Introduction

Two years have passed since Volume Two of the *Encyclopaedia Aethiopica* appeared, and now, thanks to the co-operation of hundreds of scholars, the third volume of the reference work has appeared. As before, the regional scope covers the entire Horn of Africa with the focus being on Ethiopia and Eritrea, which have for centuries held the attention of European scholarship. These two countries are, however, not taken in isolation but are at the same time considered in their broader geographic context, as the latter has at all times had a marked influence on their internal development. In the first instance the principal players have been the civilizations of Arabia and the Mediterranean, and in this respect the *Encyclopaedia* offers a number of pioneering studies.

The humanities are at the centre of the *Encyclopaedia*'s thematic scope, the main axes being languages and literatures, history and culture, art and religion. Overview articles appear alongside entries devoted to specific topics, all arranged in alphabetical order. The rise to power of the Provisional Military Government, as before, offers the main *terminus ad quem* for the *Encyclopaedia*'s temporal scope, though later developments are in all cases taken into consideration.

Volume Three continues what was true for Volume Two. Authors and the editorial team in Hamburg have addressed the topics covered with increasing attention, achieving the scholarly standard that will serve as the measure for future work on the *Encyclopaedia Aethiopica*.

The wide acceptance of the publication proves that it is responding to a long-felt desideratum in African and Oriental studies. The *Encyclopaedia* offers new momentum to fundamental and groundbreaking research in the field of Ethiopian Studies as well as a valuable tool for students of the discipline. The fact that both political and cultural organizations make use of the *Encyclopaedia Aethiopica* proves the value of the scholarly information it provides beyond the purely academic world. The first volume has in the meantime been reprinted, another sign of general interest in the subject and the format of the *Encyclopaedia*.

Of the over 4,500 articles that are planned to appear in the five volumes of the *Encyclopaedia* nearly 1,000 are included in the current volume, written by over 290 authors from 25 countries. The cases of particularly fruitful and intensive collaboration between authors, field specialists and the editorial team are marked by the siglum "Red.", and the authors thank all parties for their flexibility in making this possible. The total number of contributors to the Encyclopaedia has thus exceeded 470. As in the previous volumes, the textual information is enhanced by maps and illustrations.

Simultaneously with the editorial work the index to all the volumes is being created, which will occupy the larger part of Volume Five. It is planned to give active *Encyclopaedia* authors access to the preliminary version of the indices via the website *http://www.rrz.uni-hamburg.de/EAE*. The regularly updated *Addenda and corrigenda* to the published articles of the first volumes can be found on the same website. The most important corrections and additions will also be included in Volume Five.

In order to comply with the strict deadlines of the funding organizations and complete the volume on schedule those few articles that have not been received on time will appear in Volume Five. In these cases the entry titles appear in the volume in alphabetical order with the endorsement "s. vol. 5".

Acknowledgements

As with the previous two volumes, Volume Three of the *Encyclopaedia Aethiopica* is characterized by the deep commitment of its many authors to a common cause, reaching a degree rare for reference works of similar scale. Contributors have had the chance to present the results of their research in the form of encyclopaedia articles. At the same time, since many areas of Ethiopian Studies have still not been subjected to systematic research, authors have not infrequently had to venture into little-explored fields that are here treated for the first time. Future generations of scholars will undoubtedly be able to penetrate more deeply into the history, literature, anthropology and language studies of the region than it is possible for us today, and, hopefully, the *Encyclopaedia* will serve them as a starting point in their work.

I am gratified to see the large number of young scholars who have actively contributed to the current volume, and particularly those from Ethiopia and Eritrea. I would in addition like to express my sincere thanks to those colleagues who have helped us when articles already assigned have not been submitted on time, by taking on the missing items at short notice.

The *Encyclopaedia Aethiopica* is not simply a collection of the results of individual independent research, but is in the first place the fruit of intensive team-work, which does not stop the moment the texts reach the editorial team in Hamburg. I am most thankful to the authors for their trust in our editorial procedures and for their permission to verify, adjust, query and sometimes add things. Of course the authors remain in all cases the ultimate authority, whilst at the same time the final printed version shows a readiness to collaborate and conduct scholarly discussion that is often advantageous for the overall results as presented in the *Encyclopaedia*.

As in previous volumes, the "Field Specialists" have contributed a great deal to the improvement of the entries. Every article is counter-read by at least two scholars from outside Hamburg. They assure that important aspects and recent discoveries are not omitted and that all viewpoints regarding subjects treated in individual articles find due reflection in the text. Apart from the official members of this circle, listed on page x, a number of scholars have helped us with their advice, occasionally by way of informal contact. Among those who have significantly helped to maintain the scholarly quality of the volume I would like to mention Belachew Gebrewold, Manlio Bonati, Stefan Brüne, Matthew Curtis, Eloi Ficquet, Emmanuel Fritsch, Federica Guazzini, Markus Höhne, Wendy James, Andrea Manzo, Jonathan Miran, Simone Tarsitani, Tedros Abreha, Tsega Endalew and Rochus Zuurmond.

One should not underestimate the contribution of those scholars who have been able to visit the Ethiopian Studies Research Unit and stay in Hamburg for periods of various length helping the editorial team in its everyday work. The names of those whose visits were particularly productive have been included in the "Advisory Board" listed on page x. I am sincerely grateful to Jon Abbink, David Appleyard, Ewa Balicka-Witakowska, Baye Yimam, Haggai Erlich, Alessandro Gori, Steven Kaplan, Shiferaw Bekele, and, particularly, Gianfranco Fiaccadori for finding time and energy to make themselves available and be on hand.

My heartfelt thanks also go to the "First Readers" – all the co-editors as well as Rainer Voigt and Getatchew Haile – who helped check and improve the first draft of the volume.

The task of David Appleyard, who was responsible for ensuring the quality of the English used throughout the volume, has been of particular importance, and I owe him my most sincere gratitude. I am also grateful to the assistant proofreaders Joe McIntyre, David Weber and Aidan Vey for their valuable last-minute help.

I take this opportunity to thank Matthias Schulz for preparing the maps, and Thomas Rave for his technical layout skills. As before, Harrassowitz Verlag has ensured that the manuscript has been transformed into a presentable volume, in so far as the strict deadlines of the funding bodies have had to be respected.

The members of the Hamburg team have carried the main burden at all stages of prepa-

ration of the volume, and I am deeply grateful to them for their dedication. The team has become an independent discussion board who tirelessly strive to maintain the academic standard of the *Encyclopaedia* whilst respecting the spatial and temporal limits imposed; they have used their personal contacts with authors to obtain the necessary feedback and exchange editorial ideas; finally, they have in this way gained an unprecedented research potential that has considerably widened their own scholarly horizons. The publication of the current volume would have been unthinkable without the commitment of every single one of them.

I owe my profound appreciation to those many authors, colleagues, private individuals and organizations who have placed illustrations at the disposal of the *Encyclopaedia*, mostly without charge. Copyright information along with the full list of copyright holders and image providers will be included in Volume Five.

During all the years that the *Encyclopaedia Aethiopica* project has been in existence the students of the Ethiopian Studies Department of Hamburg University have supported the editorial team's work with commitment and creativity. They have taken upon themselves the many tasks for which the editorial team had no time; in some cases they have edited, or even written, their own entries. My particular thanks go to Dagmawit Kebbede, Sophia Dege, Isabel Hoffmann, Luam Tesfalidet and Alexander Meckelburg.

I owe a debt of most sincere appreciation to those authors who have passed away since the launch of the Encyclopaedia. Apart from the names mentioned in the previous volume two more, unfortunately, have to be added to the list, those of Bent Juel-Jensen, Wolf Leslau and Lanfranco Ricci.

A demanding project of the scope of the Encyclopaedia can only succeed with the institutional support of numerous organizations. For their sponsorship and endorsement I have to thank the Deutsche Forschungsgemeinschaft, the ZEIT-Stiftung Ebelin und Gerd Bucerius, the Fritz Thyssen Stiftung, the German Israeli Foundation, the Johanna und Fritz Buch Gedächtnis-Stiftung, the Karl H. Ditze Stiftung, the Sigrid Rausing Trust and last but not least the University of Hamburg and its Research Department. I am particularly grateful to the Deutsche Forschungsgemeinschaft for providing a subsidy towards the printing costs. This subsidy and the generous pricing policy of the publishers allow us to offer the Encyclopaedia at a price low enough for scholars from less economically secure countries to be able to acquire it.

Notes for the User

The *Encyclopaedia Aethiopica* uses several conventions that on the one hand standardize the appearance of the articles, and on the other hand facilitate their understanding by the readers. For the transcription and transliteration rules followed in the *Encyclopaedia* s. the corresponding tables in the *Notes for the User* section in Volumes One and Two. A key to the standard Encyclopaedia detail map can also be found in either of the previous two volumes. The section devoted to *Abbreviation Rules* is reproduced in the current volume due to the fact that more bibliographic titles and general abbreviations have been incorporated.

Abbreviation Rules

The *Encyclopaedia Aethiopica* works with different types of abbreviations. First and foremost, the main heading is always abbreviated throughout the entry, to one letter if it consists of one or more than two words, and to two letters, if of two words (e.g., "Kunama" - "K.", "Läga Gora" - "L.G.", "Lämma Gäbrä Ḥəywät" - "L.") . The subheadings and titles of subarticles are not abbreviated. If the entry title can have both singular and plural forms, both are abbreviated by the same syglum, the grammatical meaning being elicitable from the context (e.g., "I." in the article "Inscriptions" and its subarticles stands for both "inscription" and "inscriptions").

In order to keep the texts compact, a limited set of general abbreviations is used. The frequently used bibliographic references are also abbreviated. The clues are provided in tables on the following pages.

General Abbreviations

abbr.	abbreviation; abbreviated
A.D.	*Anno Domini*
Afr.	African
A.M.	*Anno Misericordiae*; *ʿAmäta Məḥrät* (year in Ethiopian calendar)
A.Mart.	*Anno Martyrum*
Amh.	Amharic
ANLin	Accademia Nazionale dei Lincei, Roma
annot.	annotated
anon.	anonymous
Arab.	Arabic; Arabian
art.	article
A.S.L.	above sea level
b.	born
B.A.	Bachelor of Arts
B.C.	Before Christ; Before Common Era
BFBS	British and Foreign Bible Society
bibl.	bibliography; bibliographical
BN	Bibliothèque nationale de France, Paris
BritLib	British Library, London
BritMus	British Museum, London
B.Sc.	Bachelor of Sciences
B.S.L.	below sea level
C	Celsius
ca.	*circa*
cent.	century
cf.	confer
ch(s).	chapter(s)
cm	centimetre(s)
col(s).	column(s)
comm.	commented
Copt.	Coptic
cp.	compare
d.	died, dead
D.Sc.	Doctor of Sciences
ead.	*eadem* (the same, fem.)
ed(s).	editor(s); edition; edited
e.g.	*exempli gratia* (for instance)
Engl.	English
et al.	*et alia* (and others)
etc.	*et cetera*
Eritr.	Eritrean
esp.	especially
Eth.	Ethiopian; Ethiopic
f(f).	(the) following
fasc.	fascicle
fem.	*femininum*
fig(s).	figurative(ly); figure(s)
fl.	flourished
fol(s).	folio(s)
Fr.	French
GDP	Gross Domestic Product
geogr.	geography; geographical
Germ.	German
Gr.	Greek
H.	*hiğrī* (year of Hiğra, i.e. in Arab. calendar)

ha	hectar(s)
Har.	Harari
HMML	Hill Monastic Manuscript Library, USA
ibid.	*ibidem* (in the same place)
id.	*idem* (the same, masc.)
i.e.	*id est* (that is [to say])
ICES	International Conference of Ethiopian Studies
IES	Institute of Ethiopian Studies, Addis Ababa
iid.	*iidem* (the same, pl.)
ill.	illustration
incl.	including; inclusive(ly)
intr.	introduced; introduction
Ital.	Italian
IUO	Istituto Universitario Orientale (= Università degli studi di Napoli "L'Orientale")
km	kilometre(s)
Lat.	Latin
lit.	literature; literal(ly)
l(l).	line(s)
m	metre(s)
M.A.	Master of Arts; Magister Artium
masc.	*masculinum*
mf(s).	microfilm(s)
ml	millilitre(s)
mm	millimetre(s)
M.Sc.	Master of Sciences
ms(s).	manuscript(s)
n(n).	note; footnote
n.d.	no date
N.N.	*nomen nominandum*
no.	number
n.p.	no place
obv.	obverse
op.cit.	*opus citatum*
orig.	original(ly)
p(p).	page(s)
p.a.	*per annum*
pers.	person(al) [grammatical]
Ph.D.	Doctor of Philosophy; Philosophiæ Doctor
pl.	plural; plate
pol.	political; politics
pron.	pronoun
r	*recto*
r.	rule(d); reign(ed)
repr.	reprint(ed)
rev.	reverse
s.	see
ser.	series; série
sg.	singular
sp.	spelling; spelled
spec.	specifically; special
src.	source(s)
St.	Saint
sth.	something
s.v.	*sub voce*
suppl.	supplement(ary)
syn.	synonym(ous)
Syr.	Syriac; Syrian
Tgn.	Təgrəññña
Tgr.	Təgre
theol.	theology; theological
tr.	translation; translator; translated
trad.	traditional
v	*verso*
var(s).	variant(s); variation(s)
VatLib	Vatican Library; Biblioteca [Apostolica] Vaticana
vol(s).	volumes
vs.	*versus*

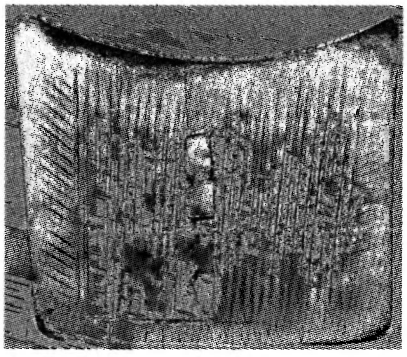
Headrest(s)

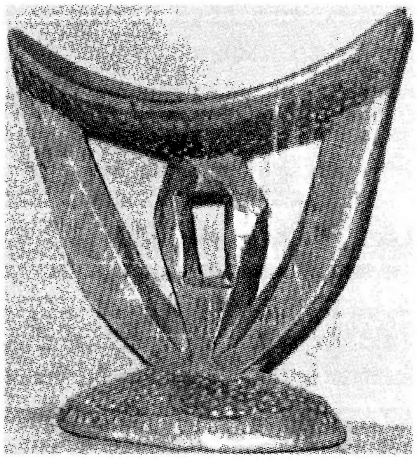
H. are wooden artefacts of everyday life used as a kind of cushion to protect special hairstyles, and in some cases additionally used as a small stool. Their use is known throughout many countries in sub-Saharan Africa (e.g., Ethiopia, Sudan, Kenya, Tanzania, Mozambique, South Africa, Zimbabwe, Kongo, Nigeria), Oceania and the Pacific region and East and South-east Asia (Indonesia, China, Japan). Even in some European alpine areas (Piedmont, Aosta valley) the use of H. was known. In ancient Egypt noble people were buried with their H.

In Ethiopia H. are (or were) used in many regions except in extensive parts of the Christian highlands. They are (or were) the individual possessions of a person. All types of Ethiopian H. have in common that they are made of one single piece of wood. They are stable and fit to the shape of the human head and neck. Some are decorated with engravings of geometrical ornaments or parallel grooves. Others are covered with pearls or paint, decorated with leather straps or metal inlays. Most of them are worked in a careful way and have a very smooth surface. The wood of the H. is often polished with certain kinds of leaves to smoothen the surface, and rubbed with castor oil (*Ricinus communis*) to achieve a dark colour and enhance the patina. The size ranges from 10 cm to 36 cm in height and 10 cm to 30 cm in width. Most of them are nearly the same size in height and width, but some have a broad (e.g., Ñaŋatom) or a high shape (e.g., Somali).

Ethiopian H. show an enormous variety in shape. They can roughly be divided into the following types:



Headrest in concave form (type 1), from Hadiyya; photo by the author, courtesy of the Frobenius-Institut (inventory no. 3642)

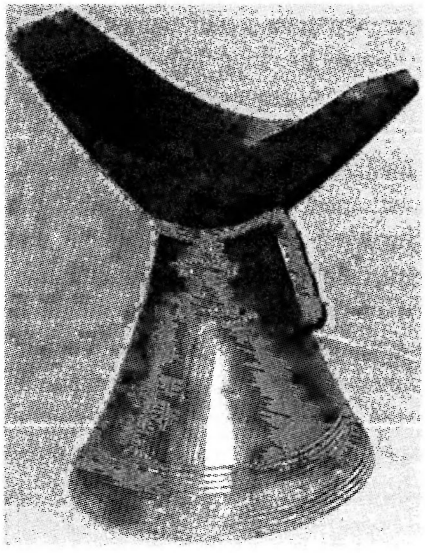


Headrest with several "pillars" (type 2); collection of the Ethnographic Museum of the IES, photo by Wolbert Smidt, courtesy of the IES

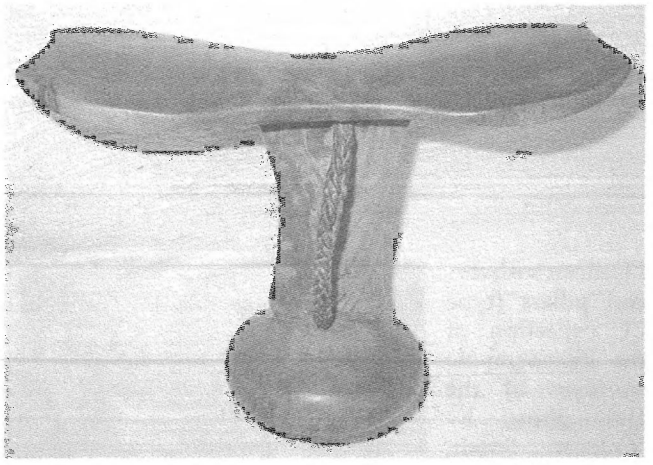
1) H. with the upper side simply carved in a concave form; sometimes the upper part is more elaborate (e.g. Oromo, Sidaama) or has two short legs (e.g. Đáasanač, Bäšada).

2) H., where parts of its body are carved out so that several columns are formed (e.g., Gurage, Arsi Oromo). These columns can be vertical or diagonal. It can be made of a four-sided piece of wood with small depth or of one foot, linked with the upper part by two (s. ill.) or more columns.

3) Another type of H. consists only of a leg and the upper part. A common variant of this type is that with a conical leg (see ill.). This conical leg is often hollow and may be used to store small pieces of chewing-tobacco or butter, which is used to smoothen the skin.



Headrest with a conical leg (type 3); collection of the Ethnographic Museum of the IES, photo by Wolbert Smidt, courtesy of the IES



Headrest with a narrow leg (type 4), Ñaŋatom type; photo courtesy of Serge Tornay

4) This type consists of three elements: one narrow leg with a broader foot and an optically separate upper part. The foot may be flat and rectangular, but can also be spheric (e.g., Hamär; Ñaŋatom, see ill.). The upper part is either rectangular or waisted with rounded ends. It is usually flat or concave and broader than the foot (e.g., Oromo, ᶜIssa, ᶜAfar, Gurage, Arsi, Mursi, Suri, Ñaŋatom, Hamär, Banna, Bäšada, Kara, Arbore, Bodi). The leg of the H. often has a handle made of fibre, leather or a thick metal wire to carry it (mainly in southern Ethiopia). Small containers with tobacco or small knives can be fixed to this handle, or the foot might be hollow and used as a container itself.

5) H. with three legs made out of a naturally formed piece of bough (e.g., ᶜAfar). Other ethnic groups use the same type as a stool only (e.g., Suri, Kara). This is also the case with the stools of the Meᵓen which resemble the H. of type 3.

Beside its practical use (protection of hairstyles, seat) the H. has the function of marking the social status of its owner. For example, the size of the H. does not necessarily correspond to the height of its owner. Among some ethnic groups (e.g. Hamär, Arbore) married men use bigger H. than other men. In Hamär the H. (*borkoto*) are connected to the male sphere; they are an essential part of male decoration. The men use them for sleeping and sitting. It is considered to be important not to sit on the dusty ground like women and children. Women use, if at all, flat, polished pieces of wood to sleep on.

Similar to the Hamär, is the use of H. among the Ñaŋatom, who call it *akičolong*, and the Arbore, where small boys, who do not use H. (*kara galeba*) for sleeping, sit on them. In contrast to the Hamär, the Hadiyya (and Gurage) men and women both used H. (*barkumma*), which were not suitable for sitting. The Hadiyya H. were made by local woodworkers or they used imported ones from Sidaama, Arsi and Gurage. Since beds and cushions of Amhara style were introduced they (like the neighbouring ethnic groups) stopped using H. Today these types of H. are only found in museums. Those H. found on the tourist market are mostly produced for the souvenir shops.

Healers

In the African Horn, as elsewhere in Africa, alternative forms of healing exist alongside the modern bio-medical system. In case of ↗disease and other kinds of affliction it has been and still widely is the norm that people first had recourse to H. (often referred to as ሐኪም, *ḥakim*, 'doctor') and traditional ↗medicine, before they looked for assistance from modern medicine (s. also ↗Hospitals). The concept of H. includes various types of specialists, most of them connected to ↗magic and/or the religious sphere. H. may be herbalists, spirit mediums (↗Possession cults), priests or traditional scholars, but also ↗marginalized people (s. EAE vol. 5) with special skills and a certain connection to the supernatural. However, traditional healing is not only of a spiritual nature, but also includes methods such as the use of bleeding, herbal medicine and massage, which are widely practised and can be most efficacious.

Stories about Christian monks and ↗saints acting as H. play an important role in the Christian tradition. *Abunä* ↗Zämikaʾel Arägawi is credited with many miracles of healing in and around ↗Däbrä Damo, the important monastery he founded (Kriss – Kriss-Heinrich 1975). Miraculous healing is an essential ingredient of most ↗hagiographies, perhaps because the ability to cure through prayer is an example of the mediatory role of the saint. The overwhelming impression created by the texts is that ↗holy men were valued as H. because of the special relationship they enjoyed with God and the power which was believed to reside in their religious paraphernalia. Their importance is exemplified by events such as the dramatic clash between monastic and pre-Christian clergy in the *Gädlä Täklä Haymanot*'s description of the attempts to heal the "evil" King ↗Motälämi.

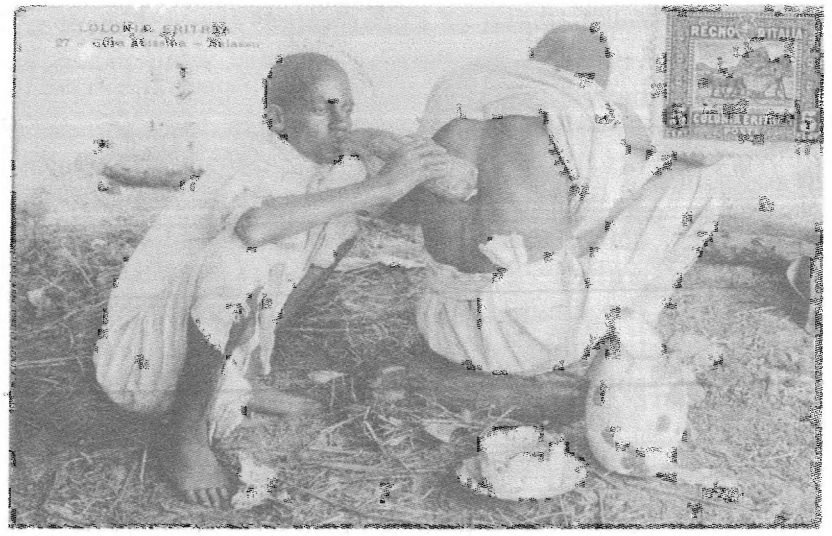
In their miraculous healing, Christian holy men commonly employed holy water (↗*Ṣäbäl*) and the soil from saintly places, prayer, human saliva, the Eucharist, the monastic garb and the cross as curative devices (KapMon 84). Holy men could just as effectively call down some frightening disease by cursing those who offended or disobeyed them, as they could heal. *Aṣe* ↗ᶜAmdä Ṣəyon I is said to have blamed a serious illness upon the wrath of *abba* Bäṣälotä Mikaʾel and asked the saint to forgive and heal him (Conti Rossini 1905:37).

Within the Ethiopian Orthodox Church there is a variety of healing traditions that can be defined as part of a continuum; some of them are central to the church's ministry, while others lie beyond the authorization of the church. Three models of healing help to define this continuum:

1. The first model might be described as "priestly healing", because it is fully endorsed by the church authorities. Priests and monks or others authorized by them might act as H. This includes the administration of the sacraments, the recitation of hagiographies and liturgies for the sick, the application of holy relics (e.g., the leg-bone of St. Täklä Haymanot) and the ingestion of or immersion in holy ash, holy mud and holy water. These elements are taken from the church compound and are considered efficacious against disease because of their sanctity. The reception and application of holy water form the heart of priestly healing. Holy springs are located within the church compound or at some distance from the church, where people who have found H. offer alms and prayers. The healing is effected primarily through exorcism, as the demonic source of the disease (↗Demons) is expelled by the purity of the water and provoked to evacuate the body of the victim.

2. The second model concerns the healing activities of the ↗*däbtära*, some of whom engage in occult or herbal healing. The method of healing that *däbtäras* perform predominantly is prohibited by the church authorities and the *däbtäras* are prevented from receiving holy communion if they are known to be occultists. However, they still can fulfil duties as church musicians. Thus a tension exists because a healing praxis that is conducted by clergy is condemned by church authorities. *Däbtära*-H. often are believed to nurture evil and other ↗spirits, who are said to advise them on appropriate treatment options for clients. Sometimes such a spirit might direct a *däbtära* to concoct a herbal remedy, or make an amulet that the patient can wear around his/her waist or neck, or write a ↗magic scroll that may be attached to the body or placed in the house of the afflicted individual. The *däbtäras* also cast horoscopes and on some occasions the astrological prediction (↗Oracles and divination; ↗ᶜ*Awdä nägäśt*) indicates that the client should make confession to his/her father-confessor or travel to a certain holy spring.

3. A third model is represented by spirit-possession cults, the practitioners of which are commonly women (s., e.g., ↗Mälkam Ayyahu). These cults are condemned by the Church, and women afflicted by *zar* spirits, for example, would be sub-



Healer at work, applying a horn for bloodletting; postcard from the Italian Colonia Eritrea, early 20th cent., collection of Alberto Valle

jected to exorcism if they apply to the first model of H. However, many women (and some men) prefer to nurture the spirits through ceremonies in which sacrifices, ↗coffee, ↗incense and ↗*čat* are offered to placate the spirits and deter them from making too many demands on their hosts.

There is also a fourth model, that of the H. without any religious function but with special knowledge of treatments, normally passed from father or mother to son and/or daughter (s. also *wägešša* below). Herbs, butter, parts of animals, stones, powder might be applied by them. Not only disease are treated but also infertility, contraception and abortion.

The *däbtära* play a mediating role between priestly healing and healing through spirit possession cults. *Däbtära*, for example, offer women amulets to placate their spirits, unlike the priests who exorcise the spirits. They provide in secret contraceptive herbs and magic to women. They do this contrary to church prohibition against contraception and in subversion of the priestly immersion ceremonies in which barren women are publicly bathed in holy water. H. within the Ethiopian Orthodox Church is thus a complicated web of practices that inform, contradict and complement each other.

The ↗Betä Ǝsraʾel H. followed healing practices virtually identical to the Orthodox Christians before coming under foreign Jewish influence. Many of the practices have survived their emigration to Israel, where traditional H. remain much in demand.

H. play an eminent role also in the Islamic cultures of Ethiopia and Eritrea. The popular devotion to Muslim ↗Holy men and woman, as well as the influence of pre-Islamic customs contributed to this. The Muslim holy man, at once an Islamic intellectual, a mystic and occasionally a H., cuts across analytical boundaries (Ishihara in PICES 13:391). Traditional folk-Islam venerated certain "saints" or *awliyāʾ* who were respected for their learning, ability to work miracles (*karāma*) and to cure. Their descendants, mostly with the title of ↗*šayḫ*, often formed "holy families" who inherited this *bäräka* (Arab. *baraka*, 'blessing power') and exploited it, sometimes acting as religious functionaries or wonder-workers and H. In areas such as Gondär, Muslims seeking a H. sometimes consult Christian holy men.

Christian, Muslim as well as Betä Ǝsraʾel H. also combine the use of the local pharmacopoeia with the healing power of the Bible or the Qurʾān. Both prescribe amulets with religious texts for preventive and curative purposes. Another method of treatment is dissolving an ink-written text in water and serving the solution as a drink to the patient. Thereby they establish a link between the spirit of the formula and the body of the patient (Slikkerveer 1990:200).

The emphasis in most traditional local religious systems (Religion, traditional) is upon maintaining a state of harmony between man and the spiritual world, often involving propitiatory rituals such as sacrifices by religious specialists. The state of harmony is connected with good health and the fertility of the natural world. For example, the ↗Sidaama of the past tried to live in peace with the spirits mainly through ritual specialists, called *kilančo* or ↗*qalləčča*. Consulted in case of illness, they looked into the smoke of incense and gave instructions. Often the ritual included an offering and the curse of the person who was accused to have evoked the disease by "evil eye" (↗*Buda*). They also chanted and made music till they fell into a trance and were considered to be possessed by a spirit (Lonfernini 1997:142).

Throughout Ethiopia, healing is often one of the functions assigned to special clans or so-called marginalized people (Freeman – Pankhurst 2003). Among the ↗Gurage, the ↗Fuga served as H., dentists and veterinarians, while among the ↗Gamo, the Degala perform medical work as part of their services. Činaśa (Činaśaša) potters among the ↗Wälaytta H. are experts in

bone-setting and prepare and administer medicine for both humans and animals. Pastoralist peoples such as the ↗Hamär also have clearly defined religious practitioners, often connected with specific clans, who play a role in maintaining ritual harmony and ensuring good health. The *wakati emba* (lit. 'butter man') was the one who drove away illness by anointing with butter (↗Milk and milk products), fat or even dung. The clan of Mišna was said to be "hot" and best able to perform the ritual of destruction used against enemies, sickness and pests. The maintenance of harmony, peace and unity concern prime values (O'Toole 1997:174).

A good example for a type of H. who, at least partially, uses healing techniques based more on empirical knowledge than on spiritual concepts is the *wägešša,* who offers assistance in the case of obvious bodily ills such as skin infections, abscessed teeth, cuts or broken bones. He or she as well may carry out simple surgery and operations like ↗circumcision, clitoridectomy and infibulation. Techniques they use are counter-irritation and cauterization. They are often illiterate, but have a broad knowledge of medicinal plants and roots. Their medical bag is simple: butter used as an ointment or laxative, a sharp knife, razor blade, pliers and a small screwdriver for surgery and tooth extractions, the horn of an antelope or cow for cupping blood after an incision etc. The *wägešša* is usually highly skilled in the administration of the wide variety of traditional drugs.

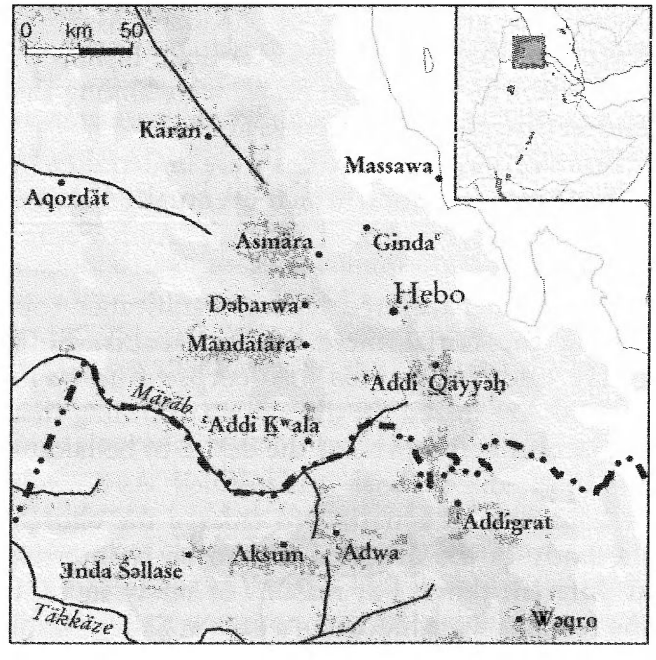
Health care system ↗Healers; ↗Medicine

Ḥebo

Ḥ. (ሐቦ, 15° 4' 40 N, 39° 14' 1 E) is the name of a village, its surrounding area and its population situated in a hilly area in ↗Akkälä Guzay



The presently destroyed Orthodox church of Ḥebo with *abunä* De Jacobis's grave; from Teclè Haimanot 1915

awraǧǧa, ca. 75 km from Asmära at an altitude of 1815 m A.S.L. The village gained prominence due to the shrine of the Lazarist missionary Giustino De ↗Jacobis.

In mid-1851 De Jacobis agreed to go north into exile in the hope that his absence might save the people of ↗ᶜAlitena and ↗Gʷalᶜa from persecution. He went to Ḥalay, where *abba* ↗Ǝmnätu had purchased a plot of land in July 1850, and visited the surrounding villages of Akkälä Guzay. The people of Ḥ. begged him to bless the foundation stone of a church, which they would build with their own hands. When the small church was completed in 1853, De Jacobis blessed it on the feast of the Assumption, 22 August. Later that same year the bishop ordained five priests in that church, and from then on H. became the second centre of the Vicariate of Abyssinia (↗Catholicism). The grandparents of ↗Kidanä Maryam Kaśa, who became the first Catholic bishop of Ethiopian rite in modern times, were among the earliest disciples of De Jacobis at Ḥ.

From Ḥ. pastoral activities were undertaken in four nearby localities, which eventually became parishes: ↗Aḳrur, ᶜAddi Qʷənṣi, ᶜAddi Fənniᵓ and Mäylaᶜ.

In 1860 Ḥ. acquired lasting significance following the burial there of De Jacobis. Both Ḥalay and Ḥ. wanted his corpse but *näᵓib* Ḥamad Are solved the dispute by affirming that De Jacobis had expressed the desire to be laid to rest in Ḥ. and his wish was fulfilled. As a result of construction activities to enlarge the church the body of the deceased had to be re-interred at different times. For reasons of safety in 1871 the remains were hidden in a cave at Ṣällim Ǝmni and only brought back to Ḥ. in 1873. The body was then reburied twice, in September 1889 and on 31 July 1916.

Ḫədar ↗Calendar

Ḫədar: Mäṣḥafä ḫədar

Ethiopian theologians often refer to a M.ḫ. (መጽሐፈ: ኀዳር, 'Book [to be read in the month] of *Ḫədar*') by Sawīros b. al-Muqaffaᶜ, Bishop of Ašmunayn (↗Severos of Ašmunayn). However, two collections of treatises on theology by Severos are known in ↗Gəᶜəz literature and it is unclear to which one they are referring. The first collection (MS1), generally styled as the *Treatise on the First Four Councils*, is the Gəᶜəz version of the Arabic *Kitāb al-Maǧāmiᶜ*. The other collection (MS2), or the *Twelve Treatises by Severos*, is the Gəᶜəz version of the Arabic *Kitāb al-Īḍāḥ*.

A M.ḫ. is listed in ms. EMML 1601 (no. 99), in an inventory of Gəᶜəz works. Unfortunately, the compiler of the list did not describe it – so we are unable to identify the work unequivocally. Furthermore, his list contains two works ascribed to Severos, the መጽሐፈ: ሰዊሮስ (*Mäṣḥafä Säwiros*, 'Book of Severos', no. 149) and the መጽሐፈ: ሰዊሮስ: ካልእ (*Mäṣḥafä Säwiros kalᵓ*, 'Second Book of Severos', no. 178). From the compiler's cryptic description of the *Mäṣḥafä Sawiros kalᵓ* – "it speaks about the unity (in faith) of Egypt [i.e. Copts] and Ethiopia [i.e. Ethiopians]", with a reference to what is found in the last of the four treatises "on the Councils" (s. EMML 1833, fol. 113b) – one can surmise that he is describing MS1.

When cataloguing the d'Abbadie collection, Conti Rossini noted that the *Treatise of Severos* (MS1), ms. Abbadie 92 (CRAbb no. 129), fol. 77a–110a (?), is called M.ḫ. Yet it is unclear which of the several known manuscripts of this text supports this assertion. Other cataloguers agree with him (e.g., Hammerschmidt's description of Ṭānāsee 52 = Kebrān 52, fol. 66a–91a, which is another copy of MS1). However, this is probably a mere repetition of what Conti Rossini had said and not the result of personal observation.

There are reasons why these two collections (MS1 and MS2) are confused under the same names: M.ḫ. and *Mäṣḥafä Säwiros*. Both collections are Severos's, they deal with the defence of the Coptic Orthodox Faith and are answers to a certain devotee. Moreover, since neither has a clearly distinct and widely accepted Gəʿəz title, and the translators have omitted their Arabic titles, it is understandable that they could be confused with each other.

In the colophon of a recent copy of MS2 – EMML 1195 – the collection is called ክብረ፡ ሃይማኖት (*Kəbrä haymanot*, 'Glory of the Faith'), but this seems to be a title given to it by either the scribe of this particular manuscript or by whoever commissioned its copying. *Glory of the Faith* is more descriptive than the title of the M.ḫ. or *Mäṣḥafä Säwiros*. However, it is by either of these two names that MS2 is popularly known and referred to.

The original M.ḫ. seems to be the entire collection in ms. Abbadie 92 rather than MS1 alone. The reason for its name is obvious: the collection, which includes MS1, must be read during the month of *Ḫədar*. That the name M.ḫ. refers to the whole collection is the view of Chaîne (ChAbb 59).

According to the three important testimonia of this text (Abbadie 92; EMML 1833 and BritLib Orient. 691), the collection includes:

1. the history of the Prophet Habakkuk (3 *Ḫədar*);
2. a brief Synaxary-mention of Eleazar, the son of Aaron (3 *Ḫədar*);
3. the Homily of Theophilus, Patriarch of Alexandria, on the sojourn of the Holy Family in Egypt (6 *Ḫədar*);
4. an anonymous Homily on the Finding of the Cross by Empress Helen, numbered 5 in Abbadie 92 (8 *Ḫədar*);
5. eleven Miracles of St. George, numbered 4 in Abbadie 92 (7 *Ḫədar*);
6. an anonymous Homily on the Finding of the Cross, not found in EMML 1833, probably a repetition of no. 4 above, s. Abbadie 92 which has only one homily on the Cross;
7. a Homily on the Four Living Creatures by John (possibly Chrysostom), Patriarch of Constantinople (8 *Ḫədar*);
8. MS1 (9 *Ḫədar*);
9. a Homily on the Archangel Michael, by a Patriarch of Antioch, possibly Severos (12 *Ḫədar*);
10. a Homily on the Martyrdom of Askänafər, a Roman governor, by Epiphanius, Bishop of Cyprus, not found in Orient. 691 and EMML 1833;
11. the Martyrdom of Menas (15 *Ḫədar*);
12. the Martyrdom of Cosmas and Damian and their brothers (22 *Ḫədar*);
13. an Admonition by Severos of Ašmunayn to the clergy, a Homily on the 24 Elders of Heaven, *kahnatä sämay* (24 *Ḫədar*);
14. the Martyrdom of Mercurius (25 *Ḫədar*);
15. the Martyrdom of James Intercisus (27 *Ḫədar*).

Orient. 691 has, in addition, excerpts from the *Acts of the Apostle Philip* (18 *Ḫədar*, s. Acts of ↗Apostles) and *Discourses* on Mt 10:37–39, and Lk 9:23–25. Neither the *Martyrdom of Eustatius* nor the subsequent *Martyrdom of Eustatius, his Wife and Two Children* (23 *Mäskäräm*) in the same manuscript belong, most probably, to the M.ḫ.

Ḥədaräb

Ḥ. (also Ḥədareb, Ḥaḍāriba, Ḥaḍārib, Ḥadāriba, Hadareb) is an "ethnic" label used in a variety of contexts in eastern Sudan, Eritrea, and Ethiopia. In modern Eritrea, "Ḥ." refers to the ↗Beğa-speaking sections of the ↗Beni ʿAmər who are concentrated in the north-eastern part of ↗ʿAnsäba region. By extension, it commonly applies to Beğa speakers in general. In 2003, these were estimated at 160,000, or 3.9 % of Eritrea's population.

Historically, however, the centre of the Ḥ. lay further north, in the present-day Sudan. According to popular etymology, "Ḥadārib(a)" is a Beğa corruption of "Ḥaḍārima", that is, 'people from Ḥaḍramōt (↗Ḥaḍramawt)'. Local genealogists sometimes claim that Ḥ. immigrated from southern Arabia to the Red Sea hills in the first century of Islam – a common way of claiming "ancient

H., as well as (b) the association of both terms with the governorship of Bale, it is tempting to regard "Dägano" as a variant or distorted rendering of H. which the chronicler moreover mistook for a proper name, while at the same time simply assuming familiar *gärad* to be the official's title (cp., however, also ↗*Däğän*).

By the beginning of the 16th cent. at the latest H. had also found its way into Muslim ↗ᶜAdal, as evidenced by the ↗*Futūḥ al-Ḥabaša*. This Arabic account of the *ğihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") against the Christian Kingdom gives *hayğan* (or in one case *hağan*) as the – apparently rather modest – title of three of his *muğāhidūn* (cp. BassHist I 72, 124, 246). In the 1570s and 1580s *hayğan* is then documented as the title of a certain Hāšim, Adalite governor in charge of ↗Awsa (Cerulli 1931:62, 68, 77). In this context H. might function as the vernacular equivalent of Arab. ↗*ḫalīfa*.

In view of the outlined trajectory it is not surprising that among contemporary languages ↗Harari provides the lexemes most clearly related to H. Its lexicon thus comprises a verb *ḥēgäna*, 'to replace, compensate', as well as the nouns *ḥēgän*, 'deputy', and *ḥīgāña*, 'replacement' (Leslau 1963:80, Abdurahman Garad–Wagner 1998: 451; note the word-initial sound shift due to Harari phonology). The obviously also related Gurage verbs *ēgänä* (Səlṭe) and *egänä* (Wälane), both 'to change' (*ibid.* and Leslau 1979:26, 799), presumably reflect a strong historical Harari influence and do not derive directly from the original Cushitic etymon.

Ḥəgg[i] ↗Law

Ḥəggi Hab Səllus Gärä Ḫəstos

The Ḥ. (ሕጊ፡ ሀብ፡ ስሉስ፡ ገረ፡ ኽስቶስ, 'Law [Code of] Hab Səllus [and] Gäbrä Krəstos', s. KolTrad II, 55, also *Śərᶜat nay Habśəllus nay Gäbrä Krəstos nay Däqqätäššəm*, 'Customs of Habśəllus, of Gäbrä Krəstos [and] of the ↗Däqqi Täššəm') is the ↗law code established in the late 17th cent. during the co-regency of *däggiyat* ↗Hab Śəllus and his son *däggiyat* Gäbrä Krəstos over the ↗Märäb Məllaš and the ↗Bambolo Məllaš. It was enforced in ↗Ḥamasen, their power base. According to tradition, the Ḥ. was the product of the regular court both rulers held at May Bela. The code depends on more ancient law-traditions and is a result of local developments, Ḥamasen elders possibly being involved in the drafting process. Ḥamasen, like other northern provinces and descent-groups in Säraye and Akkälä Guzay, had acquired a high degree of legal autonomy, which made a judicial system necessary which would not depend directly on the *nəguśä nägäśt* and the ↗*Fətḥa nägäśt*.

It was probably transmitted orally for several generations until it was written down; by then it had already undergone several revisions through law-assemblies. The Ḥamasen villages, however, belonging to the Däqqi Täššəm descent-group and unified under this common law, traditionally use the names of the law's first drafters to refer to it. During the Italian colonial administration of Eritrea, it retained its validity and was printed in 1918 on 18 pages in Asmära to be used by local judges. This version was signed by local representatives of the villages of ↗Ṣäᶜazzäga, ᶜAddi Musa, Qušät, Ṣaᶜda Krəstiyan, Wəkkidəbba and ᶜAddi Asfäda, together with the responsible *qäššı* (↗*qes*) of ᶜAddi Qonṣi. Due to the recognition of ↗customary law by the present Eritrean government, the civil-law traditions of the Ḥ. are still preserved, and are the basis for court sessions on village level in Ḥamasen even today. There are several manuscripts containing Ḥ., sometimes accompanied by or amended by other legal provisions.

Within the juridical confederacy of villages following the Ḥ., only a limited number of villages (the "*ᶜaddi ḥəggi*") keep a copy of the Ḥ.; in cases of litigation, the parties have to go to these settlements. This principle of *ᶜaddi ḥəggi* can also be found among other Təgrəñña-speaking groups. The *ᶜaddi ḥəggi* were not seats of governors, e.g., the traditional capital of Ḥamasen and residence of the dynasty of Hab Səllus and Gäbrä Krəstos, Ṣäᶜazzäga, had no copy of the Ḥ. Possibly this is

a traditional way to control power by separating the legislative from the executive branch.

The formal procedure, which is the precondition for a court session on the basis of the Ḥ., is of particular interest. Three persons from the village in possession of the law code have to collaborate: the appointed judge (↗*Daññа*), a peasant and the *qäššï*. The *daññа* may not keep the code at home, the Ḥ. has to be provided by an (illiterate) peasant from the family of law-holders; the *qäššï* then must be the one to read the law. Thus, without the peasant and the *qäššï*, the *daññа* cannot judge. This division can be seen as reflecting three social groups or institutions: the secular power, the church and the peasantry. This system of checks-and-balances ensures that the law cannot be manipulated.

Heliodorus

H. (Gr. Heliodoros) of Emesa (today Ḥimṣ, Syria), about whom we have no biographical information, was the author of the *Αἰθιοπικά* (*Aithiopiká*, 'Ethiopian Story', in ten books), the longest and structurally most complex, and yet one of the oldest and most debated, of the extant Greek romances. Scholars date it from 2nd to 4th cent. A.D.

Staged against the background of a conflict between the Meroitic king Hydaspes and the Persian satrap Oroondates, this may allude to the remote expedition led, after 529 B.C., by the Persian king Cambyses against the "longlived" Ethiopians, i.e. Nubians (Herodotus, VII, 17–22; ↗Iran).

In spite of recent attempts to trace the text to either the second half of the 4th or the end of the 3rd/beginning of the 4th cent. (Bowersock 1994: 149–60, resp. Cracco Ruggini 2004:215f., 221), a thorough enquiry into its historical matter rather suggests dating within the 3rd cent. (s. already Merkelbach 1962:234): the siege of the Egyptian town of Syene (medieval Aswān) by the "Ethiopians", i.e. the Meroites (interested in its emerald mines), is not necessarily reminiscent of that of Roman Nisibis by the Persians in 350 as described by Emperor Julian the Apostate (Or., I and III [II], s. Szepessy 1972 and 1976). Likewise, the whole story seems to mirror the manifold world of travel, trade, international diplomacy and religion that was characteristic of the 3th cent. (Ziethen 1998, passim) – like the imitation of Thucydides, deeply affecting Heliodorus's style.

H. was clearly writing under the influence of the relationships enjoyed by the city of Emesa with the Eastern Mediterranean, ↗Meroë, ancient Persia (↗Iran), ↗Egypt, the Upper ↗Nile, ↗Nubia and the ↗Horn of Africa (Cracco Ruggini 2004:217). The representation of the Aksumites ('Αξιομῖται, *Axiomîtai*) is also in accordance with this chronology: they are introduced as "friends and allies" of the Meroitic king, to whom their ambassadors pay homage at his capital town after he seized Syene (Conti Rossini 1919–20:235f.; Cracco Ruggini 2004:215f.). In keeping with this picture, the Blemmyes (↗Beğa) appear as vassals of the Meroitic king and great warriors in his service. The last mention of Meroë as an independent state is found in 254, the conquest of the country by the Aksumites being usually placed in 260 or 269 (Fiaccadori 2004:116f., 125f.) – which suggests an even earlier chronology, if not for the composition, at least for the sources of H.'s romance.

The main characters of this truly Hellenistic story – a garbled love affair with a happy end despite several obstacles – are the priestess Chariklea, the whiteskinned daughter of the ruler of "Ethiopia", i.e. Meroë, and the Greek envoy Theagenes, a Thessalian nobleman. The text opens on a scene depicting them shipwrecked in the proximity of the Red Sea. Hence they embark on a series of adventures – indeed appropriate to the genre – ending in Meroë, Chariklea's birthplace. Here the two are united in wedlock and become priest and priestess of the Sun. In his lively narrative, H. cleverly resorts to a variety of stylistic devices. For instance, elements from Greek and Roman theatre frequently show in the plot, and such ancient sources as ↗Herodotus are employed. In addition, H. skilfully

created the characters of priests, Persian and "Ethiopian" aristocrats, philosophers, servants, thieves, pirates, fishermen, eunuchs, envoys and merchants (s. Ziethen 1999). Almost all figures, though taken from Greek models, are given characters featuring those posited for the relevant countries – e.g., "Ethiopia" or Persia. The novel entered the circle of world culture and was often utilized, imitated or referred to in later works, especially by Byzantine authors (cp. the qualified 11th-cent. reading glosses published by Conca 1989:235–41), its plot – a love affair – being allegorically understood as the soul's quest for virtuous life, and thus meeting with wide approval.

Gabriele Ziethen – Gianfranco Fiaccadori

Həllawe ↗ Christology

Ḥəmbərti

Ḥ. (Tgn. ሕምብርቲ, lit. 'navel, centre') is a town and an archaeological site ca. 28 km from Asmära (13° 55 N, 37° 8' 60" E), between the south-western Gaš Barka lowlands and the Ḥamasen highlands to the east (*zoba* Maʾkäl; for location s. Ḥərgigo).

According to local oral tradition, the town was founded in the traditional ↗ Kunama settlement area during the 13th cent. by a certain Gäbrä Maryam, a Christian from Wällo, and his two sons, Tanti and Çumata. Tanti and his four sons controlled Ḥ. village whereas Çumata and his descendants had the nearby Ṭef hill in their hands.

Mountain slopes east of Ḥ. serve as grazing land; lowland plains are used for farming, with red soil cultivated in the north and east and black soil south and west of the town. Wheat, barley, beans and other crops are cultivated. An important cattle market lies south of the village. Traders arrive every Friday from all over the south-western lowlands. Some vendors buy cattle here and resell them on Saturday in Asmära.

Ḥ. town had ca. 8,700 inhabitants in 2000; it is estimated to have grown to ca. 11,000 since. The overwhelming majority of the population is Christian Orthodox (over 10,000). The main local church is dedicated to St. Mary, and the town used to be known as Maryam Ḥəmbərti in the past. There are three other Orthodox churches, one Protestant and one Catholic church. There is also a mosque at Ḥ. The Muslim community, numbering ca. 200 members, is believed to have descended from immigrants from Šire.

During a recent University of Asmära archaeological mission (Werede Okubay 2000),

extensive pieces of archaeological evidence were discovered at Ḥ., including blades and scrapers manufactured from ↗obsidian, quartz and chert; grindstones, pestles and mortars in basalt; quartz hammer-stones and ↗pottery with different decorated motifs. Evidence of stone-wall structures and ash deposits at several locations on the Ḥ. archaeological site suggest that the site may have been the location of an early farming community, perhaps dating to the ↗pre-Aksumite period. A stream, fed by seasonal rains, locally called *mäsno*, once flowed down Mt. Ǝmba Täk̲ärra (ca. 2,579 m A.S.L.) past Ḥ., perhaps, contributing to the development of an ancient sedentary farming community.

The Ḥ. site can be compared to other ancient sites in the surrounding area of Eritrea, such as ᶜAddi Gäbray, ↗May Näfḥi, ↗Qoḥayto, Daᶜro Ṗawlos, ↗Sämbäl, Qʷəšät, ᶜAddi Ḥawəša and Säläᶜ Daᶜro.

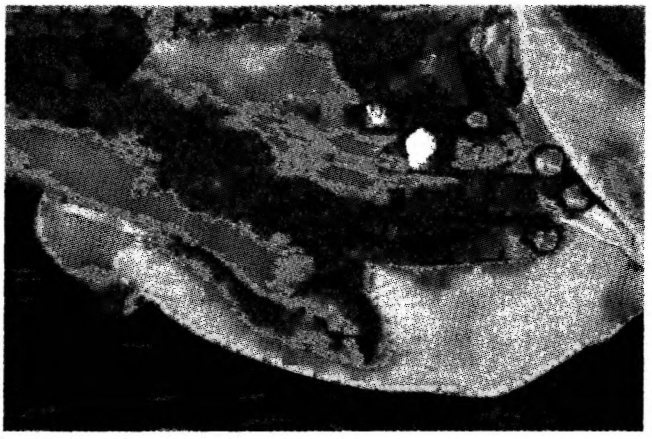
Henna

H. (Amh. ሕና, *ḥənna*, from Arab. حناء, *ḥinnāʾ*; *Lawsonia inermis*) is a slowgrowing indigenous shrub or small tree with sweetscented creamy-white flowers. In Ethiopia it grows along river-courses and in semiarid parts of the country. It is mainly used as a dye of a range of orangered colours extracted from crushed and powdered leaves and young shoots. Traditionally, the dye was released with lemon juice, and was used to dye leather and clothing.

H. was, and still is, used for cosmetic purposes, mainly among Muslims in eastern Ethiopia, where women's arms, hands and sometimes feet are decorated with H. ornaments. Sometimes this kind of ↗body ornamentation is combined with tattoos. It is also used to colour and condition hair. Muslim men, especially the elderly, may colour their beard as, allegedly, Prophet Muḥammad did. In northern Ethiopia and Eritrea among Christians, too, H. is well known. It serves to stain women's hands, finger and toenails and feet. Today H. powder is in widespread and popular use throughout the country as a natural dye, giving women's hair a variety of red tinges.

In traditional medicine, H. leaves, when heated and placed on the body, are believed to relieve rheumatism; the smoke from heated leaves, used



Hand of a Somali woman decorated with henna mixed with black hair dye, custom typical for a wedding ceremony, Dərre Dawa; photo 2000, courtesy of Peri Klemm

to fumigate the whole body, is said to act as an aphrodisiac; a mixture of powdered leaves and old butter is believed to help heal wounds and a paste of honey and powdered bark, eaten once, is said to induce or accelerate labour. H. is also used as a perfume, made from its sweetsmelling volatile oil, for thatching and for fodder.

In ↗Harari culture H. plays a significant role in customs connected to the wedding ceremonies. On the Friday before the marriage, the bride invites people to attend her wedding. In doing this she is accompanied by her *hinna gēlāč*, her 'H. friends', who are members of the bride mother's ↗*afōča* organization. The *hinna gēlāč* act as her representatives, inviting her future in-laws whom she is obliged to avoid until the completion of the first phase of the wedding. On the next day a special dish called *hinna uḫāt* ('H. bread'), Harari bread and beef stew coloured by H. dye, is brought from the bride mother's house to the groom's household as an initial gift in a series of exchanges between the two parties. In return, the groom's party makes a ritualised visit, during which its female members try to paint the hands of the bride with H. By pretending to defend against this, the bride performs her shyness.

Henok: Mäṣḥafä Henok ↗Enoch

Heraclius

H. (Gəᶜəz: ሄራቅሊ, Hərqal, also Ḥarqal, Eraqəl, b. ca. 575, d. February 641, Constantinople), emperor of Byzantium from 5 October 610, was the son of the exarch of Carthage, who sent him with a fleet to overthrow the "tyrant" Phokas. After seizing power by that, H. was to fight, until the end of his life, against the Slavs and Avars in the northern Balkans, and especially against the Persians and then the Arabs on the eastern frontier of the ↗Byzantine Empire. The Persians captured ↗Jerusalem and the relic of the True Cross in 614, and occupied Egypt from ca. 619; the Arabs invaded Syria and defeated the Byzantines at the banks of the river Yarmuk (a tributary of the Jordan) in 636. As a result of his victorious campaigns against the Persians, H. was able to free Egypt in 629, and to recover Jerusalem and the True Cross one or two years later (↗*Mäsqäl*). The fame of his military deeds won him the titles of "New Alexander" and "New Constantine", and was widely spread all over the Near East and the Horn of Africa (Fiaccadori 1987:132f. and nn. 52f.). An immediate Ethiopian reflection of that are the Holy Sepulcher and the Cross represented on the obverse of the silver and, resp., copper coinage of *nəguś* ↗Armaḥ, possibly the king who, according to Theophanes (*Chronographia*, A.M. 6123, ed. de Boor 1883, I, 335), in 630/31 sent to H. an embassy – the last one received at the Byzantine court – for congratulating on his success (s. Fiaccadori 2006:140f. and n. 53–56, 58f., on Krivov 1990). H.'s connection with Egypt is mentioned in the ↗*Sənkəssar* (8 *Tərr*, s. ColSyn IX, 64–71; s. Marrassini 1983: 385 and n. 9); in the chronicle of *aṣe* ↗Śärṣä Dəngəl, H.'s struggle for the "Cross of Christ" provides a significant parallel to the Emperor's campaign against the rebel ↗Yəsḥaq (CRHist 59; s. Fiaccadori 1987:133 n. 53).

On account of his rescuing Jerusalem, H. became a legendary, quasi-apocalyptic figure – the last emperor of the Byzantine *Reichseschatologie*. As a "New Alexander", esp. in the non-Chalcedonian and Monothelete world (Reinink 1985; for Islam s. Cook 1992), he is most likely behind the commemoration of ↗Alexander the Great in Ethiopia (s. *Sənkəssar* on 29 *Gənbot*, ColSyn VIII, 346f.). H.'s policy in Africa in the early 630s is reflected in the so-called *Doctrina Jacobi nuper baptizati* ('Indoctrination of Jacob Recently Converted': CPG no. 7793; s. Dagron – Déroche 1991), a piece of anti-Jewish polemics with strong eschatological overtones, known in Ethiopian tradition as ↗Särgis Abərgawi (Grébaut 1909, 1919).

H. was also the Emperor whose repentance for the massacre of Jews in Jerusalem in 630/31 became the alleged reason for adding an (eighth) extra week to the ↗Lent: the Greek *tyrinē* or *tyrophágos hebdomás* ('Cheesfare Week'), *ṣomä Hərqal* ('fast of Heraclius') in Ethiopic. A peculiar version of this story is found in the ↗*Anqäṣä amin* by *əčč̣äge* ᶜƎnbaqom (DonEnbAnq 216–21, cp. 122–26; for other versions s. Peri 1963:56–62).

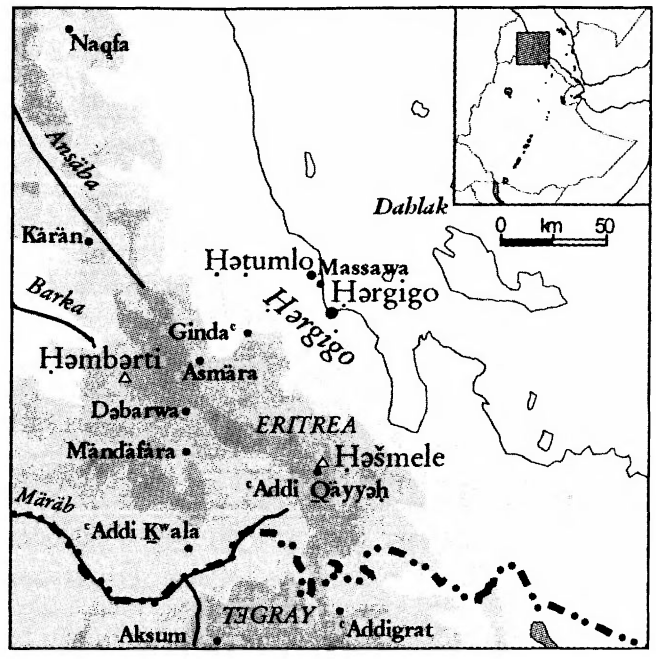
Herbs ↗Spices and Herbs

Ḥərgigo

Ḥ. (ሐርጊጎ, Arab. Ḥarqīqū) was a Red Sea mainland port opposite the island port of ↗Massawa, with which it enjoyed long-term close contacts. The approximated forms of the name, Arkiko and Arqiqo, are regularly employed in sources (e.g., Arabic, Portuguese, etc.). Local people used to call the place Däḥono, a word etymologically connected with the Sāho *dakano* ('elephant'; cp. Dəkänämo in ↗Asaorta; s. ↗Elephants). Here, in fact, according to the 2nd-cent.-B.C. Greek writer Artemidorus (quoted by Strabo 16, 4, 8) there was "a place for elephant hunting", immediately after "the port Saba" (possibly modern Gärar, north of Massawa). Still in the 19th cent., as travellers report, elephants came to the area around Ḥ., as it had plenty of water, due to streams coming from the highlands.

Though Ḥ., unlike Massawa, was not mentioned by early Arab writers (who were more familiar with the Red Sea islands than the mainland), it is probable that it dates back, like Massawa, at least to early medieval times. By the early 16th cent., its port was described by the Portuguese as a major commercial centre. Plentifully supplied with provisions, as well as export articles, from the interior, but lacking good harbour facilities, it was avoided by sea-going vessels, which made their way instead to Massawa. The two ports were, however, symbiotically linked by small local craft, which plied between them, constantly transporting export and import articles.

The Ḥ. area, which was relatively well supplied with often brackish water, was likewise the source of most of Massawa's water supply. Despite their economic interdependence, politically the two ports were often divided. Ḥ., in the 1520s, was thus under the control of the Christian ↗*baḥər nägaš*, whereas Massawa belonged to the Muslim ruler of the ↗Dahlak sultanate. Later, in 1557, both ports fell under the control of the ↗Ottoman Empire, which, seeking to advance inland, established a fort at Ḥ. with an Ottoman garrison (s. ↗Ḥabeš). This proved so



impregnable that *aṣe* ↗Śärṣä Dəngəl's attempt to capture it in 1589 was in vain.

Ḥ., though the smaller of the two settlements, had a significant population. James ↗Bruce, in the late 18th cent., wrote that it had "about 400 houses", which would imply a population of about 2,000 inhabitants, while early-19th-cent. travellers put it at between 1,000 and 1,500. Ḥ. had owed its importance, throughout this time, to its intermediary position between Massawa and the mainland, but this was destroyed when the Egyptians, in the 1870s, constructed a causeway linking island and mainland. Circumvented by the causeway, Ḥ. thus lost its *raison d'être* and rapidly declined. The place was described in 1938 as no more than a "large village" (*Guida* 331), albeit one with a 370-metre-long landing-stage and some warehouses.

Hermannsburger Mission

The H.M., or Missionsanstalt Hermannsburg, now Evangelical Lutheran Mission (ELM), in Ethiopia known as German Hermannsburg Mission, was founded in 1849 by Pastor Ludwig (Louis) Harms (1808–65) at Hermannsburg, Germany. Inspired by reports of Johann Ludwig ↗Krapf, Harms sent his missionaries to East Africa on a mission-owned ship called the Candace, to reach the Oromo. But the attempts made in

Missionaries Wassmann (left) with his family, Bahlburg (second from right) and the Wassmann family and staff; photo courtesy of the author

1853/54 and 1857/58 failed because the *sulṭān* of Zanzibar (Muscat), Sayyid Saᶜīd, did not grant the missionaries permission to enter East Africa. Instead, the H.M. started work in Southern Africa, later also in India, Australia, New Zealand, America, the Middle East and other regions.

In 1927 two missionaries, Hermann Bahlburg and Dietrich Wassmann, and two craftsmen, Hermann Grabe and Adolf Müller, started work in Addis Abäba, Aʾira (Western Wälläga), and Buunoo Beddellee (Illubabor). More missionaries, teachers, nurses and craftsmen followed. The Italian invasion interrupted the work in the interior, but it continued in Addis Abäba, where the missionaries also cared for the German-speaking Protestant congregation. The Beddellee station was destroyed, but the station in Aʾira was kept by local Christians led by ↗Dafaa Ğammoo. In 1942 the remaining Hermannsburg missionaries in Ethiopia were interned by the British.

In 1951 the Ethiopian Government permitted Wassmann and another missionary to return to Ethiopia. They continued the work in Aʾira, from where in the meantime a number of congregations had been founded and an independent national Church had been organized under the leadership of Dafaa Ğammoo ("Gimbii Board"). New stations were opened in Addis Abäba, Ç̣alliya, Beddellee and Daapoo Gaačoo with schools, handicraft-training centres, clinics, student hostels etc. At Aʾira, a hospital, a dresser-school, a boarding-school (elementary and secondary) and a Bible school were opened. After congregations, with support from Swedish, Norwegian, German and American Lutheran Missions, had formed the ↗Ethiopian Evangelical Church Mekane Yesus (EECMY) in 1959, all H.M. stations and institutions were handed over to the EECMY between 1970 and 1973 under an Agreement on Integration Policy signed in 1969. At present, the H.M. continues to be a partner of the EECMY, supplying finances and personnel to different synods and institutions of the Church.

Hermas

H. (ሄርማስ) is the title of the Ethiopic version of the Greek apocryphal document known as "The Shepherd of Hermas", written in Rome during the middle of the 2nd cent. The work is best described as a compilation of different elements: visions, commandments and parables given by a "shepherd" (who is not Jesus Christ but the angel of repentance) to the author, who calls himself Hermas and speaks in the first person. The numerous versions of the text – Latin, Coptic (Sahidic and Akhmimic fragments), Middle Persian fragments and Gəᶜəz

– suggest that it was well known throughout the ancient world. The Ethiopic version, made in Aksumite times, appears to be the only complete text of the work. For the recently discovered important new Greek texts s. Lusini (2001b).

The ancient catalogue of Christian works called "Muratorian fragment" (3rd cent.) suggests that the author was a brother of Pius, Bishop of Rome. The author's claims about himself are probably fictional, serving rather to emphasize the theme of repentance in the book. Through revelations and moral instruction the reader is urged to maintain the hope for his salvation. At the time of writing, the Church was enthusiastically waiting for the imminent arrival of the Kingdom of God, of which it was the prefiguration. But, with time, moral decay had seeped into the Church. As a response to this situation, the book of H. does not attempt to enforce an extreme moral strictness upon the Church – unlike the Encratites who reject the sinner and his sin – instead, it offers the option of repentance, which results in perpetual hope.

The diffusion of this book, around the Mediterranean and into Africa as far as Ethiopia, reveals the widespread need for Christianity to find an alternative solution for immorality within its ranks. Rather than adopting an attitude of exclusion, H. prefers forgiveness and repentance.

The only two known manuscripts of the Ethiopic version, translated directly from the Greek Vorlage, come from ↗Gundä Gunde. In the same place the only extant copy of the *Antichrist* by ↗Hippolytus was found, a fact indicating the special role played by this monastery in the preservation of literary works going back to the Aksumite age. The first and the oldest manuscript dates to the 15th cent. and has a text closer to the Greek original. It was brought to Italy by Antonio ↗Mordini and is now kept in Parma, Biblioteca Palatina (ms. Parm. 3842 olim Mordini 9; with a photographic reproduction in the Vatican library, Vat. fot. 133, s. Fiaccadori 1994:90, 102 n. 88).

The other manuscript, dating to 1531 and unrelated to the former, was copied in 1847 (by Antoine d'↗Abbadie on a machine by De Jacobis at Gundä Gunde; now in Paris, BN Abbadie 174). In 1860, d'Abbadie, with the assistance of August ↗Dillmann, edited this copy and made a Latin translation.

Jacques-Noël Pérès

Hermits

H., or anchorites (monks who retire and live in solitude), have been one of the most remarkable features of Ethiopian ↗monasticism since its very beginnings. Among the earliest H. was, e.g., *abba* ↗Pänṭälewon (one of the ↗Nine Saints), who lived as a recluse (hence his attribute *zä-ṣomaᶜət*, 'of the cell') to the north-east of Aksum in the first decades of the 6th cent.

The Ethiopian H. (Gəᶜəz **ባሕታውያን**, *baḥtawəyan* [sg. *baḥtawi*], lit. 'solitaries', or **ኅቡኣን**, *ḫəbuʾan*, lit. 'hidden' [cp. ↗*Səwwuran*], also **ናዝራውያን**, *nazrawəyan*, 'hermits', from *nazrawi*, 'Christian', lit. 'one from Nazareth', cp. LesCDic 412) themselves trace their origins back to O.T. prophets (e.g., Elijah) and to such significant personalities of the Christian Egyptian tradition as ↗Anthony the Great and Paul of Thebes, whose hagiographical account was translated into Gəᶜəz from Greek between the 4th and 6th cent. Later, the works of ↗monastic literature were also a paramount source of inspiration.

The H. were revered both by the common faithful and in monastic circles, being admired for the full implementation of the Christian ideal of holiness. The particular distinctive features of their asceticism, still practised by Ethiopian H., are the life in the "desert" and complete seclusion, full rejection of participation in worldly activities and extreme practices of self-mortification. H. are ↗holy men and women, who are believed to be close to God and worthy of receiving

Hermit, Wälläga, 1920s; archives of the Hermannsburg Mission, Hermannsburg (no. 162)

divine revelations; they are able to act as prophets (↗Prophecy) and charismatic preachers. They are also characterized by extraordinary behaviour or even an asocial way of life and distinctive dress (animal skins, yellow robes, or even nudity). In general, they lead a life beyond the authority of the Ethiopian Orthodox Church. In Ethiopia the ancient lavriotic regime seems to survive: there is no clear distinction between cenobitic and eremitic traditions. H. may be affiliated to a monastic community; and monks, after many years of contending in the community, may settle outside their monastery in order to lead an eremitic life (as, e.g., is usual in ↗Waldəbba, famous because of its H. and cenobitic communities, s. Girma Elias 1977), moving eventually further to areas particularly suitable for seclusion (and sometimes traditionally reserved for H.), building their own settlements (s., e.g., Paulos Asrat – Melake Hiywet Baysassie – Bekele Gayid 1954).

H. were always numerous in Ethiopia. However, only a few of them have been included in the category of the ↗saints generally recognized and venerated in the ↗Ethiopian Orthodox (Täwaḥədo) Church. The half-mythic ↗Gäbrä Mänfäs Qəddus, "head of the H.", is, however, one of the most venerated Ethiopian saints; in Ethiopian ↗hagiography H. are referred to with awe and admiration and sometimes described as superior to coenobitic monks. As a recent example of the Ethiopian eremitic tradition, one can recall the famous ᶜAbdalmasīḥ al-Ḥabašī, an Ethiopian H. in Egypt who resided in the 1950–60s near Dayr al-Barāmūs and exercised strong spiritual influence on some senior ecclesiastics of the ↗Coptic church (Meinardus 1961:153–56).

In Ethiopian society, H. play a peculiar role: "violating the rules of etiquette, they exhort men to good deeds, symbolically uniting order with disorder they intervene in politics" (Bauer 1989: 236; concerning politics s.: van der Vlist 2004: 8). Exemplifying the "three key concepts contributing to prophetic social change: alienation, communitas and charisma" (Asmarom Legesse 1994:315), they emerge from their liminal zones especially during times of crises and wars, sharply reacting to current developments. Prophetic leaders such as Ǝsa Lale (arrested by the governor of Č̣änč̣a in 1924), Abbaye of Kambaata (1930s) and Č̣äläke of Gofa (1930s) witness to a similar phenomenon among the people of the South (Balisky 1997:115–32). There are also parallels with the "Spirit or prophetic Churches", which reinforced African views of the essentially unified and "spiritual nature of human existence and the ever-continuing, renewed interpretation of revelation" (Gray in GetLRubMiss 14).

Joachim Persoon

Herodotus

H. (Gr. Hēródotos; b. ca. 485 B.C., Halikarnassos [Bodrum], d. 425 B.C., Thurioi) was the first Greek historian: in Cicero's famous words, "the father of history" (*Leg.* I, 1, 5).

Between 431 and 425 B.C., he wrote the *Historíai* (lit. 'Inquieries', the word was adapted to Latin then meaning 'history') into the places and peoples he encountered during his wide-ranging travels around the Mediterranean. His work became a valuable literary source for scholars from Antiquity to the Middle Ages (from the 10th cent. at least, the Byzantine authors entertained a direct familiarity with it), and was rediscovered in the West during the early Renaissance, when it was soon translated into Latin (Eleuteri 1996). With all the debatability of H.'s authority, many of his statements have been confirmed by modern archaeological and historical research (s., e.g., Pugliese Carratelli 2005 and D'Oriano 2005).

H. was in fact a *lógios*, i.e. a reciter of *lógoi* or 'stories' in prose: the *Historíai* – with almost theatrical elements about battles, political incidents of note and, especially, the marvels of foreign lands – were first presented orally in the Greek cities during major religious and athletic festivals at which he offered performances (and expected payment). They were then arranged into a continuous narrative focusing on the theme of Persia's imperial progress and the threat to the freedom of the Greek as typified by the conflict between the latter and the Persians or "Medes" in the 5th cent. B.C. (↗Iran). Later editors divided the work into nine books, named after the nine Muses (starting from Clio, the "Muse of History").

H.'s many travels across the ancient world encompassed Asia Minor, the Black Sea, Thrace and Macedonia, Tyros, ↗Greece and Sicily, Kyrene and ↗Egypt, and in the *Historíai*, he dwells on descriptions of European, Asian and African milieus, with a strong emphasis on geographic, ethnographic, anthropologic and even linguistic details.

In Egypt, H. ventured as far as Elephantine and the first ↗Nile cataract. Here he reports that the annual flooding of the Nile was said to be the result of melting snows far to the south, and comments that he cannot understand how there can be snow in Africa, the hottest part of the known world – an example of his method of comparing the theories known to him.

Also in Egypt H. collected information on ↗Aithiopía and its customs (*Hist.* II, 2–182 and III, 20–24): rather than with ↗Ethiopia, this country, far to the south, is to be identified with ↗Nubia – the first new material to appear on that place since Homer's poems (↗Greek literature; ↗Historiography). H. thus contributed to the fortunes of the name and notion of "Ethiopia" as a symbolic representative of Africa. Yet, his primary goal was to explain the reasons behind the great war between Greece and Persia, and how Greek and non-Greek cultures were coming into initial contact with Iran, for which he strove to use every available resource: historical details, dreams, oracles, novels, tales, accounts from wise men and priests, and anonymous individuals. The ethnographic (religious and cultural) description of the Ethiopians themselves, who belonged to the geographic edges of the Mediterranean world, formed an integral part of H.'s narrative about the Persian king Kambyses's expedition to Egypt.

Ḫəruy Giyorgis

The church of Ḫ.G. (ኀሩይ ጊዮርጊስ) was constructed in 1876–79 under the patronage of *aṣe* ↗Yoḥannəs IV when he chose the town of ↗Däbrä Tabor in Bägemdər as his capital. It was erected south of the new site, called Sämära, established by Yoḥannəs to the north-east of the former settlement of the governors of Bägemdər and *aṣe* ↗Tewodros II. The rectangular stone church, measuring ca. 26 m long and 16 m wide, was constructed with the apparent assistance of the Italian craftsman Giacomo ↗Naretti.

The church's ↗*aläqa* seems to have had some control over the Saturday market held at Sämära, which may have gained prominence at that time (Pankhurst 1977:261f.; PankHist II, 77f.). During the first third of the 20th cent., under the patronage of *ras* ↗Gugsa Wäle, governor of Bägemdər, the church was redecorated (ChTana 47f.); this work, possibly done by local church-painters, like *aläqa* Kaśa, ᶜAlämu, Bäyyänä and Amrot, was then destroyed by fire (PankHist II, 349; Hammerschmidt – Jäger 1968, pl. 34). Today, the church houses the throne, flag, spear and hand-bell of its royal founder *aṣe* Yoḥannəs IV (Pankhurst 1977:261; PankHist II, 77).

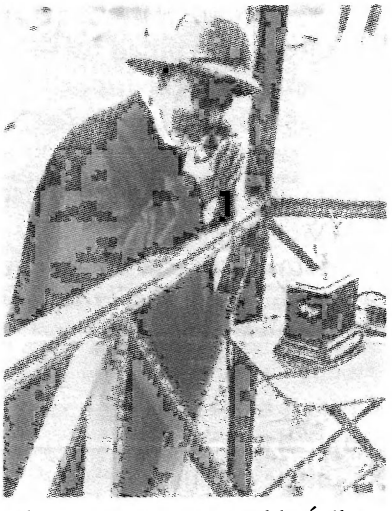
Ḫəruy Wäldä Śəllase

Ḫ. (ኀሩይ ወልደ ሥላሴ, birth name Gäbrä Mäsqäl; b. 8 May 1878, Märḥabete, d. 19 September 1938, Bath, England) was a prominent politician and a leading intellectual of the ↗Ḫaylä Śəllase I era. Ḫ.'s personality was shaped by both traditional and modern education. After being initiated in traditional church education in Mänz and Sälale, he joined the then famous school of ↗Ǝnṭoṭṭo Raguᵓel. It was his mentor and teacher there, *mämhər* Wäldä Giyorgis, who gave him the name Ḫ., by which he has come to be known in history. In Ǝnṭoṭṭo Raguᵓel, he also won the patronage of *ṣäḥafe təᵓəzaz* ↗Gäbrä Śəllase who, impressed by Ḫ.'s liturgical and in particular ↗*aqʷaqʷam* skills, entrusted him with administrative tasks.

Later Ḫ. got acquainted with foreign ideas and languages. He learned English at the Swedish mission school in the northern outskirts of Addis Abäba as well as through his association with Dr. Charles Martin, known as *ḥakim* ↗Wärqənäh. Ḫ. even started taking some lessons in Arabic, but had to abandon them in face of rumours that he had become a Muslim. He was also able to acquire some French through association with a French veterinary team.

Equally significant in broadening Ḫ.'s outlook were his frequent travels abroad. This started in 1911 when he accompanied *däğğazmač* (later *ləᶜul ras*) ↗Kaśa Ḫaylu to the coronation of King George V of England. Subsequent travels took him once again to England and to the United States in 1919 (as a member of the delegation sent to congratulate the Allies on their victory in World War I); to Jerusalem in 1920 and 1923; again to Europe in 1924 as part of the entourage of *ras* ↗Täfäri Mäkʷännən (future Emperor Ḫaylä Śəllase); and finally and most memorably to Japan in 1931.

Ḫ. started the career that eventually elevated him to Foreign Minister in 1914/15 as a secretary in the Addis Abäba municipality. In 1916, following the change of regime, he rose first to the post of director-general and served as acting mayor in 1919–21. His next post was as chief judge of the ↗Special Court (the court set up to hear cases involving foreigners and nationals), with the title of *blatta*. This title



Blattengeta Ḫəruy Wäldä Śəllase; from Farago 1935:127

was elevated to that of ↗*blatten geta*, which has since been associated with his name, when Ḥ. was made director-general of the Ministry of Foreign Affairs in 1927, a prelude to the attainment of the pinnacle of his career on 19 April 1931, when he became Foreign Minister. He kept that post until the Italian invasion in 1936. Although Ḥ. was one of those who had opposed the Emperor's decision to go into exile, he accompanied him to England, where he died.

Ḥ. has left his mark on national life, not only as a diligent civil servant, but also as a prolific writer. He has to his name over 20 books and booklets. These cover a wide range of subjects: history, biographical dictionary, travelogue and fiction. His literary accomplishments won him international recognition, including honorary membership of the German Oriental Society in 1929 and, during his exile in England following the Italian invasion, a post as teacher of Amharic and Gəᶜəz at the School of Oriental Studies (later ↗School of Oriental and African Studies).

Ḫəṣan Moᵓa

Ḥ.M. (**ሕፃን፡ ሞኣ**, also known as Gäbrä Ǝgziᵓabəḥer, fl. under *aṣe* ↗Bäᵓədä Maryam, 1468–78) was a holy monk. He was the son of Arkəledis and his wife Təbe Ṣəyon, from the small village of Därdärre, in Tägulät (Šäwa). His hagiography (e.g., EMML 2353) has not yet been published. According to some traditions, he entered the monastery of ↗Däbrä Bäggəᶜ in Šäwa, where he became a monk and lived in the time of the abbots Yoḥannəs and Zärᵓa Abrəham. He was ordained as a priest by *abunä* ↗Gabrəᵓel. Having heard about Ḥ.M.'s sanctity, Bäᵓədä Maryam requested him to come to the court to teach his son, and he was appointed *qalä nəguś* (lit. 'voice of the king'), i.e., Emperor's spokesperson.

Other traditions, including one circulating today in Däbrä Bäggəᶜ, claim that it was Ḥ.M. who founded this monastery; some others stress his relationship to the line of *abba* ↗Taklä Haymanot of Šäwa or shift his court activities to the time of *aṣe* ↗Zärᵓa Yaᶜəqob (cp. also another account on Ḥ.M.'s life, cited by Sergew Hable Sellase, in ChojPaint 471, n. 6). The church of Däbrä Bäggəᶜ is devoted to Ḥ.M. and his annual feast is celebrated in the monastery on 24 *Ḥamle*, on which day he is inscribed into the *Sənkəssar* (GuiSyn I [404] 388).

Ḥəšmele

H. (**ሕሽሜሌ**, also locally known as Bäᶜatti Abgər) is an ancient archaeological site area in Akkälä Guzay (today in the *zoba* Däbub), Eritrea, approximately 2 km north-east of ↗ᶜAddi Qäyyəḥ (s. map for Ḥərgigo). The H. area is known for ↗rock art, prominent mound features with architectural rubble and ceramic scatters, and the ruins of an ancient building.

Rock paintings at H. are found in two small rockshelters just east of the Asmära road. Descriptions of these paintings were first published by Vincenzo ↗Franchini in 1958 and Paolo Graziosi in 1964. The first rockshelter (referred to as Ḥ.I) is 1.8 m deep and ca. 2.4 m high and contains at least 17 humpless cattle figures (*Bos taurus*) with pincer-like horns and a row of seven

human figures also painted in red color. The second rockshelter (referred to as Ḥ. II) is 2 m deep and 1.6 m high and contains at least one human figure, a series of black-colored bovid figures that may represent long-horned cattle, and a possible elephant figure. The rock paintings at Ḥ. contain elements that are generally similar to both the Sorre Hanakiya and early Dahthami stages of the so-called Ethiopian-Arabian style of rock art documented in the ↗Horn of Africa and possibly dating to between the 3rd and 1st millennium B.C. (Brandt – Carder 1987; Agazi Negash 1997; cp. Červiček 1979).

The preservation of the rock paintings at Ḥ. has been affected by natural exposure to moisture and light, and, in recent years, by vandalism and the smoke of temporary cooking fires placed within the rockshelters.

In the early 1990s the ruins of an ancient roughly rectangular-shaped building made of closely fitted stone were revealed by rock quarrying and construction activities in the Ḥ. area. This building may date to the first millennium B.C. or early first millennium A.D. and was documented by the National Museum of Eritrea, the German Archaeological Mission to Eritrea, and the University of Florida between 1995 and 1997. A protective fence was constructed around the building ruins in 1996.

In 1997 archaeologists from the National Museum of Eritrea and the University of Florida documented and mapped 27 ancient archaeological mound sites via a systematic transect survey in a 2.5 km² area on the north-eastern portion of the ᶜAddi Qäyyəḥ plateau that included the Ḥ. area. Similarities in mound composition, architectural elements, and ceramic traditions among these sites and the ancient urban center of Qoḥayto, located a few kilometers west of Ḥ., tentatively suggest the integration of these sites into a common cultural system. The pottery, for example, shows affinity to that excavated on some of the sites near Asmära (e.g., Daᶜəro Qawlos; Fattovich 1983). Diversity in mound site size and placement on the landscape also is apparent and may be indicative of specialization and interdependence among ↗Qoḥayto and hinterland communities in the ᶜAddi Qäyyəḥ and Ḥ. areas.

Hess, Robert Lee

H. (b. 18 December 1932, d. 12 January 1992) was an American scholar of contemporary colonial and Ethiopian history. H. attended Yale University, earning his B.A. (1954), M.A. (1955) and a Ph.D. (1960) in African History. He also attended the University of Rome (1956-58). He taught at the Carnegie Mellon University, Mount Holyoke College, Northwestern University and the University of Illinois at Chicago, where he also chaired the History department and acted as a Vice-chancellor promoting the study in African and Middle Eastern studies. Among his major scholarly interests were relations between ↗Italy and the Horn of Africa, Ethiopian politics and the history of the ↗Betä Ǝsraʾel, areas on which he published articles, reviewed books and supervised dissertations. He also edited the volume of the *Dictionary of African Biography* dedicated to Ethiopia (EncAfr). H. conducted field research in both Somalia and Ethiopia and worked in Italian archives. He was also one of the convenors of the Fifth ↗International Conference on Ethiopian Studies in Chicago and edited its proceedings (PICES 5b).

From 1979 until his death in 1992, he was President of the Brooklyn College of the City University of New York, which, under his leadership, developed into one of the United States' leading public institutions of higher education. The Hess Collection on Ethiopia and the Horn of Africa and the Robert L. Hess Collection on the continent of Africa of the Brooklyn College Library contain some 5,000 volumes from the late 18th to mid-20th cent., largely devoted to colonial issues and the colonial period. A foundation bearing H.'s name was created at the Brooklyn College.

Steven Kaplan

Ḥəṭumlo

Ḥ. (Tgn. ሕጡምሎ, Arab. حطملو Ḥuṭumlū, Ital. Otumlo) is one of the mainland settlements of ↗Massawa, located some 4 to 5km north-west of the port town (s. map for Ḥərgigo). The name Ḥ. refers to the halophile *ḥuṭum* shrubs (*Suaeda Fruticosa*) that grew in abundance in the area. In ʿAfar, *ḥudúmlu* means 'there are *ḥuṭum* trees'.

The foundation of Ḥ., possibly between the late 18th and early 19th cent., seems to be associated with the migration of settlers from neighbouring ↗Ǝmkullu as a result of deforestation around the latter. In any case Ḥ. owed its existence first and foremost to the availability of water. In the late 1860s Henry Blanc noted that both Ǝmkullu and Ḥ. had about 20 water wells and that new ones were constantly dug. Ḥ. served as the caravan station closest to Massawa and therefore catered to landward or coastward caravans for supplies, provisions and labour. As the population of Massawa island grew beyond the islet's capacity to provide enough housing space, Ḥ. also provided extra residential space for the port's merchants and brokers. The population of Ḥ. was traditionally composed of a fixed urban population that included many families of the coastal commercial and political elite, as well as a "floating" population of pastoralists and agro-pastoralists from around the region (e.g., ʿAd ʿAsker, ʿAd Šuma, Gädäm Sikta) who cultivated in the *wadi* basins near Ḥ. between October and March. This configuration epitomized Ḥ.'s role as a brokerage centre, linking the coast and the interior through a variety of commercial, transportation and labour networks.

An Egyptian report from 1866 stated that Ḥ. comprised 507 stone and wood hut constructions, four water wells and 30 *faddān* (ca. 120 km²) of agricultural land. During the rainy season, Ḥ. provided the Massawa conurbation with vegetables, melons, tobacco, dhurra, maize, cucumbers and bultuc (bulrush millet).

In the early Italian period Ḥ. and Ǝmkullu held one of the most important weekly markets of the colony, where camels, cattle, sheep, butter, hides and other commodities destined for export

Shrine of *sayyid* Hāšim al-Mīrġānī and *šarīfa* ᶜAlawīya at Ḥəṭumlo; photo 2000, courtesy of the author

via Massawa were sold. According to oral data, Ḥ. proper was and still is traditionally distinguished from its northern part, Ḥ. *maᶜəday* (Tgr. 'further away', 'on the other side'). The latter, also called *Otumlo superiore* by the Italians, was inhabited by a floating population, mainly the ↗Ḥabab and the Mäsḥalit. The fixed population, among which were some wealthy and notable Massawans, lived in *Otumlo inferiore*, sometimes in stone houses and residential compounds known as *darät* (Tgr.). In 1938 Ḥ.'s population was estimated at 6,000.

A central aspect of Ḥ.'s importance was its role as a religious centre in the eastern Eritrean region. It was in Ḥ. that the Ḫatmīya brotherhood (↗Islamic brotherhoods) established its centre/headquarters in ↗Sämhar. *Sayyid* Hāšim al-Mīrġānī (1849–1901), the first "official" representative of the order in the Eritrean area, settled in Ḥ. and lived there until his death. He was buried in Ḥ. and a shrine was built in his honour with the financial support of the Italian administration. To this day Muslims from all over the region perform the ↗*ziyāra* to the shrine on 2 *Ġumādā l-āḫira*. Another *ziyāra* commemorating his daughter, *šarīfa* ᶜAlawīya (d. 1940), is performed on 22 *Šawwāl*. The tombs of two other local holy men are found in Ḥ.: *šayḫ* Aḥmad Naǧāš (d. 1872) who was associated with the Qādirīya order and *šayḫ* Muḥammad ᶜUṯmān b. Muḥammad (d. 1898) of the influential ↗ᶜAd Šek family. In the early 20th cent. an Italian colonial manual identified five coral stone ↗mosques and twelve other straw or wooden hut mosques in Ḥ. On the basis of their names, several of these mosques were associated with the Ḫatmīya, Šāḏilīya and Qādirīya Ṣūfī brotherhoods.

Ḥ. was almost totally destroyed during the repressive campaigns of the Ethiopian forces between the 1960s and 1990.

Hetzron, Robert

H. (b. Róbert Herzog, 31 December 1938, Budapest, d. 13 August 1997, Santa Barbara CA) was an eminent linguist, who mainly contributed to Cushitic, Semitic and comparative Afro-Asiatic studies, with a general interest in linguistics and in Hungarian.

Having received a general and Jewish-religious schooling, H. joined the University of Budapest to study Hungarian, Hebrew, Semitic Philology and Arabic. After the defeat of the uprising of October 1956, he moved to Vienna and Paris, where he studied general linguistics with André Martinet, and Amharic with Joseph ↗Tubiana. Later he went to Jerusalem to become a student of Hans Jacob ↗Polotsky and wrote his M.A. thesis on "Object Suffixes in Amharic". H.'s doctoral dissertation, guided by Wolf ↗Leslau in Los Angeles, was on Southern ↗Agäw (1969). He was then appointed professor at the University of California in Santa Barbara, where he remained until his retirement.

H. published several books and numerous articles on various subjects in Cushitic and Semitic linguistic comparison and classification and specific studies on ↗Ethio-Semitic languages, with particular attention to Gurage. In his work *Ethiopian Semitic: Studies in Classification* (Hetzron 1972) he suggested a new systematic classification of Gurage and Ethio-Semitic, based mostly on common morphological innovations (↗Gurage languages). H. significantly contributed to the thorough linguistic description and grammatical analysis of various Ethiopian languages.

Gideon Goldenberg

Heuglin, Martin Theodor von

H. (b. 20 March 1824, Hirschlanden, Württemberg, d. 5 November 1876, Stuttgart) was a German diplomat, naturalist and traveller.

H. came to Egypt in 1850/51 to explore the area between the Nile and the Red Sea coast as well as the Sinai peninsula. Appointed Austrian consular agent to Khartoum (1852), he left with the vice-consul Konstantin Reitz for Ethiopia to conduct negotiations with *ras* ↗Ali of Gondär and *däǧǧazmač* ↗Wəbe Ḫaylä Maryam of Təgray to extend Habsburgs' sphere of economic influence. Crossing the border near Mätämma into the Ethiopian highlands, they proceeded via Wähni and Č̣əlga to Dämbəya province, where they spent some days at the court of *däǧǧazmač* Kaśa Ḫaylu (later *aṣe* ↗Tewodros II) in Gända. A trade agreement was signed, and Austrian subjects were granted exemption from duty in Kaśa's territories in expectation of support for his claim to the imperial crown. Waiting in vain for more than two months for audiences with Ali and Wəbe during the last stops of their journey (Gondär and Däbrä Ǝski), H. conducted zoological studies in the northern Lake ↗Ṭana region and ↗Tämben. Under the threat of the approaching military conflict between Kaśa and Ali, the mission was abandoned and they left for the Nile Valley.

When Reitz died on the way back the following year, H. assumed the Austrian consular duties in the Sudanese capital and was officially appointed vice-consul in 1855. He explored the Bayuda steppelands, the area round Khartoum, the White Nile region and Kordofan, in the latter case exploiting new trade routes to Darfur. In 1857 H. accompanied captain Wilhelm von Tegetthoff on an espionage mission along the African coast from Quṣayr (Egypt) to Berbera (Somalia), exploring the possibilities of creating an Austrian colony with special attention to the hinterland of ↗Massawa and the ↗Danakil shore.

On resigning from the diplomatic service in 1858, H. returned to Europe and headed the German expedition to discover the fate of Eduard Vogel who had previously disappeared in Wadai (Tchad). With obvious colonial intentions, he chose the route by the Red Sea and through Ethiopia. He arrived at Massawa in summer 1861 and conducted an extensive survey of the ↗Dahlak archipelago. Due to severe conflicts along the projected route, the mission failed, and the team split in Kärän. H. remained in Ethiopia, travelling to ↗Ḫamasen, ↗ᶜAdwa, the ↗Səmen highlands and Gondär to Ǝčäbäd south of Mäqdäla, accompanying Tewodros II on a military campaign against the Oromo. Returning via Gondär, Č̣əlga, Wähni and Mätämma to Khartoum in early 1863, he joined the expedition of a Dutch woman Alexandrina P.F. Tinné to the Upper White Nile, exploring the lower reach of the Sobat and the Bahr al-Ghazal. He left with the remainders of the mission via Berber and Sawākin, arriving in Germany in 1865.

In the following years, he investigated Spitzbergen and Novaja Zemlja (1870–71) and participated in a hunting trip to the Sudanese Red Sea coast and northern Ethiopia (1874–75). H. died while preparing for a journey to the island of ↗Soqoṭra.

Michael H. Zach

Hewett Treaty

The H.T. or Treaty of ᶜAdwa was signed on 3 June 1884 between Ethiopia, Britain and Egypt, Britain acting as the protectorate power of Egypt. It was popularly named after the head of the British mission sent for the purpose, Rear Admiral Sir William Hewett.

The H.T. was the result of a British initiative to dismember the already collapsing Egyptian dominion over the Nile and the Red Sea, and rescue the Egyptian garrisons besieged in eastern Sudan by the then victorious Mahdīya forces (↗Mahdists). As Britain had already occupied Egypt, and its forces proved unable to face the Mahdists, London decided to turn to Ethiopia to help rescuing the Egyptians in the towns of Qallābāt (↗Mätämma), Ǧira, Amidib, and ↗Kassala. In late December 1883 William Hewett was sent to Massawa together with the American Mason *bey*, Egyptian governor of Massawa Province, who subsequently acted as the representative of Egypt. Throughout January to May 1884 Hewett and his envoys conducted preliminary negotiations with *ras* ↗Alula Ǝngəda, the governor of ↗Märäb Məllaš in his new capital ↗Asmära. In return for Ethiopian rescue missions they offered to turn Kassala and the country of Bogos (↗Bilin) over to the Ethiopians. They also promised Ethiopia free access to the port of ↗Massawa, leaving the impression that Britain would remain there. The whole arrangement was supposed to turn the Märäb Məllaš into a solidified and expanded Ethiopian province, and Alula, according to the British reports, was all for it. *Aṣe* ↗Yoḥannəs IV, however, was apparently sceptical. It was only in the last week of May that he agreed to meet with the mission in ᶜAdwa and, finally, to sign the treaty on 3 June 1884.

The H.T. proved a turning point in the history of the whole theatre. Ethiopian expeditions did manage to relieve the small garrisons of Qallābāt, Ǧira and Amidib, and in return the country of Bogos, including the Egyptian fort of ↗Kärän, was handed over to Alula's men. The much larger garrison of Kassala, however, was beyond Alula's reach. His attempts at capturing the town, continuing to late 1886, proved disastrous to all concerned, and diverted his attention away from Massawa. Moreover, the vital port was not to be used by the Ethiopians. The British interpreted the wording of the treaty as an Ethiopian abandonment of their old claim to Massawa. Disengaging themselves, they, in fact, enabled the Italians to take Massawa in February 1885.

The H.T. was the only international agreement signed by *aṣe* Yoḥannəs. The man who had sought British (anti-Muslim) partnership in the aftermath of the British intervention of 1868, was led to believe the partnership was finally coming. For the British, however, it was at that time a disengagement enterprise. They mobilised the Ethiopians to fight the Mahdīya while the Italians, from the London point of view, filled the vacuum created in the Red Sea and prevented French domination following the Egyptian retreat. Yoḥannəs thus ended up trading one weak enemy, the Egyptians, for two strong ones. He undertook to provoke the Mahdīya and found himself facing Italians who rather than running a free port soon began their ambitious encroachment from Massawa. Thus, instead of solidifying an Ethiopian Märäb Məllaš, the H.T. began a quick countdown towards the fall of Yoḥannəs and the establishment of Italian ↗Eritrea.

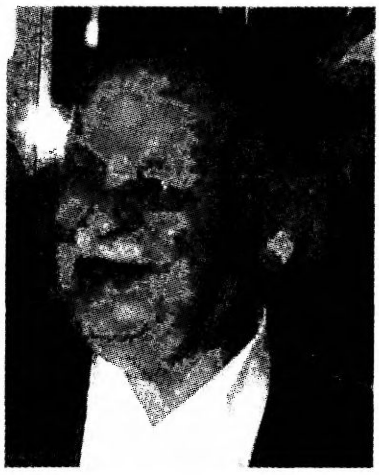
Heyer, Friedrich

H. (b. 24 January 1908, Darmstadt, d. 10 April 2005, Schleswig) was a German historian of the Orthodox and Oriental churches. His research was initially focused on Eastern Orthodoxy and his postdoctoral thesis was devoted to the Church in Ukraine (1951). From 1951 to 1964 he taught at Kiel University. From 1964 to 1976 he held the chair of Konfessionskunde at Heidelberg University.

From 1951 onwards H.'s research centred upon the non-Chalcedonian churches; he began to develop an interest in Ethiopia. He organized conferences on Orthodoxy at the Evangelische Akademie Schleswig-Holstein, which he headed, and invited Coptic and Ethiopian representatives. In 1963 H. went to Ethiopia himself. Thanks to his good contacts with the officials of the ↗Ethiopian Orthodox (Täwaḥədo) Church his visit was particularly fruitful; the result was his book about the Ethiopian Church (1971).

H. played a significant role in the theological relations between Germany and Ethiopia. During



Friedrich Heyer; photo 1999, courtesy of Monika Schilling

his numerous travels to Ethiopia he developed a deep knowledge of traditional ↗education. After the ↗Revolution in 1974, H. decided to support the church schools and monasteries. He established the Tabor Society, Deutsche Gesellschaft zur Förderung orthodoxer Kirchenschulen in Äthiopien e.V. at Heidelberg, a German society that since 1976 has supported (five) traditional church schools in Gondär (Mädḫane ᶜAläm) and Bägemder (Maḫdärä Maryam, Mäkanä Iyäsus and Zuramba, also Betlehem in Gayənt). He also launched the related journal *Kirche und Schule in Äthiopien* in 1975. Together with ↗Śərgəw Hablä Śəllase and a group of Ethiopian students of theology, H. edited the five volumes of the *Amharic Church Dictionary* (AmhChurchDic), and published over 660 articles and monographs during his long academic career.

In 1998 he received an honorary doctoral degree in Theology from the University of Sibiu-Hermannstadt.

Verena Böll

Heyling, Peter

H. (b. 1607/08, Lübeck, d. 1652, Sawākin, also መዐልም፡ ጴጥሮስ *mäᶜalləm* Ṗeṭros, in Catholic sources Pietro Leone) was a German Protestant traveller. The son of a goldsmith from Lübeck, he attended a gymnasium and was educated in the doctrines of the Evangelical Lutheran Church. He studied the writings of Martin Luther, Johann Arndt, Johann Tauler and Thomas of Kempis.

At the age of 20 H. left Lübeck to study law in Paris. There he met Hugo Grotius, who became his teacher and friend. During the height of the Thirty Years War, H. made a journey to Egypt planning to revitalise the ↗Coptic Church with the evangelical teachings of the Lutheran Reformation (↗Protestantism). By then, the ↗Sacra Congregatio de Propaganda Fide, exploiting the inert state of the Coptic Church, was dispatching ↗Capuchin friars to Egypt to unite the "schismatic" Copts with the Apostolic See of Rome.

In 1633–34, H. was in Egypt, where he faced the animosity of the Capuchin missionaries encountered at the Coptic monasteries of Wādī an-Naṭrūn. He studied Arabic and Syriac at the monasteries of St. Macarius and ↗Dayr as-Suryān, being the last visitor who met Syrian monks there in 1634. Known by the Copts as *muᶜallim* Buṭrus, he criticised the "theological errors" and "corrupt practices" of the Coptic Church. In Cairo, he discussed the reformation theology with the Greek Orthodox Archbishop of Jerusalem and joined a group of Coptic and Syrian pilgrims to the Holy Land.

In October 1634 *aṣe* ↗Fasilädäs, returning to the teachings of the Church of Alexandria after his father's alliance with the ↗Jesuits, requested a new metropolitan from the Coptic patriarch Matthew III (1631–46). H. used this as an opportunity to accompany the new *abunä* ↗Marqos on his way to Ethiopia. Whereas the anti-Catholic politics of Fasilädäs, supported by the new metropolitan, led to a tragic end of the Jesuit mission in Ethiopia in 1632, H., who became known in Ethiopia as "*mäwalimu* Ṗeṭros" (and similar), could carry on his Lutheran preaching. He worked for 17 years as educator, missionary, physician and theologian, most of the time in the Gondär area, particularly in ↗Azäzo. Thanks to his friendship with the metropolitan and his anti-Catholic feelings, he was introduced into the royal court and accepted by the nobility. Fasilädäs offered him his only daughter in marriage. It is, however, not clear

which political position he acquired at the court; there are indications that he was nominated *bəḥt wäddäd* (↗*bitwäddäd*; Kropp in PICES 7) It was under his advice that the Emperor convened an ecclesiastical council. H. translated the Gospel of St. John into Amharic, which was then in high demand, but seems to be lost today (Samuel ↗Gobat, however, reported to have seen it still in 1830). H.'s disapproval of Ethiopian piety, however, earned him the expulsion from the country in 1652 via ↗Dəgsa and Massawa. He then moved to the island of ↗Sawākin, where the Turkish *pasha* ordered him to be executed (s. LudHist III, XIV, 366).

H. had in Ethiopia a group of followers, led by Zämaryam of Azäzo and called መናፍቃን፡ ደቁ፡ ለጀርመን (*mänafqan däqqu läğärmän* 'heretic disciples of the German', s. Kindeneh Endeg 2004; cp. ↗Germany). They participated in a synod convened by Fasilädäs, after which they were excommunicated. However, in the 31st year of Fasilädäs's reign, another synod was held in which the group of Zämaryam was in the majority and enjoyed royal support. Throughout the 17th cent., the followers of the ↗*qəbat* polemically styled the *ṣägga ləğ* doctrine (↗*Yäṣägga ləğ*) as *mänafqan däqqu läğärmän*. During the reign of ↗Iyasu I the group was still active. The traces of H.'s missionary activities are still felt in the ↗Ethiopian Evangelical Church Mekane Yesus.

Ḥəzbä Nañ ↗Täklä Maryam

Ḥəzqəyas

Ras Ḥ. (ሕዝቅያስ, fl. 1696–1711) was a person of rank at *aṣe* ↗Iyasu I's court. In 1696, *däğğazmač* Ḥ. publicly accused *blatten geta* Yoḥannəs of corruption. The latter was then kept in the background for several years, neither totally out of favour, nor really condemned. In the first year of his reign, *aṣe* ↗Tewoflos appointed Ḥ. *ras* of Bägemdər, but dismissed him a year later.

The reports on H.'s death diverge. The "short chronicle" states that he died suddenly on 22 August 1711 (BassÉt II, 180 [tr.]; cp. Schneider 1990:119), whilst according to Bruce he was put in prison and tortured after having been involved at Gondär in a conspiracy against *aṣe* ↗Yosṭos (BruNile vol. 2, 546).

Ḥ. had at least two sons: the first was arrested and tortured by Yosṭos in July 1712; the second, *baša* Gäbrä Mädḫən, took part in *aṣe* ↗DawitIII's succession to the throne against ↗Bäkaffa (BassÉt II, 131, 135, 181; DombrChr 270–73). Ḥ. was buried in Ṣädda (BassÉt II, 180).

Ḥəzqəyas

Ḥ. (ሕዝቅያስ, d. 26 March 1813), one of a series of puppet kings of Ethiopia during the ↗*Zämänä mäsafənt*, reigned 1788–94. After the death of his father *aṣe* ↗Iyasu II, he was confined to the royal prison ↗Wähni Amba together with all other possible pretenders to the throne. In 1788 *ras* ↗Aligaz of the Yäğğu Oromo dynasty, one of the king-makers of the epoch, quarrelled with the then king *aṣe* ↗Täklä Giyorgis I. Aligaz deposed Täklä Giyorgis and exiled him to ↗Ǝmäkina in Lasta, putting Ḥ. on the throne instead.

The natural outcome of the political success of *ras* Aligaz was the growing rivalry of other mighty feudal lords within his family. His own brother-in-law *ras* ↗Ḫaylu Wänd Bäwäsän became his most formidable foe. Ḥ.'s ephemeral reign was not only full of rivalries, it was also a pathetic story of how a puppet king who was manipulated by feudal lords tried to manipulate his puppeteers. Such attempts by a powerless king lacking any local power base were doomed to failure. When in 1792 Ḫaylu Wänd Bäwäsän proceeded to Ǝmäkina and released Täklä Giyorgis, this was practically the end of Ḥ.'s reign. His main supporter Aligaz was defeated and had to withdraw into his native province of Yäğğu. In 1794, Ḥ. finally ceased to be a sig-

nificant figure. He was buried in ↗Gondär at the church of Adäbabay Täklä Haymanot.

Sevir Chernetsov

Hiddii

H. is the Oromo name for a thorned solanaceous plant (*Solanum campylacanthum*, *Solanum coagulans*, *Solanum adoense*, *Solanum unguiculatum*, Amh. *ənbʷay*) that bears prolific quantities of hard fruits, which look rather like small yellow and orange tomatoes. The main types of H. are *h. fardaa*, *h. gaagaa*, *h. loonii*, *h. re'ee* and *h. Waatitti*.

Sprays, handfuls or containers of the fruits are a common Oromo symbol of fertility and fecundity (cp. ↗*Asennaa*). H. represent livestock in children's games and in the semi-serious game of young adults a game called *hiddii looni hirratani*, as well as in some rituals. It has been reported that H. could be used as a sacrifice if no suitable animal was available. Crushed H. are used to soften ↗leather. The cooked pulp can be used to soften the hair. An infusion of one variety is used against coughing and diarrhoea in children. An apotropaic quality was ascribed to H.

Highland East Cushitic

According to the most widely accepted classification, the H.E.C. languages form a subgroup of the East Cushitic languages, in their turn a branch of the ↗Cushitic language family. The second largest group within East Cushitic is the ↗Lowland East Cushitic languages. Hetzron (1980) classified H.E.C. together with the ↗Agäw languages (Central Cushitic) in a group which he labelled Highland Cushitic languages, but this classification has been rejected by Hudson (1981) and later by Tosco (2000).

The H.E.C. languages are ↗Burği, ↗Gideʾo, ↗Hadiyya (including ↗Libido), ↗Kambaata (including ↗Allaaba, ↗Qabeena, and ↗Ṭimbaaro) and ↗Sidaama. They are spoken by probably ca. 6,000,000 people living in southern central and south-west Ethiopia. The largest number of speakers accounts for Sidaama (ca. 2,000,000) followed by Hadiyya (ca. 1,000,000), Gideʾo (ca. 650,000) and Kambaata (ca. 500,000). Allaaba has ca. 130,000 speakers and Ṭimbaaro ca. 80,000. The smallest languages are Burği, Libido, and Qabeena, which total less than 40,000 each. In addition, Burği is spoken in northern Kenya by a group of ca. 7,000 people who immigrated from Ethiopia. For location s. maps for separate languages.

The classification of Burği within H.E.C. had been a topic of discussion in the first half of the 20th cent. This language was not considered to be related to H.E.C. by several scholars (for an overview of the discussion s. Hudson in Bend-NonSLang 237ff.). The affiliation of Qabeena remained unclear until Crass (2001) classified it within the Kambaata-group, the closest related language being Allaaba.

According to Hudson (1981) the H.E.C. languages spread from the south, i.e. the Burği area, to the north, i.e. the area now settled by the Kambaata and Hadiyya. The first split produced Burği and Gideʾo. In the course of time Sidaama split off from Gideʾo, Kambaata from Sidaama and Hadiyya from Kambaata. This process took place some 1,500 to 2,500 years ago (Hudson 1981:121).

Today, most of the H.E.C. languages are written in primary education and in publications with a modified version of the Latin alphabet. The Ethiopic ↗script (*fidäl*) is used only for primary education in Qabeena.

Phonological characteristics of H.E.C. are a five-vowel system (*i*, *u*, *e*, *o*, *a*), a phonemic distinction between short and long in vowels and consonants, ejective plosives and affricates, and (at least in some languages) whispered vowels as allophones of short vowels in word final position. Hudson (1989:11f.) reconstructs the following consonants for Proto-H.E.C.: *tt*, *d*, *k*, *g*, *č*, *č̣*, *ʤ*, *h*, *l*, *ll*, *r*, *rr*, *m*, *mm*, *mʾ*, *n*, *nn*, *nʾ*, *w*, *ww*. Stress is phonemic in Allaaba, Hadiyya, Kambaata, Libido, Qabeena, Sidaama and probably in the other H.E.C. languages. Morphonological characteristics are an epenthetic vowel *i*,

partly nasal metathesis in the first person plural of the verbs and different kinds of assimilations.

Verb derivation includes the suffixes *-am* for passive, *-s* and *-siis* for causative, and *-d/-ʾ* and *-aqq* for medial. Subject agreement is marked by morphemes suffixed directly to the verb stem. The morphemes follow the Afro-Asiatic subject agreement pattern, namely 1st pers. sg. *-ø/-y*, 2nd pers. sg. and 3rd pers. sg. fem. *-t*, 3rd pers. sg. masc. *-ø/-y*, 1st pers. pl. *-n*, 2nd pers. pl. *-t* and 3rd pers. pl. *-ø*. 2nd and 3rd pers. pl. are marked by additional morphemes to distinguish them from 2nd and 3rd pers. sg. masc., respectively, e.g. *-ak* in Libido and *-oon/-een* in Qabeena. Tense/aspect is marked by vowels following the subject-agreement markers. In main predication other suffixes follow the aspect vowels in most of the persons. Typical are *-mm* or *-nn* for 1st pers. sg. and 1st pers. pl. The occurrence of these suffixes led to a "new compound suffixal conjugation" which is considered to be the main innovation of H.E.C. (Tosco 2000:94).

Furthermore, a remarkable number of sequential and adverbial converbs must be distinguished. Sequential converbs are used mainly to describe sequential events; adverbial converbs refer to temporal, conditional and other adverbial relations.

Verbs composed of an ideophone and the verb 'say' for intransitives and 'do' for transitives are found in all H.E.C. languages. The verb *y-/i-* 'say' fuses phonologically with the ideophone so that it is sometimes difficult to distinguish a compound verb from an ordinary verb. In Libido this is the case, e.g., for the verbs *baqimma* 'accroach' vs. *baq(y)imma* 'awaken', *qullimma* 'be bald' vs. *qul(y)imma* 'be afraid', *lappimma* 'grease oneself' vs. *lap(y)imma* 'recline' and *wiṭimma* 'sprinkle' vs. *wiṭṭ(y)imma* 'assemble'.

Nouns are marked for case, gender and number. Concerning case, the most prominent feature is the fact that the accusative is the unmarked case. It is used in citation and for marking objects of transitive verbs and predicates of nominal sentences. Some scholars call this case "absolutive". The nominative, however, is restricted to marking subjects of both intransitive and transitive verbs. Languages of this type (called "Marked Nominative Languages") are found quite often in southern Ethiopia and neighbouring countries, but are extremely rare in the rest of the world. The masculine gender is unmarked, whereas feminine is often marked by the suffix *-ta* (derived from the feminine demonstrative determiner *ta*). Number is generally unmarked in citation but may be marked by special suffixes for singular and plural.

Verbal nouns do not change their behaviour regarding case assignment, i.e. case-marking of the argument(s) does not change in relation to the verb from which the verbal noun is derived. Case marking of the verbal noun depends on its syntactic function in the matrix clause. The Libido sentence *mánči*$_1$ *waasa*$_2$ *ʾangan*$_3$ *ʾituko*$_4$, 'The man$_1$ (NOM) ate$_4$ the food$_2$ (ACC) with his hands$_3$ (INSTR)' shows after nominalization as *mánči*$_1$ *waasa*$_2$ *ʾangan*$_3$ *ʾitimma*$_4$ *mooʾummo*$_5$, 'I saw$_5$ the man$_1$ eating$_4$ the food$_2$ with his hands$_3$'. The accusative of the verbal noun *ʾitimma* 'eating (ACC)' is assigned by the verb *mooʾummo* 'I saw'.

The unmarked word order in H.E.C. languages is Subject – Object – Verb. Modifiers precede the head noun. Nominalized verbs are used frequently, especially in focus constructions. Nominalization on fully inflected verbs is marked by morphemes derived from the demonstrative determiners: *ka/ha* (masc. acc.), *ku/hu* (masc. nom.), *ta* (fem. acc.), *ti* (fem. nom.), e.g. Qabeena *ta karšíta ʾasseemmáa-hu ʾabba-há-ʾi*, 'The one who gave me the money is my father' vs. *ta karšíta ʾasseemmáa-ti ʾeezé-ta-ʾi*, 'The one who gave me the money is my mother'.

The reconstructed ten-word list is: 'one' **mitto*, 'two' **lamo*, 'three' **sase*, 'fire' **giira*, 'water' **waʾa*, 'blood' **ṭeega*, 'sun' **arre* (not attested in Burǧi), 'moon' **agana*, 'tooth' **inqo*, 'tongue' **arrabo* (Hudson 1989).

Hiǧra

H. (Arab. هجرة, 'emigration') most commonly is the name by which the emigration of the Prophet ↗Muḥammad from ↗Mecca to ↗Medina in 622 A.D. is known. In Ethiopian context, however, the particular importance is associated with the so-called "first H." (*al-hiǧra al-ūlā*, after ↗Ibn Isḥāq), i.e. the emigration of a group of early followers of Muḥammad to al-Ḥabaša, most

probably to ↗Aksum (although the town is not mentioned in the sources) in and after 615 A.D.

In his youth in Mecca, Muḥammad may have learned about Ethiopia through his paternal grandfather ᶜAbdalmuṭṭalib, who is said to have been in contact with ↗Abraha, and to have entertained commercial relations with Ethiopia. Muḥammad also met with Christian Ethiopians and even spoke some Gəᶜəz (Ibn Saᶜd 1906:72; Jeffery 1938:305ff.).

Unable to protect his followers against the ↗Qurayš, as Ibn Isḥāq puts it, Muḥammad sent them to the safety of Ethiopia for fear of apostasy. Recent western research has considered further reasons to account for the emigration to Ethiopia. Thus, certain hints in the sources may be interpreted as signs of strong frictions between two rivalling groups in the young Muslim community, the schismatic danger which Muḥammad counteracted by his recommendation to one of the two groups to emigrate (cp. Watt 1953:113–16).

Among the first emigrants were the later *ḫalīfa* ᶜUṯmān b. ᶜAffān, Muḥammad's daughter Ruqayya, and Baraka Umm Ayman, his former nurse, who was of Ethiopian origin. After three months a rumour that the Qurayš leaders had accepted ↗Islam brought this group back to Mecca. Ibn Isḥāq attributes the first remigration movement to the easing of the Muslim community's situation in Mecca owing to Muḥammad's temporary acknowledgement of the three goddesses (in the "satanic verses"; s. aṭ-Ṭabarī ed. de Goeje et al. 1879–1901, vol. 1, 1193; Ibn Isḥāq tr. Guillaume 1955:165ff.). But when the rumour turned out to be false, a second group of at least 132 Muslims went to Ethiopia in 616 A.D. According to Ibn Isḥāq (tr. Guillaume 1955:148), the total number of migrants was 83 or 84 adult men. Most Western historians are of the opinion that there were not two streams of emigrants, but only one (cp., e.g. Buhl 1906:13–22). Whatever the case, Muslim and Western scholars alike consider the first H. as a historical event (cp., e.g., Nöldeke 1914:163f.). H. is not mentioned in the Qurᵓān, but is confirmed by a relatively old document the authenticity of which has never been doubted: the letter of ᶜUrwa b. az-Zubayr (d. around 712 A.D.) to the *ḫalīfa* ᶜAbdalmalik (r. 685–705), quoted by aṭ-Ṭabarī (ed. de Goeje 1879–1901, vol. 1, 1181).

The emigrants were well received by the *nəguś* (*an-↗naǧāšī*, as he is referred to in Islamic sources, ↗Aṣḥam[a] b. Abǧar/↗ƎllälaṢäḥam), who resisted the appeals of emissaries from the Quraÿš to send them back. During an audience Muḥammad's cousin ↗Ǧaᶜfar b. Abī Ṭālib explained the Prophet's teaching. He quoted from *sūra* 4:171, "Jesus, son of Mary, is the apostle of God and His word, which He cast into Mary, and a spirit proceeding from Him", and from the first part of *sūra* 19, which is a paraphrase of Luke 19:16–34. On the other hand, Ǧaᶜfar also underlined the Oneness of God. The *naǧāšī* declared that the difference between Islam and Christianity was not greater than a stick (cp. DonHaySirat 242, n. 16) and allowed the Muslims to stay in his country under his protection. According to Islamic tradition, the *naǧāšī* eventually embraced Islam.

According to Ibn Isḥāq (tr. Guillaume 1955: 169), the number of the emigrants who returned to Mecca before Muḥammad's H. to Medina, was 33. Some of them took part in the Prophet's H., some stayed in Mecca. Ibn Saᶜd (1906:79) mentions that a group of emigrants returned to Arabia while the Prophet was in Ḫaybar, thus in the year 7 H. [628 A.D.]. The emigrants who returned from Ethiopia and came to Muḥammad were recognized by the Prophet as participants of two H. and as *muhāǧirūn* ('emigrants'; s. Ibn Saᶜd 1906:79, 1904:205; cp. also Rodinson 1961:143).

Some 20 Muslims had died in Ethiopia, and their tombs are venerated in ↗Nägaš.

H. played the role of a "foundation myth" for the Muslims of the Horn of Africa in general and for the inhabitants of the coastal lowlands (↗Sāho, ↗Iṯafalo) and the ↗Ǧäbärti in particular. The myth is alive in contemporary Islamic discourse as shown by a considerable number of booklets published in Addis Abäba (cp., e.g., Aḥmäd Aḥmädin n.d.; Mäḥmud Šakir 1995/96; Muḥammäd Ṭoyyəb 1998/99). The H. to Ethiopia plays also a crucial part in the discussion of modern Muslim theologians. The "Abyssinian model" is the main argument for adherents of the doctrine that Muslims can emigrate to countries dominated by non-Muslims (cp. e.g., Masud 1990:42ff.).

The high esteem Ethiopia initially enjoyed in Islam is reflected in the great number of Muslim traditions dealing with the theme of the first H. They are found in the classical collections of traditions, codified in the 3rd cent. H. [9th cent. A.D.]. By that time, however, the memory of the privileged position of Ethiopia in regard to Islam had faded away. Already by the end of the 1st cent. H. [7th cent. A.D.] the attention of Islam shifted from Ethiopia to the east, and by the beginning of

the 3rd cent. H. [9th cent. A.D.] to the Turks. The special relation with Ethiopia became a memory of the past (cp. van Donzel in StudAeth 109–14). During the following centuries, tensions between Islam on the African coast and Christian Ethiopia grew, and culminated in the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī.

Ḥimyar

The term Ḥ. originally designated a tribe of ancient Yemen and the region of its settlement; later on the Ḥ. became the leading people of the last South Arabian empire. They are frequently mentioned as *ḥmyr-m* in the Epigraphic South Arabian ↗inscriptions of the middle and late periods and in the royal ↗Gəʿəz inscription in monumental South Arabian script from ↗Aksum, from the time of king ↗WʿZB (RIÉ no. 192.5); as *ḥmr-m* in the royal inscriptions from Aksum of the time of King ↗ʿEzana in Gəʿəz in monumental South Arabian script (RIÉ nos. 185/I.1; 185bis I.1; 186.2); in non-vocalized Ethiopic script as **ሐምየረ**, *ḥmyr* (RIÉ no. 185/II.1) and **ሐምረ**, *ḥmr* (RIÉ no. 185bis II.1).

The Arab tradition knows them in the rare morphological form حِمْيَر, *ḥimyar*. Both the form **ሐምር**, *ḥəmer*, found in two Gəʿəz inscriptions from Aksum of the time of King ʿEzana (RIÉ nos. 188.2; 189.2–3) and in a fragment from South ↗Arabia (RIÉ no. 266.2), and the variant **ሐምር**, *ḥamer*, attested in the Gəʿəz inscription from Mārib (RIÉ no. 195 II.17), point to an original pronunciation *Ḥamēr* or **Ḥumēr/Ḥumayr* respectively. The last forms are the base of Greek Ὁμηρῖται, attested, e.g., in the Greek inscriptions from Aksum of the time of King ʿEzana (RIÉ nos. 270.2; 270bis.1; 271.6–7) with the variant Ὁμηρεῖται in a fragmentary text from Meroë (RIÉ no. 286.1).

The Ḥ. originally settled in the south-western part of South Arabia. Towards the end of the 2nd cent. B.C. they freed themselves from the authority of Qatabān and gradually established an autonomous realm. The first mention of the Ḥ. is to be found towards the end of the 1st cent. B.C. in the Ḥaḍramitic inscription RÉS 2687 on the defensive wall of al-Bināʾ which protected the access to ↗Ḥaḍramawt from the seaport Qanaʾ on the Erythraean Sea, on the coast of which the Ḥ. had gained ground. In many campaigns the Ḥ. conquered the southern parts of the Sabaean territory, and founded their capital Ẓafār in one of the most fertile regions of the Yemenite highlands. The ↗*Periplus of the Erythraean Sea* (ch. 23), an early 1st-cent. Greek handbook for seafaring merchants, referred to Ẓafār as a *metropolis* and the residence of the legitimate king of the Ḥ. and of the Sabaeans. In his *Natural History* (VI, 161) ↗Pliny "the Elder" remarks that the Homeritae are a tribe whom Aelius Gallus during the Roman campaign in the year 25 B.C. found to be the most numerous of the South Arabian peoples. In the struggle for supremacy that took place in Yemen in the first two centuries A.D. between Sabaʾ, Ḥ. and other dynasties of the highlands, Ḥ. succeeded in strengthening its dominant position, so that its rulers could be justified in bearing the title of "king of Sabaʾ and Ḏū-Raydān" (*mlk/sbʾ/wḏrydn*). Ḏū-Raydān ('the master of Raydān', lit. 'he/the one of Raydān') was the title by which the rulers of Ḥ. styled themselves after the castle Raydān sheltering their capital Ẓafār. This name is also found in the titles of the Ethiopian kings in the royal inscriptions from Aksum of the time of King ʿEzana, as *rydn-m* in Gəʿəz in monumental South Arabian script (RIÉ 185 I.1; 185bis I.1) beside *zm/rydn-m* (RIÉ 186.2), and in non-vocalized Ethiopic as *rydn* (RIÉ 185 II.2) and *rd* (RIÉ 185bis II.1), furthermore as *zä/räydan* in Gəʿəz inscriptions from Aksum of the same king (RIÉ

nos 188.3; 189.3) and two centuries later in the inscription of King WʿZB from Aksum in Gəʿəz in monumental South Arabian script as *ḏrdn* (RIÉ no. 192.6). The Greek versions of the "trilingual" inscriptions from Aksum of King ʿEzana offer the transcription Ῥαεισδᾶν (RIÉ nos. 270.2; 270bis.2) and Ῥεεισδᾶν respectively (RIÉ no. 271.7).

From approximately 200 to 270 A.D. there is plenty of South Arabian epigraphic evidence of Abyssinian presence in the western coastal plain of Yemen and of Abyssinian military activities there. The Sabaean king ʿAlhān Nahfān allied himself with the Aksumite ruler Gadarat (↗GDR[T]) against Ḥ. (CIH 308), probably to restrain the latter from controlling seafaring on the Red Sea. Once even Ẓafār had to be defended from the attack of an Ethiopian army which had marched to the town.

Later on, Ḥ. sought assistance from King ʿAḏebah with the Ethiopian allies from Sahratān, i.e. the Yemeni Tihāma, against the Sabaeans. It is obviously a historical reminiscence of this period that in the middle of the 4th cent. King ʿEzana's titulary includes Ḥ. with its castle Raydān and Sabaʾ with its castle Salḥīn (e.g., RIÉ 187.2; 188.2–4).

Around the year 280 A.D., during the reign of the Ḥimyarite king Yāsirum Yuhanʿim, the traditional Sabaean dynasty in Mārib ceased to exist, and towards the end of the 3rd - beginning of the 4th cent. the Ḥimyarite king Šammar Yuharʿiš and his successors succeeded in conquering Ḥaḍramawt, through which he became the sole ruler in South Arabia. He and his successors could therefore claim the title of kings of "Sabaʾ and Ḏū-Raydān and Ḥaḍramawt and Yamanat" (e.g., Ja 656).

About the year 342 A.D. the Byzantine Emperor Constantius II sent ambassadors under the leadership of a certain ↗Theophilos "the Indian" to the ruler of the Ὁμηρῖται, and as a result of the mission three churches were built between the Red Sea and the Persian Gulf, one of them in the Ḥimyarite capital Ẓafār (s. also ↗Byzantine Empire). Jewish and Christian missionary work gradually caused the decline of the traditional worship of the mainly astral deities. The first testimonies to Ḥimyarite monotheism are to be found in two inscriptions from Ẓafār dated to 378 A.D., in which King Malkikarib Yuhaʾmin and two of his sons record the building of palaces in their capital "through the power of their Lord, the Lord of Heaven" (Gl 389 = RÉS 3383; Bayt al-Ašwal 2 = Ga 3). In the first third of the 5th cent. under the reign of the mighty ruler Ab(u)karib Asʿad, the Asʿad Kāmil of the Arab tradition, the royal title was upgraded to "(king) of the Arabs of the highland and of the lowland" (Ry 509). This formula is evidence of the expansion of the Ḥimyarite realm to the north and of the integration of Bedouin tribes of central Arabia into the Ḥimyarite dominion.

When King ↗Yūsuf Asʾar Yaṯʾar, who professed the Jewish faith, came to power, probably in 517 A.D., he launched military operations against both the Ethiopians in Southern Arabia and their allies, the local Christians. According to the testimony of three Late Sabaic rock-inscriptions (Ry 508, Ja 1028 and Ry 507), the Ethiopians in Ẓafār, three hundred in number, were killed and the church there was burnt. King Yūsuf rejected the long titulary and named himself simply "king of all the tribes" (Ja 1028.1), whereas the institutional term "kingdom of Ḥ.", on which God's salvation is called down, is epigraphically attested once (Ry 507.11). In 518 or 523 A.D. the besieged town of ↗Nağrān was taken and the persecution of the Christians occurred during which many died a martyr's death. The ↗martyrdom of the Ḥimyarite Christians caused a great consternation in the Christian Orient and prompted military intervention and an invasion by an Ethiopian army in 523 or 525 A.D. The expedition was led by the Ethiopian King ↗Kaleb Ǝllä Aṣbəḥa himself and was supported by the Byzantine emperor ↗Justin who put ships at the disposal of the Ethiopians to cross the Red Sea. The South Arabian troops were defeated, King Yūsuf was killed and the Yemen became an Ethiopian protectorate. Christian parishes were founded, churches were built and a local Christian nobleman named ↗Sum(u)yafaʿ Ašwaʿ (Ἐσιμιφαῖος) was chosen to reign as a vassal of the Ethiopian king (Procopius, Bell. I, 20).

Later on, ↗Abraha, an officer of the Aksumite army, came to power through a revolt (he is epigraphically attested in four Late-Sabaic inscriptions dated between the years 543 and 553 A.D.). Abraha claimed the long titles of the former Ḥimyarite dynasty, and according to the long inscription set up by him at the dam of Mārib his troops consisted of Ethiopians and Ḥimyarites (CIH 541.25f., 75). During his reign ↗Gregentius was appointed archbishop of Ẓafār, to whom the Leges *Homeritarum* ('Laws of the Ḥimyarites') are attributed, a collection of regulations which mainly reflect administrative practice and circumstances of life in the Byzantine Empire in later times.

Between 570 and 575 A.D. the Abyssinians were expelled from the Yemen by the Persians with the help of the legendary Sayf b. Ḏī Yazan, and South Arabia became a province of the Sassanian Empire. In the year 628 A.D. the then Persian governor converted to Islam and the Yemen turned into a Muslim country. Since the time of the spread of Islam the terms Ḥ. and Ḥimyaritic were still current among the population of the Yemen, the Arab writers called all inhabitants of pre-Islamic South Arabia Ḥimyarites and the epigraphic documents in *musnad*-writing, which they had left, Ḥimyaritic. For the Yemeni author al-Hamdānī in the first half of the 10th cent. Ḥimyaritic was still a living and familiar speech in some parts of the Yemen, but he obviously meant under this name either a dialect of Yemeni Arabic or an unwritten local language, different both from Arabic and Old South Arabian. Centuries after the fall of the realm of Ḥ. another Yemeni patriot, Našwān b. Saʿīd al-Ḥimyarī (d. 1177), in his famous *Ḥimyarite Ode* (*al-Qaṣīda al-Ḥimyarīya*) celebrated the might and grandeur of the Ḥimyarite kings who had once ruled over (South) Arabia.

Walter W. Müller

Ḥimyarites, Book of the

In 1924 Moberg published the fragments of 49 chapters of a previously unknown Syriac work: chs. 1–7 are lost, a summary of the contents alone being preserved. The work, conventionally cited as the "B.Ḥ.", describes events of the years ca. 518–23 A.D. (Beaucamp et al. 1999–2000:73–77, 80; cp. Fiaccadori 2003:184f., 232f.): namely, the spread of ↗Judaism and ↗Christianity in South Arabia (chs. 1–3); the first Aksumite intervention in South Arabia (chs. 4–7); the persecution of Christians at Ẓafār, ↗Naǧrān and ↗Ḥaḍramawt (chs. 8–36/37); the second Aksumite intervention and the establishment of Aksumite sovereignty in South Arabia (chs. 38–49).

The text of the B.Ḥ. is preserved in only one single fragmentary manuscript, copied in Qarya(t)ên on 10 April 932 (colophon in Moberg 1924:xxf.). The description seems to depend on eyewitnesses, with no use of written sources, and the author is unknown: neither Moberg's (1924: lxvif.) nor Shahîd's (1963 and 1989:166–71) identifications, with Sergios/Georgios of Ruṣāfa and ↗Simeon of Bê(t) Aršâm respectively, are totally convincing. The text – however relying upon the two famous Letters of Simeon (Beaucamp et al. 1999–2000:19–24) – might have been composed in Syria not long after the events.

In connection with Ethiopia, chs. 4–7 and 38–49 of the B.Ḥ. are of major importance. In ch. 4 the Aksumites, informed by Bishop Thomas about the events in South Arabia, are triggered to intervene there on account of a first persecution of Christians, about which otherwise nothing is known. The heading of ch. 5 mentions the Aksumite commander *Ḥywnʾ*, identified by Drewes (1978) with *Ḥyn* in the Ethiopic inscription RIÉ no. 199.34f. – both names loosely recalling that of the Aksumite king ↗Eon. After restoring peace in the Yemen, the Ethiopian army leaves the country (ch. 7). Some Abyssinians stay in Ẓafār, keeping their own church. The second persecution (chs. 8–36/37, connected with the name of Ḏū-Nuwās (↗Yūsuf Asʾar Yaṯʾar), starts with the burning of the Ethiopian church in Ẓafār (ch. 8, confirmed by the Sabaic inscriptions Ry 507.3, Ry 508.3, Ja 1028.3, s. Beaucamp et al. 1999–2000:34).

Within chs. 38–49, reporting about the second Aksumite intervention, only chs. 42–49 are preserved, albeit heavily damaged. After the death of the Jewish king is recounted in ch. 42, the subsequent parts of the text do not contain much historically relevant material. The end of ch. 48 states that the Aksumite king ↗Kaleb stayed in South Arabia for seven months, built a number

of churches (a detail also found in the Vita of Archbishop ↗Gregentius of Ẓafār), appointed priests and a viceroy, and left there some Abyssinian notables when he returned to Ethiopia.

Hippolytus

H. (Gəᶜəz ሂጶሊጦስ, Hepoliṭos, directly from Gr. Ἱππόλυτος; or አቦሊድስ, Abolidəs, also አቡሊድስ, Abulidəs, አቡሊዲስ, Abulidis, አቡሊዳስ, Abulidas, ባልዳስ, Balədas, via Arab.), traditionally a Roman presbyter or even a bishop and antipope, also a martyr (d. 235 A.D.), one of the most important Christian writers of his time, flourished between the second half of the 2nd and the first half of the 3rd cent. H., once identified with the character represented in a statue discovered in Rome in 1553 and now in the Vatican Library, was traditionally credited with the authorship of Greek homilies, commentaries, and exegetical, canonico-liturgical (the ↗*Traditio Apostolica*) as well as chronographical (a *Chronicon* up to the year 235) and other writings mentioned in various sources, from ↗Eusebius of Caesarea to later exegetical collections (*Catenae*; for full list, including the spurious works, cp. CPG I, 256ff., nos. 1870ff.).

The traditional view assigning to one single author the whole corpus of works once classified as "Hippolytean" has been severely criticized by numerous scholars since the mid-20th cent. (cp. Simonetti 2000; Potestà Rizzi 2005) and is no more tenable; however, there is no generally accepted new hypothesis. A popular (Simonetti's) alternative suggestion is that there were at least two writers, both named H. and active in Rome at the beginning of the 3rd cent.: (1) the Oriental bishop known to Eusebius and Hieronymus, i.e. the author of the anti-heretical writing *Contra Noetum*, the treatise *On Christ and the Antichrist*, a commentary on the Biblical book of Daniel and of other exegetical works; (2) the author of the *Elenchos* ('Refutation' in Gr.) and of the Biblical chronology. Their relationship with H. the martyr is still to be ascertained. It is also generally acknowledged that the *Traditio apostolica*, lost in its original (Greek) text but preserved in Ethiopic (cp. Horner 1904; Duensing 1946) and in other versions, is to be considered a writing of its own. Partially derived from it, and explicitly attributed to H., the *Canons of Hippolytus*, are also an original Greek canonico-liturgical work (CPG no. 1742). They were composed later in Egypt (4th or first half of the 5th cent.), and are fully preserved only in the Arabic version in 38 canons (cp. Coquin 1966 [text, tr.]; Bradshaw – Bebawi 1987 [tr.]). Contrary to the statement made by Ludolf (1691: 304) and reiterated by scholars depending upon him, and in spite of the mention of 38 canons of H. in the so-called "Coptic index" preserved in some mss. of the ↗*Senodos* (cp. BauSen I, 7 [text]), as well as among the sources of the ↗*Fəṭḥa nägäśt* (cp. Guidi 1897–99:13 [text] = 14 [tr.], no Ethiopic version of the *Canons of Hippolytus* has been discovered so far (cp. Bausi 1991:13f., nn. 40–43; 2003:25). The traditional understanding of H.'s character is reflected in the *Sənkəssar* entry for 6 *Yäkkatit* (BudSaint 596; ColSyn X, 492–95; already in the Copto-Arabic Synaxarium), where there is to be found the half-legendary story of the invention of the relics of the martyr H., "patriarch of Rome", man of learning, author of homilies and of "38 canons on the law of the

Church", who was cast into the Red Sea and died on 5 *Yäkkatit* (cp. BudSaint 596).

Ethiopian literary tradition has preserved two writings of H., both belonging to the period of the early Aksumite translations: (1) the most important is the treatise *On Christ and the Antichrist*, which like other rare items preserved in books from ↗Gundä Gunde (here from ms. no. 151 [according to a checklist different from Mordini 1953; cp. Caquot 1965:166], fols. 90r–143v), was directly translated from Greek, probably by a non-Greek speaker, and entitled መጽሐፈ ምሥጢር ዘሄጶሊጦስ በእንተ ክርስቶስ ወበእንተ ሐሳዌ መሲሕ (*Mäṣḥafä məṣtir zäHepoliṭos bä'əntä Krəstos wäbä'əntä Ḥassawe Mäsiḥ*, 'Book of the Mystery of H. on Christ and on the False Messiah'; cp. Caquot 1965 [text]; Beylot 1991 [tr.]; Lusini 2001:45ff.). The original Greek text is preserved (CPG no. 1872), and also Slavonic and Georgian versions are known, as well as Syriac and Armenian fragments (cp. Norelli 1987); (2) a second writing circulated under the name of Philo or Theophilus of Carpasia and published from mss. BritLib Orient. 8192, fols. 72va–77ra, and EMML 1763, fols. 201v–204v (cp. Raineri – Tedros 2003; but also attested by ms. EMML 8509, fols. 99r–102r, as earlier noted by Fiaccadori 1989:150; for fols. cp. Sergew Hable Sellasie 1987–88:17) has been recently identified with the important spurious Hippolytean homily "In sanctum Pascha" (CPG no. 1925 = 4611; cp. Voicu 2004). The erroneous mention of an *Abulidəs* in the ↗*Haymanotä abäw* is due to confusion with *Yolios*, 'Julius' (cp. LöfUpp 119).

Hippopotamus

The H. (*Hippopotamus amphibius*, Amh. ጉማሬ, *gumare*, also *bəhemot*, Oromo *roobii*) was traditionally widespread in many of Ethiopia's rivers and lakes, and played a significant role in the country's economic life. Since the 18th–19th cent. the H. has been extinct in the territory of Egypt and Nubia, and has become rare or is disappearing in many regions of Ethiopia.

A representation of a H. found its way into the *Christian Topography* of ↗Cosmas Indicopleustes (Wolska-Conus 1973:332f., 388 fig. 5). H. hides, according to Pliny (1952, vol. 6, 34), were an export of the Aksumite port of ↗Adulis (PankHist I, 18). The importance of H. was observed in the early 16th cent. by ↗Almeida, who noted that those of Lake Ṭana came out to graze and did considerable damage to crops. Some of the inhabitants of the area, he added, killed and ate these animals, and out of their skins made *alänga*, or whips, with which they drove their mules and horses, as, unlike the Europeans, they did not use spurs (Beck-HuntAlm 35f.).

H. were for centuries hunted with spears (s. engraving in PankHist II, 249), but from the middle of the 19th cent. were increasingly more effectively killed with firearms. Christians were not allowed to taste the flesh of H., which was considered impure (cp. Lev 11), but the animal was extensively eaten by the ↗Wäyṭo, ↗Harro and other groups living near its habitat, who were on that account generally despised by the majority of the

population – and sometimes accused of "smelling of H.". Among the ↗Hadiyya the H. was regarded as a quasi-sacred animal and whips made of its skin played a central role in ceremonies of ritual purification ↗*Fandaanano*.

H. skins were extensively used in the manufacture of circular convex shields, much employed in warfare, as well as whips, which by the early 20th cent. were transported from Lake Ṭana to Addis Abäba, where two or three of them sold for 1/16 of a Maria Theresa thaler (Mérab 1929:412f.).

H. are only rarely mentioned in hagiographic texts. St. ↗Yafqərännä Ǝgziᵓ was once attacked on Lake Ṭana by a H. (here ቢሕ *biḥ*) who overturned his boat; the saint, however, saved himself by walking upon his cloak (Wajnberg 1936:81). Likewise, St. ↗Wälättä Ṗeṭros was threatened by a H. (here *gumari*), as she was crossing Lake Ṭana in a boat. The saint prayed to the angels and fearlessly counted the teeth in the open mouth of the beast, after which the H., which had already grasped with its forelegs at the edge of the boat, disappeared again (tr. Ricci 1970:30). A story of a miraculous salvation of a monk of the monastery of ↗Rema from a H. is inserted on fol. 2r of the 18th-cent. ms. with the Vita of ↗Mäbaᵓa Ṣəyon (Ṭānāsee 107 = Rēmā 18), and a drawing illustrates the story (fol. 1v). The Chronicle of ↗Iyasu I mentions H. (here *anabərtä baḥr*, 'lake monsters/whales' [erroneously translated by Conti Rossini as 'leopardi del lago', cp. Bausi 2007:201]) accompanying the Emperor's body during his funeral (Conti Rossini 1942:91 and 65 n.1 on the miniature illustrating the scene). The chronicles mention a H.-shooting by Iyasu II.

Hirmaata

H. was the name of the important Thursday market on the outskirts of ↗Ǧirän, the residence (*masaraa*) of the kings of ↗Ǧimma Abbaa Ǧifaar (for location s. Hossaᵓəna).

In the mid 19th cent., ↗Abbaa Ǧifaar I, the son of the founder of the kingdom, turned H. into the largest market south of the Blue Nile. It kept its importance under the long reign of ↗Abbaa Ǧifaar II, who managed to preserve his autonomy by paying tribute to Ethiopia. Trade brought him high income through the taxes collected by the ↗*näggadras* (chief of merchants) appointed by the sovereign. Spices, musk, ivory, hides and skins, *qoččo* (bread made of ↗*ənsät*) and slaves were exchanged at this market. Caravans crossed the Abbay and proceeded to the Red Sea ports. Between the end of the 19th and the beginning of the 20th cent. there were as many as 30,000 merchants and caravans of up to 200 mules (Montandon in PerGov 305; Traversi in LewJimm XVII, 57, 69ff., 74, 77f., 97, 109, 112n). Traders in transit had to use another market called Mandaraa Seṭᵓo.

Ethiopian markets did not necessarily give birth to towns; they were open-air areas with basic infrastructure which grew or disappeared according to the wishes and needs of the authorities and traders. Borelli, for example, who stayed several months in Ǧirän in 1887, referred to this market as "Gifti" and used the word H. for the plain where the market took place (Borelli 1890: 304f. [map]).

According to Zervos (ZerÉth 339f.), H. remained the capital of the province of Ǧimma, which was annexed by Ethiopia after Abba ǦifaarII's death. It was also decided, in 1935, to rebuild the town and rename it Ḫaylä Śəllase (ZerÉth 338). The Italians, who had reinstated ↗Abbaa Ǧoobir Abbaa Ǧifaar, the late king's successor, to Ǧirän included the site of H. within the perimeter of their new town of Ǧimma, which was given the status of capital of the "Governo dei Galla e Sidama". 40 years ago Lewis (LewJimm) treated H. as a part of Ǧimma and noted the decay of Ǧirän. At present there are no remains of what was once the largest market in Ethiopia.

Alain Gascon

Ḫirutä Amlak

Ḫ.A. (ኂሩተ፡ አምላክ, fl. 13th cent.) is known as a follower of *abba* ↗Iyäsus Moʾa of ↗Däbrä Ḥayq Ǝsṭifanos and as the founder of the ↗Daga Ǝsṭifanos monastery on Lake Ṭana. According to the Vita of Iyäsus Moʾa, Ḫ.A. witnessed his master's meetings with *aṣe* ↗Yəkunno Amlak at the time they concluded their "pacts" (KurMoa 28ff.; cp. ↗*Kidan*). The same source shows Ḫ.A. spreading "his master's teaching" from "the land of Sarka up to Gazge and in all the land of Aläfa and that of the ↗Agäw" (KurMoa 34), i.e. in the areas west and south of Lake Ṭana. A note in the so-called Gospels of Ḥayq – the manuscript commissioned by Iyäsus Moʾa himself – dates Ḫ.A.'s arrival at Daga to the Year of Mercy 237 (EMML 1832, fol. 12v), interpreted by Taddesse Tamrat as 437 = 1252/53 A.D. (1970:89, n. 12). A ↗*sälam* devoted to Ḫ.A. (ms. Dägä Eṣṭifänos 5, fol. 85vb–88va) credits him with 60 years of activity, which leads Six to the conclusion that he died in 1312/13 (Six in MiscAethKur 243).

Ḫ.A. is locally commemorated on 8 *Näḥase* according to a note found in the margin of a Daga Ǝsṭifanos copy of the ↗*Sənkəssar* (ms. Dägä Eṣṭifänos 17, fol. 173v). His *sälam* is read on the 8th of each month; another *sälam* celebrates him together with several other members of the community (ms. Dägä Eṣṭifänos 5, fol. 85v–88v, 8r).

A closer analysis of the available documents has raised several questions concerning the historical character of Ḫ.A. For example, the mentioned note in the Gospels of Ḥayq says that Iyäsus Moʾa of Ḥayq conferred the title of ↗*ʿaqqabe säʿat* on Ḫ.A. the same year he sent him to Daga. But the title of *ʿaqqabe säʿat* had not yet been conferred on the abbots of Ḥayq in ca. 1252/53, the date suggested by Taddesse Tamrat. Furthermore, this dating contradicts the chronology of the Vita of Iyäsus Moʾa which shows Ḫ.A. still at Ḥayq after Yəkunno Amlak's ascension to throne in 1270.

Ḫ.A. occupies a special place in Iyäsus Moʾa's hagiography. The passages featuring Ḫ.A. as a witness to his teacher's "pacts" with the Emperor, however, pose still another problem as their character reveals that the Vita consists of several layers going back to different times. The text could be dated, at the earliest, to the second part of the 15th cent. (Cerulli in KurMoa XV [tr.]), or even to the late 16th/early 17th cent. (Kropp 2003 and in HirKrSaints 195ff. demonstrates how the Vita was compiled at a later date from different documents).

Ḫ.A. is not mentioned in either of the two known copies of the Homily (↗*Dərsan*) in honour of Iyäsus Moʾa (one ms. in Däbrä Ḥayq and one in Daga Ǝsṭifanos), which is older than the Vita (Kropp 2003). Another element of the Vita, the list of Iyäsus Moʾa's followers sent in mission throughout Ethiopia (KurMoa 34), is not present in the Homily. The analysis of this list (partly similar to a monastic ↗genealogy) reveals that information from different periods was placed at the same chronological level; the enumerated "spiritual sons" of Iyäsus Moʾa did not live at the same time. This text fragment possibly reflects Däbrä Ḥayq's domain of influence at the time when the Vita was written and not at the time of the events narrated in the vita (13th cent.; DerDom 110–21). The list uses the same words to talk about Ḫ.A. as the note on the preaching of other Iyäsus Moʾa's followers in ms. EMML

2093 (fol. 85v–86r). Like the notes on the "pacts" in the Vita, it may well have belonged to the collection of different pieces used to write down the Vita of Iyäsus Moʾa at a much later time.

Other relevant Daga documents equally reveal several textual layers. The oldest ones mention a certain *mämhər* of Daga Ǝsṭifanos, *abba* Ḫirut (identical to Ḫ.A.?). As such, he appears in the oldest copy of the local *Sənkəssar*, on the upper margin of the folio with the entry for 8 *Näḥase* (ms. Paris, BN d'Abbadie 66–66bis, fol. 311ra). In further documents with the names of the fathers commemorated by the community, this Ḫirut is often associated with a certain Səmᶜon (mss. Paris, BN d'Abbadie 126, fol. 129v; 135, fol. 135v), with whom he is also paired as Ḫ.A. (Dāgā Esṭifānos 2, fol. 3r; cp. Dāgā Esṭifānos 5, fol. 8r: *Ḫirutä Amlak wäSəmᶜon*).

Two other texts claim that Ḫ.A. was the spiritual son of Iyäsus Moʾa, sent to found the monastery of Daga during the reign of Yəkunno Amlak. They recount the history of Daga till the reign of *aṣe* ↗Śärṣä Dəngəl, which allows to date them to the end of the 16th cent. at the earliest. One of these texts is preserved in ms. Dāgā Esṭifānos 2 (fol. 1va–2ra), the other in ms. Dāgā Esṭifānos 16 (fol. 275r). On the verso, a third text offers a different version of the story (fol. 275v): Ḫ.A. brings the *tabot* of St. Stephen, blessed by *abunä* ↗Täklä Haymanot, to Daga; at the end a list of kings supposed to have been buried at Daga by the 18th cent. is appended. These contradictory pieces of evidence might predate the final composition of the Vita of Iyäsus Moʾa, reflecting hesitations in local collective memory and monastic ↗historiography (Bosc-Tiessé 2001:54–60).

Ḫ.A. is now fully recognized by the Daga Ǝsṭifanos monastery as its founder. The seal of the church, applied on a document of 1966 A.D., names the monastery "[Daga Ǝsṭi]fanos Ḫirutä Amlak" (SixTana III, 153 [ms. Dāgā Esṭifānos 27, fol. 219v]). During the last decades of the 20th cent., the monastery has also reinforced its association with Ḫ.A. by erecting a little mausoleum with his relics in the *qəddəst* of the present church (Bosc-Tiessé 2000:263); an image of Ḫ.A. has recently been painted on the western wall of the ↗*mäqdäs*.

Historical Books, biblical

The H.B. follow upon the ↗Octateuch in the ↗Old Testament; they share the particularities of text development with the O.T. The H.B. included in the Gəᶜəz ↗Bible are: 1 and 2 Sam (in the Greek Septuagint version [hereafter: LXX] 1 and 2 Kings), 1 and 2 Kings (3 and 4 Kings in the LXX), Ezra and Neh (altogether, 2 Ezra in the LXX), Esth (the Gəᶜəz version of which exhibits the same peculiar additions as the LXX recension, cp. Pereira 1911:11ff.), and 1 and 2 Chr (1 and 2 Paralipomena in the LXX, also with the prayer of Manasses at 2 Chr 33:13, cp. Grébaut 1932:8, 227ff.). The Gəᶜəz Bible comprises also 3 Ezra (or Greek Ezra or Apocryphal Ezra), the contents of which corresponds to 2 Chr 35–36, almost the entire Ezra, Neh 7:72–8:13, and the history of the three young men at the court of Darius, which is not found elsewhere. 3 Ezra is missing in the Hebrew Bible, but is found in the LXX, where it is named 1 Ezra (2 Ezra of the LXX comprising Ezra and Neh altogether; note that all references to biblical H.B. in DillmLex are made according to the LXX terminology). As to 4 Ezra – or the Apocalypse of ↗Ezra, which

is lost in the original Greek text, but preserved in numerous versions, including the Gəᶜəz Bible, where it is attributed to "ᶜƎzra Sutaʾel" (or Sutuʾel, or Sutəʾel, cp. DillmLex 1413) – the name can be properly used only for chs. 3–14 (cp. Haelewyck 1998, no. 180), while chs. 1–2 and 15–16 are later additions (respectively labelled by the scholars 5 and 6 Ezra, cp. Haelewyck 1998, nos. 182, 183). However, 4, 5 and 6 Ezra belong to the apocalyptic, not to the biblical H.B., besides, neither 5 or 6 Ezra are known to exist in Gəᶜəz. The Gəᶜəz Bible does not include 1–4 Mac known from the LXX; another, non-biblical text has become generally known as the "Ethiopic book of ↗Maccabees".

The fortune of the biblical H.B. in the ↗Ethiopian Orthodox Church may be appreciated from the number of Gəᶜəz and ↗*andəmta* Amharic commentaries: there are few Gəᶜəz manuscripts (cp. Cowley 1988:435f.), e.g., BN d'Abbadie 39, fols. 156r–197v, 201v–202r (on 1–2 Sam, 1–2 Kings, 1–2 Chr and Ezra), d'Abbadie 157, fols. 51r–69v (on 1–2 Sam and 1–2 Kings), and fragments in BritLib Orient. 743 (1–2 Sam and 1–2 Kings); much more numerous are the *andəmta* manuscripts (*ibid.* 456ff., including those on the "Ethiopic book of Maccabees").

Historiography

The term H. designates both the writing of history and the principles of historical writing. A developed historiographic tradition is one of the most peculiar features of Ethiopian culture, where H. is represented by a substantial number of works, many of them being not only valuable documentary sources, but also outstanding literary masterpieces.

Foreign H. was also focusing on Ethiopia since classical antiquity, producing what can be now considered a rather uneven series of sources and critical reflections, ranging from Arabo-Islamic to European modern and contemporary writings, that greatly contributed to the understanding of the country and its culture as well as, in some cases, to the shaping and development of Ethiopic H.

On account of their peculiar scholarly character within the framework of the so-called Orientalism, western H. works after the 16th cent. shall be dealt with under ↗Research, historical. There, Arabic H. since the late 19th cent. shall be also treated, as a witness to the enduring attention of Near- and Middle-Eastern scholars over Ethiopian historical matters.

Ethiopian historiography

The beginnings of historiography in Ethiopia

The sources of Ethiopian H. can already be found in the ↗Aksumite period. The earliest examples are the royal ↗inscriptions; scant traces are also extant of Egyptian historical texts translated into ↗Gəᶜəz from Greek at that time: e.g., the fragmentary *Alexandrian History* – from a lost original only known through partial Latin versions (CPG 1641 and 1667) – transmitted within the so-called *Aksumite Collection*, a set of canonico-liturgical works found in a newly discovered Ethiopic manuscript from Təgray (Bausi in PICES 15, 536, and 2006, n. 2: "the earliest text of truly histori-

cal character in Aksumite Ethiopic literature"). A proper H. tradition only developed after the reinstatement of the ↗Solomonic dynasty ca. 1270. An opinion still to be proved has it that H. emerged under the influence of translations from ↗Arabic of such foreign works as the *Yosippon* (↗*Zena Ayhud*), the Chronicle of ↗John of Nikiu and those devoted to ↗Alexander the Great.

Ethiopian H. started being perceived as such by contemporary readers only in the 14th cent., when the country was inscribed into the major framework of Christian world history thanks to the ↗*Kəbrä nägäśt*, the Ethiopian national epic intended to continue the biblical ↗Historical Books of Kings. The fact that in the Bible the Kings are followed by the Books of Chronicles prompted modern scholars to style all subsequent works of official Ethiopian H. as "royal chronicles" – a title hardly fitting before the late 17th cent. These "chronicles" were traditionally titled *tarik* (ታሪክ, lit. 'history'), or ዜና (*zena*, 'narrative, story'), and written in an Amharicized form of Gəᶜəz called *ləssanä tarik*, 'language of the chronicles'.

The (incomplete) list of published Ethiopian historiographies (including both Gəᶜəz and more recent Amharic texts) is:

BlunChr; BTafA; BTafY; CARLO CONTI ROSSINI, "Iyasu I re d'Etiopia e martyre", *RSO* 20, 1942, 65–128; ID., "Due squarci inediti di Cronaca Etiopica", *RRALm* ser. 4ª, 1, 2, 1893, 804–18; ID., "Storia di Lebna Dengel re d'Etiopia sino alle prime lotto contro Ahmad ben Ibrahim", *RRALm* ser. 5ª, 3, 1894, 617–40; ID., "L'autobiografia di Pāwlos, monaco abissino del secolo XVI", *RRALm* ser. 5ª, 27, 1918, 279–96, here 284–89; CRHist 221–31; CRNuov; CRReal; ConzGal; MARIUS CHAÎNE, "Histoire du règne de Iohannes IV roi des rois d'Éthiopie (1868–1889)", *RevSem* 21, 1913, 178–92; AUGUST DILLMANN, *Die Kriegsthaten des Königs ᶜAmda-Sion gegen die Muslim*, Berlin 1884 (Sitzungsberichte der königlich preussischen Akademie der Wissenschaften zu Berlin 43); FESSEHA GIYORGIS, *Storia d'Etiopia*, ed. by YAQOB BEYENE, Napoli 1987; FusTeo; GebMollyas; FotiCr; GETAČČÄW ḪAYLE, የአባ፡ ባሕርይ፡ ድርሰቶች፡ ኦሮሞችን፡ ከሚመለከቱ፡ ሌሎች፡ ሰነዶች፡ ጋራ (*Yäᵓabba Baḥrəy dərsätočč Oromoččən kämmimmäläkkätu leločč sänädočč gara*, 'The Works of *abba* Baḥrəy with Other Documents concerning the Oromo'), Collegeville, MN 2002; GSMen; GueCopMen; HSLife; HuntAmd; KrAmdS; KrLebD; MANFRED KROPP, *Die äthiopischen Königschroniken in der Sammlung Däğğazmač Ḫaylu*, Frankfurt am Main – Bern – Paris 1989 (Heidelberger Orientalische Studien 13); MahZekr; MarAmdS; MHasOr; MorTeo; MonVidTheo; FRANCISCO MARIA ESTEVES PEREIRA, "Zena Minas. The History of the Monastery of Däbrä Libanos'), St. Petersburg 1906 (Pamjatniki efiopskoj pismennosti 4), 345–63; ZanLitTheod.

14th–17th century

The first known work of royal H. is devoted to *aṣe* ↗ᶜAmdä Ṣəyon I's victorious campaigns against the Muslim states of the south (PerrAmdS; Dillmann 1885; for recent editions, s. KrAmdS; MarAmdS). The time of composition of this work, only transmitted in later manuscripts, is still open to discussion: whether it is the work of a witness to the events or a later (15th-cent.?) elaboration upon an unknown earlier source. It can, in any case, be considered as epic lore, focusing on one single series of events, in literary garb (with frequent addresses to the listeners: "now, hear ye ...").

The next known royal H., describing the reign of the 15th-cent. *aṣe* ↗Zärᵓa Yaᶜəqob, is a less consistent text formed by (originally independent?) parts written by different authors (PerrZarY). The narrative concentrates on the ruler's administrative deeds. Royal H. seems to take shape as a literary genre here – distinct from ↗hagiography, albeit often bordering upon it. This is also evident in the case of the *History* of *aṣe* ↗Bäᵓədä Maryam, the son and successor of Zärᵓa Yaᶜəqob (PerrZarY 105–92). The work bears no similarity to the previous one, though it also consists of two separate parts: the first, written by the Emperor's confessor, is a well-organized text that begins before Bäᵓədä Maryam's coming to power and ends in the seventh year of his reign; the second, very short, is not a continuation of the first, but describes the Emperor's administrative reforms and the most important events of his reign. The *Histories* of Bäᵓədä Maryam's sons and successors – *aṣe* ↗Ǝskəndər and *aṣe* ↗Naᶜod – are preserved only in excerpts (PerrEsk).

During the 16th cent., official H. tended to compile independent royal "histories" into larger collections, like the *History* of *aṣe* ↗Ləbnä Dəngəl, explicitly defined as such at its very beginning (Conti Rossini 1894:617; KrLebD 3). Stories of the Emperor's predecessors were compiled and integrated anew. This method proved to be viable, so that the *History* of Ləbnä Dəngəl became, in turn, a first chapter of a larger compilation that included the accounts of the reigns of ↗Gälawdewos, ↗Minas and ↗Śärṣä Dəngəl. The *History* of Ləbnä Dəngəl (the authors of which, according to a *Sənkəssar* notice, were Śənnä

Krəstos and Zäṗärakliṭos; Duensing 1900:47) was supposed to be comprehensive, but it only describes the favourable period of reign, omitting ↗Aḥmad b. Ibrāhīm al-Ġāzī's invasion and Ləbnä Dəngəl's death. The disturbances during the reign of Gälawdewos never let the work be properly completed.

The "royal chronicles", written rather accurately during the emperors' lifetime, were often left unfinished after their death. The *History* of *aṣe* Gälawdewos (ConzGal) is an exception. A eulogy with high pathos and sincere feeling that ends with verses in the style of Jeremiah's *Lamentations*, with marked hagiographic overtones, it was completed on 2 April 1560, i.e. four days before the anniversary of Gälawdewos's death (Guidi [1899] believed it had been composed by *əčč̣äge* ↗ʿƎnbaqom not so much as a secular writing, but rather as a lamentation for the commemoration day of the Emperor-martyr).

The *History* of Gälawdewos's brother, *aṣe* Minas (Pereira 1887), though a panegyric, has a secular character. It is divided into two distinct parts: the larger one dealing with the vicissitudes of Minas's life before his enthronement, and the shorter one, called by its author the "story of the kingdom's division", concentrating mainly on political troubles during his reign; it is continued in the *History* of Minas's son and successor *aṣe* Śärṣä Dəngəl (CRHist). The *History* of Minas was probably begun immediately upon his enthronement in 1559: the first part was completed during his lifetime; the second, during the reign of Śärṣä Dəngəl – as an introduction to the latter's own *History*, which appears thus but a concluding part of the compilation cycle opened by the Chronicle of Ləbnä Dəngəl. In fact an independent text, it is typical for its time and long enough to reveal the erudition of its authors (s. Chernetsov in PICES 9).

Monastic historiography

Quite a different H. work, *The History of the Galla* (↗*Zenahu lägalla*, CRHist 221–31) by the monk ↗Baḥrəy dates to the end of the 16th cent. It describes the structure of the main ↗Oromo tribes, as well their wars against the Ethiopians. Unusually objective for its time, Baḥrəy thoroughly analyzes Oromo victories and Ethiopian defeats while also comparing both societies. Equally unusual are the notes by the monk ↗Ṗawlos (Conti Rossini 1918:284–89). The yearly records of a private eye-witness to the events from 1523 to 1578, they bear no specific title and start with the words "Ṗawlos saith ...". In this sense, the text is indeed an "autobiography", as Conti Rossini called it, as well as a piece of evidence for the growing interest in recording current events.

A precedent to monastic H. are probably the "Golden Gospels" (↗*Wängelä wärq*), found in almost every church. Here, land grants, donations, etc. were recorded, more often on specially added pages. Important current events were sometimes also mentioned, the notes, thus, developing into a kind of chronicle. Sometimes a scribe's interests went beyond the limits of his native community producing annals less official than royal H.: e.g., in the *Narration of Däbrä Libanos*, compiled probably in 1654 (Turaiev 1906: 345–63). Its text can be divided into three parts: the internal regulations of ↗Däbrä Libanos of Šäwa, the latter's history and the stories on the local "fathers". The second part, ending with the events of 1593, is better preserved.

Alongside the influence of Arabic Christian H., among the triggers of the developments of Ethiopian monastic H. was the idea that Ethiopia alone had preserved the Orthodox faith and was, thereby, the acme of civilization since the creation of the world. Thus H., asserting Ethiopia's great past, was particularly important in times of trouble.

Gondärine period

During the 17th cent. the works of official H. were gradually transforming into "royal chronicles" proper. In the *History* of *aṣe* ↗Susənyos the narrative becomes chronological, being carefully structured according to the years of reign (PerChron). A new feature is the mention of the names of the authors. The first 22 chs. were written by *abba* ↗Məhərkä Dəngəl, whilst the continuation belongs to *azzaž* ↗Täklä Śəllase "Ṭinno" and the ending to a third, anonymous author. ↗Fasilädäs, who reinstated Orthodoxy and founded the capital city of ↗Gondär, was not honoured in Ethiopian H. with a long chronicle (Kropp 1986). The theological controversies of the time put Fasilädäs at odds with the ↗Ethiopian Orthodox (Täwaḥədo) Church, and he was punished with literary silence. His son *aṣe* ↗Yoḥannəs I enjoyed cordial relations with the clergy, and was "rewarded" not only with a chronicle but also with a special text, the ↗*Bəʿälä nägäśt*, perceived by contemporaries as a piece of H.

In the ↗Gondärine kingdom, official H. became the leading literary genre, producing royal chronicles in the full sense of the word. Following a strict chronological principle, the texts were divided into as many chapters as the years of reign. The language of the texts was standardized and adjusted, e.g., through ↗Amharic loanwords, to describe matters and events of secular life. The first such work was the lengthy chronicle of *aṣe* Yoḥannəs I (GuiIohan), written by ↗Ḥawarya Krəstos. The historical element prevails in it over the literary: the narration is rather concise, but royal edicts are all rendered in great detail, for the author is first and foremost keen on royal interests. The last part of the chronicle lacks detail, as on Yoḥannəs's death in 1682 Ḥawarya Krəstos immediately proceeded to write the Chronicle of the new ruler, *aṣe* ↗Iyasu I. After the death of Ḥawarya Krəstos in 1700, the work was continued by ↗Zäwäldä Maryam, until 1704, when Iyasu launched his Gibe campaign and sent Zäwäldä Maryam back to Gondär. A younger royal scribe, ↗Sinoda, carried on the Chronicle until Iyasu's dethronement by ↗Täklä Haymanot, when Sinoda lost his appointment. Later, when ↗Tewoflos decided to honour the memory of Iyasu and canonize him on the second anniversary of his death, Sinoda was reappointed to write the Vita of Iyasu, a piece of hagiography rather than H. (Conti Rossini 1942). Because of theological controversies, Sinoda did not become Tewoflos's chronicler; he resumed his activities only in 1721, during the reign of *aṣe* ↗Bäkaffa. In 1723, he was granted the title of *↗ṣäḥafe tə'əzaz*. After Sinoda's death, Bäkaffa's Chronicle was continued by ↗Kənfä Mika'el, who wrote its last 14 chs. In 1730, Bäkaffa's son *aṣe* ↗Iyasu II was enthroned by the kinsmen of his mother *ətege* Məntəwwab (↗Bərhan Mogäsa). The weakness of royal power was reflected by H.: when Iyasu II died and was succeeded by his son *aṣe* ↗Iyo'as I, the chronicler continued writing as if no change had taken place.

Historiography during the *Zämänä mäsafənt*

The decline of monarchy was marked by changes in official H. Local rulers, formerly subordinate figures in the background, now became politically independent, a fact official historiographers could not ignore, while royal chronicles became much less "royal" in essence (Chernetsov in PICES 11). The second part of the *History of Iyo'as* is actually a distinct work, with a title of its own, *History of Däğğazmač Mika'el*. It is a genuine chronicle featuring *ras* ↗Mika'el Səḥul as the actual ruler. In 1769, in Gondär, he ordered Iyo'as to be strangled and enthroned the 70-year-old *aṣe* ↗Yoḥannəs II. This was the end of both royal authority and royal chronicles in Gondär. However, no chronicles of provincial rulers were written afterwards. A few works reflected instead a growing need for the revival of the old H. tradition, of which at least two instances are known. The first is the vast compilation *däğğazmač* ↗Ḫaylä Mika'el Ǝšäte and his friend *abeto* ↗Abägaz made from a number of manuscripts in monastic libraries (Kropp 1989:25) so as to retrieve what had been lost after the burning of Gondär by Mika'el Səḥul. Most extant versions of that compilation span from ↗Bä'ədä Maryam till its own times. The second instance concerns a similar compilation accorded to *däğğazmač* Goššu Wädağe (BlunChr 228f.).

A genre of H. different and rather independent from the royal chronicles appeared in the late 17th/early 18th cent. Wider historiographic writings were produced to be later styled by scholars as "short chronicles". They present a general history of Ethiopia from its legendary beginnings, with the full range of Ethiopian "historical legends", "king lists", notes from the Church history, and briefly report on the Solomonic emperors, from ↗Yəkunno Amlak to Ləbnä Dəngəl. They were followed by a comparatively detailed and well-written H. on the 16th-cent. Muslim wars, and even more detailed accounts on the later Ethiopian emperors. The last part of these texts forms a real chronicle, ending in most versions with the death of Bäkaffa in 1730, which was probably the original close. However, continuations (up to ↗Mənilək II) as well as interpolated versions with additional works exist. Here the chronological framework could have been provided by either monastic H. or tables with historical notes from private or monastic circles (Kropp 1986:360).

Mid-19th–20th-cent. historiography

Official H. reappeared with the restoration of the royal power, i.e. during the reign of *aṣe* ↗Tewodros II. Three texts dealing with his reign are known. The first is the official chronicle written by *ṣäḥafe tə'əzaz* ↗Zännäb (ZanLitTheod; MorTeod). The narrative adopts the style of the royal Gondärine chronicles, yet with the crucial

difference of being written in Amharic, marking a new stage in the development of Ethiopian H. The second work, also in Amharic, was authored by ↗Wäldä Maryam, a cleric from the entourage of *abunä* ↗Sälama (MonVidTheo). Written 15 years after Tewodros's suicide, it was rather a series of personal recollections than a proper chronicle. The third work is a collection of historical anecdotes about the Emperor (FusTeo). Whilst the language is Amharic, the anonymous author, a native of Təgray, quotes some of the stories in ↗Təgrəññña as he had heard them.

The conservative *aṣe* ↗Yoḥannəs IV ordered his own chronicle be written in Gəᶜəz (BTafY). To this end a special committee was created that included Yoḥannəs's own historiographer, *liqe* Märᶜawi Täklä Ǝsṭifanos (ca. 1838–99), *mälakä bərhanat* Bərhan (d. 1882), the dean of ↗Däbrä Bərhan Śəllase church of ᶜAdwa and *nəburä əd* Iyasu (d. 1891).

The increasing interest for national H. during the time can be proved by the existence of at least six chronicles of Yoḥannəs IV, all more or less contemporary but different in nature, written in both Gəᶜəz and Amharic. H.-writing moved again away from the court, mainly to churches and monasteries. The short chronicles took a new shape, describing the reign of *aṣe* Yoḥannəs IV within the general context of the history of Ethiopian emperors (s. BTafY 15–21; Chaîne 1913; Ricci 1947). In the politically ambitious province of Šäwa, this genre was developed under the influence of the apocalyptic ↗*Dərsanä Raguᵓel*, which, at least in its Šäwan version, predicted the fall of the Gondärine branch of the Solomonic dynasty and the rise of the latter's Šäwan branch, which traced its ascent to *abetohun* ↗Yaᶜ[əqob], the younger son of Ləbnä Dəngəl (cp. ↗Mänz).

These were the so-called "interpolated chronicles", where the Gəᶜəz narration, typical for the "short chronicles", was integrated with special Amharic stories belittling the Gondärine rulers in order to praise the Šäwan descendants of *abetohun* Yaᶜəqob (Guidi 1926:358).

In the period of monarchy revival during the reign of *aṣe* Mənilək II, his chronicle was written by *säḥafe təᵓəzaz* ↗Gäbrä Śəllase (Bairu Tafla 1967). Although in Amharic, the work is reminiscent of the official chronicles from the turn of the 16th cent.

The end of the 19th cent. witnessed the composition of the *Yägalla tarik* (s. BTafA), the most remarkable composition of *aläqa* ↗Aṣmä Giyorgis Gäbrä Mäsiḥ harking back to Baḥrəy's *Zenahu lägalla* (BTafA 61). Aṣmä Giyorgis, well-acquainted with Western culture, intended to recreate Baḥrəy's work in keeping with the new – European – methods and sources.

During the first decades of the 20th cent., the number of authors engaged in H. grew considerably, among whom ↗Afäwärq Gäbrä Iyäsus, author of ↗*Dagmawi Mənilək*, *aläqa* ↗Tayyä Gäbrä Maryam, who wrote the *History of Ethiopian People*, and ↗Gäbrä Ḥəywät Baykädañ, with the pamphlet *Emperor Mənilək and Ethiopia*. The latter two were Protestant converts, which possibly accounts for their attitude towards God, the Ethiopian monarchs and society. Their writings were, however, not part of royal H.: their aim was not so much to serve their monarch as to educate him. Mention should also be made of the works of *aläqa* ↗Fəśśəḥa Giyorgis ᶜAbiyä Ǝgziᵓ, the founder of Təgrəññña literature.

In the progress of time, as Ethiopia was modernizing and a new court life and administrative system were taking shape, there was no longer room for traditional *ṣäḥafe təᵓəzaz* officials. Although there were some flashbacks, such as the *Chronicle of Abeto Iyasu and Empress Zäwditu* by ↗Gäbrä Ǝgziᵓabəḥer Elyas (GebMolIyas), modern developments soon brought an end to the age-long tradition of royal H. in Ethiopia.

The next decades of the 20th cent. saw instead the birth of a more up-to-date H. A pioneer work was the remarkable autobiography of *aṣe* ↗Ḫaylä Śəllase I, written mostly during his exile at Bath, with the help of ↗Maḫtämä Śəllase Wäldä Mäsqäl and ↗Ḫəruy Wäldä Śəllase. There, in an archaic and simple language, the Emperor offers a moralistic, and yet effective, view of the "progress" achieved by his state during its early decades (HSLife XVIII–XIX, XXXI). Maḫtämä Śəllase is also responsible for the *Zəkrä nägär*, a collection of recollections and anecdotes featuring leading historical figures (MahZekr). Also *qesä gäbäz* Täklä Haymanot is worth mentioning here as a representative of the old tradition: he is the author of an unpublished "Chronicle of Ethiopia", a vast compilation of documents in Gəᶜəz from several monasteries and churches (SerHist 226 n. 66). Recent and ambitious writings in European languages – most French and English – have introduced scholarly standards of historical ↗research into local H.: so, e.g.,

the works by ↗Täklä Ṣadəq Mäkʷəriya (TSTarik I–IV), Taddesse Tamrat (TadTChurch) and Mohammed Hassen (MHasOr).

Foreign historiography on Ethiopia

Ancient Greek and Roman historiography

From classical times, in keeping with its (alleged) Greek etymology, the name "Ethiopia(n)" loosely applied to all countries with "burnt-faced" peoples from the Atlantic to the Indian Ocean (↗Aithiopía) – also due to the geographical idea of a land connection between the Indian peninsula and Africa, turning the Indian Ocean into a large lake (↗Ptolemy). This ambiguity, doomed to last well into the Middle Ages, was fostered by both Ethiopia's position on the way to ↗India – a term then often coextensive with Ethiopia, and encompassing ↗Nubia and South ↗Arabia as well (cp. ↗"India" as name of Ethiopia) – and its legendary character in ancient poetry: e.g., in Homer and Aeschylus, where the Ethiopians are said to live at the extreme (southern) boundaries of the world (↗Greek literature on Ethiopia). Not even the "father of History", ↗Herodotus, had a clear perception of the geographical situation: his "Ethiopia", to which an interesting excursus of his *Histories* is devoted (II, 1, 28ff.), is a country far remote to the south, mainly coinciding with Nubia. Later on, in Hellenistic and Roman times respectively, the name Ethiopia became a specific designation for the kingdoms of ↗Meroë, in Nubia (bordering upon ↗Egypt), and then ↗Aksum, centred in the Ethiopian highlands (cp. ↗Ḥabašāt). Under Ptolemy II, through the intensive presence and activities of ↗Greeks or Hellenized Egyptians in the ↗Red Sea area, actual Ethiopia(ns) entered Greek H. and, to a more sensible extent, the interlinked geographical and ethnographical literature focusing on the ↗Nile and the regions and peoples along it. In the 2nd cent. B.C., Agatharchides of Cnidus wrote ten books *On Asia*, with a description of "Ethiopia" (i.e. Nubia) repeating that of the 3rd-cent. geographer Artemidorus, and five books *On the Red Sea*, as well as *Eklogaì historiôn* ('Select Histories') equally bearing on Ethiopia: all of them survive in fragments chiefly transmitted by the 1st-cent. B.C. historian Diodorus of Sicily (*Bibliotheca*, III, 2–10) and the 9th-cent. A.D. Byzantine patriarch and erudite Photius (*Bibliotheca*, codd. 213 and 250).

However, only in the age of Augustus (with the expedition of Elius Gallus to South Arabia,

25 A.D.) did a series of direct contacts with the present-day Eritrean and Ethiopian areas develop that were soon reflected in Greek and Latin sources somehow complementing the scarce H.: from ↗Pliny the Elder, whose description of ↗Adulis is, however, depending upon a lost work by the Greek geographer Dalion (3rd cent. B.C.), to the ↗*Periplus of the Erythrean Sea*, with the first mention of Aksum hitherto known. The Aksumites were again to be remembered by the ↗*Scriptores historiae Augustae* on the occasion of the triumph of Emperor Aurelian (270 A.D.). In the next century, Christian Ethiopia attracted the obvious attention of contemporary or slightly later ecclesiastical H.: the writings by ↗Rufinus of Aquileia, in Latin, and ↗Philostorgius, in Greek, offer invaluable accounts on Frumentius (*abba* ↗Sälama Käśate Bərhan) and the evangelization of Aksum and, respectively, on the Arian mission of ↗Theophilos the Indian.

The trade with India and the events in 6th-cent. ↗Nağrān led then to a keener interest in Ethiopia and the relevant game of alliances on the side of either the ↗Byzantine empire or Sasanian Persia (↗Iran). This is witnessed in detail by the coeval Greek narratives of ↗Cosmas Indicopleustes, also transmitting the ↗Monumentum Adulitanum, an example of 2nd–3rd-cent. local H., of Nonnosus, a diplomat who journeyed to ↗Arabia and Aksum (his work, now lost, is transmitted by Photius, cod. 3); and of Procopius of Caesarea, a historian who had access to the imperial archives in Constantinople and speaks about *nəguś* ↗Kaleb, his military expeditions against ↗Ḥimyar, and his successor(s). The same matter, intermingled with other episodes, was dealt with by the chronicler John ↗Malalas, and later resumed by his middle-Byzantine successors, e.g., ↗Theophanes (d. 817 A.D.), confusedly drawing upon late antique H. and hagiographical sources alike.

Gianfranco Fiaccadori

Classical Arabic historiography on Ethiopia

Historiographic production in ↗Arabic represent one of the most substantial and complex manifestations of ↗Arabic literature (for a general introduction s. Rosenthal 1952), and a number of texts provide sources for Ethiopia's history. These texts are heterogeneous: they belong to different genres of Arabic literature, have diverse nature, shape and content, some even mix different traditions. For our purpose, of interest are: the great historical works (world histories, annals); local historical works (e.g. of Egypt and the Yemen); biographical dictionaries (*ṭabaqāt*, i.e. the chronological "categories" of illustrious personages in some field or another); ethnological texts (e.g. on the different human races of the world); handbooks for the chancelleries; as well as such religious forms of literature as *aḫbār* and *ḥadīṯ* (historical traditions and sayings of the Prophet ↗Muḥammad), *asbāb an-nuzūl* (writings devoted to the explanation of the circumstances in which a verse or a group of verses of the ↗Qurʾān was revealed), hagiography (*manāqib*, *faḍāʾil*, *ʿilm ar-riğāl*) and even sections of *tafsīr al-qurʾān* (Qurʾānic commentaries).

Early texts on the life of the Prophet often contain information about the so-called first ↗*hiğra* to al-Ḥabaša (615). They also give us hints regarding the knowledge the Arabs had of the Ethiopians and their king and about the relationships existing between ↗Arabia and Ethiopia in the late pre-Islamic and early Islamic periods. Among the most important late 8th-early 9th cent. texts are *as-Sīra an-nabawīya* by ↗Ibn Hišām; the *Kitāb al-maġāzī* of al-Wāqidī; *aṭ-Ṭabaqāt al-kubrā* by Ibn Sa^{c}d; the *Ta$^{\circ}$rīḫ ar-rusul wal-mulūk* and the *Tafsīr* of aṭ-↗Ṭabarī. The first *hiğra* is also among the subjects of prophetic *ḥadīṯ* (in such collections as *aṣ-Ṣaḥīḥ* by al-Buḫārī, *aṣ-Ṣaḥīḥ* by Muslim, the *as-Sunan* by at-Tirmiḏī, *as-Sunan* by Abī Dāwūd, *as-Sunan* by Ibn Māğa, *as-Sunan*by an-Nasā$^{\circ}$ī); the *Muwaṭṭa$^{\circ}$* of Mālik b. Anas; and the *Musnad* of Aḥmad b. Ḥanbal. The collection of verses and biographical information on poets in the 10th-cent. The *Kitāb al-Aġānī* by Abū l-Farağ al-Iṣfahānī also provides data on early contacts between Arabia and al-Ḥabaša.

Later works devoted to the biographies of Muḥammad's companions also contain valuable pieces of information, e.g., the 13th-cent. *al-Usd al-ġāba* by Ibn al-Aṯīr and the 15th-cent. *al-Iṣāba fī tamyīz aṣ-ṣaḥāba* by Ibn Ḥağar al-^{c}Asqalānī. Finally, the books by al-Wāḥidī and as-↗Suyūṭī should be mentioned. These sources are imbued with a strong theological tone as preservers of the sacred history of the beginnings of ↗Islam. However, they still contain a historically reliable core (s. Raven 1988; Hussein Ahmed 1996).

As Islam established itself in the Arabian Peninsula, in the Near East, and in North Africa, the relationship between the Islamic states and Christian Ethiopia assumed a different character. This was also enhanced by the spread of Islam in Ethiopia itself and by the emergence of several Islamic principalities in the Horn of Africa, which often led to wars. ↗Egypt and the ↗Yemen were the two Islamic countries which were in closer touch with Ethiopia and Arabic H. concerning Ethiopia originated almost entirely from these countries.

Ethiopia, both the Christian state and the Islamic parts, did not draw Arab historiographers' attention as much as other regions of the world. Thus, there is only one monograph recorded exclusively devoted to the history and, partially, the geography of Ethiopia, the 15th-cent. The *Kitāb al-ilmām bi-aḫbār man bi-arḍ al-Ḥabaša min mulūk al-Islām* by al-↗Maqrīzī (ed. as MaqIlmam^{1,2}; Guidi 1910).

At the same time, quite a few Arabic historiographical sources offer details on the country. Among the 9th–15th cent. Arab authors whose works have already been successfully used by scholars of Ethiopia were Muslim and Christian alike (s. EI^{2}, GrafLit and Brockelmann 1943–49, CerPal for details) al-↗Ya^{c}qūbī, Patriarch Eutychius (Sa^{c}īd b. Biṭrīq), Agapius of Manbiğ (Maḥbūb b. Quṣṭanṭīn), Maḥbūb b. Manṣūr b. Mufarriğ and ↗Severos of Ašmunayn with their continuators, aṭ-Ṭabarī, al-Mas^{c}ūdī, ^{c}Umāra al-Yamanī, ↗Abū Sāliḥ al-Armanī, Ibn ^{c}Abd aẓ-Ẓāhir, Ǧirğis al-Makīn b. al-^{c}Amīd (↗Giyorgis Wäldä Amid), al-↗^{c}Umarī, Ibn Nāẓir al-Ǧayš (Taqīddīn al-Muḥibbī), ↗Ibn Ḫaldūn, al-Ḥazrağī, al-↗Qalqašandī, al-Maqrīzī, Ibn Ḥağar al-^{c}Asqalānī, Abū l-Maḥāsin b. Taġrībirdī, as-Saḫāwī, ↗Ibn Iyās.

In more recent times, Ethiopia was even less present in Arabic H. Only sources originating from the nearby Yemen continued to deal with Ethiopian events and persons. Such was the case with ↗Ḥasan b. Aḥmad al-Ḥaymī, Muḥammad b. ^{c}Alī aš-Šawkānī and Muḥammad b. Muḥammad Zabāra aṣ-Ṣan^{c}ānī. The famous 19th-cent. Egyptian historian al-Ǧabartī includes a section devoted to Ethiopians in his *^{c}Aǧā$^{\circ}$ib al-āṯār fī t-tarāğim wal-aḫbār* to clarify his "African" origins.

The relatively little attention paid by Arab writers is paralleled by the small amount of Arabic works dealing with Ethiopians and other peoples of the Horn (*al-Ḥabaš*) as a whole, including history, customs and ethnographical characteristics. It also should be underlined that in some cases the terms *ḥabaš* and *ḥabašī* were not used in their narrower meaning 'Abyssinia(ns)', but had a broader sense of country of the Blacks. Belonging to this genre are works by al-Ǧāḥiẓ, ↗Ibn al-Ǧawzī, as-Suyūṭī and ↗Muḥammad b. ^{c}Abdalbāqī al-Buḫārī al-Makkī (s. van Donzel in StudAeth).

Alessandro Gori

Portuguese historiography

Modern European H. on Ethiopia, albeit surfacing in a few 14th–15th-cent. works (s., e.g., CRStor 9ff.), properly began with the embassies and religious missions sponsored by the crown of ↗Portugal in the 16th and 17th cents. They produced an important corpus of texts on Ethiopia, mostly written in Portuguese, but also in Latin, Italian and Spanish.

In 1540 the account by Francisco ↗Alvares was published. That offered the most accurate description of Ethiopian religious and secular life to the time. Alvares described at length "Aquaxumo" (↗Aksum) and the lands and peoples forming and surrounding the Christian kingdom (e.g., BeckHuntAlvar ch. 37–39). In the same year, Damião de ↗Góis' *Fides, religio, moresque Aethiopum* appeared, the central part of which was the translation of an Ethiopic text on the history and faith of Christian Ethiopia (↗Ṣägga Zä°ab). Further information on Ethiopia is found in the monumental *Decadas* of Diogo do ↗Couto.

It was, however, only with the circa 80-years long presence of ↗Jesuits in Ethiopia, between 1556–1632, that a proper European H. on the country fully developed. Indeed, it could be argued that H. was a central element in the mission. On the one hand, Ethiopian Christianity earned the respect of the missionaries, who were somehow fascinated by its traditions and, albeit biased by their Catholic position, strove to know and report about them. On the other hand, they also thought that these traditions had been corrupted throughout the ages, namely by the contacts with the Muslim neighbours and the distance from Rome. Hence, in the years of utmost expansion (1603–32), the missionaries carried out a global programme aimed at "freeing" Ethiopia's Christian history from such "alien" elements, their reformation mission being thus helped by the hermeneutics of local history.

In the annual letters sent to India and Europe, the missionaries often gave hints about both the societies hosting them and their history. Likewise, as their first residence in ↗Fəremona lay not far away from Aksum, they had several opportunities to visit the city and to write on its origin, its most remarkable sites and antiquities. Alfonso ↗Mendes noted that a number of obelisks (↗stelae) lying down had been made to fall by the "Turks" (i.e. the troops of ↗Aḥmad b. Ibrāhīm al-Ġāzī, or "Grañ"; BecRASO VIII, 26f.). His fellow Tomás ↗Barneto described the church of ↗Ənda Maryam Ṣəyon rebuilt by ↗Śärṣä Dəngəl, and suggested that the obelisks could be related to sepulchres, an idea somehow anticipating their modern definition as "tomb markers". He also traced the origins of Ethiopia's "Judaic errors" to the Queen of Sheba (↗Makəda) and Solomon (ibid. XII, 189, 202–05). The rite of ↗coronation of ↗Susənyos in 1609 was also described in detail by ↗Paez who, whilst in Fəremona, had direct information from Portuguese present at the ceremony (ibid. XI, 258ff.), by Manoel de ↗Almeida (ibid. V, 87–90) and by Barneto (ibid. XII, 203f.; for samples of Aksum described by Jesuits s. Monneret de Villard 1938:63–77, and Munro-Hay in StudAeth 186–91).

Aksum was also repeatedly visited by missionaries as part of their project to reinterpret in Catholic terms Ethiopia's written tradition (BecRASO XI, 107). Almeida was the most proficient in this hermeneutic enterprise. He made a lengthy description of the town, calling the obelisks "barbarian and monstrous machines" and hinting at a monumental Greek ↗inscription (probably ↗°Ezana's; BecRASO V, 83ff.). With a skilled use of the texts preserved at the church of Aksum Ṣəyon (including probably a copy of the ↗*Kəbrä Nägäśt*), Almeida also offered a critical interpretation of the history of the Queen of

Sheba (↗Makəddа) and the origins of Aksum (BecRASO V, 93f.).

The missionaries also worked on historical religious texts, translating them into Portuguese or reshaping them in the original language. In translating they were often helped by members of the Catholic community of natives and Ethio-portuguese (↗Portugal), like João ↗Gabriel, who had been gathering at Fəremona and ↗Gorgora. António ↗Fernandes censured some points of the ↗*Haymanotä Abäw* in order to "get rid for good of their errors" (Cohen 2004:13); with similar purposes, he worked on passages from the Ethiopic OT and NT (↗Bible translation). Likewise, Paez, Almeida and ↗Barradas also tried to amend a number of ↗*gädl* of important indigenous saints (↗Täklä Haymanot, ↗Samu'el, ↗Gärima, ↗Gäbrä Krəstos; s. Cohen 2004:12f.).

Finally, a paramount contribution of the mission were the major historical treatises written by Nicolao ↗Godinho (1615), Paez (ca. 1622), Mendes (1561), de Almeida (ca. 1645; summarized later by ↗Tellez) and Barradas (ca. 1633). Conceived as quasi-encyclopaedias with full details on the mission and Ethiopia, they were all, to the exception of Paez's, written out of Ethiopia (cp. ↗Beccari's excellent introductions to each single work, BecRASO I–IX). These treatises, especially those by Paez and Almeida, combined such local elements as ↗hagiography and royal chronicles with modern European narrative methods, thus offering the first coherent accounts on the "Empire of Ethiopia" and the mission. Paez's *História da Etiópia* is also remarkable in that it served not only the mission (by refuting ↗Urreta's text) but the enlightened *aṣe* Susənyos, to whose deeds most of book IV was dedicated (Pais 1945–47, vol. 3).

Portuguese and Jesuit information on Ethiopia was often accurate as to local names and historical events. Thanks to modern printing press, which the Jesuits used heavily, it also reached a larger public. Quite often the annual letters were quickly selected, amended, translated and published in different European languages and collections: the *Annuae Litterae Societatis Jesu*, first printed in Rome in 1583 (then in Guerreiro, Lisbon 1611, and delle Pozze, Naples 1621). Later authors such as ↗Ludolf and ↗Bruce were to exploit these sources thoroughly and also to compare the different historical interpretations put forward by the Jesuit authors (on ↗Prester John, Aksum, hagiography, etc.). Today, most of the Portuguese–related texts (annual letters, treatises), both by secular and religious authors, have been published (BecRASO) or reissued, whilst a few remain unpublished, mainly at the Arquivo Municipal de Braga, Portugal, and at the Archivio Romano della Compagnia di Gesù.

HIV/AIDS

Almost one million people infected with the Human Immunodeficiency Virus/Acquired Immune Deficiency Syndrome are estimated to live in Ethiopia at present. In Amh. AIDS (*edəs*, also in other local languages) is also referred to indirectly as **የጊዜያው** or **ዘመኑ፡ በሽታ** (*yä-gizeyaw* or *zämänu bäššəta*, 'disease of the times') or **ቀሳፊ፡ በሽታ** (*qäsafi bäššəta*, 'the disease that kills').

The first AIDS cases were diagnosed in Addis Abäba in 1986 (Lester et al. 1988). Lack of information and awareness, together with war and population movements, especially during the war between Eritrean and Təgrayan liberation movements and the *Därg* (until 1991), contributed to a rapid rise of HIV in urban centres and garrisons. In that situation ↗prostitution (as in Asmära) further aggravated the situation. Even today, recruits run a higher risk of infection.

AIDS has become the leading cause of adult mortality (Garbus 2003:60). In the Ethiopian age group 15–49 the prevalence rate is 3.5 % (Federal Ministry of Health of Ethiopia 2006), whereas in Eritrea it is 2.4 % (UNAIDS 2006). Although these numbers are low compared to other sub-Saharan countries, their social impact is disturbing: an estimated number of 720,000 children under 17 had lost their mother or father or both parents to AIDS by the end of 2003 (WHO - UNAIDS 2004; Kloos et al. 2004; ↗Epidemics).

HIV wall painting in the centre of Mäqälä, with the motto [*nəkkälaḳäl*] *eds wälläd*o *käyəbärrəs* ('let us fight back AIDS [so that] the offspring will not be wiped out'); photo 2004, courtesy of Michael Gervers

Heterosexual contact is the primary mode of transmission, followed by perinatal mother to child transmission. Data on age distribution show relatively high rates among children under five and low prevalence of AIDS cases among children aged between 5 and 15 years.

The AIDS crisis is a serious threat to both Ethiopia and Eritrea, although a declining trend can be observed: whereas by the end of 1999 the World Health Organization (WHO) estimated the number of people with HIV infection in Ethiopia to be 3 million (UNAIDS – WHO 2000), in 2003 1.5 million people were said to be living with the virus in Ethiopia. The epidemic is more severe in urban areas, were the infection levels are five times higher than in rural areas (UNAIDS 2006; about 10 % of the adult Addis Abäba population was estimated to have HIV in 2002, s. Yared Mekonnen et al. 2002:120). "The share of AIDS deaths in the adult population (20–54) is estimated at 68 % [at Addis Abäba], without noticeable differences between men and women" (Tekebash Araya et al. 2004:178). In 2000, overall HIV prevalence among rural military recruits was 3.8 % compared to 7.2 % among urban recruits.

Traditional ↗healing plays a role in local responses to epidemics. It is widely believed at Addis Abäba, e.g., that holy water (↗*ṣäbäl*) from Ǝnṭoṭṭo Maryam can cure HIV. However, no cure based on traditional ↗medicine has ever been confirmed. People are generally reluctant to talk about HIV, as the discourse on this disease is still marked, to a certain extent, by stigma and denial (Garbus 2003: 52). "Lung disease and cold, in particular, have become well-known euphemisms for AIDS"; those who allegedly died of these diseases might in fact have died of AIDS (Tekebash Araya et al. 2004:178). Antiretroviral therapy is now available; however, of 30 countries in sub-Saharan Africa Ethiopia has the lowest percentage of women under treatment (UNAIDS 2006).

Anti-HIV campaigns, especially focusing on behavioural change, have been carried out both in Ethiopia and Eritrea since the mid-1990s. They seem to be comparatively successful. Data from Ethiopia suggest that the prevalence among pregnant women aged 15–24 declined from 24 to 15 % between 1995 and 2001 (Aster Tsegaye et al. 2002). As HIV is spread especially in urban contexts and in settlements along routes, awareness campaigns focus on these areas, and also on the military. Public events like music festivals today regularly make HIV a central topic or at least include it in the programme. Wall-paintings and panels showing the consequences of HIV and unprotected sexual intercourse are found along routes. However, awareness about the use of condoms is still deficient (↗Sexuality). In Eritrea, condoms are called Abu Sälama (lit. 'dolphin') in order to create positive connotations.

Throughout the country the Ethiopian government has appointed counsellors, who carry on the official HIV awareness campaigns at the local *qäbälä* level, both in urban and rural areas. Government agencies, church organizations and NGOs have established local health centres, orphanages, organizations to help mothers affected by HIV and other institutions in Addis Abäba

and other urban centres. However, the country's health care system is still "shockingly ill equipped to carry out a national anti-HIV/AIDS program" (Shinn 2001).

Inevitably, some Ethiopians who have emigrated have been HIV/AIDS carriers. Although none of the Ethiopians who arrived in Israel in the early 1980s via the Sudan were infected, subsequent migrations via Addis Abäba had an every increasing rate of infection. There was a major scandal and violent demonstration in early 1996 when it was revealed that Israeli blood banks had been routinely discarding Ethiopian blood donations because of fear of contamination. Since then the topic has continued to evoke concern, but has been dealt with under the general rubric of countries with high HIV/AIDS rates.

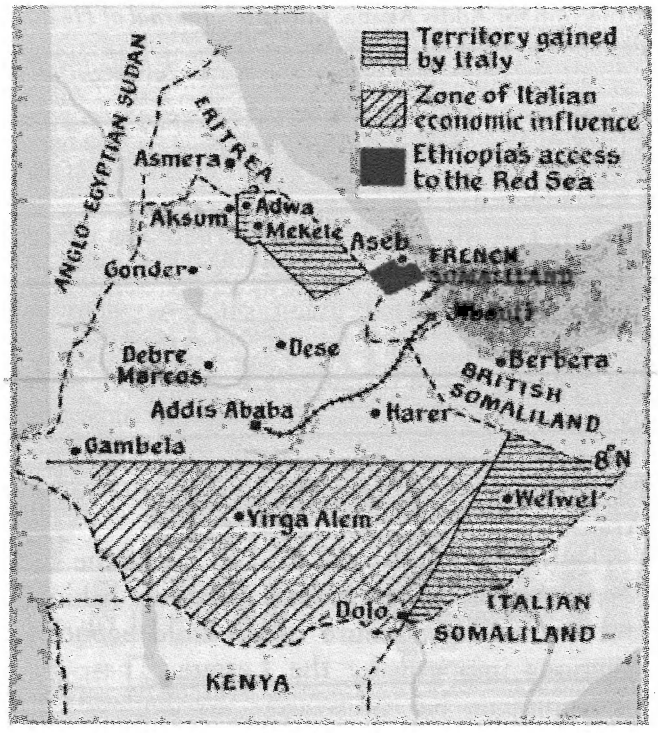
Angelika Wolf

Hoare-Laval Plan

The H.-L.P. of early December 1935 was named after the British Foreign Minister Sir Samuel Hoare and the French Head of the Government Pierre Laval. Formulated some two months after the opening of the Italian Fascist invasion, it was designed to bring about a termination of hostilities, without either an extension of ↗League of Nations' sanctions, or the implementation of Article 19 of the League Charter.

The background to the H.-L.P. lay in the successful Italian advance into northern Ethiopia and the manifest failure of the mild economic sanctions imposed by the League. These two developments led to widespread demands for the full implementation of Article 19 of the Covenant. It stated that any League member "which had resort to war" in "disregard" of the Covenant should be deemed "to have declared war against all other Members". There were also demands for the extension of sanctions to include petrol, without which the Italian air-force could not fly, and for the closing of the Suez Canal, through which Italian soldiers and their weapons had to pass. However, both the British and French Governments were reluctant to alienate Italy by meeting these demands, the more so as Mussolini had threatened, bombastically, to attack the British Navy if sanctions were applied to petrol.

The H.-L.P., which was designed to satisfy Italy, was largely drafted by the head of the Foreign Office's Ethiopia department, Sir Maurice Peterson, in collaboration with Laval, and was finalized in Paris by the British and French ministers on 7 and 8 December 1935. The proposals were revealed to Mussolini before being disclosed to either *aṣe* ↗Ḫaylä Śəllase I or the League. The H.-L.P. proposed that Ethiopia should surrender most of ↗Təgray and ↗Ogaden and accept an Italian sphere of economic interest in all southern Ethiopia up to 110 km of Addis Abäba. To sweeten the pill, Ethiopia was to be given the Italian Eritrean port of ↗ᶜAsäb or the British Somaliland port of ↗Zaylaᶜ, with, however, the provision that no railway should be built to link the latter with the Ethiopian interior (Dugan – Lafore 1973:217f.; Hardie 1974:169f.; Waley 1975:48–70).



Robson's map illustrating the agreement made in December 1935 to divide Ethiopia between the European powers; from Pankhurst – Last 1974:47, courtesy of Eric Robson

The H.-L.P., which was immediately leaked to the press, was rejected by both ↗Mussolini, who wanted a spectacular military victory, and by the Emperor, who felt that it endangered Ethiopian sovereignty. British – and much neutral – public opinion was outraged by the fact that the H.-L.P. rewarded the aggressor at the expense of its victim, and revealed the apparent hypocrisy of earlier British Government expressions of loyalty to the League (Salvemini 1953:385–407; Hardie 1974:164–200; Waley 1975:44–70). Hoare was obliged to resign, and Britain's international prestige plummeted (Baer 1967:329). Moves for the extension of the all-important petrol sanction were, however, abandoned.

Hobyo

H. (5° 21' N, 48° 31' E) is a mud and wattle settlement on the Indian Ocean, roughly 480 km north-east of ↗Mogadishu. Some Somalis suggest, especially the Habar Gidir sub-lineage of the ↗Hawiye clan-family who pasture their herds in the environs of H., that its name means 'Here is the place of water'.

Despite its humble visage today and hot arid locale, H. played a significant role in Somali history as the seat of the once-prosperous sultanate of H., established in 1878 by the enterprising Yūsuf ᶜAlī (Yuusuf Calii "Keenadiid" ['He who would not submit to subjugation']). The descriptive nickname refers to the fact that some time in the 1870s Yūsuf ᶜAlī, a scion of the great ruling family of the ↗Mağeerteen sultanate to the east in the town of ᶜAluula on the Gulf of Aden, openly rebelled against his uncle and father-in-law, the *boqor*, or *sulṭān* (*suldaan*), ᶜUṯmān Maḥamūd (Cusmaan Maxamuud). A massive civil war erupted in which Yūsuf ᶜAlī's motley of mercenary Ḥaḍramīs and Indians proved no match for the *boqor*'s much stronger and battle-hardened warriors. Yūsuf ᶜAlī made a perilous flight with his followers southwards to descend on the pastoral Habar Gidir clans, hastily constructed a *garesa*, or watch tower, a massive building to overawe the local people. The Habar Gidir counterattacked, and a bloody slaughter ensued. Although the Habar Gidir clans bravely charged repeatedly, they failed to storm in Yūsuf ᶜAlī's massive fortifications, and they were repulsed with heavy losses. This defeat and consequent occupation was to leave a bitter memory of hostility on the part of the now-dominated Habar Gidir towards the ↗Daarood, Yūsuf ᶜAlī's clan-family. This unfolded with a fearful vengeance more than a century later in the 1990s when, in the wake of Somalia's collapse as a state, the Habar Gidir under the late General Maḥammad Faaraḥ ᶜAydiid, took heavy reprisals against the now-vulnerable Daarood.

Meanwhile intermittent forays continued between the Mağeerteen and H. sultanates until 1907 when the Dervish Somali anti-colonial movement, under the leadership of *sayyid* ↗Muḥammad ᶜAbdallāh Ḥasan, mystic, poet

and warrior, moved their capital to the town of Eyl on the Indian Ocean, thus occupying a swathe of territory on the coast midway between the two warren sultanates.

The presence of the dervishes in the intervening coast and continued skirmishes between them and the Mağeerteen sultanate gave Yūsuf ᶜAlī's hard-won, desert patrimony a period of peace and prosperity. Trade in hides and skins, ↗ostrich feathers and, above all, the aromatic products of myrrh and frankincense (↗incense) in return for fabrics, household utensils and grains from ↗India, as well as the voluminous importation of the famous Maraykani, or American cotton cloth, gave H. a considerable measure of prosperity near the end of the 19th cent. The town experienced something of a transformative building boom with stone houses and Indian-style porticos replacing the mud and wattle of erstwhile days in the dwellings of the nascent middle class and Yūsuf 's hitherto humble court was transformed into a modern royal house of literacy, record-keeping clerks, courtly hangers-on and learned divines. This, however, was not to last.

With the advent of European ↗colonialism Italians appeared at the Somali coast in the 1880s, encroaching on Yūsuf's kingdom of H., and declared a protectorate over it in 1889. With the expansion of Italian colonial ambitions under ↗Mussolini H. was brought under complete Italian control in 1925.

With the collapse of the Somali state (1991; ↗Somalia) and consequent cataclysmic social upheavals, H. has become a battle ground between various and sundry clans, leaving the city ravished and despoiled, especially in 2005 when a lethal feud between the ᶜAyr and Saleebaan branches of the Habar Gidir, devastated the town, returning it to its erstwhile forlorn state of mud and wattle humble dwellings.

Said Samatar

Hodson, Arnold Wienholt

Sir Arnold H. (b. 1881, Bovey Tracey, Devonshire, Great Britain, d. 1944) was a military officer and author of travel accounts on Ethiopia. He reached the rank of lieutenant and between 1904–12 he served in the Bechuanaland Protectorate (later Botswana) as a policeman and magistrate. From 1914 to 1927 he was British consul in southern Ethiopia, first working in the region of Boräna and later being assigned to a consular post in Mağı, on the border with British-controlled Sudan.

As an intrepid traveller being well-accepted by the local population (Dizi, Meʾen and Boorana, among others), H. attempted to enhance British interests – delineating and observing borders, opening trade routes and discouraging slave-trading – in the volatile region along the borders of the Sudan and Kenya. In the process he became more and more involved in local affairs, protecting the indigenous people against ↗*šəfta* attacks and Ethiopian imperial maladministration. H. participated in armed campaigns against bandits and poachers and often urged his British superiors to use their influence with the Ethiopian government to improve the country's administration.

During his exploits, which included trekking, butterfly-collecting and big game hunting, H. mapped much of south-western Ethiopia. His detailed sketches and cartographic information, while not always completely accurate, proved to be valuable, and for many decades were to provide helpful data to researchers and military personnel. H. left Ethiopia just before *aṣe*

Ḫaylä Śəllasse's accession to the throne. In his last book, *Where Lion Reign,* he expressed the hope that the young monarch might improve the state of the nation. H. later served as a governor of the Falkland Islands (1929–30), Sierra Leone (1930–34) and the Gold Coast (1934–41), and was knighted in 1934.

H.'s travel accounts (1927, 1929) are a fascinating and readable source on local societies, sites and on the cause of numerous conflicts, as well as on patterns of raiding and trading in the Maği and Boorana regions in the early 20th cent. They contain detailed geographical and ethnographic information about the local ethnic groups, their leaders and their relationship with the state agents, foreign adventurers and raiders who settled down in the area during this period.

Abyssinia*, London 1929; ID., "Journeys from Maji, Southwest Abyssinia", *Geographical Journal* 73, 1929, 401–28.

Jon Abbink

Höfner, Maria

H. (b. 11 October 1900, Linz an der Donau, d. 5 November 1992, Graz) was an Austrian Orientalist. She studied Semitic Philology and Ancient History in Graz with Nikolaus Rhodokanakis, a Semitist who worked on South Arabian inscriptions. After obtaining a doctorate she researched on ↗Epigraphic South Arabian and published Sabaean and Qatabanian inscriptions. In 1940 she became a lecturer in Semitic Philology, at the University of Vienna, with particular emphasis on South Arabian and Ethiopic languages. The further stages of her academic career were, from 1944, in Tübingen, where she was appointed extraordinary professor in 1954, and, after 1964, in Graz, where she held the chair of Oriental Studies.

H. was well-known for her *Altsüdarabische Grammatik* (1943). She devoted much of her time to the edition of South Arabian inscriptions collected by Carl Rathjens and especially by Eduard ↗Glaser. The publication of *Das Feteḥ Maḥārī* contains her translation of the Təgre text recorded by Karl Gustaf Rodén. In 1956 appeared the first fascicle of the *Wörterbuch der Tigrē-Sprache*, by Enno ↗Littmann and H., who after the death of Littmann in 1958 continued and completed the work. The first volume of the *Wörterbuch der Mythologie: Götter und Mythen im Vorderen Orient* includes chapters on Northern, Central and South Arabia as well as one on "Die Semiten Äthiopiens" by H.

Walter W. Müller

Ḫoğa Murād ↗Murād, *ḫoğa*

Ḫoḫətä bərhan

Ḫ.b. (ኖኅተ፡ ብርሃን, 'Gate of the Light') is the title of a Marian hymnological composition (↗Hymns) known also as ፀዳለ፡ ብርሃን (*Ṣädalä bərhan*, 'The Splendour of the Light') or ፀዳለ፡ ፀሐይ (*Ṣädalä ṣäḥay*, 'The Splendour of the Sun'). Since in this work St. ↗Mary is metaphorically considered to be the gate through which the Light, or Sun (i.e. Christ) came to illuminate the world, the Ḫ.b. can also receive the name ሙፃእ፡ ፀሐይ (*Muṣaᵓa ṣäḥay*, 'The Exit of the Sun').

The Ḫ.b. is a composite work of prose and poetry, a large part of which contains invocations, prayers and praises, mainly addressed to Mary. There is also a section of prayers and praises addressed to God the Father, to Christ and to the Holy Trinity. The parts of the Ḫ.b. are arranged according to the days of the week. The main inspiration for the Ḫ.b. is the ↗Bible; the work is full of biblical quotations and allusions, mostly from and to the O.T. Many of the Ḫ.b.'s passages are inserted into communal and personal prayers; the work as a whole is not meant to be sung in church.

The Ḫ.b. is traditionally attributed to *ətege* ↗Əleni, the wife of *aṣe* Zärᵓa Yaᶜəqob, who was indeed very active in religious literature. However, some references in the text suggest that the author was male rather than female, lived in the 16th/17th cent. and had knowledge of the theological discussions of his time. Otherwise, the authorship of the Ḫ.b. is usually attributed to *abba* ↗Giyorgis of Sägla or Gasəčča, a prolific 15th-cent. writer (s. Aklilä Bərhan Wäldä Qirqos

1945:83; Wäldä Hanna Täklä Haymanot 1959: 51; Getatchew Haile 1981:129, n. 93).

Habtemichael Kidane

Höhnel, Ludwig Ritter von

H. (b. 6 August 1857, Preßburg/Bratislava, d. 23 March 1942, Vienna) was an Austrian naval officer and explorer. In 1876, he entered the Austro-Hungarian navy. Between 1886–89, he participated in the Ostafrika-Expedition led by Count Samuel Teleki von Szék and established under the auspices of Crown Prince Rudolf. During the expedition, which was to discover Lakes Rudolf (↗Turkana Lake) and Stefanie, he was in charge of the geographical section and carried out scholarly research.

Between 1899–1903, H. was aide-de-camp of Emperor Franz Joseph, and in 1905 he was appointed to head the Austro–Hungarian delegation sent to ↗Mənilək II to conclude a treaty of commerce and friendship. However, H.'s negative attitude towards the economic development of Ethiopia resulted in only low-scale relations between both countries. In 1905–09, he led a further mission to Australia and Polynesia until his retirement from active service with the title of rear-admiral in 1909.

He devoted the rest of his life to working on his scholarly records. His memoirs were first published in German in 1926 in a somewhat abbreviated form and then in an English version with a biography and annotations.

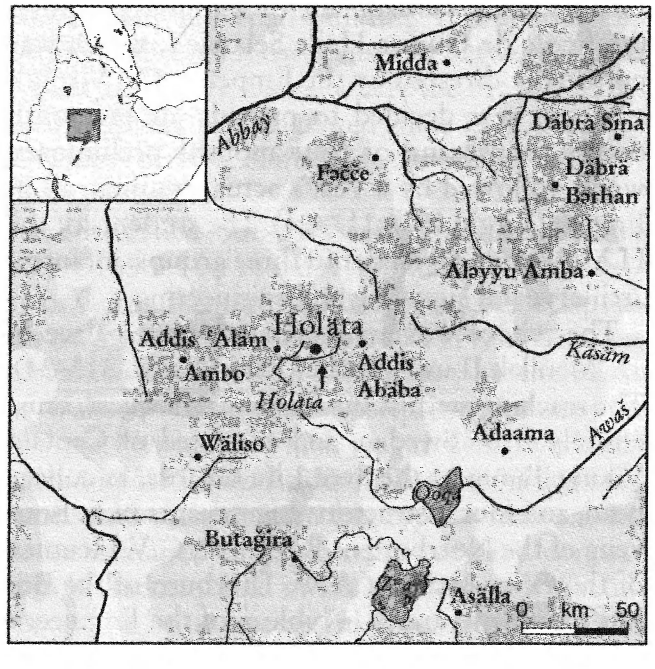
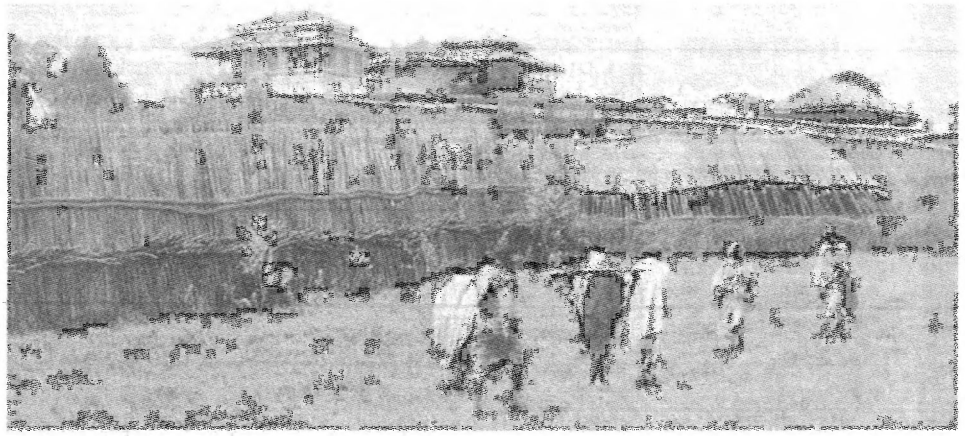
Holäta

H. (ሆለታ, Oromo sp. Hoolota) is the name of a river and a town (09°04' N, 38°30' E 2,450 m A.S.L.), now also known as Gännät or Holäta Gännät, ca. 45 km west of Addis Abäba.

The settlement was established by *aṣe* ↗Mənilək II and *ətege* ↗Ṭaytu in 1902 after Mənilək abandoned his plan to move his capital to ↗Addis ʿAläm, and decided instead to solve the wood shortage in ↗Addis Abäba by building a road between it and Addis ʿAläm. This road, one of the first in the country, ran for part of its route by the H. river, where the settlement of ʿAynä ʿAläm ('Eye of the World'), later renamed after the river, came into existence. There Mənilək ordered to erected a fine palace, on a nearby elevated site. His wife, seated in her purple tent, supervised the town's development. This included some canalization of river water. H. soon had a population of some 15,000 inhabitants, and, because of the Emperor's frequent presence there, was nicknamed by Germans the "Potsdam of Ethiopia".

The town declined in importance after Mənilək's death, but regained some prominence in 1935 when *aṣe* ↗Ḫaylä Śəllase I chose H. as the site for the country's first military academy





The Holäta palace of *aṣe* Mənilək II; photo early 20th cent., from *Die Woche* 1910:1440

(↗Holäta Military Academy). In 2000 the town had a population of 22,554 inhabitants.

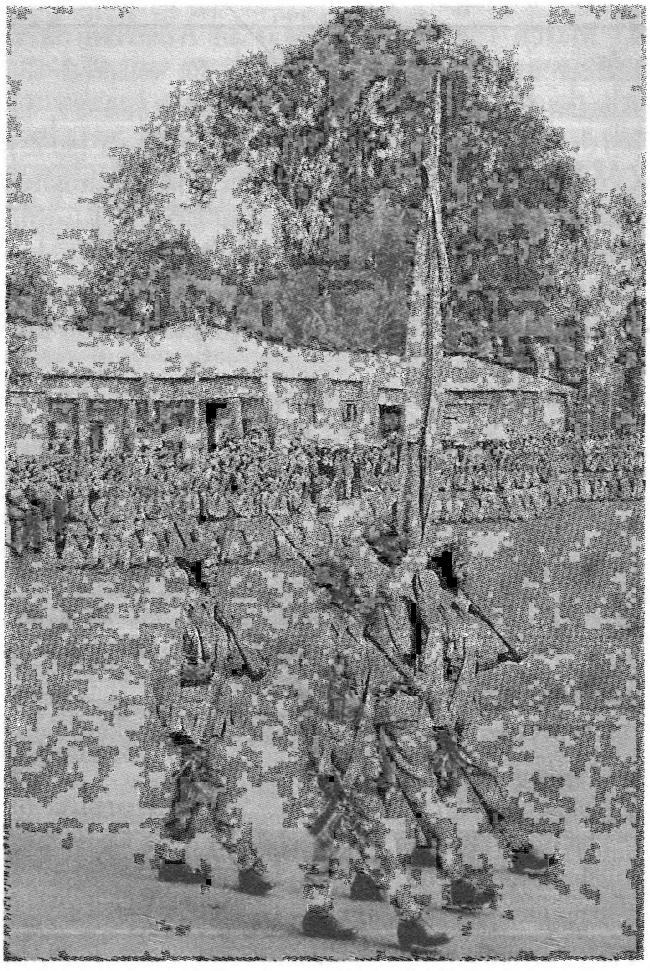
Holäta Military Academy

The H.M.A. (**ሆለታ፡ የጦር፡ ትምህርት፡ ቤት**, *Holäta yäṭor təmhərt bet*, later *Gännät yäṭor təmhərt bet*) 45 km west of Addis Abäba, was established in 1935 on the eve of the Italian fascist invasion (↗Italian war 1935–36). Following his European visit of 1924, which had taken him to Sweden, *aṣe* ↗Ḫaylä Śəllase I, faced with the threat of invasion – and the need to modernize the Ethiopian army, asked the Swedish government in 1933 to find him a military adviser (↗Sweden, relations with). A Swedish general, Eric ↗Virgin, was duly appointed, and was asked by the Emperor to advise on the establishment of a military school: the École de Guerre Haile Selassie I, which was personally directed by the Emperor. On Virgin's advice it was decided to provide an 18-month course, consisting of four months preliminary work, followed by a year's actual training, all in French (Virgin 1936:117–24). The students of the H.M.A. were divided into three groups: infantry; artillery; and signaling and engineering.

The school was housed in a former palace of *aṣe* Mənilək II in ↗Holäta (PankHist II, 313–34). The teaching staff, at the Emperor's request, came entirely from Sweden, and consisted of Captain Viking Tamm of the Svea Life Guards, as college head, and four instructors: Lieutenants N.E. Bouveng of the Norrbottens Regiment, G.V. Heuman of the Göta Artillery, A.W. Thorburn of the Bohus Regiment, and A. Nyblom of the Engineers. Teaching, of 105 cadets later increased to 148, began at the end of January 1935 and the school was officially opened at the end of March – only six months before the beginning of the war to which the cadets were duly despatched: 17 were killed in battle and 24 executed after capture (Halldin-Norberg 1977: 137ff.). A monument was later erected to those who had fallen.

The school was re-opened and expanded soon after Ethiopia's liberation in 1941, when it was run by officers of the British Military Mission in Ethiopia, who used English as the language of instruction. They were replaced, in 1948, by members of the United States Military Assistance Advisory Group, who were later in their turn withdrawn.



Cadets of the Gännät Military Academy (the former Holäta Military Academy) around 1960; from Hamere Selassie Bette Mariam 1964:300

The H.M.A. was expanded after the ↗Revolution of 1974, during the *Därg* period. It was renamed after General ↗Mulugeta Buli (a H.M.A. cadet of 1935) who was assassinated in the palace, together with other officials and dignitaries, when the ↗coup d'état 1960 (s. EAE II, 1081f.) failed. After the change of regime in 1991, the new government took it over and used it as a place of political education for political and military prisoners for a short period. Then it was re-established as a military school. It was renamed after General Ḫayyälom Arʾaya upon his death in 1998.

Richard Pankhurst

Holland, Trevenen James

Colonel H. (b. 1836, d. 1910) was a British officer who participated in the ↗Napier expedition of 1867–68 and co-authored the official British Government history thereof. The son of a colonel, H. studied at Oxford before joining the army. He served in the Crimean war, in India, where he was involved in crushing the Indian Mutiny and in several other British campaigns. Head of the Intelligence Department in the Mäqdäla expedition, he was mentioned in dispatches and immediately afterwards appointed a Companion of the Bath.

H. wrote extensively on military matters and is remembered for his remarkably detailed and exhaustively documented two-volume *Record of the Expedition to Abyssinia*, which he co-authored with the British officer ↗Hozier (1870). In 1910, shortly before H. died, he stood, unsuccessfully, as a Conservative Parliamentary candidate.

Richard Pankhurst

Holtz, Arnold

H. was an early 20th-cent. German financial adventurer and, at times, diplomatic agent who epitomized the "concession-hunters", a prominent feature of post-↗ᶜAdwa Ethiopia. He first came to Ethiopia in 1902. In March 1904, he acquired a mining concession, the first of his many concessions. A company by the name of the Abessinische Bergwerks- und Handelsgesellschaft was formed in Berlin in November 1905 to exploit the concession. The company fizzled out barely a year later amidst mutual recriminations. H. then turned his full attention to the Abyssinian Mining Syndicate, that he had been instrumental in forming. Although it seemed to enjoy some degree of imperial favour (one of its important meetings actually being held in the German Reichstag), the initial euphoria could not be matched by any concrete results in the realm of mining.

Part of the problem for H.'s business undertakings was that the German government (↗Germany), and, particularly, the Legation in Addis Abäba, viewed him with considerable circumspection, not to say downright hostility. Although H. might have played some role in the advent of the ↗Rosen mission to Ethiopia in 1905, which effectively marked the beginning of Ethio–German diplomatic relations, he later fell out with the leaders of that mission. However, like most of the concession-hunters, he managed to ingratiate himself with the Ethiopian rulers. He particularly endeared himself to *aṣe* ↗Mənilək II when he brought a motor car to Ethiopia in 1908. He followed this up with concessions for road-building throughout the empire and for motor-transport between Addis Abäba and Dərre Dawa, where the Franco–Ethiopian railway had stagnated since 1902. As with so many of H.'s concessions, nothing came of these two, either.

As it turned out, H.'s record of total failure was redeemed by two developments in the history of German enterprise that form a postscript to his own futile undertakings. In 1914, he brought to Ethiopia a German pharmacist by the name of Walter ↗Zahn, who subsequently opened St. George Pharmacy, which was to remain a landmark in downtown Addis Abäba for quite a long time. And although, in his typical fashion, H. never managed to exploit the brewery concession he had acquired in 1913, it became a precursor to the more-successful concession acquired

Holy Land ↗Jerusalem

Holy men

Although most traditions attach special significance to the activities of religious specialists, the phenomenon of H.m. and holy women (↗Saints) in Ethiopia is most prominent in the monotheistic faiths. Often the H.m. are viewed as individuals who represent the living incarnation of the values of a particular religious tradition. While some H.m. are viewed as models to be imitated, in other cases a two-tiered system exists in which the H.m. represent a standard of devotion beyond that expected of average believers. In addition to the messages conveyed by their conduct, H.m. also have a vital function in assisting believers in their daily lives through the performance of both mundane and miraculous deeds.

A complex relationship exists between the living H.m. and the ↗saints who are commemorated after their death through ritual and literature. Although H.m. are venerated in their own lifetimes, in many cases the only records of the H.m.'s activities are posthumous accounts. Thus, the knowledge which survives of the living H.m. is often derived from the commemoration of the deceased saints through oral traditions, written texts, and their commemoration in ritual. This is particularly noteworthy in Ethiopia where none of the religious traditions appear to have formal rites of canonization. Thus, while it is convenient to distinguish between the living H.m., who are present in the lives of the believers, and the saints (Eth. ቅዱሳን, *qəddusan*; Arab. اولياء, *awliyāʾ*), who are venerated after their death, our knowledge of the former is usually available because of the special honour accorded to the latter. This distinction is also important, because it reminds us that not every H.m. venerated in his lifetime is commemorated later as a saint. Moreover, some saints of the ↗Ethiopian Orthodox (Täwaḥədo) Church were not H.m.

Christian holy men

Most H.m. of the Ethiopian Orthodox Church were either monastic leaders or ↗hermits. By virtue of their monastic vocation and ascetic life style, these Christian H.m. acquired a unique status which enabled them to fill a vital mediatory role in Ethiopian society. In the process of becoming monks, the H.m. stripped themselves of their secular identity and were reborn as new social beings. This was most prominently symbolized by the assumption of a new garb and a new name (↗*Śərʿatä mənkʷəsənna*); the H.m.'s special status was further augmented by the separation from their bonds of kinship and the norms of secular society. Most conspicuous among the ascetic labours were celibacy and virginity. Dietary restrictions (especially abstinence from prepared foods) and ↗fasting were also common among H.m. Sleeplessness, restricted movement such as standing in one place for long periods, and the wearing of uncomfortable garments were among the other formative ascetic practices associated with the H.m.

Through their initiation and ascetic practices H.m. acquired a unique multi-faceted religious persona. Stripped of their original social identity, they were able to re-enter society as new beings, "strangers" with neither family nor native region. In this "stranger" role they were able to intervene with an air of impartiality in both political and domestic disputes. From a position outside and somewhat above normal human society, they offered the possibility of just and unbiased verdicts to parties in dispute.

Both as monks and as ascetics the H.m. were believed to have achieved a status similar to that of ↗angels. Hagiographic texts make frequent comparisons between the appearance, character, behaviour and garb of the H.m. and those of the angels. Most importantly, the monastic H.m. were believed to be like angels and St. Mary as mediatory figures capable of communicating between man and a remote, unreachable God.

One important expression of the H.m.'s special relationship with God was that their prayers were believed to be especially efficacious in achieving cures. Plagued by a variety of ailments and medical complaints, people travelled to the H.m. in the hope of being healed (↗Healers). Such cures as were achieved, resulted not from the H.m.'s application of any special medical knowledge or training, but rather of his use of religious techniques and objects including prayer, the Cross, the Eucharist, holy water, and their monastic garb. In addition to protecting men from ↗demons and disease, the H.m. also guarded them and their property from the attacks of animals. Lions, snakes, locusts and other wild creatures, were driven off and even killed by power of the H.m. Since such animals were frequently perceived of as emissaries of Satan or even Satan himself (↗Devil), the holy man's victory represented not only a practical achievement, but also a triumph over the demonic forces which threatened human society.

The H.m.'s encounters with the members of the natural world were not confined to conflicts alone. Some H.m. were believed to be able to communicate with a wide variety of creatures. The H.m., who scorned human kinship and prepared food in order to live in the wilderness and eat food in its natural state, were capable of mediating between the realms of man and beast, enjoying a coexistence with the animal kingdom reminiscent of the period before the Fall.

The tensions within society were frequently expressed in the dramatic idiom of "Satanic" possession (↗Possession cults). In their role as exorcists, the monastic H.m. attempted to pinpoint, isolate, and resolve such areas of tension. In dramatic confrontations, the demonic forces which threatened society were challenged head on and defeated by the forces of good and the representatives of order as presented by the H.m.

The vast majority of the H.m. commemorated in the hagiographic literature of the Ethiopian Orthodox Täwaḥədo Church were the leaders of monastic communities (↗Monasticism). In their role as abbots, these H.m. assumed many of the responsibilities of other leaders of local communities. Like the representatives of regional polities, the H.m. had to be constantly on guard in order to protect his community of loyal followers from the kings' attempts to centralize the administration of the kingdom. The recruitment of disciples and the selection of a new abbot were two areas that were especially vulnerable to royal interference.

The influence of the H.m. was not confined to their monastic communities. Often the H.m. are remembered for championing particular causes. This was especially the case in the 14th and 15th cent. when they headed monastic movements with a strong regional character. However, it was also an important theme during the encounter with the ↗Jesuit missionaries and during the theological controversies of the ↗*Zämänä mäsafənt*. Numerous H.m. played an active role in the political life of the court forming alliances with local rulers and members of the royal family, and seeking to influence the succession process. The H.m. also played an active role in the incessant military campaigns that characterized the history of the Christian empire. The prayers of H.m. were believed to have an enormous impact on the outcome of a battle.

In return for predictions and blessings before a battle and encouraging the troops on the battlefield, the H.m.'s monastic community received gifts of land, booty and established valuable relationships with rulers, military leaders, and common soldiers. Thus, even in the military sphere, the H.m. can be seen to have played a role not unlike that of local rulers and nobles.

In summary, the monastic H.m.'s exalted position in Christian Ethiopia was based upon his ability to perform a wide variety of functions for the benefit of those who followed and believed in them. Some of these functions carried with them no inherent religious significance and were, in essence, similar to the activities and responsibilities of secular chiefs and rulers. As leaders of monastic communities, many H.m. had responsibility for multi-faceted institutions with political, military, social and economic functions. However, it would be misleading and reductionist to view the monastic H.m. as nothing more than nobles in monk's clothing. Their unique status was also based on their role as the

most accessible representatives on a decidedly "this-worldly" religious ethos. Explanations of and solutions to many of the problems which confronted believers in their daily lives were provided by the H.m. whose monasticism and distinctive lifestyle were believed to have equipped them to serve as exorcists, mediators, healers, subduers of wild animals, and most important, intercessors before God.

Betä Ǝsraʾel holy men

Like their Christian counterparts, ↗Betä Ǝsraʾel H.m. are drawn from the monastic clergy. This institution appears to have emerged among the Betä Ǝsraʾel around the 14th or 15th cent. and is attributed to the activities of *abba* ↗Sabra and his disciple ↗Ṣägga Amlak. It continued to be a central element of their religious life until the 20th cent. Betä Ǝsraʾel H.m. are remembered for introducing important elements of their religious practice such as literary works and purity laws and for the miracles they performed. Many are also recalled as defenders of the faith versus Christianity. They are commemorated at numerous holy places in Ethiopia, which often served as pilgrimage sites, but not in written texts. A small number of sites are associated with Betä Ǝsraʾel holy women.

Muslim holy men

The history of Muslim H.m. in Ethiopia has yet to receive extended scholarly attention. Partially, at least, the lack of attention appears to be due to the tendency to emphasize the role of traders and warriors in the spread of ↗Islam in Ethiopia at the expense of clerics and leaders of ↗Islamic brotherhoods. It also appears to be linked to the fact that in contrast to the Christian case, the deeds of Muslim H.m. in Ethiopia are remembered far more prominently in oral traditions than in the written sources. Only in recent years has the crucial role of Muslim H.m. possessing *karāma* (Arab. 'divine favour') and capable of transmitting *baraka* (Arab. 'holiness, blessing') begun to emerge. On the basis of this preliminary material it is possible to trace the main points in the lives of some H.m. and to offer some preliminary generalizations regarding their characteristics.

One feature which distinguishes Muslim H.m. from their Christian counterparts is their inherently international character. While the major Ethiopian monastic houses were local entities confined to Ethiopia, Muslim H.m. were often part of a wider network of ↗Islamic brotherhoods. In a similar fashion the emergence of *Ṣūfī* (Muslim mystic) H.m. in Ethiopia appears to be intimately linked to contacts with the wider Muslim world, most notably the Ḥiǧāz (↗Arabia). In contrast to the Christian H.m., who were celibate and had only spiritual descendents, Muslim *šayḫs* often had both spiritual and physical descendents (↗*Šayḫ*). Thus holy families are a common phenomenon. The ↗ʿAd Šek, for example, were a holy family in Eritrea, who were composed of descendants of *šayḫ* al-Amīn b. Ḥāmid b. Nāfʿūtāy, who arrived in the region in the 19th cent. The reputation of the *šayḫ* and his descendants for preaching and miracle working attracted many followers to Islam.

Finally, because of the existence of a clearly articulated code of religious law in Islam ((↗Šarīaʿ), much of the Muslim H.m.'s reputation rested on their personal observance and obedience to this code. These differences notwithstanding, many of the characteristics attributed to Christian H.m. are also found in traditions regarding the Muslim H.m., including ascetic behavior and the performance of miracles.

Ḥāǧǧī šayḫ sayyid Bušrā b. ʿAlī (1756–1855) is one of many Muslim H.m. commemorated at various sites by the ↗Argobba people, the possible remnants of the population of ↗Ifat. He was a contemporary of *šayḫ* Sulaymān Dağdağ, who himself was a great-grandson of *šayḫ* ↗Ḥusayn of Bale. Oral tradition credits him with a significant role as arbitrator in solving local conflicts and with having gone without drinking for 72 days during a period of drought until a heavy rain fell. Indeed, this was only one of the many miracles he is said to have performed. Others included: blinding lions, producing harmony between hyenas and donkeys, paralyzing his enemies and reading a chapter of the Qurʾān from a distance of six feet.

The Wällo of the 19th cent. was also home to a number of important *Ṣūfī* H.m, who are remembered for their high level of religious observance and their clashes with those who favored a less rigorous adherence to Islamic law. The earliest of these, *šayḫ* ↗Muḥammad Šāfī, is said to have divided his time between teaching, prayer and ↗*ǧihād*. He is remembered for having turned horses into oxen to feed his troops and calling down God's wrath on a local chief who confiscated his land. *Šayḫ* ↗Ǧaʿfar Bukko was the son of a well-known mystic and miracle worker,

Ṣiddīq Bukko. *Šayḫ* Ǧaᶜfar had a reputation as an ascetic and missionary as well as a reformer who criticized both religious officials who deviated from Islamic law and secular rulers who lived in luxury while their communities suffered. *Ḥāǧǧī* ↗Bušrā āy Muḥammad is remembered for his unrelenting struggle against non-Islamic practices including the *zār* cult (↗Possession cults), excessive consumption of ↗*čat*, and ritual ↗sacrifices under trees known as *gobadan*. Although there is a tradition that he was killed at the behest of *aṣe* ↗Tewodros II who feared his popularity, he appears to have died of natural causes.

Holy Trinity Theological College

The H. (ቅድስት፡ ሥላሴ፡ መንፈሳዊ፡ ኮሌጅ, *qəddəst śəllase mänfäsawi kolleǧ*) was the first modern theological school of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). It was established on a site constructed during the Italian occupation adjacent to the ↗Qəddəst Śəllase cathedral and inaugurated in December 1944 by *aṣe* ↗Ḫaylä Śəllase I. The Emperor was eager to see more competent clergymen, and prior to the establishment of the H., 20 church scholars had been chosen to receive modern theological education at the ↗Gännätä Ləᶜul Palace under the guidance of Professor Bäträ Ṣadəq Kaśa (Shenk 1972:241f.). Later, the Emperor financed the H. from his private treasury until the Ministry of Education assumed responsibility.

The H.'s main goals were to enable traditionally educated priests and scholars to acquire modern ↗education, both religious and secular; to train qualified teachers of religion and morals who could interpret the Christian faith in a way more meaningful and acceptable to the contemporary society; and to teach the young people Ethiopia's spiritual and cultural heritage alongside modern western education.

Initially a theological school serving elementary level, the H. later expanded to cover secondary and university level and was arranged in four sections. In the first, the three- (later four-) year Priests Section, traditional scholars graduated in one or more fields took part and emphasis was given on secular subjects. In the six- (later eight-) year Deacons Section, deacons with some background in elementary traditional education were trained in more advanced traditional church education and modern education. These sections were later integrated into Elementary School which continued until 1960. In the High School section, students – mostly coming from St. Paul (serving as a seminary) and Harär Ras Mäkʷännən church boarding schools – were instructed in secular subjects to qualify for the Ethiopian School Leaving Certificate Exam. The fourth, Religion Teachers' Training Section was opened to answer the need of the Ministry of Education for morals teachers in its elementary schools.

In October 1960, the College Section was opened by the Ministry of Education in consultation with Church authorities. A year later, the H. became one of the six chartered units of the newly opened Ḫaylä Śəllase I University (↗Addis Abäba University). In line with the University's administrative system, the H. continued to train young theologians who could occupy important positions both in the Patriarchate and governmental institutions.

During the initial years of the school, it was administered by the board of governors headed by *abunä* ↗Tewoflos, the then spokesman to the Patriarch and Archbishop of Harär, with representation from the Ministry of Education, the government, and the church. The everyday activity of the school was headed by Marcos Daoud (b. 1897, d. 1986) of the ↗Coptic Church with the Ethiopian and Coptic teaching staff (Shenk 1972:243). The college section was

The Library and Secretariat of Holy Trinity College, previously the Office for the Abolition of Slavery; photo 2007, courtesy of Tilmann Chromer and Miriam Amine

administered by scholars from other sisterly churches like Bishop Terenig Poladian of the Armenian Church (1960–63), Dr. K.C. Joseph (1963–67), Father A.T. Gabriel (1967–69) and Dr. V.C. Samuel (1969–?) from the Indian Orthodox Church (Shenk 1972:244).

With the coming of the *Därg* (↗Provisional Military Administrative Council) the H. was put, first, under three years of sanction; later its property was fully confiscated. Despite the attempts by various Church officials, including the Patriarch, to recuperate the H., it stayed under the control of the military government for 17 years, loosing most of its students and functions. When the EPRDF came to power, in October 1994 the Church under the Patriarch *abunä* Ṗawlos was able to regain control of the H. that was reopened in 1995, with 12 academic staff members and some 150 students, including women, offering degree and diploma program.

Today, the H. offers baccalaureate, diploma and certificate programs and is on the way to offer postgraduate studies. It is headed by a dean, appointed by the Patriarch, and is ruled by an executive board, accountable to the Holy Synod of the EOTC.

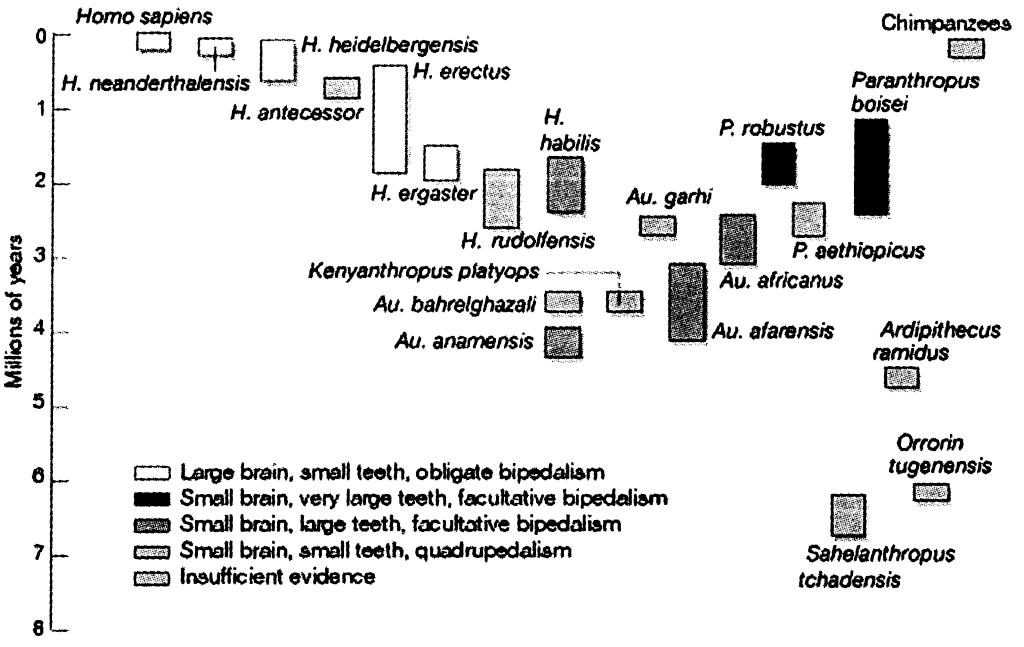
Homily ↗Dərsan

Hominids

The term H. comes from the Latin family name *Hominidae* and in the common usage it includes modern humans and our evolutionary ancestors back to the separation of our line from that leading to the African apes. Yet due to intensive research and continual new findings, phylogenetic relations and even classification criteria are in a state of flux. Most traditional taxonomists would argue that, on the basis of the unique features of our mind and behaviour, only humans now belong to the family. However, recent advances in cladistic taxonomy and genetic analysis have

shown that modern humans are closer to African apes (gorillas and chimpanzees) than either of these are to orang-utans (the Asian apes), not to mention ↗monkeys. Thus, many biologists today consider *Hominidae* to include the African apes and thus restrict the family *Pongidae* to the orang-utan. A rather unsatisfactory outcome of such a scheme is that H. may now mean "African apes and humans" (a super-family previously known as *hominoidea*) or "humans and their direct ancestors" (a tribe which may label *homininae*). Only the second group, whether it is referred to as H. or Hominines, is described in this entry. Three genera are usually included in the H. family: ↗*Ardipithecus*, *Australopithecus* (e.g., ↗*Australopithecus aethiopicus*, ↗*Australopithecus afarensis*, ↗*Australopithecus garhi*) and ↗*Homo*. Bone remains belonging to the three types that have been discovered in Ethiopia.



Timeline of hominid species; after Wood 2002 (modified)

Three general features have been recognized as characteristic of the *Hominidae*: a relatively large brain size in relation to body size, reduced dentition and bipedality. The first two appeared relatively late, after the emergence of the genus ↗*Homo* 2.4 million years ago [mya], and only the latter clearly defines the members of the earlier genus *australopithecus* (4.2–1.1 mya) as H. Since all modern apes have different patterns of locomotion, walking on two legs has become the touchstone feature of the first H. The other H. genus found in Ethiopia, *Ardipithecus* (5.8–4.4 mya), has not been fully studied yet. However, available published material indicates that its locomotion type might be controversial, though it is largely accepted as a facultative bipedal and thus part of the H. family. Academic discussion continues on other earlier taxa, such as *Sahelanthropus*, found in Chad (7–6 mya), and *Orrorin*, discovered in Kenya (6 mya), whose condition as part of the human lineage is much debated. Since most theories explaining the origin of bipedalism take into account the shift of the first H. from a wooded environment, where apes like their ancestors have remained until today, to an open savannah setting, palaeoenvironmental data indicating a more forested and wooded habitat for *Ardipithecus* have puzzled researchers. However, recently-published data from ↗Gona suggest that those H. lived in a mosaic of environments.

According to the most favoured model of H. evolution, a series of successive adaptive radiations (branching) has taken place in response to environmental changes, in which anatomical features appeared mixed in a "mosaic" manner. Homoplasy (independent acquisition of similar shared characters) was probably very frequent and thus key H. adaptations such as bipedalism, manual dexterity and a large brain could have evolved more than once. Therefore parallel features are not enough to link one species with another, let alone to identify any of them as the direct ancestor of modern humans.

The following *Australopithecus* taxa have been recorded in Ethiopia – main sites are indicated. *Ardipithecus* has been found in ↗Aramis, Gona and Alayla (ᶜAfar); *Australopithecus afarensis* in ↗Hadar, Maka (ᶜAfar) and Omo ("Southern" region); *Australopithecus garhi* in Buri (ᶜAfar); *Australopithecus aethiopicus* has been documented in the Šungura Formation of the lower Omo; another variant of the "robust" australopithecines, *Australopithecus boisei*, was found in Šungura, Omo and ↗Konso-Gardula (Southern Ethiopia).

Víctor M. Fernández

Homo

H. (Lat. 'human, man') refers to the biological genus to which the only living species, *H. sapiens*, and several extinct species belong. Its single most important feature is considered to be a large brain, most members having a volume of more than 700 ml, larger than that of the biggest *Australopithecus* or living apes. The number of ancient species is uncertain but at least five forms are currently recognized: *habilis*, *erectus*, *heidelbergensis*, *neanderthalensis* and *sapiens*.

H. habilis, which existed between 2.4 and 1.5 million years ago [= mya] in eastern and perhaps also southern Africa, is a controversial species and some scientists believe that it should be assigned to either the australopithecines or *H. erectus*; it is also widely thought that its specimens have too wide a range of variation for a single species and the larger forms are classified as *H. rudolfensis*. *H. erectus* lived between 1.8 and 0.3 mya in Africa, continental Asia and Indonesia. Its presence in Europe is discussed, as the oldest confirmed European ↗hominids have been labelled *H. antecessor* and *H. heidelbergensis*. The *erectus* brain size was larger than *habilis*, varying between 750 and 1,225 ml, and its body proportions varied; however, some specimens were taller and more slender than earlier ones. Some scientists classify the first African *erectus* specimens as belonging to a separate species, *H. ergaster*, which differs from the Asian fossils in the shape of the brow ridges and the brain profile. After approximately 0.5 mya, the European *H. heidelbergensis* is considered an ancestor only to the Neanderthals – which became extinct some 30 thousand years ago [=tya], – genetic and archaeological data pointing to the African "archaic" forms of *H. sapiens* (sometimes labelled *H. rhodesiensis*) as the only precursors of modern humans. Thus, all the morphological variations (races) known today among us are the result of rapid adaptations to different environments of one single species having originated in Africa sometime around 200.000 years ago.

The earliest known fossil of *H.* in Ethiopia is the palate with partial dentition AL 666–1 found in ↗Hadar (ᶜAfar) and dated to 2.3 mya, which represents the palaeontological evidence for the projection of the *habilis* well back into the Pliocene. The date agrees with that of the oldest stone tools hitherto discovered (2.5–2.6 mya in ↗Gona, ᶜAfar and to 2.3 mya at the ↗Omo river, Southern Nations, Nationalities and Peoples' Region [SNNPR]), yet their connection with *habilis* is far from clear since several hominid species with variable foraging strategies are also known to be associated with early stone tools.

A number of bone fragments, mostly teeth, classified as nonrobust australopithecines or early *H.*, have also been found in the Šungura Formation of the Omo river, dated to between 2.4–2 mya. Some are similar to *H. rudolfensis* in size and morphology and are thus likely to represent the ancestral condition of the genus. Remains attributed to *H. erectus* were found in ↗Mälka Qunṭure (Oromiyaa), ↗Konso-Gardula (SNNPR) and ↗Buri (ᶜAfar). Mälka Qunṭure re-

mains include a humerus dated to 1.7–1.6 mya, and a mandible and teeth dated to 1.5 mya. The fragmented remains unearthed at Konso are associated with one of the earliest known occurrences of Acheulian stone hand-axes, dated to 1.6–1.4 mya. The calvaria and postcranial relics from Buri are dated to 1mya and resemble the Asian specimens of *erectus*, thus supporting the hypothesis of only one widespread palaeospecies in both continents. Bones attributed to early *H. sapiens* were discovered at Herto, Bodo (ᶜAfar) and Omo-Kibiš (SNNPR). The Herto skulls, two adults and a child, are dated to 160 tya and have been labelled an independent subspecies, *H. sapiens idaltu*. The two crania from Kibiš, Omo-I and II, have been redated recently to 195 tya, thus constituting the oldest known modern humans. The earlier Bodo cranium from the middle Awaš, dated to ca. 600 tya, is a nearly complete skull and a controversial find since some scientists argue that it is a *H. erectus* (or *heidelbergensis*) specimen with *H. sapiens*-like characteristics. Cutmarks on the skull are interpreted as evidence of cannibalism.

Honey

Introduction

H. (Amh. **ማር**, *mar*, Gəᶜəz, Tgn. **መዓር**, *mäᶜar*, Orom. *damma*) is the sweet substance produced by bees (↗bees and beeskeeping) from the nectar of blossom or from the secretion of parts of plants and stored in honeycombs. It is valued for its taste, healing properties and economic value. It is generally considered to strengthen the body and facilitate a long life.

Due to wide climatic variability, Ethiopia is endowed with diverse and unique flowering plants which are suitable for bee colonies. Such plant species include trees, shrubs, herbs and cultivated crops. The most common plants preferred by bees are *Bindens spp.*, *Trifolium spp.*, and *Guizotia spp. Acacia spp.*, *Cordia africana* (↗Acacia). Ethiopia is one of the ten major producers of H., 23,000 metric tonnes being produced annually. The export value of H. is by far less than that of beeswax.

Admassu Addi

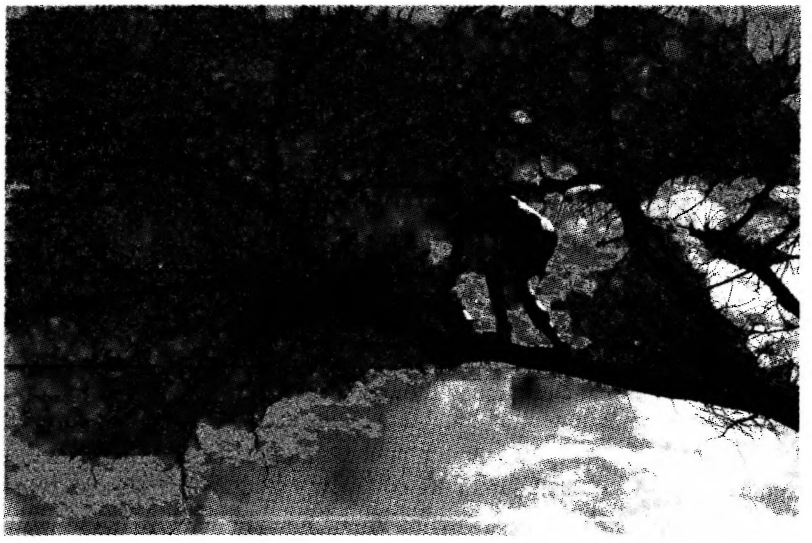
Concept and role of honey in Ethiopian culture

H. has been important historically in the Ethiopian plateau and lowlands, the particular techniques used to collect it giving rise to specific knowledge in the fields of ethnozoology and ethnobotany.

In Təgray H. was collected from wild bees (Tgn. **ንህቢ፡ ጥርቀ**, *nəhbi ṭərqä*), from beehives in trees, from fissures in rocks or from old termite nests, or from underground in the case of earth-dwelling bees, **ጭዳናይ** (*č̣ädänay*); not much H. came from domestic bees. It was the custom to combine the preparation of the beehives with the ceremonies of the first day of the Ethiopian New Year. On the plateau three varieties of H. were distinguished, based on specific, dominant flora and identifiable by colour and taste, and named in connection with their place of origin *baryani* (Barka, ᶜAnsäba and Sahəl), *salima* (Asaorta), *ḥabäši* (plateau).

H. is used in both food and drink. After pressing it is used for the preparation of mead and, as a by-product, to wax. The preparation of mead, in its regional varieties, Tgn. *mes*, Orom. *daadhii*, Amh. ↗*ṭäğğ*, is undertaken by men or women according to social context, area and time. The regulation of the proportion of H. to water, the dosage of aromatic herbs (*gešo*, lat. *Rhamnus prinoides*; *ṭäddʷo*, lat. *Rhamnus staddo*) and the preparation and fermentation time define its alcoholic, gustative and social values, differentiating between good domestic *mes* and commercial *mes*, from white to red to black to a bitter one, *din*, the cheapest and most unpleasant. A typical *ṭäğğ* can have around 14 % alcohol.

H. is used in traditional therapeutic practices. H. and mead have taken on a high cultural position in the alimentary code and have a symbolic value at important occasions of consumption and feasting, at birth ceremonies, at cultural events



K"egu smoking out a bee-hive to obtain honey; photo 1989, courtesy of Matsuda Hiroshi

in monasteries, at ↗burial or commemoration (↗*täzkar*) banquets, where relatives and friends bring large vases of *suwwa* and *mes*. Mead, often reserved for the chiefs, as sumptuary consumption, has symbolized a line of social demarcation: its presence in the retinues of the chiefs in war and in the shared feasting at the banquets of the élite symbolized the rank of the host and his table-companions, giving rise also to specialized roles (Amh. *ṭäğğ* [*mes*] *asallafi*, 'servant who serves *ṭäğğ*' or *ṭäğğ mälkäññä*, 'official charged with brewing, storing and serving *ṭäğğ*'). Its status as a superior drink is seen by its relationship with *suwwa* or ↗*ṭälla*, which are consumed by the lower social strata. Nevertheless, *ṭäğğ* has lost some status due to its association with *ṭäğğ bets*, mead houses frequented by the poor.

Mead also expresses cultural and religious boundaries and identities: the Muslims drink *bərz* (ብርዝ), water flavoured by H., unfermented.

Historically H. was present in circuits of exchange, in local markets (Massawa, Gondär, Mäqälä, etc.) as well as externally; and additionally in the form of mead in the sexual-economic exchange (women who sold both the drink and their sexuality). It has been an exchange product in the taxation system which bound the peoples from the lowlands with the regional chiefs of the plateau, as well as in internal socio-economic relationships, in the levying of the chiefs, in land taxation such as "land of H.", *yä-mar märet*, in Wällo, or as *yä-mar əšät*, in Wälläga, or in Harär, where the *mälkäññä* had to hand over the *asrat*, the *arafa* and half the tribute of H. they had collected to the government.

H. and mead are symbolic referents in rhetoric of discourse and in the oral literature, as metaphors or metonymies in songs and in proverbs, where social, aesthetic and conversational aspects are united. Thus in Təgrəññä proverbs: *mäᶜar kəsäfru mäᶜar yənnagäru*, 'while they measure the H. (to pay the tax), they talk about H.' (sweetly to conquer the soul of the measurer; Conti Rossini 1942, n. 203 = Fusella n. 43); *qäṭinu əmbär mes əyyu*, 'even though it has been watered down, it's still mead' (good qualities are not lost because of sudden misfortunes; *ibid.* n. 125); *zəḥazä yərättəᶜ, zəbärbärä yəbättəᶜ*, 'he who has taken wins his case, he who has taken the mead from the beehive dilutes it in water to make mead' (*ibid.* n. 338).

Gianni Dore

Hoora

H. is the Oromo name given to naturally occurring mineral ↗water and to the source, usually a spring, of that water. H. are essential to the well-being of herds and flocks and are considered by pastoralists to be a crucial gift from God without which stock would wither away; they may also be taken as a cure by people internally and/or as a bath. Some springs, such as Hora ↗Finfinnee in the area of the present Gəyon Hotel in Addis Abäba, became well-known Oromo watering places and seasonal cultural and ritual centres.

The word has pastoral and poetic associations, like its derivatives *hoori-ni*, 'wealth, stock, property' and *hoora-ta*, 'to possess, multiply, bear fruit, prosper', and is commonly used in proverbs, prayers and word-play, e.g., *hoora alee hinhoran/horii maklee hintolan* ('without mineral water (cattle) will not breed/without wealth (people) will not be happy', cf. Cotter 1990:198). H. with its resonances is one of the items from which the cultural consciousness of pastoral Oromo was constructed.

Lake H. is a crater lake in ↗Däbrä Zäyt. A pilgrimage site on its shores is the place of traditional yearly celebrations for the Oromo deity Waaqa in September. It is also a popular nature tourism destination.

Temesgen Negassa

Hor ↗Arbore

Horn of Africa

The geographical term H.A. is an alternative or sometimes parallel designation for North-east Africa (cp., e.g., Lewis 1966:6: "North-eastern Africa and the Horn"). In a more restrictive sense, it applies to the large peninsula ("horn") that juts for hundreds of kilometres into the Arabian Sea, between the Gulf of ↗Aden to the north and the Indian Ocean to the south, as the easternmost projection of the African continent. The ↗Bāb al-Mandab straits separate it from the Arabian highlands, a bank of the Red Sea rift.

History of the term

As coined in the 1950s, the term chiefly indicated the ↗Somalia and ↗Djibouti region, and those areas inhabited by ethnic groups linked with them, as in Lewis's book on the Somali, ʿAfar and the related Sāho (LewPeople; cp. also TrIslam 1–31). With reference to Somalia and north-eastern ↗Ethiopia alone, the term H.A. was first used in the 1900s by the French geographer Fernand Maurette in reporting about the Mission scientifique du ↗Bourg de Bozas (Gascon 1999). By extension, since the mid-1970s, H.A. has certainly earned a weightier status than a mere cartographic term, assuming the general, now more prevalent meaning of North-east Africa, with special reference to the vast region including, beside Ethiopia, ↗Eritrea and Somalia (with the island of ↗Soqoṭra, which belongs politically to ↗Yemen), the countries of Djibouti and, sometimes, ↗Sudan and ↗Kenya (and even ↗Uganda and ↗Tanzania), all culturally interconnected by common features – first and foremost ↗Islam (Gori 2006:8f.). As such, the H.A. covers an extension of 1,885,000km².

Borrowed from European languages, the modern Amharic term የአፍሪካ ቀንድ (*yäʾafrika qänd*; Tgn. *nay afriqa qärni*) is used in Ethiopia to refer to the wider H.A. (Berhanou Abebe – Ficquet 2003:111). In Arabic, the same expression is rendered as *al-Qarn al-Ifrīqī* (which is, e.g., the title of the official bulletin of the ↗Somali National League) or, more elegantly, *Qarn Ifrīqiyā*, which mainly denote the Muslim Somali regions, but also Ethiopia in contemporary discourse. The Amharic journal *Yäʾityopya yäʾafriqa ṭənat mäṣhet bätäläyyəm bäʾafriqa qänd lay yämmiyatäkkur – Ethiopian Journal of African Studies, with Special Emphasis on the Horn of Africa*, published in the 1980s at the Institute of African Studies of ↗Asmara University, displays an even wider notion of H.A. encompassing ↗Egypt as well. In the Ethiopian context, the term H.A. became especially popular in modern ↗historiography, as it allows one to cover the history of "wider Ethiopia" including the immediate neighbours of this country (cp. Bahru Zewde 1998; s. already Marcus 1972), and is a neutral synonym of the disputable "Greater Ethiopia". Yet, this use of the term H.A. is still foreign to those scholars (mainly Somalists) who are bound to the original meaning of the geographical "horn", corresponding to Somali territories alone.

The H.A. understood as North-east Africa roughly coincides with ancient ↗India maior (i.e. Somalia, which faces ↗India media, i.e. Arabia Felix), as well as with the undefined *Aromatophóros chōra* or *Regio aromatica* to which the Greeks and Romans sent for frankincense, myrrh, dragon's blood or cinnabar, taking these commodities back along the ↗incense route.

It also largely overlaps with the fairly recently coined term ↗Orbis Aethiopicus used to describe a culturally inter-linked region, in implicit reference to the ancient Greek term ↗Aithiopía as corresponding to ↗Kuš (but cp. ↗Ḥabašat, ↗Abyssinia) and thus approximately to North-east Africa.

H.A. is in this sense the successor of the older terms that fell out of use or changed their meaning. It is understood as absolutely neuter, without implying or denoting any cultural or political dominance of any particular region over others (as may be the case with "Aithiopía" in certain contexts).

Geography and history

The H.A. is one of the most ancient locations of the "hominidation" process, as proved by such discoveries as "Lucy" or "Dənqənäš" (↗Hominids) in the ↗ʿAfar Depression. Like the people of the Middle East, the inhabitants of the H.A. have used the ↗plough, practised animal husbandry, and kept the Arabian dromedary (↗Camels) as a domestic animal since before the Christian era.

The geographical position of the H.A., at a crossroads of sea routes, has made it a crossroads of cultures and of long-distance ↗trade since antiquity. As *Regio aromatica*, it was a destination for Greek and Roman merchants. The H.A., believed to include the Land of ↗Punt, was already known and important to ancient Egypt, and was then served by a network of ports that, from Ptolemaic times at least, stretched down the coast of Africa and the Persian Gulf as part of the ancient sea route along the greater Indian Ocean rim. Along this route, the kingdom of ↗Aksum, strategically located in the H.A., with ↗Adulis as its "port of trade", played an important role from the 1st to the 7th cent. (Fiaccadori 2004:112, 118ff., 154).

The political map of the H.A. has been continually redrawn in the course of history. Most of the modern ↗boundaries are as they were established after the end of the colonial period in mid-20th cent. (↗Colonialism), while ↗Africa Orientale Italiana covered most of the H.A. Some of the borders are still being redefined.

Population

Apart from the coastal countries of the Gulf of Guinea, the H.A. is the most densely populated region in Africa. With ca. 40 million inhabitants recorded in 1975, over 75 million in 2000, and 84 million in 2005, the ↗population has doubled in less than 30 years. According to several estimates, 130–140 million people will be living there by 2025 (Peltre 2003). Population is particularly dense in the areas above 2,000 m A.S.L., free from malaria and sleeping sickness.

Throughout the last millennium, the region has been regularly struck by natural catastrophes, such as droughts (in Ethiopia) or flood (in Somalia and Ethiopia, e.g., most recently in 2006 in the Dərre Dawa area), resulting in recurrent ↗famines. These crises have particularly affected the lowlands – 2/3 of the whole H.A., where only 20 % of the population live, mainly nomadic pastoralists (with the exception of the Benaadir, which is regularly flooded by the Wabi Šäbälle river). The highlands – 1/3 of the total area that contains 4/5 of the peninsula's total population – have also been prone to famines, most recently in 1958–59, 1973–74 and 1985–86. The combination of famine and war, always present at least in parts of the region, cost ca. 2 million lives during the decade 1982–92.

The peoples of the H.A. share a few common cultural features with those of the highlands of ↗Arabia (esp. Yemen) and the ↗Middle East. Numerous ↗inscriptions witness ancient relationships between the two shores of the Red Sea. The *fidäl* ↗script used by several languages in Ethiopia developed from the ↗Epigraphic South Arabian script. The northern Sudanese regions were since ancient times culturally interwoven with the regions further south, the ↗megalithic culture being an example for that.

Most of the languages spoken in the H.A. belong into the ↗Afro-Asiatic phylum (↗Ethiopian language area), ↗Ethio-Semitic, ↗Cushitic and ↗Omotic being the best represented families. ↗Nilotic languages are also spoken. For a comprehensive overview of the linguistic and ethnic landscape s. ↗Languages and peoples (s. EAE vol. 5), as well as the entries for separate countries.

The many traditional ↗religions of the H.A. have been gradually replaced either by ↗Christianity, which has been present in the highlands of Ethiopia and Eritrea since its introduction into Aksum in the 4th cent. and has since been advancing from the north to the south, or by Islam, which penetrated from the coast as early as the 7th cent., spreading through the lowlands (the ʿAfar Triangle and Ogaden), and then expanding into the highlands of Somaliland, Harär, Arsi and southern Ethiopia. The confrontation of these two great religions has largely shaped the ethnic, cultural and political history of the region.

Horn(s)

H., obtained from a number of ↗animals found in Ethiopia, notably oxen, goats, buffalo, ibex, antelope, deer and rhinoceros, contributed significantly to the country's material culture. The abundance of cattle throughout much of the country and the immense size of the H. of the Sanga breed (dramatically depicted in SalTrav 259), made H. widely available and relatively cheap. Specialized H.-workers were to be found in many areas, particularly in places of some affluence; and ox, buffalo and antelope H. were on sale at most of the more important markets.

Drinking H., in Amharic ዋንጫ (*wanča*), were so generally used for the drinking of ↗*ṭälla*, or beer, that the word *wanča* was often used virtually as a synonym for the drink. Other articles of hornware included goblets for drinking spirits, knife-handles, spoons (particularly in the south), some trumpets, plectra for harps, the tips of reeds used in weaving, part of the nozzles of traditional bellows, snuff-containers, ink-H., and chess-men. Buffalo and rhinoceros H. was especially prized for the making of goblets. Several ↗musical instruments made of H. were widely used, notably the *hulduduwa*, a horn with a bamboo mouthpiece, played in the south to announce funerals (Tesfaye Lemma 1975:23). H., as can be seen to this day at the entrance to the thermal bath in the palace compound at Gondär, were likewise also sometimes set in the walls as pegs on which to hang clothes. The long black H. of the *sala* antelope served for the manufacture of earrings, while rhinoceros H. was used for the manufacture of sword handles. Rhinoceros and hippopotamus H. constituted a valuable export, the former already mentioned in the ↗*Periplus of the Erythraean Sea* in the 1st cent. A.D.

Horse names ↗Names

Horse(s)

H. were highly regarded in traditional Ethiopian society and played a major role in ↗warfare. One of the earliest Ethiopian historical documents to mention the use of H. in war is the 6th-cent. Martyrium of ↗Arethas mentioning the equestrian troops (↗Cavalry) of the Aksumite king ↗Kaleb (Bausi – Gori 2006:33; MHAksum 219). Early evidence of the Ethiopic term ፈረስ (*färäs*, 'horse') is to be found, e.g., in the *Mäṣḥafä ↗Aksum* and in the Golden Gospel of ↗Däbrä Libanos of Šəmäzana (CRDLib no. 6a, 186.15; CRAxum). The existence of highly prized cavalry can be traced to the Aksumite period (MHAksum 259). Valued for their manoeuvrability, H. were mainly employed in battle: warriors rode ↗mule-back to the site of an engagement and then made use of H. in combat (BeckHuntAlm 50f.). In the early Solomonic centuries they were considered so important that quality animals were imported, as Alvares reported in the 16th cent., from Arabia, Egypt and the neighbouring Sudanese lowlands. Many noblemen also bred H. from mares brought from Egypt (the colts, separated from their mothers, were fed from milk cows). H. from Təgray and the country of the *baḥər nägaš* were particularly esteemed (BeckHuntAlvar 429, 518; BeckHuntAlm 50f.; Foster 1949:146). They were also a notable item of tribute: Goğğam, for example, yielded *aṣe* ↗Ləbnä Dəngəl 3,000 H. annually (BeckHuntAlvar 326, 425f.).

Nobleman on a horse, early 20th cent.; postcard from the collection of André Evalet

Steeds of royalty and high dignitaries often wore beautiful saddle-cloths, extending almost to the ground (BeckHuntAlvar 401f.; BeckHuntAlm 81; Foster 1949:118). Horse-riding, according to Baḥrəy's *History of the Galla*, was not practised by the Oromo until the time of the *luba mučale* (1554–62; ↗*gadaa*), who "made men who went on three legs [i.e. their two feet and a spear], ride on four [i.e. those of the horse]" (BeckHuntAlm 117, 137); later, however, Oromo cavalry became known for its strength.

H. featured in many areas of Ethiopian life: at palaces and royal capitals, in the countryside, at markets and, with cavalry, on military campaigns. *Aṣe* ↗Zärᵓa Yaᶜəqob, in the 15th cent., had H. bridled all-day at his palace at Däbrä Bərhan, (PerrZarY 42), while the ᶜAfar ruler Kamil, in the 17th cent., kept H. within his sight at his residence (Lockhart 1984:124). Gondär, in imperial days, had a ፈረስ፡ ቤት (*färäs bet*, 'stables'), or area allocated for ፈረስ (*färäs*, 'horse'; Rüppell 1840:80), while *aṣe* ↗Yoḥannəs IV, in the 19th cent., had two favourite chargers tethered within his palace at Däbrä Tabor (Winstanley 1881:204). Capitals, among them Däbrä Bərhan and Däbrä Tabor, were situated beside fields used for equestrian exercises (IsKrapf 274; Bianchi 1884:64f.), including ↗*gugs*, or mock-warfare (Parkyns 1953:80).

H. were sold at many rural markets, where they were taxed (PankEcon 521–31). Their cultural importance is evinced by the practice of naming kings and important personages after their steeds (MahHorse 195–303; ↗Names).

Addis Abäba's first race-course was established by *aṣe* ↗Mənilək II in 1903 (Mérab 1922:134f.), whilst in 1933 *aṣe* Ḫaylä Śəllase I founded a polo-club (ZerÉth 141; ↗Ğan Meda). After the Liberation in 1941 he also set up several important, and highly regarded stables in Addis Abäba.

Richard Pankhurst

Hospital(s)

The first modern H. in Ethiopia was established by the Russian Red Cross in the immediate aftermath of the ↗ᶜAdwa war (1896). Wishing to support a fellow Orthodox Christian country in difficulty, but unable to provide assistance before the end of hostilities, the Russians, upon *aṣe* ↗Mənilək II's request, set up an all-purpose H. in Addis Abäba. It opened in 1897, and operated for ten years, until 1906 (Shvedov 1897; Pankhurst 1965:124–29).

The Russian initiative was soon followed by Italians, French and British, all three of whom began to provide medical assistance of one kind or another at their Legations (de Castro 1915, vol. 1, 361–66; Pankhurst 1965:131f.). The French Capuchins, under André ↗Jarosseau, meanwhile established a leprosarium (↗Leprosy, lepers) at Harär in 1901 (Jennings – Addison 1905:43–46; Pankhurst 1965:134). Two years later the local governor, *ras* Mäkʷännən, founded the country's first provincial H., but, finding it difficult to administer, handed it over to the French, who considered the climate of the Harär highlands preferable to the heat of their nearby port of Djibouti (Jennings – Addison 1905:41f.; Pankhurst 1965:134f., 147f.). Later, in 1911, the Franco–Ethiopian railway opened the second provincial H., a small one in Dərre Dawa (Pankhurst 1965:135).

Aṣe Mənilək II, distressed by the closing of the Russian H., took steps meanwhile to found the country's first government H., to which he gave his name. Located on the site of the former Russian establishment, it was inaugurated in 1910. Administered by a series of different directors, it was staffed almost entirely by nurses and made use of private physicians and surgeons brought in from the town on a consultancy basis (Mérab 1912:211f.; ZerEth 255; Pankhurst 1965:156).

The period between the *ras* Täfäri Mäkʷännən regency and the pre-war ↗Ḫaylä Śəllase I monarchy witnessed a somewhat accelerated growth in the number of H. The old Mənilək Hospital was modernized (ZerEth 255) and a new, and more modern, government institution, the Bet Sayda Hospital, was founded in 1924. Unlike the Mənilək Hospital, it was fully staffed and run throughout the pre-war period by a politically influential Swede, Kurt Hannar (Farago 1935:132f.; ZerEth 255f.; Pankhurst 1965:140).

Three missionary H. were also set up in Addis Abäba around this time (↗Missions): the United Presbyterian Church of North America founded the George Memorial H., run by Thomas ↗Lambie, in the Gullallee district in 1923 (Bergsma 1932:294 and s. index; Pankhurst 1965:140f.); the Seventh Day Adventists established the Zäwditu Memorial H., called after the former empress, in the Fəlwəha area in 1934 (Sandford 1946:65; Pankhurst 1965:141); and the Italian Catholic Mission, in the same year, founded another H. at Gullallee. This, called the Ḫaylä Śəllase Hospital, was by far the best-equipped of the three (Farago 1935:197; Pankhurst 1965:141). A second leprosarium was opened by the ↗Sudan Interior Mission in 1934 (ZerEth 256; Pankhurst 1965:142). Several H. and/or clinics, mainly run by missionaries, were also in existence in the provinces by 1935, notably at Däse, Däbrä Marqos, Ǧiǧǧiga, Näqämte, Gore, Dämbi Dollo and Ayra, as well as in Bägemdər, Wälaytta and Arsi (ZerÉth 257; Pankhurst 1965:143f., 148f.).

After the Italian invasion of 1935–36, the three principal Addis Abäba H. were expanded, renamed, and reserved for Europeans. The Bet Sayda Hospital thus became the Vittorio Emanuele military Hospital; the Ḫaylä Śəllase I Hospital became the Principessa di Piedmonte Hospital; and the Zäwditu Hospital became the American Hospital. The old Mənilək II Hospital, renamed the Duca degli Abruzzi Hospital, on the other hand became a segregated H., with wards for both Europeans and "natives". Two additional H. for Europeans were also established: the Regina Elena military Hospital, in the former Mänän girls' school; and the Luigi Razza Hospital, in the house of *ras* ↗Mulugeta Yəggäzu, the pre-war Minister of War. Later, in

The former Ḫaylä Śəllase I (now 12 Yäkkatit) Hospital at Səddəst Kilo, Addis Abäba; photo 1988, courtesy of Paul B. Henze

1938, the old Presbyterian Hospital at Gullallee was re-opened as a H. for Native Chiefs and Notables; and an entirely new H. also for "natives", the Emanuele, was established in the city's Täklä Haymanot area. Pre-war provincial H. were maintained, most notably at Harär, Gondär, and Däse, and a new one set up at Ǧəmma. All four, however, catered mainly for Europeans (Pankhurst 1973:110–13).

After the Liberation in 1941 the above H. were renamed, desegregated, and largely converted, or re-converted, for general Ethiopian use. The old Mənilək H. and Zäwditu H. regained their former names. The former Bet Sayda, later the Principessa di Piedmonte, became the Ḫaylä Śəllase H. The former Italian H., sometimes called the Ḫaylä Śəllase H., was called after the latter's son-in-law Ras Dästa H. The Emanuele, which had been established by the Italians for "natives", retained its name, and became a H. for people suffering from mental disorders (Pankhurst 1973:110). The former Italian H. for Native Chiefs and Notables was on the other hand converted into the Pasteur Institute.

Several new H. were also established in Addis Abäba in the next two decades. The first was a Russian Red Cross H., whose roots dated back to Mənilək's day. Situated on the Ǧəmma road, far away from the earlier Russian H., it was named after the former Ethiopian patriot, *däǧǧazmač* ↗Balča Safo, who was said to have been killed in battle near the H. site. The next H. founded at this time was the Princess Ṣäḥay Memorial H., named after the Emperor's daughter ↗Ṣäḥay, who had served as a nurse in Britain during World War II. This H. was largely financed internationally, with funds raised in Britain by Sylvia ↗Pankhurst. It became the country's first teaching H. (Pankhurst 2003:268, index). Other hospitals established in this period included a free H., called after St. Peter and St. Paul; and a maternity hospital named after Mahatma Gandhi. Two gynaecologists, Reginald and Catherine Hamlin, a New Zealand–Australian couple, set up a much-praised ↗Fistula H., just outside the town. The last important Addis Abäba H. to be opened during the reign of Ḫaylä Śəllaseı was the Duke of Harär Hospital, named after his son Mäkʷännən. After the 1974 ↗Revolution it was renamed the Ṭəqur Anbässa, or Black Lion, Hospital, called after the patriotic Black Lion Organization of 1936. By the eve of the Revolution the capital's hospitals had a little over 2,700 beds (*Directory* 1972:5).

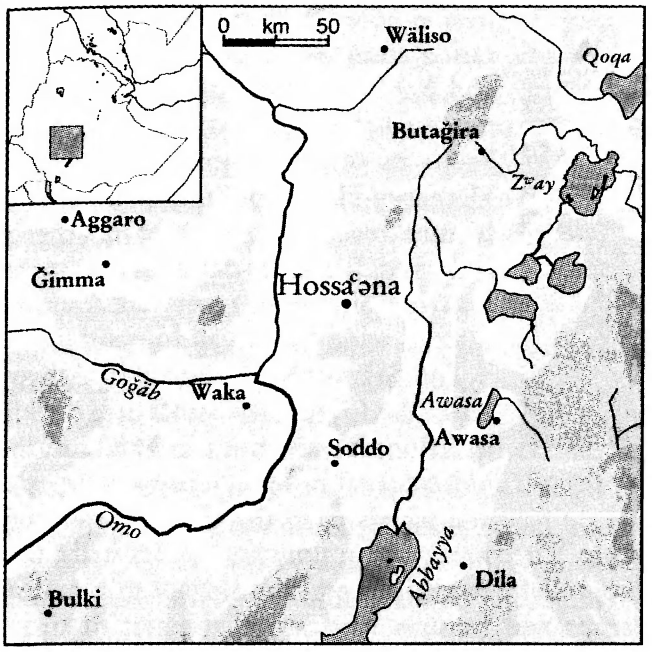
Richard Pankhurst

Hossaᶜəna

H. (also Hossanna, Hossäyna, Hadiyya: Waaččamo; 2,450m A.S.L.) was established as the capital of ↗Kämbata province by *ras* ↗Abatä Bʷayaläw, the governor from 1896 to 1911. This area had been conquered by *aṣe* ↗MənilәkII's troops between 1886 and 1893. According to oral traditions the new settlement was named H., because its foundation was instituted on Palm Sunday (ሆሣዕና, *Hośaᶜəna*). This event can be dated



to 1904, when Abatä moved from his former residential ↗*kätäma* of Angača to Šeešduuna (Hadiyya: 'bee hill') in the Waaččamo district of the Leemo-Hadiyya. At the same time the ↗*tabot* of the Maryam church was transferred from the top of ↗Ambäriččo mountain to the new capital.

During the ↗Italian war of 1935–36 H. became a stronghold of Amhara settlers (↗*Näfṭäññä*) against the rebellious local population. It was later made the capital of Kämbata *awraǧǧa* – in 1977 renamed Kämbata–Hadiyya *awraǧǧa* – within the province of ↗Šäwa. After the territorial restructuring of Ethiopia in the early 1990s H. became the capital of Hadiyya Zone in the "Southern Nations, Nationalities and Peoples' Region". Among the local population the old name Waaččamo is increasingly used, although Amharic has remained the dominant language of the town population.

H. is an important administrative, educational, religious and commercial centre in a densely populated rural area of central-southern Ethiopia. Surplus products, which are traded in the big Saturday market, mainly consist of agricultural items, grain and livestock, and of local handicrafts. Industrial firms do not yet exist. In the early 1970s H.'s population was estimated to ca. 11,000. The census of 1994 listed 31,701 inhabitants (s. CSA 1996), half of them ↗Hadiyya and one fourth people of Amhara origin. Since then the town population has considerably increased (43,091 inhabitants in 1999, s. CSA 2000).

Hotel(s)

Hotels in Ethiopia

H. in Ethiopia traditionally did not exist. Travellers expected to obtain hospitality from peasants or others in the countries through which they passed, and monarchs on occasion issued written documents authorizing their bearers to demand ↗*dərgo* ('provisions'), en route. Soldiers, on the other hand, lived very largely by pillage, or enjoyed great banquets given from time to time by their leaders. Ludolf (1882:393f.) tells the amusing story of a group of Ethiopians, arriving in Rome in the early 17th cent., who partook of a meal at an eating house, and expected to offer their host eloquent thanks rather than actual cash payment.

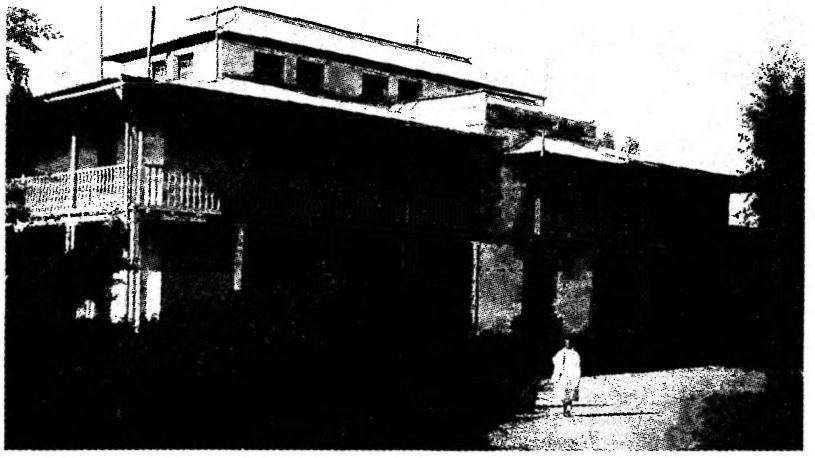
The subsequent development of H. in Ethiopia was a function of the country's urbanization and modernization. The first H. in ↗Addis Abäba, opened in the early 20th cent., was the Ṭaytu Hotel, called after its founder, *ətege* ↗Ṭaytu (but also for a time known as the Bollolatos Hotel – a reference to its Greek manager), which catered mainly for Ethiopians, including those who had studied abroad; and the Hôtel de France, owned by a Frenchman, M. Terras, which was frequented mainly by Europeans.

The Ǝtege Ṭaytu Hotel remained the town's leading H. up to the ↗Italian war of 1935–36. It was popular with the educated elite, with its restaurant serving European as well as traditional Ethiopian dishes. Over the years, it had put up several two-storey buildings.

The Hôtel de France was housed in a two-storey building, designed by an Armenian architect, and spacious for its time. There was a billiard room and a cinema hall in it. Terras also organized dances and hunting and other expeditions. Accommodation was provided for between 15 and 30 Maria Theresa thalers per month.

Another early H., run by an Ethiopian, was at Čoba, on the Addis Abäba–Awaš road. The development of the Addis Abäba–Djibouti Railway led soon afterwards to the opening of Greek-run H. at Dərre Dawa and Awaš stations. H., as might be expected, later expanded greatly during the ensuing Italian fascist and post-liberation periods.

Other private H. included the Greek-run Splendide, the Empire and the German-owned Deutsches Haus, in which Evelin Waugh (1936:64ff.) stayed at the time of the Italian invasion.



Hôtel Impérial in Addis Abäba, early 20th cent.; postcard from the collection of Lorenz Jensen

The Italians built a chain of H. in Addis Abäba and in many towns throughout the country called CIAAO, after the Compagnia Immobile Alberghi Africa Orientale that constructed and ran the H. The CIAAO H. were spacious, had good en-suite bathrooms and offered, as can be expected, Italian cuisine in their restaurants.

After the Liberation in 1941, a number of Ethiopian H. came into existence. Those established in Addis Abäba in the first decades included the "Ras", the "Gännät", the "Gəyon", the "Afrique", the "Wabi Šäbälle", the "Ethiopia" and the "Hilton", as well as others in provincial towns. An innovative Gurage hotelier, Bäqqälä Molla, also opened a number of hotels in the Rift Valley area.

Richard Pankhurst

Hotels in Eritrea

Modern H. were introduced in Eritrea by the Italian colonial regime to cater for the needs of colonial administrators. Traditionally, people travelling did not stay in H., but rather pitched their tent or slept under a tree or in the shade of the village merchant's veranda. A few H. began to appear around the turn of the century.

The oldest existing H. was the Albergo Italia, built by Italians in 1899 in ↗Asmära, according to a modern eclectic style, incorporating elements from the renaissance and baroque. Although it was later renamed the "Kärän Hotel", today it keeps its original name. In 1914 the Ḥamasen H. was built, with an architecture resembling that of northern Italy and Tyrol. Its distinctive feature was the suite in the tower with wrap-around windows on all four sides.

The Sälam Hotel, formerly Albergo CIAAO, (cp. the subarticle on H. in Ethiopia) was built in 1937 by the old colonial holding company for H. and tourism, in the classical rational style. The sparse and simple lines of its halls, the bas-relief decorations and the elegant minimalist lamps and fixtures have stood the test of time. It is in this refurbished H. that the result of the referendum for Eritrea's independence was announced on 27 April 1993.

Nowadays H. account for a still insignificant portion of Eritrea's economy.

Naigzy Gebremedhin

Hoti Šeroči

↗*Tato* H.Š. (also Hoti Ginoč, Hoti Heroči, Hoti Gaoči, Galli Terri or Belli; r. ca. 1802–21), king of ↗Käfa, consolidated the territorial expansion realized by previous kings, especially Šagi Šeroči (r. ca. 1775–95), and added to it by defeating the ↗Gurage and ↗Ğimma Oromo in battle and expanding toward the north-east. The background of this was the long-standing competition for the trade in ↗slaves and ↗coffee with neighbouring kingdoms.

Despite his historical importance as a "warrior king" and strong ruler, not much is known about H.Š.'s reign. Belonging to the Bušašo Miŋǧo dynasty (↗Käfa dynasties) that had ruled since the 14th cent., H.Š., in conflict with emerging political formations such as the ↗Benç and the Oromo kingdoms, forced several surrounding chiefdoms and kingdoms into a vassal relationship with Käfa, e.g., Šeka, Še, ↗Boša, Nao (↗Nayi), ↗Yäm, ↗Konta and ↗Dawro, effectively making Käfa an imperial state. Local informants consulted by Orent (1970:277) confirm that this was the heyday of Käfa's power and expansion. H.Š. reorganized the political structure of the kingdom, increasing central control and appointing

political representatives (*rašo*) in the newly subdued areas. He also divided the kingdom into 18 regions (*worafo*) and 134 districts (*worbo*). His reign was probably marked by more social equality. The repression of the ordinary farming population generated resistance (cf. Lange 1982:206).

In H.Š.'s reign Orthodox Christianity had entered Käfa, and because of its impact on sections of the elite it became an important religious factor next to the widespread spirit cults (↗Possession cults), e.g. around the *ašelločči* and *deoče* spirits. Lange's (1982:202) historical work on Käfa society mentions that H.Š. converted to Christianity and banished the chief ritual leader ("priest") of the Käfa traditional ↗religion, who was supported by the older, landed elite. Christian immigrants and Christianized Käfiččo tried to monopolize the trade routes (slaves, coffee, ↗ivory, cardamom, ↗zibeth) and thus caused resentment and intra-elite struggle. In 1820–21 H.Š.'s half-brother and pretender to the throne Bedi (Gaha Nečočči) led a revolt with the support of more traditional-minded, anti-Christian people and took power in 1821, exiling H.Š. to Wota in Benç ("Gimira") country, where he died. This struggle was reflected in Käfa oral traditions recorded by Lange (1982:204f.), where the incumbent king H.Š. was reputed to have tried to physically injure Bedi so that he could not become king (Käfa kings were supposed to be without physical blemishes). This plan miscarried and the "prophecy" that his brother would chase him out and succeed him was realized.

House(s)

Houses in ancient Aksum and Təgray

Architectural remains of residential and cult buildings (palaces and churches) are the most impressive archaeological evidence in the ↗Aksum area.

Most residential buildings discovered at Aksum are elite palaces or parts of elite palace complexes. These complexes were square or rectangular in plan, and consisted of a central building, surrounded by open courtyards and enclosed by a range of rooms.

Residential buildings were built on a stepped podium (i.e., a constructed platform usually about 3.5 m high) with an indented plan. The podium was approached by staircases, and sustained a building with two or more stories. The external walls of the central building and surrounding range of rooms were "indented", i.e., they presented an alternately recessed and projecting surface with projecting corners.

The podium consisted of a platform with an external stone wall strengthened with corner blocks, and internally divided by walls and filled with soil. The stone walls of the upper building were strengthened with wooden beams which projected on the exterior (the so-called "monkey's head" construction technique, Tgn. *rəʾsi həbäy*). The walls were built with a core of small, flat stones in a clay mortar, and were reinforced at regularly spaced intervals of ca. 50 cm with timbers let into the inside and outside of the wall and small cross poles projecting outside.

Stone columns and wooden poles supported the upper stories inside the buildings. Pillars made with small stones embedded in the soil fill of the podium supported the columns at the ground floor. Evidence of frequent restoration, reinforcement and reconstruction at the residential "palace" of ʿOna Nägäśt (↗Betä Giyorgis) suggests some structural instability of these buildings and a need for constant maintenance to prevent building deterioration.

Today, only the podiums and sometimes the lower part of the elevated walls are preserved. They are frail structures because the construction stones were not well laid. Large concentrations of small stones from collapsed structures often indicate the occurrence of ancient buildings on the surface.

The remains of the "palace" excavated at ʿOna Nägäśt serve as an example of the state of preservation of the ancient buildings. The walls range in width from about 0.5–1.25 m and are composed of a combination of flat, tabular, and polygonal rocks (some showing signs of rough hammering) laid uncoursed in a thin application of mud mortar. In many instances small pieces of rock were set in the mortar between larger rocks for added stability.

Stepped walls are characterized by a series of recessed sections about 0.48 m high, each of which is set back about 5–6 cm, and is separated from other recessed sections by a thin course of

Remains of an Aksumite residencial building at Dungur near Aksum; photo 2006, courtesy of Wolbert Smidt

finely worked slate or schist, which forms the "step". In the course of the excavation, a large number of dressed stone blocks were uncovered in fill deposits: none were found in intact walls. Fragments of fired clay bricks were also numerous in the fill deposits. No large dressed stone blocks, such as those used in the construction of Dungur and other Aksumite site residential structures, have yet been found in wall construction at ʿOna Nägäśt.

The evidence of rural H. dating to Aksumite times is very scarce. Some remains at Mäzəbər, near Aksum, consist of a rectangular building, about 9 m long, with two rooms on a small platform about 50 cm high and a step at the entry to the south. One room was slightly projecting. A similar building was also recorded in ↗Qoḥayto.

Two clay models of huts from ↗Ḥawəlti, to the east of Aksum, represent a rectangular building with a flat top sustained by projecting wood beams, and a cylindrical hut with a conical top. These models are tentatively dated to the late 1st millennium B.C., and suggest that the same basic types of rural houses we can see today in Təgray already existed over 2,000 years ago.

Houses of the Amhara

The traditional Amhara H. (ቤት, *bet*) is built of stone or wattle and daub; the term ጎጆ (*goǧǧo*) refers to less prestigious huts or H. and is associated with young couples' or poor people's dwellings. The round H. with their conical grass roofs, topped with an earthenware dome (ጉልላት, *gulləlat*) provide maximum protection from wind and rain and integrate well with the landscapes of the Amhara highlands.

Amhara households live on their land, or close to it, often in fenced compounds (ግቢ, *gəbbi*) with at least one dwelling H. which accommodates the household members and, occasionally, some of their animals. The result is a scattered settlement pattern, although in some regions (e.g., Wällo) one may find larger clusters of households forming small hamlets. The compound commonly contains a number of H. in addition to the main one which belongs to the household head – some used as dwellings for married sons or retired parents, others simple constructions for the household's animals. In previous times the nobles would have a number of H. with different functions in their compounds, such as kitchen (ማድ፡ ቤት, *mad bet*), reception H. (አዳራሽ, *addaraš*) and guest H. (እንግዳ፡ ቤት, *əngəda bet*). Such specialized H. are no longer common.

The Amhara highlands vary in altitude and climate, which is reflected in the H. people live in. The extreme highlands (*däga*), which are populated at altitudes up to 3,600 m A.S.L., are often exposed to frost. Dwellings are consequently constructed to keep their inhabitants warm, typically with thick stone walls, often with two layers of stones with clay in-between. At lower altitudes (*wäyna däga*) the climate is milder and timber is more readily available. Here the walls of the H. are built with strong saplings or split trunks (mainly of eucalyptus) which stand upright from the ground, each quite close to the next. They are bound together with horizontally placed wood or ↗bamboo. The walls are then plastered on both sides with a mix of mud (ጭቃ, *č̣əqa*) and straw. In the lowlands (*qʷälla*), the climate is warm and dry and H. are even simpler constructions, with less use of plastering, which provides airy shelters.

For the Amhara peasant the H. is one of his most valuable material possessions. H. building is men's work, usually done in the dry season by communal work (↗*Däbo*) in which neighbours and friends of the host participate. People known

Houses near Hamusil in Wällo; photo 1993, courtesy of Michael Gervers

to have special competence will be called on for thatching and for preparing the *č̣əqa* mixture which is used for plastering. There is no advanced carpentry work involved, since the wooden parts are tied together with strips of bark, but specialists in construction of the walls and roof are still needed. A circular ditch is dug for the round wall which the roof rests on. Trunks and saplings (↗Eucalyptus) are cut for pillars and the beams used for the roof and walls (if not stone walls), and grass for thatching is collected or bought. Depending on the local availability, grass and wood represent the highest costs. The standard grass for thatching is **ሰንበሌጥ** (*sänbäleṭ*), while **ጓሳ** (*gʷassa*), the most valued grass, is only found in the highlands. The cheapest alternative, straw, is more rarely used.

The H. has one entrance with a simple door made of rough wood boards; windows are not common in traditional grass-thatched H. Light comes in through the door opening and through non-plastered sections of the wall, where it meets the roof. Smoke from the hearth disperses through these openings and through the grass-thatched roof. The smoke from the fireplace can be dense and irritating, particularly in wood-deficit areas where dung is used as fuel. Women in particular, who spend much of their time in the H. and close to the fireplace, can be seriously bothered with eye catarrh and respiratory trouble. Accumulated soot deposit can also serve to impregnate and insulate the building (Pankhurst 1992:92). The outer walls are protected from heavy rain and hail by the overhanging roof, but repairs may be needed after each rainy season. With good maintenance a H. can last for 20 years (Messing 1985:32).

Inside the building the floor, walls and the clay benches that run along a part of the wall are smeared with a mixture of *č̣əqa*, dung, ↗*ṭef*, straw and ashes. This makes a smooth and hard surface which needs regular maintenance; cracks tend to develop over time and serve as refuge for insects and fleas. Daily brushing of the floor and occasional application of new layers of fresh dung/mud are consequently important household chores, done by women. Fresh grass or reeds can be spread on the floor at religious holidays or other festive occasions as a symbol of life. Besides being refreshing and decorative, the grass also has a sanitary effect as it is thrown out after some days, together with the dirt and fleas which have accumulated in it.

The H. may be divided into several rooms by semi-permanent walls of bamboo or cloth, but the central room is the main one, where the hearth is placed at a good distance from the wall and the central pole. Damage by fire is rather common. About half of the room has clay benches along the walls, where household members and guests can sit on sheepskins. The benches also provide sleeping places for the children. There is little furniture; small straw trays (**ሙሶብ**, *mäsob*) are used for serving meals, and most residential H. have at least one master bed (↗*Alga*), consisting of a wooden frame with interlaced strips of hide.

The smallest H., typically occupied by widows, newly married couples, or poor families, have only one room, where grain is stored, food is made, and family members sleep. Full-fledged households, with two or more generations, tend to occupy bigger H. These usually have a wall which runs inside the outer one and makes a section (**ጓዳ**, *gʷada*) with partitions for storage of grain and equipment, and a part used as a kitchen, where cooking utensils are stored and the heaviest cooking, particularly *ənǧära*-bread baking, is done. A part can also be used as the master bedroom. Cattle, if the household has any, are kept at night in separate sheds in the compound or in a part of the *gʷada*. In some highland areas with a cold climate, two-story buildings (**ፎቅ፡ ቤት**, *foq bet*) exist. These are stone buildings where animals are kept on the ground floor and the living quarters are on the first floor, benefiting from the warmth of the animals downstairs.

The H. for the Amhara has great symbolic significance. Residence has represented the main

House construction, Ethiopian highlands; photo courtesy of the Peter the Great Museum of Anthropology and Ethnography of the Russian Academy of Sciences, St. Petersburg (I 349–228)

common also in rural areas. A consequence of this shift in roofing materials is that H. are built in a rectangular form.

Lit.: AMARE DAWIT – FASIL GHIORGHIS, "Early Architectural Development in Addis Ababa", in: *CentAddis* 173–98; HARALD ASPEN, *Amhara Traditions of Knowledge*, Wiesbaden 2001 (AeF 58); ALLAN HOBEN, *Land Tenure among the Amhara of Ethiopia*, Chicago – London 1973; JILL LAST, *Ethiopians and the Houses they Live in*, Addis Ababa 1981; LevWax; SIMON DAVID MESSING, *Highland Plateau Amhara of Ethiopia*, New Haven, CT 1985 (Lit.); PAUL OLIVER (ed.), *Encyclopedia of Vernacular Architecture of the World*, Cambridge 1997 (Lit.); HELEN PANKHURST, *Gender, Development and Identity: an Ethiopian Study*, London – Atlantic Highlands, NJ 1992.

Harald Aspen

means to claim land (Hoben 1973). This made the H. a symbol of connection to the land over generations, and the family (**ቤተሰብ**, *betäsäb*, lit. 'people of the house') is closely associated with the land and the H. Ideally, family members who have moved to other places are expected to visit their homeland and parents regularly, and preferably on religious occasions, such as ↗*Fasika* and ↗*Ṭəmqät*. This obligation does not cease with the death of parents. Descendants are supposed to continue to celebrate memorial rites, which are of great importance for many Amhara.

The round form of the traditional Amhara H. has been compared with the tent of the king (Messing 1985:35) – and with the church, seeing the circular room around the central pole as the "domestic inner sanctum" (LevWax 74). The central pole holds symbolic meaning and represents the protective spirit of the household (**የቤት፡ አድባር**, *yäbet adbar*). Before a H. is inhabited blood sacrifices may be presented to the *adbar*, by smearing blood from the sacrificial chicken or animal on the central pole and the door (Aspen 2001:103).

The Addis Abäba–Djibouti ↗railway facilitated the importation of corrugated iron sheets and these gradually replaced thatched roofs, especially in Addis Abäba in the first decades of the 20th cent. (Amare Dawit – Fasil Giorghis in CentAddis, 192). In rural areas this process was slower but today it is common to see H. with corrugated iron sheets (**ቆርቆሮ፡ ቤት**, *qorqorro bet*). While this may have signified relative wealth in earlier times, locally manufactured sheets are now available and iron sheet roofs have become

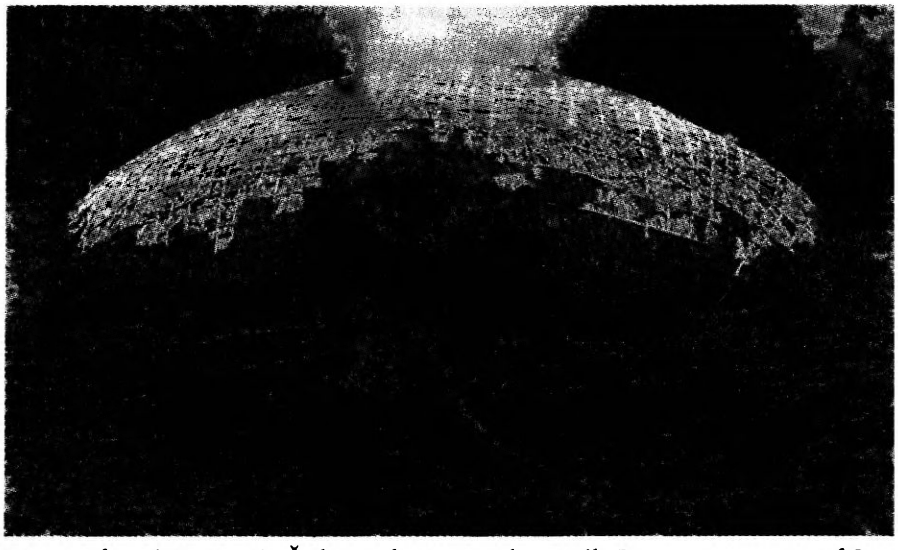
Houses in southern Ethiopia

Corresponding to the multiplicity of peoples and cultures the southern parts of Ethiopia possess a considerable variation of architectural styles and types of H. Regarding their layout and technical details they are basically dependent on the environmental conditions, ranging from cool and wet highlands to dry and hot lowlands, and on the respective availability of construction materials. The functional principles differ according to economic orientations, intensive and extensive farming, agropastoralism and nomadism.

Since it is impossible in this context to present information concerning the H. of approximately 50 ethnic groups, a limited number of models will be sketched which can be regarded as representative examples of larger regions or culture areas. These are the cases of the ↗Oromo, ↗Somali, ↗ᶜAfar, ↗Gurage, ↗Wälaytta, ↗Sidaama, ↗Dorze, ↗Dizi, ↗Gimira (↗Benǧ), ↗Konso and ↗Añwaa. The ↗architecture of the ↗*kätäma*, the (fortified) towns and market centres with rectangular tin-roofed houses, has spread everywhere in southern Ethiopia after the imperial, Amhara-led conquest of the late 19th cent. and will not be analyzed here.

For the most widespread types of circular H. with conical roofs the general label *tukul* became common in Ethiopia. The Oromo, who have spread over large parts of southern and central Ethiopia, developed different types of settlement patterns and H. The ↗Mäčča in the west usually live in circular H. with conical roofs the eaves of which are stretched and supported on poles thus

forming a small veranda, where firewood, household items etc., can be kept. The interior is mostly partitioned into two or more rooms. One contains the fireplace and a sleeping platform modelled out of mud and others are used as bedrooms for husband and wife and for storing kitchen utensils and foodstuffs. The main house is surrounded by grain stores (↗Granary), and a hedge of living ↗euphorbia or of ↗acacia boughs commonly fences the whole compound.



House of Arsi Oromo in Šedom; photo 1901 by Emile Brumpt, courtesy of Service des Archives de l'institut Pasteur, Fonds Émile Brumpt, Paris (Boîte 4 no. 172/Mission du Bourg de Bozas)

The Arsi formerly lived in beehive shaped H. with three to four small pillars supporting the roof, which were constructed around enclosures of thorn fences. These have meanwhile been replaced by circular constructions with conical roofs overhanging at some distance. Milk containers made of grass and wood are fixed to the central pillar supporting the roof. Livestock is kept outside in kraals surrounded by thorn fences or walls of cow dung.

Other Oromo groups, such as the ↗Guğği and the Baarentuu on the Harär plateau, mostly follow comparable patterns of H. construction although considerable differences are visible in the details. Among the ↗Arsi of the highlands near the spring of the Wabi Šäbälle a huge type of H. is found which looks like a horizontally halved barrel. It is mainly constructed of ↗bamboo and consists of separate rooms for men, animals and equipment. The ↗Boorana in the utmost southern parts of Ethiopia and adjacent Kenya are mostly cattle-breeders leading a semi-nomadic way of life. The H. they live in are made of a wooden framework of bent sticks, often with the lower walls reinforced with a screen of branches. The roof and parts of the walls are thatched with grass. Small calves, lambs and kids are kept inside the H. whereas adult livestock stays in enclosures of thorn fences during the night. When people move for their cycles of nomadic transhumance they carry along only the essential parts of the wooden frame; the materials for tying and thatching are usually collected in the new place. In this respect the Boorana H. differs from the true nomadic dwellings of their neighbours such as the ↗Gabra and the ↗Somali.

Peoples in the arid lowlands of the Ogaden and the ᶜAfar Triangle are largely camel nomads who need to be very mobile. Their dwellings have to be transportable and therefore constructed and dismantled quickly. They consist of a cupola-shaped frame of bent boughs on which mats of palm fibre or tarpaulins of plastic are fixed. Half a dozen of these tents belonging to related people usually encircle a space where the animals stay overnight. Walls of thorn twigs and/or stones mostly surround the whole compound. Within the tent a small platform is erected on wooden pillars which serves as a bed and for storing parts of the equipment. The tent is the property of the women who take full responsibility for its construction and transport. Some ᶜAfar nomads possess stone dwellings near the escarpment of the highlands which they temporarily inhabit during their seasonal migrations.

H. of most highland populations are solidly built dwellings of the *tukul* type. They have to provide protection against cold and abundant rainfall and shelter people as well as domestic animals. The H. of the ↗Gurage are circular with an average diameter of 8–10 m. A circular pillar with additional buttresses fixed at its upper part support the beautiful thatched steep roof. For these parts species of wood are preferred which are more or less resistant to termites. The walls constructed of poles (usually ↗Eucalyptus at present) vertically dug in the ground are horizontally connected with wooden bars and split bamboo sheets. The specially ornamented piece of ceramic on the apex has largely been replaced by a broken clay or metal pot. The space right of

Boorana hut-building; photo 1950/52 by Eike Haberland, courtesy of the Frobenius Institut, Frankfurt am Main (23–Ha216–06)

the entrance is usually the domicile for humans, whereas the animals, cattle, sheep, goats, horses, mules, donkeys and chickens are stalled in the left part behind a wooden barrier. The kitchen is either at the back of the H. or, less frequently, in a small extra hut. The grain is stored in huge baskets within the H.

The Gurage type of dwelling was widely adopted by their southern neighbours, the ↗Hadiyya and ↗Kambaata. These peoples live in scattered hamlets, which is a characteristic pattern of settlement for all groups in the southern highlands relying on intensive agriculture with *Ensete ventricosum* (↗*Ənsät*) as basic foodstuff. It fits perfectly to the necessity of permanent care of the gardens and plantations surrounding the H.

Such conditions basically relate to the ↗Wälaytta, ↗Sidaama and ↗Dorze as well. The Wälaytta H. equals the Gurage type of dwelling in size, but the roof is usually less steep and often extends to the ground as a kind of second wall. The composition of the interior is similar to the Gurage H. but is usually subdivided into more compartments by screens of bamboo. The furniture consists of wooden bedsteads covered with ox hides and stools. The custom of decorating the apex with ostrich eggs, which is principally widespread in Ethiopia, seemed to have been particularly frequent in Wälaytta.

The traditional H. of the Sidaama is extraordinary by the fact that it is mainly constructed of bamboo. In its diameter and inner division it does not differ much from the Gurage and Wällaytta type, but it is flatter and its roof is supported by usually three oblique poles instead of one vertical pillar in the middle. The split bamboo sheets horizontally cover the roof as well as the walls down to the ground. The spaces in between are carefully filled with grass and *ənsät* leaves. Thus, the interior is well isolated and kept warm. Above the entrance there is an extended shelter (a "nose" of the roof). The compounds, gardens and *ənsät* plantations are commonly surrounded by bamboo fences. Like the Sidaama, the Dorze and other peoples of the Gamo highlands use bamboo as a basic material for constructing their H. The shape, however, is remarkably different. The Dorze H. is a beehive shaped building of sometimes more than 5 m height. In this construction the roof and the walls are no longer distinguishable. It is furnished with two benches and provides a special place of reception for guests.

In its shape, the Dizi H., on the utmost southeastern promontory of the Ethiopian highlands, is similar to that of the Dorze, but being 5 m in diametre, it is considerably smaller. The left part is paved with pebbles as a stall for the animals and roofed with a platform for storing utensils and provisions. A higher platform in the middle above the hearth carries household equipment and at the right side people sit and sleep.

The H. of the Gimira peoples (↗Šeko, ↗Nayi, ↗Čara, Še, Benč) on the escarpment of the southwestern highlands are comparatively small and with low entrances. The eaves of the steep roofs are often stretched and form a narrow veranda. The walls painted with white colour often carry a mural decoration of red geometric ornaments. (With regard to Christian motives this custom has recently been introduced to other parts of Ethiopia.) H. in the southern highlands may last for about 40 years, provided their dilapidated parts are regularly repaired. When they are finally dug up, some parts such as central pillars may be used again.

At the escarpment of the southern highlands in the direction of the semiarid plains of eastern Africa the Konso have invented a peculiar type of settlement and H. Unlike the areas of *ənsät*-cultivation these people live in compact villages practising intensive agriculture (mainly of millet varieties) on terraced fields. The H. are built on basements made of stone – including the walls of

the relatively small H. (diameter usually less than six meters). The roofs are thatched with reed and shelter a veranda surrounding the H. There are separate grain stores and stone walls with gates surrounding and securing the villages and graveyards with wooden effigies showing the deeds of deceased persons.

The ecology of lowlands west of the south-western escarpment of the Ethiopian highlands offers extremely different conditions with respect to architectural conventions. The Me'en-Surma peoples dwell in semi-permanent hamlets and villages and temporary herding settlements. The shape of their H. is circular. Livestock is always kept outside the house. ↗Suri houses often have a defensive double wall and a fireplace at the centre. The Añwaa are sedentary along the rivers living on agriculture and fishing. Their circular H. have many-tiered reed roofs and the walls are often painted with geometric or figurative ornaments. Provisions and domestic animals such as chickens and sheep are mostly kept inside whereas fireplaces and grain stores are outside. Among numerous peoples of southern Ethiopia the gathering of building materials and the construction of traditional H. is a kind of social event in which many adult members of a local community participate.

Several groups such as the Gurage, Hadiyya and Kambaata possess special associations of mutual aid for H. building at the clan level.

Ulrich Braukämper

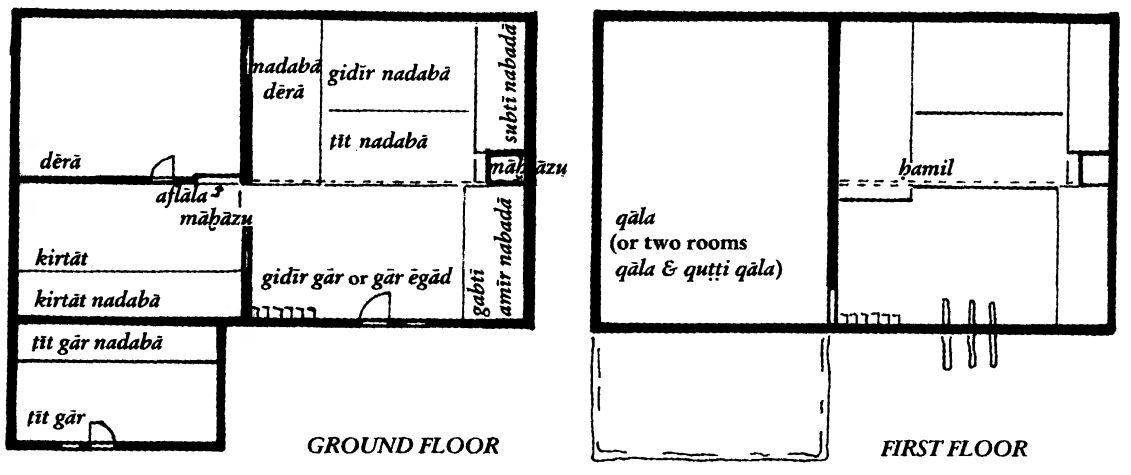
Traditional houses in Harär

In ↗Harär, there are usually several H. (*gār*) within one compound, the kitchen being housed in a separate room and shared by all households. The dwellings are rectangular and windows face the courtyard. The building materials are stones found around the city and pounded stones, mixed with clay, serve as mortar and as plaster for the exterior and the interior of the walls.

Today, walls are whitewashed with lime, *naṣīḥ āfar*, while the floor and the visible parts of the platforms – *nadabā* – are painted red. The ceilings of older H. are made of thin tree trunks stripped of their bark and then whitewashed. One beam (the *ḥamil*) above the first and lowest platform is thicker. An ostrich egg used to be hung there to protect the H. against lightning.

One enters through a large living-room, *gidīr gār*, which is the centre of the H. Every room in the H. has a *nadabā*; the living-room has several of them on all sides serving as seats or beds. These are covered with Somali mats or oriental rugs brought from the pilgrimage to Mecca. Shoes are permitted to be worn only in the space between the entrance door and the first and lowest platform, the *ṭīt nadabā*. Next to the highest platform, the *amīr nadabā*, which is only for the master of the H. and for honoured guests, there is the "pillar of the house", the *māḫāzu*, with a spearholder, *wåram mōraǧā*. Above the entrance door there is a shelf for Somali mats.

In the far corners of the living-room there are one or two built-in cupboards or wardrobes.



Ground-plan of a *gār* in Harär; courtesy of the author

The walls have several niches for trinkets and books. The walls of the living-room are decorated in a prescribed manner with Harari basketwork, wooden porringers and Chinese enamel plates. From the living-room a doorway leads into a small side-room, the *kirtat*, the "women's room". Adjoining, there is a small store room, *dērā*. Both are half as high as the living-room. The wall at the side of the *dērā* has a special niche, where the black, long-necked pottery containers, *aflāla*, covered with elongated basketry lids, *aflāla uffa*, are placed. These containers are for keeping ↗jewellery and valuables, while the *aflāla uffa* contain the umbilical cords of the children of the family.

A staircase next to the *kirtat* leads to a room above the *kirtat* and the *dērā*, called the *qāla*. It used as a storeroom for agricultural tools and for hay and foodstuffs. Together, the *kirtat* and *qāla* are as high as the living-room. Nowadays the *qāla* is partitioned from the living-room by a delicately carved wooden screen, the main room of the *qāla* serving as a separate bedroom, while the *quṭṭi qāla* still serves as a storeroom. Attached to the H. at the front there is often a small room with an entrance of its own, the *ṭīt gār*, for the youngsters of the H.

A latrine surrounded by a wooden structure is separate from the dwellings. Once filled up it is covered with earth and left to dry, while a second latrine is built. After a while the first latrine is opened and its contents are used as manure for fields.

Houses in Eritrea

Traditional buildings in Eritrea are as diverse as the ethnic composition of the society. In the highlands, two main types prevail: the rectangular-type **ሀድሞ** (*hədmo*) and the round-type **አጉዶ** (*ag^{w}do*, both used by ↗Təgrəññña speakers). In other regions, rectangular huts (↗ᶜAfar, ↗Sāho), circular-type *dasa* and *áre* (Sāho), round *tukul* (↗Bilin, ↗Kunama, ↗Nara, ↗Hədaräb, Sāho), *həmmär* (↗Təgre-speaking groups), and *beyt* (↗Rašāʾida) have been described.

Hədmo are the traditional H. of the Təgrəññña peasants of the highlands of ↗Akkälä Guzay and ↗Ḥamasen. The H., sometimes also called *naši*, are rectangular and have a flat roof. Similar H. also exist in Təgray. Trunks of big trees are used as pillars for the main construction and the ceiling enforcement. The side walls can be filled with layers of stones and mud or with branches, straw and mud. The trunks on the roof are covered with soil on which grass may grow. The inside walls and the floor are covered with a mixture of animal dung and soil and painted white. They have up to 200 m² space (ca. 10–18 m long, 6–10 m wide and about 3 m high). Their sizes and aesthetic differ from each other within one village and also within the region. There are several regional types of *hədmo* which vary as to floorplan, size and functional areas. Dainelli and Marinelli (1912: 396–406) distinguish and provide schematic drawings for the *hədmo* of the Asmära area, of ᶜAddi Sogdo, of ↗ᶜAd Täkälezan, of Ǝmba Dərho, of Ḥalay etc. In the areas on the fringe of the Eritrean highlands, such as ↗Sänᶜafe and ↗Mäṭära, *hədmo* take modified forms under the influence of the neighbouring peoples (ibid. 413–18).

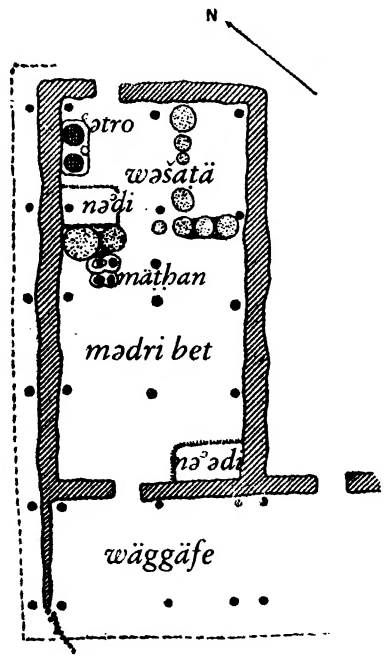
The Eritrean *hədmo* interior usually consists of three separate sections: **ገበላ** (*gäbäla*, 'entrance', sometimes also called **ወገፈ**, *wägäfä*), **ምድሪ፡ ቤት** (*mədri bet*, 'antechamber') and **ውሻጠ** (*wəšaṭä*, 'kitchen'). The *gäbäla* is a roofed but open fronted veranda, sometimes fitted with mud benches (**ንእዲ**, *nəʾədi*, and **መደብ**, *mädäb*) and then used as the men's bedroom, for storing farming tools, for meeting family members publicly, playing with children and as an animals' rest area. The semipublic middle section, *mədri bet*, is the place where guests are received and entertained, where the family takes their meal and where a newly married couple sleeps for the first time. After the birth of children, the wife and children sleep here. This is the place where most of the H. work is done and the new born animals as well as unthreshed grain are kept. The *mədri bet* is furnished with stools (**መንበር**, *mänbär*) and a table for eating meals, with *mädäbs* and *nəʾdis* as seating and sleeping facilities. Further, a grinding stone (*mäṭḥan*) and water container (**ዕትሮ**, *ᶜətro*) may be set on the ground.

The high ↗granary (**ቆፎ**, *qofo*), made out of mud, separates the *mədri bet* from *wəšaṭä*, the innermost and very dark part of the *hədmo*. In this room, where only women are admitted, a wife

keeps her properties and hides herself when she quarrels with her husband. The oven is placed and most of the meals are cooked in *wəšaṭä*.

Round holes are left in the walls to fit in cylindrical beehives (*qofo*) with the ↗bee entrance outside the wall. The bee colonies (usually several in each H.) are maintained and the ↗honey is collected by the wife (Fichtl ms., 1). The traditional beekeeping practice allows honey harvesting without destroying the colony.

Hədmo are built and maintained by ወፈራ (*wäfära*, 'neighbourhood help'). When a *hədmo* must be built or repaired, women cook, brew sorghum beer (*səwwa*) and invite neighbours, friends and relatives to collect the building material and work on the H. The *hədmo* are usually inherited by the youngest son, or, if the family has no male children, by the closest relative of the man.



Ground-plan of a *hədmo* in Asmära, scale 1:200; after Dainelli-Marinelli 1912:399, fig. 108a

The *agʷdo* is a round structure with a conical roof formerly wide-spread in the rest of the Eritrean highlands (↗Säraye), it also exists in Təgray, especially in the Aksum area and Abärgalle (a similar type is also known as ሰቐላ, *säqäla*). In the past decades, however, *hədmo* became the dominant H. type almost everywhere. In *agʷdo*, too, one can see a clear division between the *mədri bet* in front and *wəšaṭä* inside. The walls are made of stone kept together by earth and mud. A trunk in the middle of the room supports the conical roof made out of branches covered by thatch (*sahari*, or *walid*). Several *agʷdo*-H. are usually grouped together forming a large yard (*dämbe*) in their midst (Dainelli – Marinelli 1912:407–12).

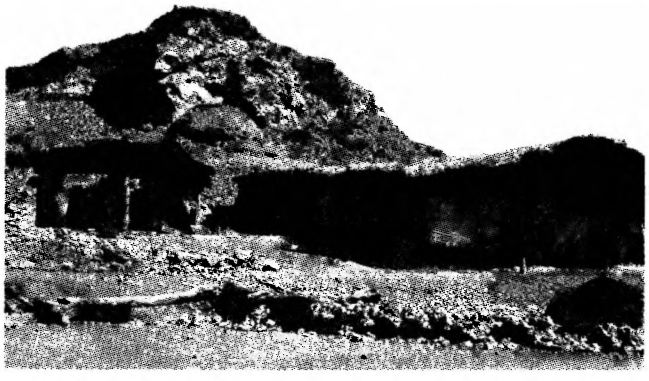
The Bilin, Kunama and Nara – sedentary ethnic groups – construct the walls of their H. of mud bricks which have been plastered with mud and occasionally painted white. The pastoralist Ḥədaräb construct the walls from small-size tree trunks and brushwood or reeds without plaster. For the roof, branches, brush wood or palm leaves are put in rows one over the other up to the top. In the interior the "furniture" is movable, like the bed (ᶜ*angäräb*, cp. ↗*alga*), shelves, the fire place, the grinding stone, the granary. The fireplace was traditionally a three-stone-stove which ws sometimes replaced by a mud stove (Dainelli – Marinelli 1912:437f.).

The *dik*-compounds (ibid. 418f.) are characteristic for the ↗Mīnifire Sāho. They consist of a large oval hut for goats (*abur*) and a conical H. made of branches for the shepherd (*dasa*). In Asaorta, *dasa* are somewhat larger and better constructed; round *áre* H. – similar to *dasa* but bigger and with a low wall – are also found there (ibid. 422f.). *Dasa* is also the most wide-spread H. type in ↗ᶜAfar, and one of the H. types favoured by the Təgre ↗Marya.

The Sāho inhabiting mountain slopes adjust grottoes for their H. A stone façade with a door closes up the hollow or cave within which the rooms have been divided up for living, sleeping and for the animals (ibid. 424f.).

The rectangular hut (called *ariš* in ᶜAfar) is common among the pastoralist Sāho and the ᶜAfar who live along the Red Sea coast. It is also found in ↗Massawa and other coastal and island settlements. It can be ca. 7–8 m long and 3–4 m tall and is made of natural material like brush wood/reeds, twigs or grass. The roof consists of ↗doum palm leaves. Inside is the movable furniture like bed (ᶜ*angäräb*), the three-stone-stove, granary (a sack made of doum palm leaves), shelves. The *ariš* are put up like tents every time the pastoral nomads choose to make a stop (ibid. pl. XXXII).

Ḥəmmär is a tent-like structure shaped like a beehive (cp. ibid. 434ff.). This H. type is used by the transhumant pastoralist Təgre-speaking peo-



Hədmo in Hamasen, photo 1915 by Leo Frobenius, courtesy of Frobenius-Institut (no. 07-8179)

ples of the north-eastern highlands and the western lowlands. H. of these ethnic groups belong to the women, who are responsible for organizing the building material (small trunks, robes, mats), for putting the tent up and for dismantling it, when the village moves to the next grazing area. A *ḥəmmär* consists of five straight wood (*fot*) posts (*takyat*), wood pegs (*mičāl*), ten to twelve doum palm mats as well as robes, which have been made from doum palm fibre. A H. can be set up or dismantled by four women within two hours. The small tree trunks have to be shaped like a semicircle by the women individually, so that the scaffold will ultimately gain the beehive shape. For two weeks the young and freshly cut trunks are put between pegs that force the trunk into the semicircle. These *fot* will become the roof, they are fixed with robes onto the *mičāl* which are punched in the earth. The *takyat* are posts with a bifurcate ending supporting the individual *fot*. The mats – about eight to ten meters long – are pleated by women in neighbourhood help collectively. It takes several months, sometimes up to one year, for them to be produced. As a natural fibre harvested from doum palms, the mats are susceptible to insect damage. Thus the women put the mats above a charcoal fire and smoke them, which gives them the dark brown, almost black colour and destroys the insect larvae. Approximately every two to three years new mats have to be produced to replace the old ones. Inside the H. the bed – measuring about 2.5 x 3 m – is placed vis-a-vis the entrance, the "kitchen" with a three-stones-cooking area, grinding stone, cooking utensils, milk container is placed on the right hand side with a smoke outlet. Next to the bed, on the left hand side on a shelf, the granary – a pleated doum palm container - is located. In front of the *ḥəmmär*, a shelter (*rakuba*) is built, as a storage for fodder and tools. After children have been born, the husband sleeps under the *rakuba*, for he leaves the big bed for the woman and her children.

The H. (*beyt*) of the Rašāʾida people of the Red Sea coastal plains and in the western lowlands along the border of Sudan are similar to the *ḥəmmär*. The Rašāʾida use self-woven blankets made from goat skin instead of doum palm fibre mats as a roof.

Hozier, Henry Montague

H. (b. 1838, Bothwell, Scotland, d. 1907, Panama), Colonel, Knight Commander of the Order of the Bath, third son of the financial secretary and military writer James C. Hozier, distinguished himself as an active British officer and as one of the best military-writers of his time.

After education at the Royal Military Academy at Woolwich, H. was assistant to Robert ↗Napier in the expedition to Beijing and in the campaign against *aṣe* ↗Tewodros II. H. proved a skilled advisor on tactical aspects and received a medal for the Ethiopian operation (Hozier 1869; Hozier – Holland 1870).

Afterwards, H. was promoted Lieutenant-Colonel and received the Iron Cross for his role in the Franco–German war. In 1874, removed from active duties in the army, he was appointed Secretary of Lloyd's insurance company, where he introduced many beneficial reforms. H. was

also active in the Masonic world. He was senior Grand Deacon of England, member of the Grand Lodge of Scotland, Past Master of the Ubique Lodge and member of the Westminster Quaystone and Household Brigade Lodge and one of the founders of the Latine Lodge.

Hozo-Sezo

H.-S. (self-names: Hooz Wandi and Seezi Waaŋi or Seezo Waanä, also called "Northern Mao") is an ↗Omotic dialect cluster of extreme western ↗Wälläga, near the town of Begi (for exact location s. map for Mao). There are about 30 clans of local people in the area who claim to be members of a "Hozo moiety" and about 18 who claim to be "Sezo", making up the *Beg-mawa*, 'Begi-people' (Atieb Ahmed Dafallah – Bender 1974). The name ↗Mao (*ma^{w}o*; *ma^{w}* in Hozo, *ma^{y}* in Sezo) is applied to many peoples of the area. An earlier ethnological study of the area by Grottanelli (1940) contains a Hozo word list and an inaccurate list of supposed clan names (Atieb and Bender notes). *Ethnologue* estimates Hozo and Sezo populations as about 3,000 each (Gordon 2005:115, 118). There is no literature in H.-S.

The lexical resemblance between Hozo and Sezo is about 65 % of basic lexicon, implying a low degree of mutual intelligibility and a possible time-depth of differentiation of about 1,000 years in the "normal" case, although it is quite possible that this may be an "abnormal" case of rapid or very slow divergence. The material collected by Atieb Ahmed Dafallah and Bender are the only significant sources on the H.-S. languages up till the S.L.L.E. In S.L.L.E. 15, Siebert and Wedekind (1994:10–18) present 320 lexical items of Hozo and two varieties of Sezo: Seze I and II. Bender 2000 summarizes the grammatical data on H.-S. in ch. 8 and passim and Bender 2003 contains a summary of lexical data.

The segmental phonemes of H.-S. (Bender notes) are:

labials: *p*ʔ, *p*, *b*, *m*, *w*
alveolars: *ṭ*, *t*, *d*, *s*, *ṣ*, *z*, *n*, *l*, *r* ~ *l*
palatals: *š*, *y*
velars: *q*, *k*, *g*
post-velars: *h*-
vowels: *i*, *e*, *a*, *o*, *u* (*u* rare finally, *o* non-final; *e* ~ *a* is common)

p is rare medially and *g* is rare medially, except after *ŋ*. *ṭ* is rare, *ṣ* is rare initially, *s* has variant [*ʦ*] medially, *r* ~ *l* is medial only. *ŋ* occurs only before velar. *f*, *č*, *ǧ* occur only in loans. Suprasegmentals have not been analyzed.

Ten-word-list of H.-S. (phonemicized from Bender 1983:342f.): 'one' *onna/išile*; 'two' *dombo/noombe*; 'three' *siyazi/siize*; 'water' *haani/haanṣi*; 'fire' *taami/taame*; 'sun' *abbi/awe*; 'moon' *emti/emse*; 'blood' *hambli/hamble*; 'tongue' *winṭile/yanṣile*; 'tooth' *atṣe/aatṣe*.

Except for having different lexemes for 'one' and interesting variation in 'tongue', this very basic lexicon shows the difference between Hozo and Sezo to be at the dialect level. There are other pronounced lexical differences, however, e.g., 'big' *etsi/gatti*, 'black' *ṭuuṭa/qiqini*, 'claw' *tuumi/ṣuqumi*. Siebert and Wedekind largely agree with the above items (their Seze II is close to the Sezo above) except for 'sun', e.g., Seze I *ʾàʷkálí* (one suspects this is a compound of form 'sun-X').

The independent pronouns of Hozo and Sezo are rather different from each other. There are no gender or inclusivity distinctions. From Atieb and Bender notes and S.L.L.E. 15: Hozo: 1st/2nd/3rd pers. sg.: *naŋ+ga/hiiŋ+ga/aŋ+ga*, 1st/2nd/3rd pers. pl.: *nuŋ+ga/duŋ+ga/neŋ+ga*; Sezo: sg.: *haa+še/hin+še/han+še*, pl. *dul+še/nam+ še/hel+še*. The suffixes *+ga* in Hozo and *+še* in Sezo are probably old copulas 'it is' (s. Bender 2000:183, 198ff.). Similarities to other Omotic are slight (best is Hozo 1st pers. pl.). Demonstratives are: Hozo near/far: *zan(g)a/zaŋaŋá*, Sezo: *heti/ya*. Interrogatives in H.-S. are: 'who?' *hayéŋgà/kínàa*, 'what?' *kinebià/kínàa*, 'when?' *hinià/díngàwtàa*, 'where?' *indéša/híntèe*, 'why?' *kinegošaa/kínàa*, 'how?' *hiŋgonàa/díŋkínàa*. There are still doubts about several of the above forms. In both Hozo and Sezo, existence and location are indicated by the copula *+iti* ~ *+(i)te*. Identity/attribution are marked by *+š* in both and also zero morpheme in Hozo. The connective 'and' is *+na* in Hozo and *+ne* ...*+ne* (suffixed to both constituents) in Sezo. Negatives are *+ke* in both and also *+wa*

in Hozo. For more details and variant forms, s. Bender 2000 (ch. 8).

Ḥudūd al-ʿālam

The Ḥ. (حدود العالم, 'The Limits of the World') is an anonymous Persian geography composed towards the end of the 10th cent. It was dedicated in 982 to the *amīr* of Gūzgān (Afghanistan), Abū l-Ḥāriṯ Muḥammad b. Aḥmad b. Farīġūn. The work exists in a unique manuscript from the 13th cent. First edited by Wilhelm Barthold (Vasilij Bartol'd) in 1930, it was translated in 1937 into English, with a commentary, by Vladimir Minorsky.

The Ḥ. is very important for the historical geography of Afghanistan and the adjacent Turkish steppes. As to Ethiopia, it contains only a short paragraph which runs in Minorsky's translation as follows: "Discourse on the country of Abyssinia and its towns: East of it live some Zanǧ; south and west of it is a desert; north of it lie the sea and some parts of the Barbarī Gulf. [The inhabitants of] this [country] have faces of average size. The people are black and lazy, but with high aspirations, and obedient to their king. The merchants of ʿUmān, Ḥiǧāz and Baḥrayn come here. 1. Rāsun, a town on the sea coast and the king's residence. 2. Sawār, the town where the army of the Abyssinian king is stationed. 3. Rīn, the town where the commander-in-chief resides with (his) army. In this province gold is abundant". Minorsky identifies Rīn tentatively with ↗Zaylaʿ. The paragraph that follows, on the country of the Buǧa (↗Beǧa), is so much mutilated that it makes any quotation useless.

Hulätt lədät

The H.l. (**ሁለት፡ ልደት**, 'two births') was a Christological formula within the ↗*Karra* denomination of Ethiopian Christian Orthodoxy (↗Ethiopian Orthodox Täwaḥədo Church [EOTC]). The H.l. supporters, in opposition to the followers of the ↗*Śost lədät*, maintained that in the mystery of the second Person of the Holy Trinity there were two births: the first from the Father (without a mother) "before [the creation of] the world", **ወልደ፡ አብ፡ በመለኮቱ፡ ቅድመ፡ ዓለም** (*wäldä ab bämäläkotu qədmä ʿaläm*); the second from the Holy Virgin Mary (without a father or more literally "without man's seed") at the fullness of time, **ወልደ፡ ማርያም፡ በትስብእቱ** (*wäldä Maryam bätəsbəʾtu*). According to this doctrine Jesus Christ was "the natural Son of God" and not **የጸጋ፡ ልጅ** (*Yäṣägga läǧ*, 'Son of grace'), as the followers of the triple birth sustained.

The issue about the "births of Jesus Christ" did not emerge in Ethiopian chronicles until the death of *aṣe* Iyoʾasi in 1769 and it is not clear yet why and when it surfaced at all. However, there is no doubt that the immediate context in which the debate about "the births" was conceived was the acrimonious controversy on the Union and Unction of the Son of God. It is widely believed that the followers of H.l. were the adherents of the *Karra* and ↗*Qəbat* groups (which otherwise had substantial differences in their Christological teachings, yet shared the H.l. formula), based mainly in Təgray and in Goǧǧam, whereas the *Śost lədät* party was primarily associated with the monastery of ↗Däbrä Libanos in Šäwa (↗*Ṣägga*).

These two slogans, which often became a battle-horse used for political purposes by different rulers, witnessed alternating fortunes. During the rule of *märəd azmač* ↗Asfa Wäsän of Šäwa

(1795–1808), the *Śost lədät* party was strongly opposed and condemned by the Metropolitan ↗Yosab II. Yosab excommunicated all the followers of the *Śost lədät* doctrine, starting from the abbot of Däbrä Libanos, *əṣṣäge* Wäldä Yona, one of the most vociferous representatives of the triple birth creed. This extreme measure was dictated by the hope of unifying the Church under a single H.l. belief. The result was, however, a large rebellion by the clergy, which forced the Metropolitan to go into exile on an island on Lake Ṭana. Later on, he retracted the excommunication and was given back his episcopal see. Soon after, however, following his death, *əṣṣäge* Wäldä Yona issued an excommunication on all those who would not accept the doctrine of the *Śost lədät*.

Events took another twist with the advent of Metropolitan *abunä* ↗Qerəllos in 1816 who, in line with the position of the Coptic Church, was a staunch supporter of the H.l. doctrine. Qerəllos enjoyed an unflinching allegiance among the clergy of Təgray, where he stayed from 1816 to 1819. With his arrival on 23 June 1819 in Gondär, where many of the monks were sympathizers of the *Śost lədät* creed, the capital witnessed a rekindling of the Christological disputes. The Metropolitan, asked to air his position on the matter, declared that the *Śost lədät* doctrine was wrong and excommunicated its adherents. The move prompted an uproar from the local monks and clergy; a synod was then held in Gondär in the presence of *aṣe* ↗Iyoʾas II toward the beginning of 1820. The Metropolitan lost his case to the longstanding rival of his predecessor, *əṣṣäge* Wäldä Yona. During the quarrelsome debate the latter acted as the chief spokesman and defender of the *Śost lədät* doctrine. Qerəllos was abused, excommunicated and forced by *əṣṣäge* Wäldä Yona to seek refuge in Təgray, which remained a stronghold of the "twin birth" creed.

In the first half of the 19th cent., the rulers of Šäwa banned from their lands the *Karročč*, including the H.l. The measure responded not only to theological but also to political concerns emerging from the perennial rivalry between the Šäwans and the northern Təgrayans. When ↗Śahlä Śəllase became *nəguś* of Šäwa, he outlawed the *Karročč* and declared the doctrine of the *Śost lədät* the official belief of the state. In 1845, *abunä* ↗Sälama III excommunicated both *əṣṣäge* Mahṣäntu and his mentor Śahlä Śəllase (Conti Rossini 1916b:478). In Sälama's wake, a complete reversal of the situation took place with the emergence of *aṣe* ↗Tewodros II, who proclaimed *Karra* as the official religion of the entire empire. Here too, the choice of Tewodros was dictated by the political aim of attracting to his side the rivals of his Šäwan contenders.

After Tewodros, the Šäwan *nəguś* Mənilək (later *aṣe* ↗Mənilək II) reinstated for a short while the position of the Däbrä Libanos *Śost lədät* party, but was compelled to abolish it when the Təgrayan-born *aṣe* ↗Yoḥannəs IV, a fervent advocate of *Karra* and H.l., became Emperor. The latter called a synod in May 1878 at ↗Boru Meda in Wällo, a "neutral place" chosen as a good-will gesture to reassure people that the synod would be even-handed. A large gathering took place in the presence of Yoḥannəs IV, *əṣṣäge* ↗Tewoflos and several dignitaries and ecclesiastical authorities.

The Emperor wanted the rulers ↗Täklä Haymanot of Goğğam and Mənilək of Šäwa to be present and ordered them to sit at his right and left during the synod. The representatives for the H.l. were *aläqa* Täklä Śəllase and Mälʾakä Bərhan Wäldä Yoḥannəs and the spokesman was *aläqa* Kidanä Wäld. The triple-birth was represented by *aläqa* Habtä Wäld, *aläqa* Wəbe and *aläqa* Betä Läwi, their spokesman being *aläqa* Śənä Giyorgis. Being granted priority to address questions, the H.l. spared no effort in putting under pressure the *Śost lədät* delegates, who, according to the chronicles of the proceedings, did not argue as effectively as the H.l.

The Emperor too, despite his good will, was from the start clearly determined to put the triple-birth out of his way. The besieged triple-birth representatives tried in vain to mumble a few words to defend their Christological perspective. They were "soundly beaten" by the superior rhetoric of their opponents and by the ill-concealed hostility of the Emperor towards them. The *Karra* doctrine, and consequently the H.l., easily "won" the day. At least two prominent members of the triple-birth party received physical punishments at the order of the Emperor; they had their tongues cut out and their upper and lower limbs amputated. *Aläqa* Śənä Giyorgis and several others declared that they would have professed H.l.

Boru Meda marked the irreversible decline of the triple-birth doctrine. Mənilək II, who succeeded Yoḥannəs IV, pursued a policy of religious tolerance, recognizing for all the freedom

to embrace either Christological position. Religious tolerance was also the path followed by *aṣe* ↗Ḥaylä Śəllase I. However, at the end it was the H.l. formula which survived, asserting itself as the official Christological formula of the EOTC. The overwhelming majority of catechetical handbooks, texts with expositions of the dogmas of the EOTC and the published ↗*Andəmta* Corpus reflect the doctrine of the H.l. The standard way of describing the mystery of the second Person of the Holy Trinity is that "the first birth" occurred: ቅድመ፡ ዓለም፡ አካል፡ ዘእምአካል፡ ባሕርይ፡ ዘእምባሕርይ፡ ወልደ፡ አብ፡ በመለኮቱ (*qədmä ʿaläm akal zäʾəmʾakal baḥrəy zäʾəmbaḥrəy wäldä ab bämäläkotu*, 'begotten from the Father in his divinity before the [creation of the] world, person from person, nature from nature'). The "second birth": ፭ሺህ፡ ፭፻፡ ዘመን፡ ሲፈጸም፡ ከእመቤታችን፡ ከድንግል፡ ማርያም፡ ከሥጋዋ፡ ሥጋ፡ ከነፍስዋ፡ ነፍስ፡ ነስቶ፡ ሰው፡ ሁኖ፡ ተወለደ (*5 ših 500 zämän siffäṣṣäm käʾəmmäbetaccən kädəngəl Maryam käśəgawa śəga känäfsəwa näfs nästo säw huno täwälladä*, 'he was born of the virgin Mary taking up flesh from her flesh and soul from her soul at the completion of the 5,500 years from the creation of the world'; Ethiopian Orthodox Täwaḥədo Church 1983:28).

Some of the recent quasi-official theological manuals have gone out of their way to list the *Ṣägga* and, by implication, the *Śost lədät* among the "sects dissenting from the established church" (Aymro Wondmagegnehu – Joachim Motovu 1970:132).

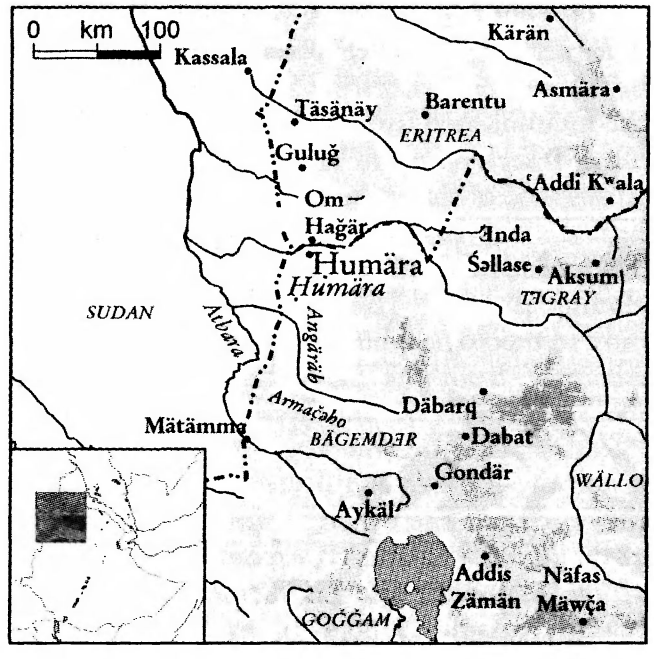
Ḥumära

H. (ሑመራ, Tgn., Tgr.: Ḥəmora, Beni ʿAmər: Ḥəmärin, Kunama: ʾƎhəmärin) is an Ethiopian town at the Eritrean border close to the Sudan (14°18' N , 36°37' E), located at the Setit (↗Täkkäze) River in Qaftä Ḥumära *wäräda* (formerly Setit-Ḥumära *wäräda*). Etymologically the name might be linked with the Ḥumrān (↗Ḥamrān), Sudanese arabophone nomads. There might also be a connection with the *ḥumär* tree, growing in the lowlands and carrying (non-edible) fruit; a nearby settlement in the area of the ↗Ṣällim Bet, May Ḥumär, is named after this tree.

Ḥ. has about 50,000 inhabitants, mostly farmers and plantation workers. About 1,000 local investors own the greatest part of the surrounding plantations. The plantations are mainly known for their oil seeds, especially sesame, but also nug. Ḥ. lies in the ↗Atbara River Basin; all the rivers of the region flow into the Atbara. Four roads connect Ḥ. with ƎndaŚəllase Šire, Gondär, Mätämma (via ʿAbdärrafiʿ) and Eritrea (via ↗ʿOm Hağär to Guluğ).

During the Italian occupation Ḥ. started to become a centre of commercial farming, and thus surpassed ʿOm Hağär on the other side of the Setit. Oil milling had been carried on in the region. Traditionally, semi-sedentary highlanders migrated to the region twice a year for sowing and harvesting, the unhealthy climate (e.g., Ma-



laria being endemic) preventing most from settling permanently. However, as in other western regions up to Qʷara to the south, commercial farming had expanded in the times of *aṣe* Ḫaylä Śəllase I, especially during the 1960s, Ḥ. having a high potential for intensive agriculture. The "Humera Agricultural Development Project" was then set up in a vast region starting from the river Gärgäf near Guluğ, following the Sudanese border, until the environs of the ᶜAngaräb to the south. The project area extended, from north to south, over around 200 km (*wärädas* ᶜOm Hağär, Setit-Ḫumära, Wälqayt, Ṣägädä and Tačč Armaçəho). Many farmers were organized in large co-operatives, which, through loans, for example helped to enhance mechanical farming, especially around H. (the first being the "Walqait-Setit-Humera Multipurpose Agricultural Cooperative", registered in 1969, with ca. 990 members in 1972, cp. Humera Agricultural Development Project 1973:128). Others kept the traditional credit system (the *šayl*, originally known from ↗Sinnār, s. O'Fahey – Spaulding 1974:82f.), a local merchant advancing a sum in planting time and setting a price for the expected crop of ca. 30–50 % below the market price (ibid. 123f.).

Humära in the early 1970s; photo from Humera Agricultural Development Project 1973

H. also has an old market, probably predating the modern plantations, when Ḥ. was only a caravan post at the river, with products from the Sudan, Ethiopia, Eritrea and oversees. Handicrafts traditionally included blacksmithing and jewellery manufacture. The economic connection with the Sudanese lowlands is very important. Merchants from Ethiopia take cattle, butter, grains, spices to the border settlement Ḫamdayt, coming via Ḥ., which are exchanged for clothes, soap, perfumes, detergents etc. from the Sudan. Caravans also transport *gešo* (leaves for producing local beer) from Ethiopia to Sudan and Eritrea.

Ethnically Ḥ. and its environs are diversified. Nomadic Təgre, Beni ᶜAmər and Ḫamasen herders – the Ḫamasenay from Šire and Eritrea – are migrants, as are animal farmers from the Wälqayt and Ṣägädä highlands, and some South Armaçəho from the ᶜAngäräb in the south. Due to the intensification of farming and the exclusive reservation of grasslands south of the Setit by the highlanders, it became increasingly difficult for the Beni ᶜAmər to find grazing land starting from the 1960s. Earlier the once numerous Sudanese nomads had found alternative grazing areas within the Sudan (cp. Humera Agricultural Development Project 1973, fig. 9–1, 160ff.). Between June and October the population of Ḥ. and environs increases considerably mainly due to migrant workers (by 130 % around 1973, ibid. 120). The agricultural projects attract people from all bordering regions, e.g., migrant Sudan Arabs, and farmers from all over Təgray. Most of the Sudanese and even Nigerian (↗Hausa) agricultural workers settle nearby Ḥ. in Bäräk̲ät and May K̲adra.

Cotton growing is traditional. A state-owned cotton plantation has been enlarged in recent years as a development project, with German development aid and in collaboration with the nearby Danša settlement, a 1990's settlement of demobilized soldiers (cp. Armbruster – Berhane Belay 1997). The fertile environs of H. and the whole *wäräda* of Qaftä Ḫumära are today the scene of new resettlement programmes for poverty reduction, peasants from ecologically degraded regions, especially from central Təgray, settling on newly distributed land.

Humbanaa ↗Baarentuu

Ḥúmmad b. Lo'oytá

Sulṭān Ḥ. (b. ca. 1830, Afᶜási, d. 17 October 1902, Đoḍá near Dorrá) was the political chief of the Debné, an autonomous subgroup of the ↗ᶜAfar. Ḥ. is the ancestor of the Ḥummaddó, a subgroup of the Debné Arbāhintó. He was the son of *sulṭān* Loᶜoytá (from *loᶜó* 'day, sun') b. Arbāhim, the *sulṭān* of the Debné (until ca. 1866). This *sulṭān* served as ↗Rochet d'Héricourt's guide during his first journey to Šäwa in 1839, and in 1862 agreed to the cession of ↗Obock to Napoléon III by the leading ᶜAfar chiefs (in the Traité de Paris, s. Morin 2004:264f.). In those days the Debné were located east of the *wadi* ↗Gobaᶜad in the vicinity of ↗Zaylaᶜ.

The first time that Ḥ. appears in historical records was in 1867 in the battle of Mári, when he helped the *sulṭān* of ↗Awsa, ↗Maḥámmad "Illaltá", to defend the Awsa oasis against the ↗ᶜIssa. In 1875, together with the Awsa *sulṭān* Ḥ. directed the Egyptian troops headed by Werner ↗Munzinger *bāšā* into the Awsa sultanate. These troops were led from Giifu, at the entry of Awsa, to the ambush of the south-eastern shore of Lake ᶜUddúmma where Munzinger and his followers were nearly all killed by the soldiers of the Awsa *sulṭān*. Ḥ.'s relationship with the *sulṭān* of Awsa was, however, mainly marked by competition. In 1884 Ḥ. signed the Treaty with the French Governor Léonce ↗Lagarde, that established the French colony in Obock (Hertslett 1967). Already in 1882 Ḥ. had conceded the sea shore of Sāgállu to the traveller ↗Soleillet, who ceded his rights to France in 1884. Oral tradition explains that Ḥ. wanted to use the French to extend the influence of the Debné over Awsa itself – a project already followed by his father. Due to a conflict with the ᶜAsahyammára of Baᶜádu in 1886 he helped *däğğazmač* ↗Mäkʷännən Wäldä Mikaʾel in a raid against Baᶜádu. Ḥ. was also said to have encouraged the ᶜIssa in their attacks against Awsa. In 1890, however, Ḥ. publicly declared the acceptance of the sovereignty of the *sulṭān* of Awsa over "all the ᶜAfar". In 1899 Ḥ. was recognized as the official Debné leader at the French colony of Obock and also travelled in the same function to the Eritrean Colony.

Hunting

H. in Ethiopia has been the subject of considerable scholarly debate and speculation. Initially, scholars, basing themselves on the reports of 19th-cent. travellers, suggested that H. groups were racially, linguistically and culturally different from their neighbours and represented a different and earlier "cultural layer" (MasMis; Biasutti 1905). This argument was later further elaborated with some variations by Cerulli (CerFolk 200–04; CerEt vol. 1, 233–38). Jensen (VSAe I, 63–66), rather than seeing such groups as remnants of original H. peoples, saw them as cultivators who were subjugated and forced to adopt H. by more powerful immigrants with superior agricultural technology (cp. Huntingford 1955; Haberland 1962; 1964). Others have seen H. groups as "failed" farmers or herders who have adopted H. as a survival strategy.

More recent research indicated that several craft groups (↗Handicrafts) in Ethiopia were in the past H. who adopted crafts as the opportunities to sustain themselves as H. declined. The ↗Wäyṭo were a formerly autonomous H. group who, during the 20th cent., became a marginalized caste-like artisan group on the periphery of Amhara society (Gamst 1979). In the 19th cent. the Wäyṭo were ↗hippopotamus hungers on the shores of Lake Ṭana. The introduction of rifles and the steady trade in hippopotamus tusks led to a dramatic decline in the area's hippopotamus population. The Wäyṭo began to take up crafts and agriculture. Similar traditions among the ↗Fuga suggest that they used to be H. groups, but like the Wäyṭo were transformed into craftsmen. This may reflect a kernel of truth, but the

Elephant tails as hunting trophies, on display in Wälläga; from Leichner 1936:112f.

diversity of H. techniques and rituals found among different marginalized groups would seem to mitigate against them all being of the same origin. Mana and ↗Manǧo hunt using bows and arrows (sometimes with poison tips), spears, nets and dogs. In some regions they hunt hippopotami and gazelle and in other porcupines. While groups that depend heavily on H. for their sustenance have well organized hunts and are clever trackers, others, such as the ↗Mağaŋir, come upon animals rather randomly and show comparatively little skill in the enterprise.

Although some H. groups are considered to have a positive influence on the fertility of the land and their neighbours, they are often viewed by their neighbours as ritually polluting largely due to their diet of wild meat. This rejection of meat which has not been ritually slaughtered seems to lie behind Alvares's claim that (in Ethiopia) "many kinds of games they do not kill because they do not eat them, others because they do not know how, and have no devices for that purpose" (BeckHuntAlvar 131).

Given the evidence cited above for the existence of H. in Ethiopia from antiquity, we must be cautious in accepting Alvares's report that in Ethiopia "nobody hunts or fishes [cp. ↗Fish], nor have they the wit nor a way, nor the will to do it; on this account the game is very easy to kill, because it is not pursued by the people" (ibid. 113). This should perhaps be understood as a reference to the Christian Ethiopian agricultural populations. However, even within this cultural limit his report is surprising in light of evidence coming, e.g., from the ↗hagiography, that H. was part of the training of a young man. The Acts of *abunä* ↗Täklä Haymanot report that the young saint-to-be learned to ride and hunt with bows and weapons of all sorts (Budge 1906:62). Similarly, the Acts of ↗Zäyoḥannəs report that the Saint hunted wild animals including ↗lions (Schneider 1972:7f. [text] = 8 [tr.]).

Whatever the status of H. prior to the 15th and 16th cent., the introduction of ↗firearms had a dramatic effect on the social organization, geographic spread and intensity of H. During the Gondärine period (ca. 17th and 18th cent.), royal hunts became a notable feature of court life. These are well documented in the chronicles of the period. *Aṣe* ↗Iyasu I was referred to in his chronicle as a skilled rifleman, and by Poncet as "the best marksman in his dominions". In 1683 he and his courtiers went down to the Abbay valley in search

The ruler of Šäwa, Wäsän Sägäd, hunting an elephant; miniature in ms. EMML 2097, fol. 182v; photo courtesy of HMML

of wild animals, and killed two buffalos. This was only the first of his many H. expeditions. Several of his successors including ↗Täklä Haymanot I, ↗Yosṭos and particularly ↗Iyasu II carried out similar hunts. Bruce recalls that it was the constant practice of this period for the rulers to make a public H. expedition at the start of his reign.

In Ethiopia as elsewhere in East Africa the early 19th cent. also witnessed a great expansion of the ↗ivory trade. Professional ↗elephant hunters using modern weaponry gradually devastated the countryside. The decline of game animals in the northern parts of the country led hunters to move southward, where they were often among the first representatives of the northern peoples in that part of the country. The expansion of H. and the subsequent decline in the availability of wild animals appears to have led some H. groups to pursue crafts.

The spread of firearms and the evolution of H. have continued in Ethiopia to the present day. The Mağaŋir of south-west Ethiopia continued to hunt using spears, arrows, and traps until the beginning of the 20th cent. Only from the 1940s onward were rifles numerous enough for them to have a significant impact and even then their use in forested areas was restricted because of

the limited visibility among the trees. Even so, wild game form only a minor part of the Maǧanjir diet.

Steven Kaplan

Huntingford, George Wynn Brereton

H. (b. 1901, d. 1978) was a British scholar of Ethiopian history and culture, associated with London University's ↗School of Oriental and African Studies (SOAS). H. came from a family of scholarly clergymen; a relative had been Bishop of Gloucester and his father had been a rector and Professor of Classics in Canada, before retiring to Kenya. H. studied classical Greek before going to school, but after his father's move to Kenya, became a coffee-planter there. He was, however, also an authority on the archaeology, social anthropology and material culture of the area.

On the outbreak of ↗World War II H. joined the British army and served in the British-occupied ↗Ogaden. At the close of the war, he joined SOAS and taught Semitic and Cushitic languages and anthropology, but became increasingly interested in Ethiopia. H. also collaborated with his friend Charles ↗Beckingham in publishing *Some Records of Ethiopia 1593–1646* (BeckHuntAlm) and *The Prester John of the Indies* (BeckHuntAlvar). Several of his unpublished writings are preserved in the SOAS archives. His posthumous *Historical Geography* (HuntGeogr), though at times ideosyncratic and based on only minimal field work, is a useful reference work for the identification of Ethiopian place-names.

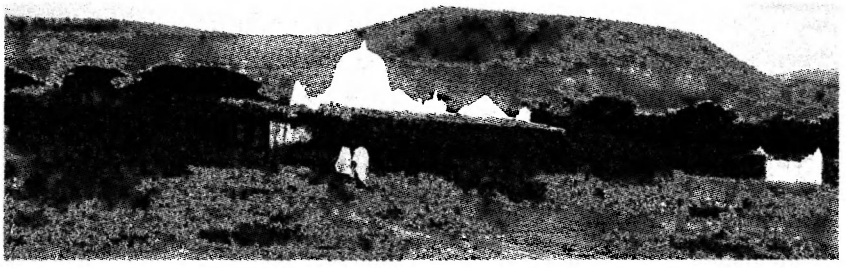
Richard Pankhurst

Ḥusayn

Usually referred to as *šayḫ* Nūr Ḥusayn of Bale, Ḥ. is one of the most-venerated Muslim "saints" (↗Holy men; ↗*Walī*) in Ethiopia. The cults devoted to him, particularly the great ↗pilgrimage to his shrine at Anaağina in Bale, are described in the article ↗Šayḫ Ḥusayn.

Ḥ.'s devotees believe in the active and beneficial spiritual presence of the *šayḫ* and seek his blessings by his *baraka*. This is kept alive by a rich corpus of oral and written hagiographical traditions referring to the deeds and miracles of *šayḫ* Ḥ. The most lively of these traditions are in the form of litanies in praise of the *šayḫ* sung (or heard on cassettes) by groups of pilgrims all the way to the shrine, and more widely recited at religious meetings of Muslims, not only in Ethiopia, but also in Kenya and Somalia (Andrzejewski 1972; 1974; Baxter 1987). A collection of various materials made up of popular legends and genealogical facts referring to the *šayḫ* was edited in three anonymous booklets in Arabic: *Kitāb Rabīᶜ al-qulūb fī ḏikr manāqib wa-faḍā'il sayyidinā aš-šayḫ Nūr Ḥusayn* ('Book of the Spring of Hearts in the Memory of the Virtues and Merits of our Lord *šayḫ* Nūr Ḥusayn'); *Kitāb Nuzhat al-asrār wa-ṭahārat al-aqḏār* ('Book of the Delight of Souls and the Purification of Filth'); *Nasabuhū š-šarīf* ('His [i.e. Ḥusayn's] Noble Genealogy'), published in one volume in Cairo in 1927 (Cer-

ulli 1928) and reprinted in 1948–49 (s. Gori 1997:57f.). Parts of these texts have been translated and analyzed by European scholars (Cerulli 1938; Andrzejewski 1974; Gori 1997). A manuscript containing the same hagiographies (or a version very similar to them) is BN Éth. Abb. 161 (ChAbb 97, CrAbb 107; s. Schneider 2006).



Grave of *šayḫ* Nūr Ḥusayn of Bale at Anaağina; photo 1972/74 by Ulrich Braukämper, courtesy of the Frobenius-Institut, Frankfurt am Main (37-Br025-63)

From this corpus emerges the fact that Ḥ. became a saint in Ṣūfī Islam due to his ability to work a wide range of miracles, his benevolence towards the poor and his strong sense of humility. The mystic light (Arab. *nūr*) emanating from him is the sign of his prominence among saints. Some features of his saintliness are also characteristic of indigenous forms of religiosity, particularly his power over snakes (↗Serpents) and other reptiles.

There do not seem to be any clues in these texts and in the related traditions as to the probable existence of Ḥ. as a historical figure (Andrzejewski 1971; Braukämper 1989). One hypothesis asserts that he was the agent for the Islamization of Bale at the turn of the 13th cent. According to tradition, Ḥ. was born in the Wabi Šäbälle valley in Anaağina, where he lived, preached and died, and which later became his shrine. His mother, Maḫida, is venerated during the celebration of Ḥ.'s birth, which is pivotal in the worship of the saint. On his father's side, Ḥ. is from an Arabian Šarific lineage who settled in the Horn of Africa. His grandfather, *sayyid* ᶜAbdallāh migrated from Arabia to Marka, on the coast of the Indian Ocean in Somalia. Following the course of the Wabi Šäbälle, his father, *šayḫ* Ibrāhīm, went inland and settled in Bale.

Such evidence on Ḥ.'s genealogy could indicate a wider Islamic missionary-movement from the Indian Ocean coasts to the eastern Ethiopian highlands between the 13th and the 15th cent. However, it could also be interpreted, in part, as a later construction intended to prove how deeply rooted were the links between the devotees of *šayḫ* Ḥ. from Bale and Somalia, reactivated in the 19th cent. by the adherence of the custodians of the shrine to the Aḥmadīya–Idrīsīya *ṭarīqa* (↗Islamic brotherhoods), which was founded in 1837 and introduced in ↗Merka by *šayḫ* ᶜAlī b. Muḥammad "Maye" Durogba (d. 1917; Cerulli 1971:346–52; Gori 2004). Such complex data are a hindrance for the historical reconstruction of the figure of *šayḫ* Ḥ., but also reveal more recent developments associated with the history of his shrine.

Éloi Ficquet

Ḫʷāğalī

Šayḫ Ḫʷ. al-Ḥasan (also Khojele; b. Asosa, d. 1938, Addis Abäba) was a ruler of ↗Beni Šangul (the so-called as-Saᶜīd). Ḫʷ. or Hoğalee sometimes also served as a name for the ↗Berta of

↗Asosa. Ḫʷ.'s father al-Ḥasan Muḥammad, a ↗*Waṭāwīṭ* of the Rikābī clan, was ruler of Aqoldi in the southern Berta region. He came to prominence by marrying the Berta daughter of a local ↗Funǧ lord. Al-Ḥasan established the base of his sheikdom around Asosa. He was imprisoned by the ↗Mahdists for refusing to join their expedition to Wälläga in 1888 which was repelled by *ras* ↗Gobäna Daṭi. Ḫʷ. succeeded his father.

The Mahdist rule over the region ended de facto around 1889/90 after an Arab-Sudanese army raided the area, with the exception of Asosa which stayed neutral. At the end of the 19th cent. the as-Saᶜīd was dominated by the competing *Waṭāwīṭ* sheikdoms of *šayḫ* Ḫʷ. of Asosa, *šayḫ* Maḥmūd of Ḫʷomoša and *šayḫ* ᶜAbdarraḥmān of Qebeš (Beni Šangul proper).

In 1898 Ḫʷ. was the first to surrender to *ras* ↗Mäkʷännən Wäldä Mikaᵓel's military expedition, while the other Beni Šangul leaders continued to fight the invaders. The collaboration of Ḫʷ. facilitated the Ethiopian intrusion into the region. Ḫʷomoša and Qebeš were looted and, after a second expedition by *däǧǧazmač* Dämissäw in the same year, were subdued.

In 1903 Ḫʷ., like the other Saᶜīd rulers, was imprisoned in Addis Abäba because he had sought recognition and protection from the British. He was released in 1908. Two years later Mənilək II gave him autonomy expecting regular tributes of gold, ivory and slaves (later also coffee). Under Ḫʷ. slave raiding increased, and the rich gold resources of his country were intensively exploited by slave labour. Asosa became an important centre for slave trade, connected with the old trade route to the market of ↗Kurmuk on the Ethio-Sudanese border. Ḫʷ., who himself joined several raiding campaigns, founded a post for the slave trade. Also Ḫʷ.'s wife, *asit* Amna, became heavily engaged in slave-trade and established trading posts in the Sudan. Ḫʷ., acting virtually independently in his realm, became one of the richest provincial governors in Ethiopia. His *gəbbi* in Addis Abäba, still extant today, is unusually large and surpasses the *gəbbi* of all other nobles by far.

Šayḫ Ḫʷāǧalī al-Ḥasan; from de Jumilhac 1933:32/33

Slaves were mainly raided among the ↗Mao and Koma whose territories were in the hands of ↗Ǧootee Tulluu, the ruler of ↗Qälləm and Sayyoo (↗Dambi Doolloo), but was taken over by Ḫʷ. in 1910. There Ḫʷ. introduced a so-called "child tribute" (*ləǧ gəbər*). The child slaves which were collected by this kind of "tax" were sent to Addis Abäba as tribute after they became mature. A great number of slave children were also sold to the Sudan.

On the eve of the Italian occupation of Wälläga Ḫʷ. submitted to the Italians after the "Western Galla Confederation", which he joined with Habtä Maryam Gäbrä Ǝgziᵓabəḥər and Yoḥannəs Ǧootee, failed to be recognized by the British. The Italians confirmed him as *sulṭān* of Beni Šangul. Ḫʷ. died after being wounded during a punitive Italian expedition in Ḫʷomoša to which he had been recruited.

Ḫʷarasa ↗Kəmant

HWBS

Among the Sabaean deities brought by South Arabian colonists to Ethiopia only four – ↗ᶜAstär, ↗Almaqah, ↗Ḏāt Ḥimyam and H. (Hawbas) – were really worshipped by the local population, who made offerings and erected sanctuaries to perform their cults. Although mentioned very early in Sabaic ↗inscriptions, H. was included in the official pantheon of Sabaᵓ much later in the 2nd half of the 1st millennium B.C. However, in the list of the five supreme deities of the Ethiopian kingdom of ↗DᶜMT (8th–7th cent. B.C.) H. occupies the second place, between ᶜAstär and Almaqah (RIÉ 1:5–6; 5 B:2; 6:2; 9:6–7, 10:13–14). The rulers of DᶜMT, the king WᶜR-N ḤYWT of the clan BN SLM-M and his 'companion' (prob-

ably his wife: *ʿrkt-n*) SMʿT-M, daughter of ṢBḤ-N, inaugurated a temple of H. (*ḥḫdsw/byt/hbs*, RIÉ 1:3–4), the location of which is not given. The name of the temple obviously occurs in the deity's epithet 'Lord of ʿIḏḏat/ʿIzzat' (*bʿl*|ʿ*ḏt*; RIÉ 1:4), which proves that H. was a god, not a goddess as it has been previously assumed. Another type of sanctuary designated with an obscure Ethio–Sabaic term *mṯry-n* is also associated with the cult of H. (RIÉ 62:2).

The veneration of this god is attested at the sites of ↗Yəḥa (RIÉ 35) and ↗Mäṭära (RIÉ 62), near the villages of Dibdib (RIE 69; 70) and ↗Toḵonda^{c} (RIÉ 85 I) and in the grotto of Gobo Fənṣəḥ (RIÉ 153; 155). In Ethiopia, as well as in Saba$^{\circ}$, two spellings of the name of H. were used simultaneously and with no apparent regularity: HWBS and HBS. If the latter represents the *scriptio defectiva* of the former, the transcription of this proper noun should be Hūbas or Hōbas.

The identification of H. with the Moon god proposed by some Muslim scholars of mediaeval Yemen is not corroborated by epigraphic materials or other ancient sources. At the same time, the ↗Aksumite god of land attested in the pre-Christian inscriptions of ↗ʿEzana as BḤR-M (RIÉ 185 I:21; 185bis I:22–23), BḤR (RIÉ 185bis II C:35–36) and Bəḥer (RIÉ 188:25–26) might correspond to H., since in invocations both are mentioned directly after ʿAstär.

Serguei Frantsouzoff

Hyatt, Harry Middleton

H. (b. 1896, Quincy, Illinois, d. 1978, Quincy, Illinois) was an American folklorist and the author of *The Church of Abyssinia*. H. studied at a number of colleges before graduating from Bexley Hall, Kenyon College, Ohio in 1920. He was ordained in the Episcopal Church (deacon 1920; priest 1921) and held appointments in Cincinnati and Columbus. In 1924 he married Alma Egan Altenberg and, after travelling in Europe and North Africa, studied at Oxford University for two years, gaining an M.A. in 1926. On his return to the United States, H. and his wife settled in New York City, where H. served as Associate Rector of the Church of the Holy Spirit from 1930 to 1965. In 1972 his research in the field of American folklore was honoured by the American Folklore Society.

Despite an ambition to do so, H. never visited Ethiopia, and his *The Church of Abyssinia* (1928) was based primarily on secondary literature; it offers a basic introduction to the history and the institutions of the Ethiopian Orthodox Church. Together with Samuel A. B. Mercer, H. provided financial support for the journal ↗*Aethiops*, founded by Sylvain ↗Grébaut, from 1930 to 1932, both being listed as editors alongside Grébaut for that period. H. was also the Director of the Alma Egan Hyatt Foundation, which published the journal ↗*Aethiopica* which replaced *Aethiops* from 1933 until it ceased publication in 1936.

Michael A. Knibb

Hyena(s)

The spotted H. (Amh. ጅብ *ǧəb*, Tgr. ዝብኢ *zəbʾi*, Orom. *waraabessa*), *Crocuta crocuta* [*habessynica*] of the *Hyaenidae* family is, after the ↗lion, the second largest carnivore in Ethiopia and Eritrea. A large female H. (up to 120 cm) can be bigger than a male (up to 110 cm). The colour (reddish brown to light brown) and the dark spotting of the coat changes with age, growing lighter and less spotted. Characteristic are large ears set high on top of the head. The distinction between female and male is difficult to observe until the female has given birth because the female reproductive organs appear nearly similar to those of the male. The elongated clitoris can be erected and the openings of the vaginal and urinary tracts are situated within it (Kruuk 1972: 210f.).

The striped H. (*Hyaena hyaena dubbah*) is less common than the spotted H. It lives singly or in pairs and is exclusively nocturnal. Its size

is smaller and its tail longer. The coat is longer, with black stripes on the sides. H. are adapted to nearly all ecological conditions in the Horn of Africa up to 4,000 m A.S.L. and during the night even include human settlements and towns within their territory.

Zoologists describe the social life of H. in metaphors taken from social anthropology. According to researchers H. are organized in "matriarchal clans" comprising up to 100 individuals. Such "clans" have a territory defined by scent-marks made by both sexes with an anal secretion. H. are organized around communal dens of cubs and their mothers, who mainly care for them. The dominant animals are the females. In competition over food with males they usually are successful.

H. command a high variety of eleven intergrading calls (e.g., whooping, grunting, giggling, growling, whining; Amh.: እሙኝ, *əmmuñ*, onomatopoetic for the 'sound of a H.'; እሙኝ፡ አለ, *əmmuñ alä*, 'to produce the sound of a H.'). H. keep their social relations by visiting each other throughout the night. They greet each other by sniffing and licking the face and the genital area (Kruuk 1972:220ff.).

H. are most active at night. During daytime they sleep in earths or caves in cliffs, e.g., in the river valleys. In areas with low population density, e.g., in the ᶜAfar savannahs, they can be active in daytime as well. H. hunt individually or in packs led by a leader. Their prey (weak or injured mammals, especially ungulates, organic waste; ca. 14.5 kg per meal) is attacked by all members at once and often killed by ripping out the bowel. H. are most effective carrion-eaters. With their large and heavy teeth and extremely strong jaws they are able to crush all kinds of remains. Sometimes carcasses are carried away or even stored (Kruuk 1972:63ff.).

The importance of H. in urban refuse removal is reported in many traveller's reports (compiled in PankEcon 619, 715). Till today H. play a significant role as scavengers in rural as well as semi-urban dwellings and even towns. H. can be dangerous to man and livestock. To prevent them from attacking, during night-time people walk in groups or armed with spears and keep their livestock in the house or within thick thorn bush fences.

Hyenas: cultural aspects

The Gəᶜəz translation of the *Physiologus* (↗Fisalgos) interprets the H. as hermaphrodite (s. above for the physical appearance of the female genitals) and impure animal. It warns not to "be like the hyena, but follow the Law". This argues against women who "left their nature" practising "sinful" sexual intercourse or behaving "like a man" (Hommel 1877:70; cp. Sumner 1982:77, 90, 166f., 199; cp. also VSAe II, 632).

The Egyptian saint *abba* Matewos of Asfoni is associated with H., for he saved a H. cub which fell into a hole. This legend, in theological terms, is probably meant to demonstrate the overwhelming compassion of the Saint or Christianity in general, which is said to teach the love even for the most sinful being. Matewos's prestige was raised by his ability to control the dangers of nature; in the legend a mother H. even licks his feet (BudSaint 334–37).

The H. plays a significant role in many socio-religious systems, as well as in folk literature. Most commonly, impurity, danger and a voracious character are ascribed to the H. Consequently, eating the flesh of a H. is considered a taboo. According to Haberland (VSAe II, 505, 630ff.) an Oromo who killed a H. and feared the spirit of the animal, had to go through a special purification ceremony. In fables the H. is often the outlaw counterpart of the more splendid lion and other predators (cf. Jensen 1936:36, 48, 90, 106, 557f.; VSAe I, 327, 382, 384; Leslau 1982, s. index). In folklore an albino H. is called "King of H." and an extraordinary magical power is ascribed to it. Occasionally food is laid out for them to calm their temper (von Rosen 1953:23).

A "pan-Ethiopian" feature in folk-religions is the close relation between ↗*buda* and H. Members of different marginalized groups, such as, e.g., blacksmiths and potters, as well as certain individuals, are believed to be able temporarily to change their shape into that of a H. Such "werehyenas", e.g., the *gooromooticcco* in ↗Hadiyya and ↗Kambaata, are said to bring harm and death, or defile graves and eat the flesh of the deceased during the night (Braukämper 1983:267). In some cases "possession" by a H./*buda* seems to have been an observable altered state of consciousness or a symptom of mental illness (s. Parkyns cited in PankSoc 263f.).

Beside such accusations there exists in different traditional cultures the idea that certain clans or persons are related to H. The clan of Gosage (Azärnät-Bärbäre sub-group, s. ↗Səlṭi) is said to have kinship ties with H. and to have migrated from "Arabia" or "Harär" riding on the back of

H. In Gurage and Səlṭe (Səlṭi) H. are, still today, occasionally fed to maintain "neighbourly relations" between human society and H. At such events elders talk to the H. gathered around the meat offered to them and ask them, not to attack the livestock (author's own observation; oral informants). Among the ↗Dorze, the highest *demuṣa*-priest is reported to have had the power to control the H. and to send them to punish defaulting debtors (VSAe III, 197f.). Jensen documents in his description of the ↗Aari that there was a certain ritual-leader with the title of *godiri babi* ('H. king') who used to carry out ceremonies to prevent wild animals from entering the fields. Among the ↗Šangama and the ↗Basketo there were priests with a similar duty. According to legend, such friendly relations between man and H. were based on a kind of contract (VSAe I, 47, 129, 219). Such pact, allegedly dating back to a famine in the 19th cent., is the origin of the tradition of the "H.-men" of ↗Harär, who are intended to prevent H. from attacking people and livestock in times of hunger. The ritual in which flesh is provided for the H. takes place outside the gates of Harär after sunset. Some of the "H.-men" distribute the flesh by holding it between their teeth. Today the tradition has become a tourist attraction. According to Harari "folk-Islam", the H. are represented by a supernatural patron, the *waraba šayḫ* ('*šayḫ* of the H.', Gibb 1996:62).

Young "hyena man" feeding a hyena at Harär; from Nehberg 2003

Often significance as a prophetic sign is ascribed to the H. or its sounds. Among the Oromo to hear the sound of H. was a bad omen (↗Oracles and divination). Haberland (VSAe II, 405, 504) records the belief among the Arsi that if a H. howls twice, it is a good sign, while a H. howling three times meant mischief. The members of the magically skilled Kallaččum clan of the Yäm were said to turn into H. or dogs and to prophesy the imminent death of people by howling in front of their houses (VSAe III, 306). In Basketo and neighbouring groups, a H. sleeping in the house of a candidate for kingship was seen as a sign that he should be chosen (VSAe I, 202, 204ff.).

Taking into account all said here, the H. symbolizes the danger and power of nature. It stands for death and decay and is an ambivalent and hybrid counterpart of the human order.

Dirk Bustorf

Hylander, Fride

H. (b. 2 February 1898, Raus, Helsingborg, d. 21 December 1988, Sörby Runtuna, Nyköping) belonged to a three-generation family of Ethio–Swedes (↗Sweden, relations with). Parents Nils and Edla Hylander (b. 1861 and 1860) had started an ↗Oromo mission in ↗Harär (↗Swedish Evangelical Mission), from where they were expelled in 1896 in the context of the battle of ↗ᶜAdwa. Out of a dozen of "Ethio-Hylanders", H. was second generation. Most representative of the third is his son Nils-Olof Hylander who was Provincial Medical Officer in Wälläga 1965–71. Even a fourth generation was involved in Ethiopia.

H. got his medical doctor's certificate (med. lic.) in 1926, married Naemi née Helgstrand (b. 1890) and then immediately went to Harär for the Bibeltrogna Vänner ('Friends True to the Bible') mission. Doctors H. and Gunnar Agge together built the mission station and hospital. H. put in his own share of manual labour and even painted the altar picture in the church.

During 1931 H. and Naemi, with their small twins and Nils-Olof being born during the "year in tent", travelled exploring new mission fields, resulting in the decision to settle at Munässa and Kofälä towards Lake ↗Zʷay. H. gathered much information about Oromo culture and beliefs and discussed with Muslims at ↗Šayḫ Ḥusayn (cp. especially Hylander 1934, 25–66, 122–85, 198–207, 233–92). German researchers like Eike ↗Haberland later acknowledged what they had learnt orally from H. by dedicating his book *Galla Süd-Äthiopiens* (= VSAe II) to him.

In late 1935 H. was selected as leader of the Swedish ↗Red Cross Ambulance in late 1935. When the Italians bombed it on 30 December, H.' stomach was wounded. After an operation in Addis Abäba, he worked again in a field hospital on the southern front by April 1936. Their escape to Kenya in July to August was difficult.

As a civilian, after involvement in war ambulance work in Finland until 1940, H. took part in planning the maternity ward in the large new Södersjukhuset in Stockholm. In 1945–46 he served as Ethiopian consul in Stockholm while Swedish experts were recruited. He was then appointed General Inspector and soon Principal Medical Adviser in the Ethiopian Ministry of Public Health in 1947–65. *Aṣe* Ḫaylä Śəllase I reserved for himself to be Head of that Ministry and sometimes communicated directly with H., without any intermediary. H. tried to make health services reach everybody, and opposed the decision that Swedish aid started with a children's hospital in the capital, instead of health stations in the countryside.

Swedish missionaries came to regard H. as the grand old man, although he held no high formal position in the mission. When consulted on religious questions he kept an independent attitude and sought answers directly from the Bible. He was always eager to achieve things, e.g., artistically to the extent of designing a set of Ethiopian postage ↗stamps, which were issued November 1951. As handicraft hobby he liked carpentry, e.g., copying Ethiopian crosses in wood from churches. After his retirement he built a museum hut at his home in Sörby Runtuna, simulating traditional Ethiopian building elements.

H. wrote much and published at least 20 books and booklet-size articles, and was an energetic editor in several contexts. He liked to keep up many relations with friends, often by letter, and in 2005 his extensive personal papers were deposited at the Sörmlands Museum near his home in Runtuna.

Hymns

General introduction

H. are a most important liturgical element in the Ethiopian tradition and are to be found in all liturgical books. Ethiopian H. are numerous and appear with various styles, topics and structures.

Many H. function as interpretative keys to liturgical hours, ↗feasts, or liturgical periods celebrated throughout the year (↗Calendar). Often of great poetic beauty and theological richness, they have primarily a liturgical function and are sung (or recited) mainly during liturgical celebration (↗*Qəddase*), and as such are generally rhyming and rhythmic compositions. H. include also verses written for private devotional purposes.

The origins of the hymnody in ↗Gəʿəz are thought to date back to between the 6th and 9th cent. and are connected by the tradition to St. ↗Yared. According to the traditional scholars, the Aksumite saint composed the H., and different authors, organizing them according to the liturgical calendar, used them in the Liturgy of the Hours (Divine Office; cp. ↗*Säʿatat*). Whilst the oldest Ethiopian H. may indeed be dated to the Aksumite era, the whole hymnody belongs to different periods and different authors.

H. are mainly inspired by the Holy Scriptures (↗Bible). All H. inherited by the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC) were originally composed following the model of the Psalms of David (↗Psalter). Later they were elaborated and lost their simplicity and severity (Grébaut 1909:90ff.). In Ethiopian liturgical usage canticles are extracted from the O.T. and N.T. (cp. ↗*Mäḥalәyä näbiyat*).

Religious controversies also encouraged the composition of H., which were adapted for the liturgical purposes and became part of the liturgy. Their purpose was to strengthen the religious position of one side and to combat the position of the opponent. They are contained in such liturgical books as the (*Mäzgäbä*) ↗*Dəggʷa*, ↗*Məʿəraf*, ↗*Mäwaśəʾt*, ↗*Zəmmare* and others. Non-liturgical H. are mostly found in books of orations or readings.

Typologies

The Ethiopian poetical H. employed in the liturgical service are divided into fixed and improvised H. The fixed collections of H. for the whole liturgical year and used only in the celebration of the Divine Office are found in the books listed above. Others, such as the ↗*mälkəʾ*, *nägś* (↗*Ǝgziʾabəḥer nägśä*), ↗*sälam* etc., and especially those dedicated to the Virgin Mary, are also inserted in the *Mäṣḥafä säʿatat* attributed to Giyorgis "of Gasəčča" (↗Giyorgis of Sägla). The improvized H. find their largest expression in the ↗*qəne* compositions.

a) Fixed hymns

Brief mention will be made here of the H. belonging to prayers celebrated in common, such as the Divine Office, the *Säʿatat*, etc.:

1. The H. found in the *Mäzgäbä dəggʷa* (lit. 'the treasury of the *Dəggʷa*', i.e. *Dəggʷa* and *Ṣomä dəggʷa* together) are arranged according to the liturgical calendar. The *Dəggʷa*, for the most part, was an Ethiopian creation and not a translation or adaptation of material imported from elsewhere (Jeffery 1993:208f.).

The attribution of the nucleus of the composition to Yared is supported by the emphasis of tradition on his authorship which is likely to be based on truth and by the fact that the time was a period of development and flourishing of hymnography in other Eastern Christian churches.

The H. of the *Dəggʷa* may be divided into the *betäññä* and the *betä alba* (from *bet*, pl. *abyat*, lit. 'house', also 'rhyme, verse'), those with and those without rhyme, respectively (s. Godet 1983-84:131ff.). They can also be classified according to the elements used: either with or without biblical quotations (psalms and canticles; HabUff 189–98).

2. The *Ǝgziʾabəḥer nägśä* represents a specific genre in Ethiopian liturgical and hagiographic literature. The aim of the *nägś*-H. is to praise the ↗saints of each day as recognized by the EOTC calendar. The *nägś*-H. are employed during the

Dəggʷa; 15th cent. ms. Vat. Aeth. 28, fol. 9r; courtesy of the Biblioteca Apostolica Vaticana, Rome

celebration of the *Śərᶜatä ↗maḫlet*. There are the *nägś* of Zärᵊa Yaᶜəqob, the *nägś* of Giyorgis and the *Mäzmurä fəśśuḥan*. Each of these follows different composition rules. Generally speaking, the H. of the *Ǝgziᵊabəḥer nägśä* consist of five rhyming and rhythmic metric lines.

3. The *mälkəᵊ* (lit. 'physiognomy, external aspect, effigy') forms a literary genre in itself and is very much developed in Gəᶜəz liturgy. This H. comprises several strophes of five rhythmic verses. Each strophe is addressed to one part of the body. Thus, it is at the same time a descriptive and laudative H. a saint, stressing the saint's holiness, virtues and powers.

The *mälkəᵊ* is also much used for private devotion amongst Ethiopian Christians who recite the *mälkəᵊ* of their favourite saint at least on the feast or on the monthly commemoration day of that particular saint, or even on a daily basis (s. Pedersen in PICES 8, vol. 2).

4. The *↗sälam* is another genre of Ethiopian hymnography. These short rhymed H. of salutation of one strophe with five verses all start with the word *sälam*, and are composed by traditional scholars. The *sälam* incorporated in the *Sənkəssar* can be the main source of information on a saint where no other reading is provided.

5. The *↗ᶜArke* are short H. or *sälam* sung after the daily reading of a saint's life in the *↗Sənkəssar*, named after their composer, ↗ᶜArkä Śəllus.

6. As the title itself shows, the *Sälamä ḫəmamat(ihu)* ('salutation to [his] sufferings') are H. of praise or greeting to Jesus Christ, who bore

the sufferings of the Cross, and to St. ↗Mary, who shared her Son's sufferings. In the H. there are also pieces addressed to the ↗Trinity. These H. are employed during the canonical hours of the Holy Week (Mogäs ᶜƎqʷəbä Giyorgis 1987:218–48; ↗*Gəbrä Ḥəmamat*).

b) Improvized hymns: *qəne*

The basic difference between *qəne* poems and other H. is that these improvized H. are intended to be used once, in a particular church and for a particular occasion. They cannot be used again, even by the same author. Some of them, however, are preserved, learnt by students (future ↗*däbtära*) and transmitted to posterity through the memory of *qəne* teachers (Admasu Ǧämbäre 1970/71).

In Ethiopian hymnody, the ↗*qəne* stands in a privileged position. Even if the first appearance of this poetic form dates from the 15th cent., during the reign of *aṣe* ↗ƎskəndƏr, the *qəne* in its simplest and most naïve form dates from long before. The verse must be rhymed and set for music (in the modes ↗*gəᶜəz* and ↗*ᶜəzəl*). Scholars do not agree on the question whether these verses are rhythmical or numerical. The *bet* is simple and it is enough that the final syllables are identical, ending with the same consonant in the same order. The length of the verses is variable. The structure of the *qəne* is very rigid and fixed, which does not leave much room for the author/poet's creative freedom. Different schools of *qəne* vary in their approach, way of thinking and teaching methods.

While some of *qəne* H. (↗*gubaʾe qana*; ↗*zäʾamlakəya*; ↗*wazema*; ↗*śəllase*; ↗*zäyəʾəze*; ↗*mäwäddəs*; ↗*saḫləkä*) are composed and sung during the celebration of the Divine Office, others (↗*ᶜətanä mogär*; ↗*kəbr yəʾəti*; ↗*asärä nəguś*) are supposed to be improvized and sung in the Eucharistic liturgy. The last three *qəne* must always be about the body and the blood of Christ and their effect on the communicants (s. HabUff 218f.).

Qəne are generally sung along with psalms and canticles. They can also be panegyrics or eulogies of political and religious authorities, take the form of admonitions or castigations or have the character of a prayer. They are addressed to a saint, king, governor, head of a church or some place etc. A poetic element of the EOTC, *qəne* can be used for praising or insulting persons (Alemayyehu Moges 1973:107; Getatchew Haile 1995:53ff.).

Education in hymnody

H. in traditional ↗education were and still are transmitted to new generations orally. Whilst some H. are taught already in ↗*nəbab bet*, the hymnody is only studied in depth in ↗*zema bet* (where *Dəggʷa*, *Məᶜəraf*, *Zəmmare*, *Mäwaśəʾt*, *Qəddase* etc. are taught) and ↗*qəne bet*, when students have left home for major cultural and religious centres (monasteries, churches), the *betä maḫbär* ('communal hall'), where the teacher transmits to them the religious patrimony (Alemayyehu Moges 1973:90f.). Students can attend any school of their choice, and education is free.

Hymns and music

Inseparable from the discussion of H. is the discussion of the origin of EOTC ↗music, ↗dance and musical ↗instruments. Although Yared may well have played an important role, it is not historically accurate to consider him, as Ethiopian traditions do, as the sole origin of all that is related to Ethiopian church music. Only a complex variety of influences can provide the full picture.

Music may be divided into three areas, according to the particular religious ceremony and to the various occurrences in the church calendar, which are related to the liturgical feast and to the liturgical time of the year (Tito Lepisa in PICES 3, vol. 2). Liturgical H. sung during the celebration of the mass or at the time of the communion are found in the *Zəmmare* (HabUff 112ff.). The *Mälkəʾa qʷərban* is another eucharistic H. that is sung just after the distribution of the communion (after the prayer *Ḫaddafe näfs*; s. Dəmeṭros Gäbrä Maryam – Ṭəbäbu Bäyyänä 1966/67:175; for the edition of this text s. DillmChr 131–36, and also MG no. 6; for a study s. Fritsch 2002).

Other compositions and collections of hymns

There exists another category of H. not associated with the psalmody or canticles. Among the most popular and important H. that do not form part of the Divine Office are, e.g., the ↗*Ləssanä säbʾ* (Grébaut 1935), the several compositions entitled ↗*Mäzmurä Krəstos* and combining H. with the Psalter (the best known dates back to the 16th cent.; Getatchew Haile 1995:55f.), the ↗*Ṭäbibä ṭäbiban* (dated by the scholars to the 17th and ascribed by the *liqawənt* to the 15th-cent. *abba* Giyorgis of Sägla; ChRep no. 364; MG no.

6; DillmChr 108–31); the ↗*Wəddase amlak* (a H. arranged according to the days of the week and composed with passages taken from patristic works, characteristic in spirit of the post-↗Jesuit time). A very large group of H. is devoted to St. ↗Mary.

The H. mentioned in this entry do not exhaust completely the richness of the Ethiopian hymnody. The spiritual poetry has been a vividly developing part of the ↗Gəʿəz literature, and still lacks comprehensive studies.

Ibn al-ᶜAssāl ↗Fətḥa nägäśt

Ibn al-Ǧawzī

I.Ǧ. (ابن الجوزى, full name Abū l-Faraǧ ᶜAbdarraḥmān b. ᶜAlī b. Muḥammad b. al-Ǧawzī, b. 1126, d. 1200, Baghdad) was an Arabic author, Ḥanbalī jurist, traditionist, preacher and historian of Baghdad. He was the most eminent Muslim scholar of his time.

Among I.Ǧ.'s numerous works there is *Tanwīr al-ġabaš fī faḍl as-sūdān wal-ḥabaš*, a small treatise written in defence of black Muslims and in reproach of racial prejudice. There, after a discussion about the origins of the "blacks", the author sets forth their good qualities, arguing that "whites" cannot claim superior merits because of their whiteness and that merits are earned by piety. He also dwells on the role of Ethiopians in the beginning of Islam (↗Hiǧra), Ethiopic words in the ↗Qurᵓān and anecdotes illustrating pious deeds by blacks (Lewis 1990:33).

Similar works are *Rafᶜ šaᵓn al-ḥubšān* ('The Raising of the Status of the Ethiopians') by as-↗Suyūṭī (d. 1505) and *aṭ-Ṭirāz al-manqūš fī maḥāsin al-ḥubūš* ('The Coloured Brocade on the Good Qualities of Ethiopians'), written in 1583 by ↗Muḥammad b. ᶜAbdalbāqī al-Buḫārī al-Makkī. Both repeat much of the content of I.Ǧ.'s book (s. Weisweiler 1924; van Donzel in StudAeth 111f.).

Stefan Weninger

Ibn al-Ḥakīm ↗Mənilək I

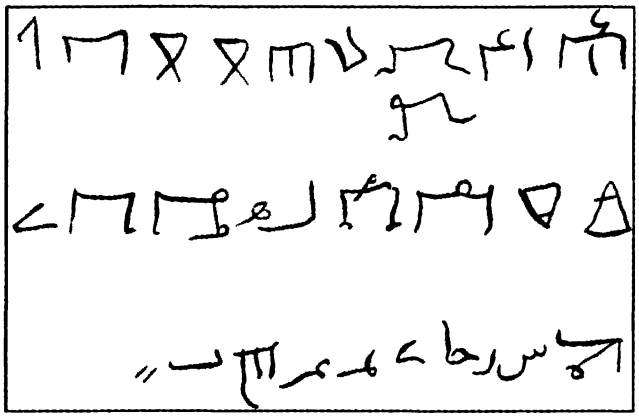
Ibn an-Nadīm

I.N. (ابن النديم, full name Abū l-Faraǧ Muḥammad b. Abī Yaᶜqūb Isḥāq al-Warrāq al-Baġdādī b. an-Nadīm, b. ca. 935, d. between 990 and 998) was an author of the well-known *Kitāb al-Fihrist* ('Book of the Catalogue'), an index of Arabic books completed, according to the author's own statement, in 987 (*Kitāb al-Fihrist* 2.12). Of his life and family little is known, nor is it clear to whom the ancestral byname an-Nadīm ('the drinking companion', i.e. courtier of a high-ranking personage) refers. His father had the byname al-Warrāq, 'bookseller' (*Kitāb al-Fihrist* 303.24), which was obviously the profession of the son, too.

An Imāmī fellow, not popular in orthodox circles, I.N. resided in Dār ar-Rūm, a Christian quarter on the east side of Baghdad. His bookstore was a convenient meeting point for scholars and learned men, where he shared with an extensive circle of acquaintances – among them many Christians – an admiration for philosophy and the sciences (*Kitāb al-Fihrist* 247.4-14).

The *Fihrist* is intended to be an index of all books written in Arabic or translations into Arabic from Greek, Syriac and other languages available in Baghdad at the time.

The first chapter (*maqāla*, 'discourse') deals with the Holy Scriptures of Muslims, Jews and Christians, and in this connection I.N. gives some information on the different alphabets of 14 peoples (Arabs and non-Arabs) and their writing systems (*Kitāb al-Fihrist* 12ff.). The examples of the alphabets given in the *Fihrist* are rather distorted, mostly because of the ignorance



Representation of the Ethiopic script in an early copy of the *Kitāb al-Fihrist* by Ibn an-Nadīm (some of the characters distorted in the copying process); from Ibn an-Nadīm ed. Flügel 1871-72, vol. 1, 19

of later copyists. I.N. had a seemingly clear idea of the mentioned alphabets, especially of the South Arabian and the Ethiopic script, as his remarks show: "Some travelers told me that the Bijah [↗Beğa] have a script and form of writing, but it has not reached us. Those who go about mention that for religious purposes the Nubians write in Syriac, Greek, and Coptic. The Abyssinians have a script like the Ḥimyarite letters, going from left to right. They separate each of the words by means of three dots, dotted like a triangle between the letters of the two words" (*Kitāb al-Fihrist* 19.12ff.; tr. Dodge 1970:36). A remark at the end of this chapter attests that the pronunciation of some consonants (*h*/*ḥ*/*ḫ*; *ś*/*ṣ*) merged quite early in Gəᶜəz. I.N. obviously used Ethiopic mss. from the famous library of the caliph al-Maᵓmūn for copying some examples of the Ethiopic script (*Kitāb al-Fihrist* 19.15).

Ibn ar-Rāhib ↗ Abušakər

Ibn Baṭṭūṭa

I.B. (ابن بطوطة, full name Šamsaddīn Abū ᶜAbdallāh Muḥammad Ibn Baṭṭūṭa; b. 25 February 1304, Tangier, d. 1368/69 or 1377, Morocco) was the most famous Muslim traveller of the Middle Ages. There exists only a short biography of I.B. in Ibn Ḥağar al-ᶜAsqalānī's work on the important persons of the 8th cent. H. (Ibn Ḥağar 1966/67, vol. 4, 100). All further information must be taken from his travelogue (*riḥla*) which was written down not by I.B. himself, but, on the order of the Marīnid ruler Abū ᶜInān, by the scholar Ibn Ǧuzayy in 1357 from I.B.'s dictation. So, the reliability of the account is not only affected by I.B.'s inventiveness and lack of memory (I.B. admits that he lost part of his notes through shipwreck and other accidents), but also by the embellishments of Ibn Ǧuzayy. This, however, does not concern the factual information I.B. gives about his travels to East Africa, though the dates 1330–31 may be placed two years earlier according to a chronology proposed by Gibb (1958-59, vol. 2, X) as an alternative, while Hrbek (1962:441f.) confirms I.B.'s dates.

I.B.'s family was of Berber origin and belonged to the scholarly elite of his hometown. He himself received the education of a legal scholar (*faqīh*). In 1325 he started his *ḥağğ* to ↗Mecca choosing the land route via North Africa. Like other pilgrims he extended his travels to complete his education (*talab al-ᶜilm*) in the centres of Islamic learning. Later, he himself became a well known scholar so that he acquired official posts such as those in Delhi and on the Maldive Islands.

His travels led him to Syria, Iraq, the Arabian Peninsula, East Africa, Asia Minor, Constantinople, the territory of the Golden Horde, Persia, Transoxania, India, the Maldives, Ceylon, Sumatra and China. In 1349 he returned to Fez, using a Catalan ship between Tunis and Sardinia. Later, he visited the kingdom of Granada and, in 1352/53, the Niger region.

I.B. had his first contact with the Orbis Aethiopicus in 1326 when he tried to reach Mecca via the Sudan and the Red Sea. On arriving at ᶜAyḏāb he realized that al-Ḥadrabī (↗Ḥədarəb), the *sulṭān* of the ↗Beğa, had driven out the ↗Mamluk garrison and sunk the ships in the harbour. I.B. had to return to Cairo and then to take the route via Syria (Defrémery – Sanguinetti 1853–58, vol. 1, 109ff.; Gibb 1958–59, vol. 1, 68f.; Dunn 1986:53f.). From Damascus he reports that there was a special section in the famous Umayyad Mosque for the students from ↗Zaylaᶜ (the Zayāliᶜa; Defrémery – Sanguinetti 1853–58, vol. 1, 204; Gibb 1958–59, vol. 1, 128).

In 1330 I.B., coming from Mecca, took a ship at Ǧidda to get to ᶜAyḏāb. The vessel (*ǧalba*) which belonged to a Yemeni captain of Ethiopian origin, however, became stranded at Raʾs Dawāʾir between ᶜAyḏāb and ↗Sawākin. The passengers had to hire camels from the Beǧa and after a ride of two days, reached Sawākin. At that time the *sulṭān* of the town was a son of the *šarīf* of Mecca whose maternal relatives were Beǧa. The Beǧa also formed part of his armed forces. From Sawākin, I.B. was obliged to return to ↗Yemen (Defrémery – Sanguinetti 1853–58, vol. 2, 160ff.; Gibb 1958-59, vol. 2, 362ff.; Dunn 1986:110ff.).

After a stay in Aden, I.B. decided to visit East Africa. Embarking early in 1331 from Aden the ship anchored for one night before Zaylaᶜ. I.B. paid a short visit to the market of the town of which he gives an unfavourable description: "It is a large city with a great bazaar, but it is the dirtiest, most disagreeable, and most stinking town in the world. The reason for its stench is the quantity of its fish and the blood of the camels that they slaughter in the streets" (Defrémery – Sanguinetti 1853-58, vol. 2, 179f.; Gibb 1958-59, vol. 2, 373; Freeman-Grenville 1962:27; Dunn 1986:122). I.B.'s mentioning of ↗camels played some role in the controversy about their introduction in Ethiopia (Esser – Esser 1982). I.B. further says that Zaylaᶜ is the city of the Barbara (here, probably for Somali; ↗Berbera) who are a people of Negroes and who follow the Šāfiᶜite rite. Somewhat in contradiction to this statement is what he says some lines later: "The inhabitants of Zaylaᶜ are black in colour, and the majority of them are Rāfiḍīs". The term Rāfiḍī normally refers to Imāmī- or Twelver Šīᶜites. Thus, Hamdun – King (1998:76; cf. also King 1979:26) connect the information with Said Akhtar Rizvi's theory about a strong Šīᶜite influence on early East African Islam (cf. Rizvi's Appendix in Hamdun – King 1998:101–06). Perhaps, I.B. uses the word here only in a non-terminological sense for people who "reject" some of the Sunnī rites.

From Zaylaᶜ I.B. sailed for 15 days and reached ↗Mogadishu (s. EAE vol. 5). He describes (Defrémery – Sanguinetti 1853–58, vol. 2, 180–91; Gibb 1958–59, vol. 2, 373–78; Freeman-Grenville 1962:27–31; Dunn 1986:123–26) Mogadishu as a large town inhabited by rich merchants who also act as brokers (*dallāl*) for the foreign merchants coming by ship. They own big herds of camels and sheep. They export the textiles manufactured in the town to Egypt and elsewhere. I.B. was invited to the court of the *šayḫ* (the title of the *sulṭān*) Abū Bakr b. ᶜUmar, who was of Barbara (Somali) origin and whose language was *maqdišī* (Somali), but who spoke Arabic as well. I.B. gives a detailed description of the court ceremonies and the robes of honour (*ḫilᶜa*) he received from the monarch. I.B. mentions the *qāḍī* of the town, Ibn Burhānaddīn, who according to his *nisba* al-Miṣrī was of Egyptian origin, if Hrbek (1962:441) is not right in changing al-Miṣrī into al-Muqrī, which means a member of a tribe that held important religious offices in the town at that time. I.B. also describes the legal procedures in Mogadishu.

After one or two weeks I.B. left Mogadishu and sailed via Mombasa to Kilwa.

Ibn Ḫaldūn

I.Ḫ. (ابن خلدون, full name Abū Zayd ᶜAbdarraḥmān b. Muḥammad b. Ḫaldun al-Ḥaḍramī; b. 27 May 1332, Tunis, d. 16 March 1406, Cairo) was born of an Arab family emigrated from Muslim Spain (Banū Ḫaldun). He received a thorough Muslim education that enabled him, during his adventurous life, to occupy several posts as a politician and a scholar. The ups and downs of his career took him to most of North Africa, to Muslim Spain and, at the end of his life, to Egypt, where

he was appointed and dismissed several times as *qāḍī* and *madrasa* teacher. In 1400 he had to accompany the Mamluk *sulṭān* an-Nāṣir in his Syrian expedition against Tīmūr. At the end of the campaign he played an important role in the negotiations with the Mongol leader concerning the surrender of Damascus. He died shortly after his sixth appointment as *qāḍī* of Cairo.

I.Ḫ. became famous – first in Europe and later in the Muslim world – for his *Muqaddima*, an introduction to his history, the *Kitāb al-ʿIbar*. In the *Muqaddima* I.Ḫ. developed a philosophy of history that anticipated many ideas of modern sociology and economics. The original theories of I.Ḫ. did not, however, produce any influence on his contemporaries. Even his *Kitāb al-ʿIbar* is a world history of the old style.

In this last book I.Ḫ. devotes a chapter to the description of Africa, which includes a short passage on Muslim Ethiopia. To the west of the Christian Kingdom he mentions the important state of ↗Damot. North of Damot there was the state of ↗Ifat, that converted to Islam at an unknown time. The ancestor of the ruling dynasty of Ifat, ↗Walašmaʿ, was once a vassal of Damot. The Ethiopian king, however, became envious because of the strength of Damot and occupied Ifat. From then on there were continuous conflicts with varying outcome between the Walašmaʿ rulers and the Ethiopian kings over the independence of Ifat. The last information, given by I.Ḫ. is that Ḥaqqaddīn Muḥammad b. ʿAlī b. Walasmaʿ (↗Ḥaqqaddīn II b. Aḥmad Ḥarb Arʿad b. ʿAlī b. Ṣabraddīn) died and was succeeded as ruler of Ifat by his brother ↗Saʿdaddīn.

Ibn Ḥawqal

I.Ḥ. (ابن حوقل, full name Abū l-Qāsim b. ʿAlī b. Ḥawqal an-Naṣībī), a 10-cent. Arab geographer, was born in Naṣībīn (Nisibis, modern Turkish Nusaybin) in Upper Mesopotamia, where he probably spent his early years. In 943 he started – as a merchant and missionary – a series of journeys which led him to North Africa, Spain, Egypt, Armenia, Azerbaijan, Iraq, Persia, and finally (973) to Sicily. It seems that he did not touch the Western coast of the Red Sea.

His main work, the *Kitāb al-masālik wa-l-mamālik* ('Book of Routes and Countries'), or *Kitāb ṣūrat al-arḍ* ('Book of the Picture of the Earth'), the last redaction of which appeared about 988, stands in the tradition of the Balḫī school of Arab geography. This school considers ↗Mecca the centre of the world – contrary to the ʿIrāqi school where Iraq is the world's centre – and confines itself to the description of Islamic and adjacent countries. Abū Zayd Aḥmad b. Sahl al-Balḫī's work *Ṣuwar al-aqālīm* ('Pictures of the Climates') which is no longer extant, consisted mostly of maps with commentaries. The maps were improved and the commentaries extended by Ibrāhīm b. Muḥammad al-Iṣṭaḫrī in his *Kitāb al-masālik wa-l-mamālik*, which in turn was the basis of I.Ḥ.'s work. Though I.Ḥ. included in his work new information from oral and written sources and from personal observation (*ʿiyān*), he is largely dependent on al-Iṣṭaḫrī (cf. the comparison of the texts in Miquel 1973–75, vol. 1, 367–90). This is especially true of the short geographic description of Ethiopia (*al-Ḥabaša*), which differs from its source only stylistically.

In this account it is said that the inhabitants of Ethiopia are Christians, even then they are at peace with the Muslims and their land cannot be considered *dār al-ḥarb* ('territory of war', against which the ↗*ǧihād* is a duty for the Muslims). Their complexion is like that of the Arabs, between black and white. They live from the area of the Beǧa (for I.Ḥ.'s account of them s. ↗Beǧa), as far as the coast opposite Aden. Ethiopia exports skins of panthers and of dappled cattle to ↗Yemen where they are tanned for making shoes. ↗Zaylaʿ is Ethiopia's port of embarkation for ↗Ḥiǧāz and Yemen (Iṣṭaḫrī 1961:32; I.Ḥ. 1938:56 [text] = 1964:54 [tr.]).

Describing the coasts of the Red Sea, I.Ḥ. also mentions the islands of ↗Dahlak, Bāḍiʿ (↗Massawa), Zaylaʿ, Naǧa (unidentified) and the town of ↗Berbera (I.Ḥ. 1938:43). The lord of the Dahlak Islands sends gifts such as slaves, amber and skins to the ruler of Yemen (I.Ḥ. 1938:24 [text] = 1964:22 [tr.]).

The most important information that I.Ḥ. added to that given by al-Iṣṭaḫrī is of a historical nature. He tells us (1938:16, 59 [text] = 1964:16,

56 [tr.]) that the southern part of Ethiopia is governed by a queen. After having killed the *ḥaḍānī* (↗*Aṣe*), she has been ruling for 30 years over a large territory in total independence, a thing somewhat contrary to what he says elsewhere (1938:24 [text] = 1964:23 [tr.]): she regularly has to send gifts to the ruler of Yemen. This fact is also confirmed by other sources (el-Chennafi 1976:119ff.).

Andersen (2000) links this information with other traditions about queens in Ethiopia (cf. ↗Badīt bint Māyā, ↗Ǝsato) and gives reasons that she was a legitimate member of the ↗Zagʷe dynasty ruling from ca. 937/38 to 977/78.

Ibn Hišām

I.H. (ابن هشام, full name Abū Muḥammad ʿAbdalmalik b. Hišām; d. 833 or 828, Egypt) was an Arabic scholar famous for his knowledge of genealogy and grammar, best known for his work on the biography of the Prophet ↗Muḥammad. His principal work is the edition of *as-Sīra an-nabawīya* ('The Life of the Prophet') by Muḥammad b. Isḥāq (d. 767 or 761). I.H. omitted some parts of Ibn Isḥāq's text and added his own material. I.H.'s edition of the *Sīra* became the basic work of the genre (Sezgin 1967:297ff.; Schoeler 1996:49ff.). On various occasions I.H. gives information relevant for Ethiopian history. Most noteworthy is the account of the Ḥimyarite king Ḏū Nuwās (↗Yūsuf Asʾar Yaṯʾar) and the martyrdom of the Christians at ↗Nağrān, the subsequent Aksumite invasion in Yemen, the Ethiopian viceroyalty in Yemen and King ↗Abraha's abortive attack on ↗Mecca (ed. Wüstenfeld 1859–60:20–41; as-Saqqāʾ et al. 1955, vol. 1, 31–62; Guillaume 1955:14–30; cf. SerHist 128ff.; Conrad 1987), and also the account of the so-called "first ↗*hiğra*", the flight of a group of Muḥammad's early followers to the court of the Aksumite *nəguś*, to escape oppression in Mecca (ed. Wüstenfeld 1859–60:208–24; Saqqāʾ et al. 1955, vol. 1, 321–41; Guillaume 1955:146–55; cf. SerHist 180ff.; Raven 1988). The *Sīra* is also a major source for the history of Ethiopians in Arabia during the early years of Islam, e.g., ↗Bilāl b. Rabāḥ, Muḥammad's *muʾaḏḏin*.

Stefan Weninger

Ibn Iyās

I.I. (ابن اياس, full name Abū l-Barakāt Muḥammad b. Aḥmad b. Iyās; b. 9 June 1448, d. 1524) was an Egyptian historian. His main work, the *Badāʾiʿ az-zuhūr fī waqāʾiʿ ad-duhūr* ('The Wonderful Flowers on the Events of the Times'), is a survey of Egyptian history and includes information about Ethiopia (scattered throughout the work and accessible through indices by Wiet 1955–60 and Schimmel n.d.).

I.I. relates that the story of the Ethiopians blocking off the ↗Nile dates from the time of the Fāṭimid caliph al-Ḥākim bi-Amr Allāh (996–1021) – the same issue is dealt with another work by I.I., the *Našq al-azhār fī-ʿağāʾib al-aqṭār* ('The Smelling of Flowers on the Miracles of the Countries'). The caliph sent the Patriarch to the Emperor of Ethiopia, who ordered the dam to be opened. This fact was noted down in the history of ↗Egypt. I.I. also repeats the story found in Muslim tradition according to which

the Ethiopians will destroy ↗Mecca, but will be eliminated by an earthquake (cp. Qurʾān VII/91, 155; cp. ↗Abraha).

I.I. mentions six of the eleven embassies reported by Arabic sources to have been exchanged between Egypt and Ethiopia in ↗Mamlūk times.

1. In 1381 *aṣe* ↗Dawit II invaded Egypt at Aswan. Patriarch Matthew I (1378–1409) was ordered to write a letter of protest to the Ethiopian Emperor. Another letter was entrusted to al-Burhān Ibrāhīm of Damietta, the chief Mālikī *qāḍī*, who returned to Cairo in 1384.
2. In 1386, other envoys arrived in Cairo with a letter and costly presents, among which were female slaves and eunuchs.
3. In 1443 a letter of *aṣe* ↗Zärʾa Yaᶜəqob repeated the threat of blocking off the Nile. The reason was that the Patriarch and the Christians were maltreated in Egypt. The *sulṭān* sent Yaḥyā b. Sad Bak (Beg), a black military leader with a good command of Ethiopic. Zärʾa Yaᶜəqob's answer refers to earlier friendly relations, but also repeats the threat regarding the Nile. He also requests that the Ethiopian monuments in ↗Jerusalem be restored.
4. In 1477 an Ethiopian envoy arrived to request a new ↗*abun*.
5. In 1481 an Ethiopian embassy, on its way to Jerusalem for Easter, obtained concessions for the Ethiopian community in the Holy City.
6. The reception of the Ethiopian envoy and his suite in Cairo in 1516, probably witnessed by I.I. himself, is described in detail. The presents, estimated at 5,000 dinars or less, were deemed insignificant; the *sulṭān* had the registers brought so that the value could be compared with that of earlier presents. One could see, I.I. remarks, the decline of the Ethiopian empire. Some say that the Ethiopian rulers possess six principalities on the Nile, all in peace with one another. At present, however, their situation is weak in comparison with the past. In 1312 King ↗Wədəm Räʾad (s. BassÉt n. 63, 68) had sent presents estimated at 100,000 dinars at least. After three days the envoy and his suite travelled on to Jerusalem, having caused scandal by wearing the cross in public.

I.I. relates also other stories: one about ships that, at the end of times, will bring Ethiopians to Fusṭāṭ and Memphis, from where they will take away as much of the Pharaohs' treasures as they can carry; another about an Ethiopian eunuch Sunbul, commander of the Mamlūks, who was put to death by his own troops in 1515. A noteworthy element in his work is that he uses the titles *ṣāḥib* ('ruler') and *malik* ('king') of al-Ḥabaša not only for the Ethiopian emperor but also for the *sulṭān* of ↗Ifat.

Emeri van Donzel

Ibn Saᶜīd al-Maġribī

I.S. (ابن سعيد المغربي, full name Abū l-Ḥasan ᶜAlī b. Mūsā b. Muḥammad b. ᶜAbdalmalik b. Saᶜīd; b. 1213, Granada, d. 1286, Tunis) was an Andalusian poet, anthologist, historian and geographer, whose geographical works contain information on 13th-cent. Ethiopia (cp. Brockelmann 1937–42, vol. 1, suppl. 1, 410f.). The well-known Ayyūbid prince Abū l-Fidā (d. 1331), although of the opinion that I.S.'s work was full of errors (cp. Pellat, in EI²), preserved important sections of it in his *Taqwīm al-Buldān* ('Geography of the Countries', Abū l-Fidā 1883:229; cp. al-Qalqašandī 1933, vol. 5, 325; Gibb in *EI²*). Most of the material on Ethiopia found in ↗Ibn Ḫaldūn's *Kitāb al-ᶜibar* (1284 H., vol. 2, 107f.) is derived from I.S.

Of particular importance is the information I.S. provides on ↗Walašmaᶜ, and on the state called ↗Ifat in Ethiopian sources (PerrZarY 112) and Wafāt or Awfāt by Arab writers. According to I.S., Ifat, also called Ǧabartī, is the capital of an autonomous king, whose royal palace and citadel are situated upon an elevated place. Its population is Muslim and said to be very mixed. Below is a valley through which flows a little stream. The country is very fertile since it rains almost every night and the inhabitants cultivate the banana and sugar cane. I.S. calculates that the astronomical position of Ifat is 8° N 57° E, according to Arab computation, i.e. on the eastern edge of Šäwa (TrIslam 58). He relates that the ↗Beğa were partly Christian, partly Muslim (Ibn Ḫaldūn 1867, vol. 2, 109; vol. 6, 199) and that

there were "Abyssinian" Muslims living on the Red Sea coast (Abū l-Fidā 1883:225).

As does the Arab geographer ↗Ibn Ḥawqal, I.S. (Ibn Ḫaldūn 1867, vol. 4, 213) relates that the ↗Dahlak Islands and the towns of the coastal plain were Muslim places tributary to the Ethiopians. ↗Merka, capital of the ↗Hawiye Somali, is a Muslim town (Abū l-Fidā 1883:232). I.S. also describes the al-Ḫasa tribe of the Beğa, who lived north of Sahart (↗Säharti), between the Nile and the Sämhar (ibid. 210, 227).

I.S. speaks of the "Barābra tribes" (Abū l-Fidā 1883:232; cp. Ibn Ḫaldūn 1867, vol. 2, 106f.), Nubian-speaking Muslims who lived along the banks of the Nile between the first and third cataracts (cp. Holt in EI²). He is the first to mention the ↗ᶜAfar under the form Dankal, "a type of blacks" (Abū l-Fidā 1883:128 ↗Dankali), who possessed ↗Mogadishu, a town on the Indian Ocean inhabited by Muslim merchants. I.S. is also the first to mention Hadīya (↗Hadiyya), an important centre of trade in southern Ethiopia, in particular of slaves, who were collected in the surrounding region and were prepared there for exportation, many of them being rendered eunuchs in a nearby village (ibid. 229), called Waṣilu by the Mamlūk official and Ibn Faḍlallāh al-↗ᶜUmarī (UmMasGaud vol. 1, 16; cp. TadTChurch 86, n. 6).

Emeri van Donzel

Ibn Sulaym al-Aswānī

I.S. (ابن سليم الاسوانى, full name ᶜAbdallāh b. Aḥmad b. Sulaym [or Salīm] al-Aswānī [or al-Uswānī]; fl. 10th cent.) was a medieval Arabic traveller and author.

After having conquered ↗Egypt in 969, the ↗Fāṭimids wanted to renew the treaty (*baqṭ*) the Muslims had concluded with the Christian kingdom of ↗Nubia shortly after the Muslim conquest of Egypt in 632. On payment of a tribute, Nubia was granted semi-independence. For this reason, the Fāṭimid general and administrator Ğawhar as-Siqillī sent I.S. on a special mission to Nubia, probably in 975. I.S. had to persuade the Nubian king George II to renew the *baqṭ* and to become a Muslim. He was successful in the first, but frustrated in the latter.

After that, I.S. toured the southern kingdom of ᶜAlwa, but it is not sure whether he also reached the lands of the ↗Beğa. At any rate, he included this region in the book he wrote about his mission, entitled *Kitāb Aḫbār an-Nūba wal-Muqurra wa-ᶜAlwa wal-Buğa wan-Nīl* ('Book on the News about Nubia, Maqurra, ᶜAlwa, the Beğa and the Nile').

The book is no longer extant, but al-↗Maqrīzī quotes two long excerpts from I.S.'s *Aḫbār* in his work commonly known as *Ḫiṭaṭ*. Chapters 31, on the Nile and ᶜAlwa, and 32, on the Beğa, are almost entirely taken from the *Aḫbār*. The first one provides a good description of the fluvial system of the Nile and its tributaries and the second one is our main source of information on the Beğa tribes in the 10th cent. I.S. writes about the geography and the history of the Beğa lands and gives many ethnological details like nomadic life, weapons, food, circumcision of women and removing the right breast of men.

I.S. is also quoted in ↗Ibn Iyās's *Našq al-azhār fī ᶜağāʾib al-aqṭār* ('The Smelling of Flowers on the Wonders of the Countries'), but that is only via al-Maqrīzī.

Ibrāhīm

I. *bāšā* (ابراهيم, *wālī*, [Turkish, *vālī*] 'viceroy', b. 1789, Nusretli, Drama [Macedonia/Greece], d. 10 November 1848, Cairo), an Egyptian general and viceroy, was the eldest son of Meḥmed Ali (also known as ↗Muḥammad ᶜAlī *bāšā*), the viceroy of Egypt (r. 1805–49). At the age of 16, I. joined his father in Egypt and was appointed by him as governor of the citadel of Cairo.

From 1807–13 I. served as Egypt's *defterdar* (director of financial administration). He succeeded his brother, Ṭūṣūn, who commanded the Egyptian forces in Arabia, and led a successful campaign quashing the Wahhābī rebellion in ↗Ḥiğaz between 1816–19. Part of his government was the Ottoman ↗*Habeş eyaleti*, the African coastal subgovernorate with ↗Massawa and ↗Sawakin as the main ports. He received the taxes from there and nominated governors, but did not interfere in the local structures of indirect government.

Subsequently, his father sent him to assist I.'s younger brother, ↗Ismāᶜīl, who had occupied Sinnār at the borders of Ethiopia early in 1821. I. organized the expedition led by Muḥammad Bey Ḫusraw that had conquered northern and central Kordofan and later joined Ismāᶜīl's expeditions in search of slaves and gold in the region west of the Blue Nile. Due to illness he returned to Cairo in February 1822.

From then on I. served as an energetic military commander of the first rank in Muḥammad Alī's expansionist campaigns, first against the Greeks in Morea and Crete (1825–28), and later in Syria. Ordered by his father, I. invaded Syria in November 1831. He took Acre, Damascus, and subsequently led his forces into Anatolia across the Taurus Mountains and halted at Konya on 21 December 1832. I. remained in Syria until 1840. He was victorious in the last battle fought against the Ottomans in Nazib on 24 June 1839, but European powers intervened to preserve the integrity of the Ottoman Empire and granted Meḥmed Ali the hereditary rule of Egypt in return for the withdrawal of his troops from Syria and other occupied lands (Treaty of London, July 1840). Due to Muḥammad ᶜAlī's sickness, I. succeeded his father as *wālī* of Egypt, but remained in that position for only a short period because he died of tuberculosis in the winter of 1848. Less interested than his father in the expansion along the African Red Sea coast, Massawa, only recently acquired again, was returned to the Sublime Porte during his short reign.

Ibrāhīm

I. *bāšā* (ابراهيم, d. 1861) was the Ottoman governor of ↗Massawa between ca. 1854–61. He was involved in the power struggles within the ↗Nāᵓib family, between the Bayt (Bet) Ḥasan and Bayt ᶜUṯmān (Osman) lineages, and appointed Idrīs Ḥasan as the 15th *nāᵓib* of ↗Ḥərgigo (Bet Osman). However, like his cousin, the 14th *nāᵓib*, Idrīs Ḥasan also rebelled against the Ottoman authorities, abandoned his post, and took refuge among the ↗Mänsaᶜ. Subsequently, I. appointed Muḥammad ᶜAbdarraḥīm from the rival Bet Ḥasan as the 16th *nāᵓib*. I. is believed to have committed suicide by hanging himself in 1861.

Ibrāhīm Abū Zaḥarbūy

Šayḫ I. (ابراهيم ابو زحربوى, also called Zerbay, Zerbayn, Zarbīn, Zarbīt) was one of the most important saints who spread ↗Islam among the ↗Somali in the first half of the 15th cent.

It is said that I. was one of the 44 saints from ↗Ḥaḍramawt who, after a solemn meeting at Awliyāᵓ Kumbo, so called in commemoration of the gathering, went out to preach Islam. I. started his mission in ↗Berbera and continued in ↗Zaylaᶜ.

I. performed several miracles, among them, reportedly, his transportation by air to Mount Ḥākim south of ↗Harär. In ca. 1430 he stayed in Harär and converted many people. Later, he apparently returned to Zaylaᶜ where he died and was buried. His tomb, near Ašurbara Gate, is highly venerated, also by the ↗ᶜAfar. Burton

(1894, vol. 1, 54) visited it and found an inscription from 1741/42 on the doorway of its dome; however, it was no longer visible at the time of Paulitschke (1888:65).

I. is said to have introduced ↗*čat*, which he probably became acquainted with in Harär, to Yemen.

According to Paulitschke, the village Šayḫ Zerbay, the first settlement of the Nole (↗Qottu) on the way from ↗Ǧildessa to Harär, is named after I. Robecchi Bricchetti (1896:99), on the other hand, reports that *šayḫ* Zerbay was a brother of I. and at the same time a son of *āw* ↗Ḥākim b. Ibrāhīm b. Aḥmad, the eponym of the abovementioned mountain. Since there is some evidence that *āw* Ḥākim flourished in the 13th cent., the identification meets chronological difficulties. Thus, the eponym of the village Šayḫ Zerbay may not be I. or his brother, but the saint *āw* Zarbīn (Zarbīt) mentioned in the ↗*Fatḥ madīnat Harar* as a companion of ↗Abādir ᶜUmar ar-Riḍā. On the other hand, it is entirely possible that the *Fatḥ* transferred I. (or his brother) from the 15th to the 13th cent. to make him a companion of the national saint of Harär, Abādir, as it did in other cases.

The ᶜAfar venerate a saint *šayḫ* Maḥámmad Darbên in whose honour a *mablúd* (↗*Mawlid*) was composed (Morin 1997:122ff.). Whether this *šayḫ* is identical with I. or his brother or *āw* Zarbīn, remains unclear. A legend, reported by Albospeyre (1959:153), says that Maḥámmad Darbên threw a spear from Zaylaᶜ to ↗Tagūra; at the place where the spear landed, a mosque was built. Morin (MorDicAfar 196) considers this a symbol for the union between the two towns.

Ibrāhīm al-Muḫtār Aḥmad ᶜUmar

Šayḫ I. (ابراهيم المختار احمد عمر; b. 1327 H. [1909 A.D.], Anqatū, Mount Kindid, Akkälä Guzay, d. 10 *Rabīᶜ aṯ-ṯānī* 1389 H. [25 June 1969 A.D.], Asmära) was first Italian-appointed Grand

Ibrāhīm al-Muḫtār Aḥmad ᶜUmar; photo courtesy of the family

Mufti of ↗Eritrea, Muslim leader, erudite *fiqh* scholar, and prolific writer. I. belonged to the Faqīh Ḥarak clan of the Sāho-speaking ↗Mīnifire group. *Šayḫ* I. travelled to the Sudan in 1925, studying in Omdurman and arrived to Cairo in 1926. He studied in several al-Azhar secondary institutes (1926-31) before enrolling at al-Azhar University. After following a comprehensive course in religious studies and specializing in *ḥanafī* jurisprudence, he graduated in 1937.

I. returned to Eritrea in 1940 and the same year was appointed by the Italian authorities President of the High Šarīᶜa court at Asmära, *qāḍī l-quḍāt* and *muftī lid-diyār al-iritrīya*. Under the politically liberal British administration (1941-52), *šayḫ* I. established, developed and reformed Islamic institutions, particularly in the fields of law and education. He centralized the Islamic legal system and regularized court procedures, *qāḍī* training and record keeping. He was instrumental in the foundation of new Arabic and Islamic schools in Asmära, Massawa, Mändäfära, Kärän, Aqordät and Ǝmbärämi. Through his published and unpublished writings, *šayḫ* I. promoted Islamic education, the use of Arabic language, and expressed firm independentist positions. Under Ethiopian rule, he struggled with courage against anti-Muslim discrimination and government interference with religious matters such as the appointment of *qāḍīs* and attempts to change Arabic/Islamic school curricula. *Šayḫ* I. resisted Ethiopian oppression by protesting vehemently against the government's abuse of power but maintained a wise and delicate balance between outright defiance and his role as Muslim leader within the public sphere in the framework of Ethiopian rule.

After his death, the office of *muftī* was not filled until after liberation, in August 1992.

Šayḫ I. has left a rich unpublished corpus of texts mostly on religious matters but also ca. 20 invaluable manuscripts on various historical, linguistic, biographical and cultural aspects of Eritrea and its Muslim communities and institutions. His memory is revered by Eritreans to this day.

Jonathan Miran

Ibrāhīm b. Aḥmad ↗Hasan b. Aḥmad

Ibrāhīm b. Muḥammad

I. (ابراهيم بن محمد, commonly known as Ibrāhīm b. Ziyād; d. 289 H. [902 A.D.]) was the second *amīr* of banū Ziyād in early Islamic Yemen. He inherited power directly from his father, the founder of the Ziyādid dynasty, Abū ᶜAbdallāh Muḥammad b. ᶜAbdallāh b. Ziyād al-Umawī in 245 H. [859/60 A.D.] and ruled for more than 40 years until his death in 289 H. [902 A.D.]; other dates, namely 280 H. [893/94 A.D.] in the biographical dictionary of Abū [Bā] Maḫrama (866–944 H. [1461–1537 A.D.]) or 290 H. [903 A.D.] mentioned by Yaḥyā b. al-Ḥusayn (1035-1100 H. [1625–89 A.D.]), seem unreliable, for they disagree with the majority of sources and occur only in the late mediaeval historiography of Yemen. In spite of the Ziyādids' *nisba* al-Umawī, their origin from the Umayyad caliph Yazīd I or even from Ziyād b. Abīhī, who was officially recognized by Muᶜāwiya I as his own brother, is dubious.

Information about the reign of I. is very scarce, even in the Yemenite historical tradition. Like all the members of this dynasty, he formally recognized the supremacy of the ᶜAbbāsid caliphs bearing the title of their governor (*ᶜāmil*), but in fact was completely independent from Baghdad. His permanent place of residence was Zabīd, the capital of the Ziyādid state that had been founded by his father in *Šaᶜbān* 204 H. [January/February 820 A.D.] in the centre of Tihāma, the coastal plain of the Red Sea, which soon became one of the richest and most beautiful cities of Yemen. It is difficult to ascertain what territories I. succeeded in holding under his effective control. An apologetic tradition, which ascribes to him as well as to his father dominion over the entire Yemen and even Ḥiǧāz, "from Ḥadramawt to Mecca", is hardly credible. In all probability, the real power of both rulers was limited to Tihāma and some areas adjoining it.

The unique evidence of the commercial contacts between the Ziyādids and Ethiopia is attested in the famous encyclopaedic work *Murūǧ aḏ-ḏahab wa-maᶜādin al-ǧawhar* of al-Masᶜūdī (d. 345 H. [956 A.D.]), according to which, the ships of I. "were regularly going to the littoral of the Abyssinians (*sāḥil al-Ḥabaša*) and with traders travelling with goods aboard". The author explained that these traders took advantage of the shortest maritime route from Yemen to Ethiopia as well as of an armistice (*muhādana*) concluded between I. and the Abyssinians.

His somewhat enigmatic epithet "Lord of *Peganum harmala* [Esphand, Syrian rue]" (*ṣāḥib al-ḥarmalā*, not *al-ḥarmalī*, as it is commonly transliterated) cited first by al-Masᶜūdī, as well as his *nisba* al-Ḥarmalī, obviously derived from it, are probably connected with a kind of monopoly for the export of this medicinal plant to the central provinces of the caliphate at that time. However, the second word in this expression could be interpreted in a different way, i. e. as a name of the favourite concubine of I., for the greatest scholar of mediaeval Yemen and a contemporary of al-Masᶜūdī, al-Ḥasan al-Hamdānī (d. after 334 H. [945 A.D.]), mentions Ḥarmala in his list of female personal names derived from names of plants.

I. left the throne for his son Ziyād b. Ibrāhīm whose reign was not long. Then another son of I., Abū l-Ǧayš Isḥāq, came to power for about 80 years.

Serguei Frantsouzoff

Ibrāhīm Sulṭān ᶜAlī

I. (ابراهيم سلطان علي, b. 1909, Kärän [?], d. 2 September 1987, Cairo) can be regarded as one of the most important pioneers of modern Eritrean nationalism and of modern social awareness among the Muslims of the ex-Italian colony.

A ↗Təgre speaker of ↗Beni ᶜAmər background, I. was educated in Islamic and Italian schools in the town of ↗Kärän. He mastered both Italian and Arabic and was employed first as a conductor for the Eritrean railroad, and later as an interpreter in the Muslim Native Affairs section of the Italian administration (↗Africa Orientale Italiana). In May 1941, after the British expelled the fascist occupiers, I., together with ↗Wäldä Ab Wäldä Maryam and ten others, established the Eritrean Patriotic Association (↗*Maḫbär fəqri hagär*) aimed at promoting Muslim–Christian understanding and national co-operation. His main concern, however, was the issue of the ↗*təgre* serfs. Some 90 % of Təgre speakers were still under the old aristocratic system, feudal privileges of which had been enhanced by the Italians. In 1943 he left his position as an interpreter for the British and moved to ↗Täsänäy. With the help of his Muslim friends in Kärän and ↗Asmära, and in cooperation with the British, he began organizing the serfs with a view to their emancipation. This entailed a fundamental reorganization of the tribal system, a process completed by the spring of 1949.

Meanwhile, as the issue of Eritrea's future was being debated by the international community and the ↗United Nations (UN), I. began combining his social activities with Eritrean nationalist politics. On 4 December 1946 he established the ↗Muslim League in Kärän, which soon afterwards, in January 1947, adopted a platform calling for Eritrea's independence and resisting both partition and unification with Ethiopia (cp. ↗United Nations Commissions for Eritrea). The nationalist-political struggle gradually gained priority over the social *təgre* struggle. I. headed a Muslim League mission to the Arab League headquarters in Cairo and to the UN at Lake Success in April 1949. In May–July 1949 he initiated the establishment of the first significant all-Eritrean nationalist coalition. Rejoining forces with Wäldä Ab Wäldä Maryam, with other Christian nationalists, as well as with the ↗Pro-Italian Party, he established the ↗Independence Bloc.

I.'s leadership in the Independence Bloc during the two years that followed can be regarded as the pinnacle of his historical role, as well as the beginning of his political decline. As the cause of Eritrea's independence was being defeated diplomatically – Eritrea was federated with Ethiopia in 1952 (↗Ethiopian–Eritrean Federation) – I.'s cooperation with the non-Muslims and the pro-Italians, as well as his domineering personality, eroded his hegemonic leadership over the Muslim sectors. Earlier in April 1947 the National Muslim Party of Massawa seceded from the Muslim League. More significantly, in 1950 the Independent Muslim League of Western Eritrea was formed under the leadership of his rival, *šayḫ* Mūsā Radāᵓī. By December 1950 the Independence Bloc was dissolved, and in January 1951, its remaining leaders formed The Democratic Eritrean Party.

During the years of Eritrea's autonomy within Ethiopia, 1952–1962, I., as a member of the ↗Eritrean Assembly and the leader of the opposition, attempted to resist the imperial campaign to undermine the entire constitutional arrangement. He and his colleagues were subjected to systematic harassment and violence by the Emperor's agents. In 1955, accused of defaming a foreign official, he was fined and sentenced to six years probation. As ↗Ḫaylä Śəllase I's imperial absolutism completely shattered Eritrea's autonomy, and as I. failed to be re-elected to the second Assembly in 1956, he fled with ↗Idrīs Muḥammad Ādam to the ↗Sudan in March 1959. He then

proceeded to Cairo to join the founders of the ↗Eritrean Liberation Front (ELF).

By the time the Eritrean nationalists entered the stage of overt and fully fledged guerrilla warfare and international struggle against Ethiopia, I. had been almost fully marginalized. His paternalistic attitudes alienated his young colleagues, and his attempts to dominate exile politics failed. He later represented the cause of the ELF in the UN, last appearing in 1963. He also participated in various inter-Arab conferences trying to present the Eritrean struggle as part of the pan-Arab revolution, equating Ḫaylä Śəlasse's Christian hegemony with Zionism. In the field itself, however, in both eastern and western Eritrea, a new generation of fighters identified him with the old, traditional guard and its methods. In Arab capitals, activists such as Idrīs Ādam and ↗ᶜUṯmān Ṣāliḥ Sabī overshadowed him. I. went on to abstain almost completely from internal Eritrean conflicts and persistently called for the avoidance of religious, ethnic and regional differences. His last message to this effect was read at Second Conference of the ↗Eritrean People's Liberation Front (EPLF) held just prior to his death. He was buried in the Sudan.

Idda

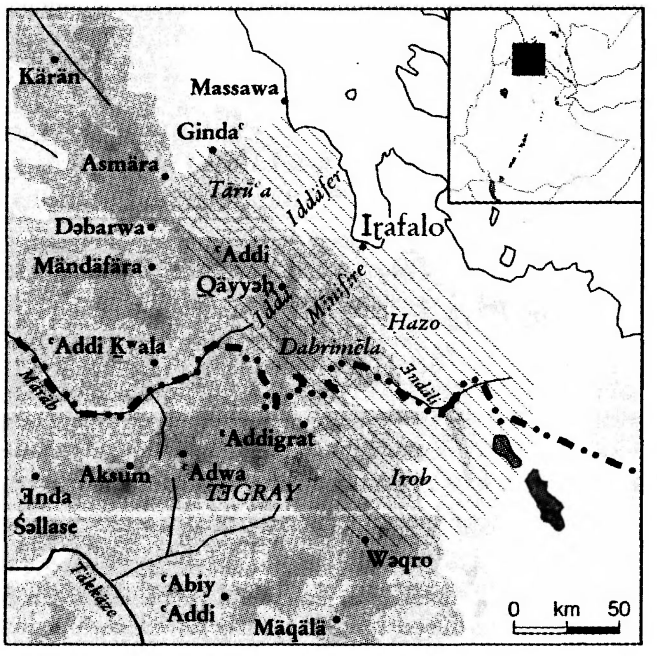
The I. (ادى) are one of the oldest ↗Sāho-speaking groups in Eritrea, as most oral Sāho tradition admits. Many Sāho tribes and sub-tribes refer to the I. as the guardians of the Sāho land, *baaṛo ᶜambaališ* (Sāho sp. *baarho cambaalish*) or *baaṛo sugus* (*baarho sugus*). They traditionally inhabit the areas of Säräwos, Märta, Gärämat and Annan. Most I. are Muslims.

Due to the expansion of the Christian Ethiopian empire in the 12th cent. and during the rule of ↗ᶜAmdä Ṣəyon, I. clans fused with ↗Təgrəñña groups of ↗Akkälä Guzay and ↗Ḥamasen and with ↗Təgre groups of ↗Barka, ↗Sämhar and ↗Saḥəl. Still today some Təgrəñña and Təgre-speaking-groups claim descent from I. tribes, e.g. in May ᶜƎdäga (Däqqämḥare). In Kʷäᶜatit, Mändäfära, the ↗Gäbärti believe that their great-grandfather was an I. Similarly, in Barka (ᶜAd Ḥasano) and Səmbar (ᶜAd Ṣäway) some Təgre clans claim I. origin.

During the Italian colonial period the I. were affiliated with the ↗Asaorta administration, having their own chief (*reedanto*), *šuum* Muḥammad. At that time the census (1931) counted 1,135 I. Today the I. form a semi-autonomous tribe.

There are different theories concerning I. origins. The word I. itself is believed by some to be a corruption of the name of the Arabic port Ǧedda (MuhTarih 221), suggesting their origin from ↗Arabia. This opinion is, however, not shared by the I. themselves.

Another tradition links the I. to Agne (or Agána), the legendary founder of the I. and some Təgrəñña groups of Akkälä Guzay (Däqqi Gäbre, ᶜAd Məqom and ƎggälaḪamus; s. Pollera 1996:79f.). Agne, according to different traditions, was either a son of *aṣe* ᶜAmdä Ṣəyon, or a child abducted from the ↗Ḥabab in the 18th cent. and raised in the court of *aṣe* ↗Bäkaffa in Gondär. Legend claims that Agne found a maiden tied to a tree where she had been



left as an offering to a ↗serpent that was terrorizing the area. He killed the serpent and liberated the maiden and the village from this subjection. The maiden belonged to the Robra and Ǝggäla Ḥaṣin tribes and her father rewarded the saviour with his daughter's hand, assigning him part of his territory. Agne had four sons by her: Te Häšənna, founder of the Arato; Šime Məre, founder of the Däqqi ᶜAd Məqom; Hanneso, founder of the Ǝggäla Ḥamus; Sälo'əba, founder of the K̲or Barya village. Agne moved later to Đi'ōt (Dhicoot) in Sāho, married Č̣idya Wätel, a Muslim of the ancient Kabota-Sāho tribe, and thus gave rise to the I. tribe (Pollera 1996:79f.). The word Agána means 'superiority', 'from the top'. Many Sāho lineages divide themselves (as the ↗Asaorta) into *agani casawurta* 'Asaorta from above', and *gubi casawurta* 'A. from below' (Morin 1999:88). "Angana" can be read on Ludolf's map (1683) as applied to the hinterland behind the Gulf of "Zulla" (↗Zula), in front of the island of "Dafalo" (↗Iṛāfálo).

Living I. oral tradition offers a still different version, according to which the I. and the Kabota were the two ancient Sāho tribes in the region. I. inter-married with Kabota and later defeated the latter clan in a war, becoming the dominant tribe in the region and extending their power to the highlands of Eritrea.

Iddäfer

I. (Sāho Iddefir, 'sons of Idda [or Idde]') is one of the well-known semi-autonomous ↗Sāho tribes in the ↗Sämhar region (for location s. Idda). They are agro-pastroralists who live scattered in the plains of Afta, Zula, Fatar and Ala, with the traditional centre in Gädäm, and migrate between Agambusa and the ↗Ḥamasen highlands in search of pasture. There are several I. descent groups, Bet (or Beyt) Alula, Bet Raqi, Bet Yaḥyā, Bet ᶜUmar ᶜĀli, Bet Sulēman, and Bet Danyā. The latter claim descent from the eldest son of the founder of the I. and thus occupy the leading position among other lineages. The I. are bilingual in Sāho and ↗Təgre.

The origin of the I. is unclear. The name I. suggests that they originated from the ↗Idda, whose men married women from other tribes such as Bet Danyā (Sāho), Bet Sayyid Ḥamedu (Beğa), Bet Ankala (ᶜAfar), and Bet Dimbágo (one of the seven Sāho "holy families" who spread Islam among the others; s. Pollera 1996:161, MorDic-Afar 222).

One of the versions of I. history claims ↗ᶜAfar origin and suggests they migrated to their present habitat after long conflicts and tensions between the ᶜAfar clans of Dankáli and Ankala. According to the legend, the former moved to the north and gave birth to new Sāho tribes of ↗Idda and I.

Sāho oral tradition says that the I., like Idda and ᶜAsaboora, are one of the oldest original Sāho tribes, who had settled in the Sämhar area already before the ↗Beğa expansion into the area during the 5th cent. Oral tradition also has it that I. share the same origin with the Bet Tawkal and Bet Ḥalifa descent groups (today known as lowland ↗Asaorta, with centres in Afta and Zula). Later, I. are believed to have mixed with Təgre-speaking groups in the Sämhar region, and that is why the Bet Tawkal and Bet Ḥalifa became Təgre speakers while preserving their knowledge of the Sāho language. Even today, some highland Təgre and Təgrəññña-speaking groups claim their descent from the I. The I. are related to the Bet Tawkal and Bet Ḥalifa through inter-marriage.

During the 19th cent., the region experienced numerous inter-ethnic conflicts. The Egyptian administration tried to settle the unrest and bring the region under civil administration through the system of indirect rule. Traditional leaders of each group were selected to be accountable to the Egyptian administration for mediating and resolving the disputes. Within the Egyptian system, they received the title *šuum*. One of the most famous representatives of the I. was *šuum* Ḥummad ᶜĀli Danyā. After his death in 1905, he was succeeded by his son *šuum* ᶜĀli Ḥummad ᶜĀli Danyā.

During the Italian colonial period and the British Military Administration, the I., along with all other Sāho tribes living in the Red Sea coastal region such as Idda, ↗Ṭarūᶜa, Baradotta, and Ḥasabat ᶜAre, were administered by Nāṣir *bey*. In the second half of the 20th cent., another famous I. leader, *šayḫ haǧǧi* ᶜUṯmān Alula, was an active member of the ↗Muslim League (MuhTarih 331). The 1931 Italian census gave a total number of 1,045 I.

Idrīs Muḥammad Ādam

I. (ادريس محمد آدم, also Idrīs Ādam, Idrīs Muḥammad Ādim, b. 1918, d. 29 August 2003, Mecca) was a founding father of Eritrean modern nationalism and the most prominent leader of the ↗Eritrean Liberation Front (ELF) during the period of 1960 to 1975.

I. was a member of the ↗Təgre-speaking ↗Beni ᶜAmər clans who had been converted in the 19th cent. to Islam by the *Mīrġanīya* brotherhood, centred on the Sudanese ↗Kassala and connected historically to Egypt. Educated also in Arabic and being an activist in the ↗Muslim League he accepted the Eritrean autonomy arrangement of 1952 (↗Ethiopian-Eritrean Federation) and acted as the chairman of the ↗Eritrean Assembly as of 1955. He soon clashed with the Chief Executive, *bitwäddäd* ↗Asfəḥa Wäldä Mikaʾel, who systematically undermined the autonomy and worked for putting Eritrea under ↗Ḫaylä Śəllase I's absolutism. In 1957 I. resigned in protest and his property was confiscated. He fled to Kassala and in 1959 proceeded to Cairo, where, already as of 1955, Eritrean veteran activists and young students were hosted by President Ǧamāl ᶜAbdannāṣir.

In July 1960 I. and his colleagues proclaimed in Cairo the establishment of the ↗Eritrean Liberation Front (ELF) under his chairmanship, and began inspiring the actual revolt in western Eritrea. Meanwhile a rival ↗Eritrean Liberation Movement representing mostly Muslims from eastern, coastal Eritrea, which had been established in 1958, was practically dissolved. As more members joined the ELF in the field, a Supreme Council headquartered in Kassala was proclaimed in 1963, still dominated by the Beni ᶜAmər activists and headed by I. In the same 1963 the ↗Organization of African Unity was inaugurated in Addis Abäba and Ǧamāl ᶜAbdannāṣir decided to stop his overt aid to the Eritreans. By that time the ELF, with Nāṣirist inspiration, had already begun developing the identity of Eritrea's Arabism, and conceived the anti-Ethiopian struggle as an integral part of the pan-Arab revolution. I. responded to the Egyptian betrayal by orienting the ELF on Damascus, where in the same 1963 the pan-Arab Baᶜṯ party took over. The secular, revolutionary pan-Arabism of the Baᶜṯ further influenced the ELF Arab-Eritrean ideology. Damascus also increased its military aid in 1966 when the Baᶜṯ army officers took over. After the 1967 defeat by Israel the Syrians lost much of their interest in Eritrea, but in 1968 another branch of the Baᶜṯ captured power in Iraq, and I. moved there. He went on roving between Baghdad, Damascus, Kassala and his units in Eritrea. Meanwhile the field fighters grew in number and in 1969 the ELF was restructured, the Supreme Council was substituted by a General Command. Though I. was re-elected as chairman of the new body, there mounted tensions between the field commanders and the men in Arab capitals. Moreover, the movement split now from all angles and in the same 1969 there emerged the rival ↗Eritrean Peoples Liberation Front (EPLF). It was combined of non-Beni ᶜAmər fighters and of exile leaders dependent on Arab countries (and the Palestinian Liberation Organization) rivalling the Baᶜṯ regimes. In late 1971 the ELF, amid war with the Ethiopians and amid fratricidal strife with his Eritrean opponents, was again restructured. A Revolutionary Council was established and I. was again voted chairman.

The 1970s saw a significant change in the relations between the Eritrean movements and the Arab countries. The age of secular, revolutionary pan-Arabism in the Middle East was over, and each Arab regime began solidifying its own, separate continuity. The general Middle Eastern interest in Eritrea's Arab revolution was gradually diminishing, and it nearly disappeared following the fall of Ḫaylä Śəlasse and the coming of the revolutionary *Därg* (↗Provisional Military Administrative Council). In both the ELF-RC and the EPLF the actual leadership was taken by the field commanders. In May 1975 the ELF leadership abroad was denounced in a Revolutionary Council congress as "opportunistic and bourgeoisie" and I. was replaced by Aḥmad Nāṣir. (The same had been the fate of ↗ᶜUṯmān Ṣāliḥ Sabī of the EPLF). After some short, futile manoeuvrings I. faded away. He moved to Saudi Arabia from where he followed the ensuing developments, culminating with the demise of the ELF in the early 1980s and the hegemony of the Christian-led EPLF in achieving Eritrea's independence in 1991. The new regime in Asmära made no effort to appease the defeated and scattered ELF veterans who had founded Erit-

rea's modern identity. The aging I., in Mecca, was meanwhile closing his life circle, abandoning the secular pan-Arabism he adopted in the 1960s and returning to political Islam.

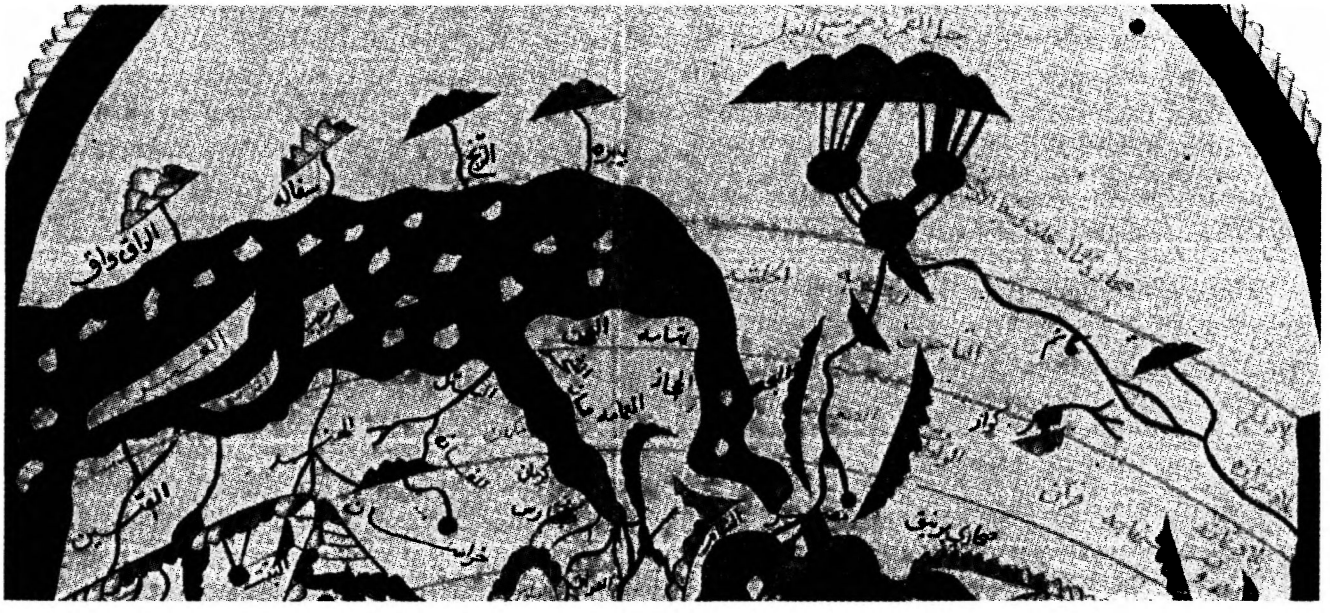
Idrīsī, al-

I. (الإدريسي full name Abū ᶜAbdallāh Muḥammad b. Muḥammad al-Idrīsī) was an Arab geographer who lived at the court of Roger II (r. 1130–54), the Norman king of Sicily. Information about his life is scarce, probably because Arabic biographers regarded him as a renegade.

I.'s main work is a descriptive geography called *Nuzhat al-muštāq fī iḫtirāq al-āfāq* ('Recreation for Him who Desires to Travel through the Countries') or *Kitāb Ruǧār* ('Book of Roger'), finished in 1154. I. adopted the Ptolemaic division of the world into seven climates (*aqālīm*, sg. *iqlīm*) and subdivided each climate into ten sections (*aǧzāʾ*, sg. *ǧuzʾ*). The description of Ethiopia is in the 4th and 5th sections of the 1st climate of this book; the neighbouring regions of the East, in the 6th section (ed. Dozy – de Goeje 1866:14–27; ed. Cerulli et al. 1970–84:32–57). I. describes several towns with their products and their relevance to trade in terms of distances and quality. While parts of his report are quite detailed, e.g. his description of the Nile fauna, he also includes such legendary material as, e.g., the source of the Nile in the Mountains of the Moon. As already noted by Ludolf (*Commentarius*, quoted by Hartmann 1796:88), many of the Ethiopian towns mentioned by I. are hard to find in other sources. To each of the 70 geographical sections of the *Kitāb Ruǧār* a map was attached, all of these maps then being put together to make up a rectangular world map similar to the Ptolemaic one (*Tabula Rogeriana*). A smaller circular world map was further supplied, which became the more famous one, (cf. Conti Rossini 1943:167–71).

In 1161 I. allegedly wrote another more detailed text accompanied by a map for Roger's son William I. This book is presently lost, but an abridged version of it, *Uns al-muhaǧ wa-rawḍ al-furaǧ* (also known as the *Little Idrīsī*), is extant. The work has the same theoretical structure of the *Kitāb Ruǧār* but the text is arranged as in an itinerary book, and supplemented by 73 maps in the form of an atlas. The *Uns al-muhaǧ* has a short section on Ethiopia (1984:26ff. [in ms. Hekimoğlu 688], 18ff. [in ms. Hasan Hüsnü 1289]; cf. already Conti Rossini 1921–23:450ff., § 14).

Information on Ethiopia contained in both I.'s works was translated into Italian and thoroughly discussed by Conti Rossini (CRStor 324ff.), who confirmed the heavy dependence of the Arab ge-



World map from the *Kitāb Ruǧār* by al-Idrīsī (1154; oriented with South at the top); copy of 1500 (detail showing northern and north-eastern Africa with the Red Sea and southern Mediterranean); from Klemp 1968

ographer on Ptolemy, and tentatively suggested a few explanations for the obscure names occurring in the texts.

Stefan Weninger

Ifat

I. (ኢፋት, also ዊፋት, Wifat in Gəʿəz sources) was a historical region and sultanate in central Ethiopia. An integral part of the ↗Rift Valley, the area of I. served for millennia as a point of contact between the pastoral/nomadic economic formations of the eastern lowlands and the ancient agricultural societies of the Ethiopian highlands. The lines of communication and trade routes from the Red Sea, the Gulf of Aden and the Indian Ocean converged in the area of I. making it a region where important historical developments took place.

↗Islam must have been introduced into the region in early times. The religion spread along with the development of the local statehood. In the late 9th cent. the precursor of I., the Sultanate of ↗Šäwa emerged, run by the ↗Maḫzūmī dynasty. The ↗Walašmaʿ dynasty, claiming the same Arab origin as the Maḫzūmī, appeared in the region as a rival force, destroyed the Sultanate of Šäwa and formed that of I. in ca. 1285 A.D. (for a while early Walašmaʿ-rulers were the subjects of ↗Damot, s. Cerulli 1943:284).

The works of such Arab authors as ↗Ibn Saʿīd al-Maġribī (transmitted by the 14th-cent. geographer Abū l-Fidā), Ibn Faḍlallāh al-↗ʿUmarī, al-↗Maqrīzī, ↗Ibn Ḫaldūn and al-↗Qalqašandī provide a relatively detailed description of the Sultanate of I. (Wafāt, or Awfāt in the Arabic sources). In these works I. appears as the most powerful among the states of the so-called Muslim fringe (the others being ↗Arabäbni, ↗Därа, ↗Däwaro, ↗Hadiyya, ↗Šarḫa, Bali [↗Bale]) in the period between 1285 and the second half of the 15th cent. It comprised a territory adjacent to the trade routes south of historical ↗Gədəm, including a part of the high plateaux of north-east Šäwa and stretching into the lowland beyond ↗Awaš as far east as ↗Zaylaʿ that, according to al-ʿUmarī, was also subject to the rulers of I. (hence the name "kingdom of Zaylaʿ" on some European maps; s. CerStud I, 5f.; ↗Carthography).

The population of I. seems to have been mixed: in particular, al-Maqrīzī says that the language of the people of I. was "Abyssinian" (cp. ↗Ethio-Semitic) and ↗Arabic (MaqIlmam² 7; cp. CerStud I, 19f.). The core of I.'s population must have been composed of the distant precursors of the ↗Argobba and related peoples such as the ↗Dobaʾa. Ibn Saʿīd significantly identified I. as a citadel of Islam in the region; the majority were *šāfiʿīs* (but in the 15th *ḥanafīs* were probably dominating, s. MaqIlmam² 7; cp. Cerulli 1943:286). Al-ʿUmarī lists seven "cités mère" of I. – most probably I.'s tributary districts (UmMasGaud 8f.) – and provides valuable data on I.'s economy and culture, mentioning wide cultivation of ↗*ṣat* and the circulation of the traditional iron ↗currency called ↗*ḥakunu* (CerStud I, 17–22).

The importance of I. is attested by the latter's link with ↗Ğäbärti. According to Ibn Saʿīd, Ğabara/Ğabart was an alternative name of I. and its population (Abū l-Fidā 1883:229); it was also used in other Arabic sources (Cerulli 1943:293f.), and then generally extended to the Muslims of the Horn of Africa. In his *Kitāb al-ilmām* (written 1435–36) al-Maqrīzī says that Ğabara or Ğabart was a name of a district in I. (s. UmMasGaud 37; cp. Cerulli 1943:286; cp. ʿAbdalkader Hagos Muḥammad 1991:11–25).

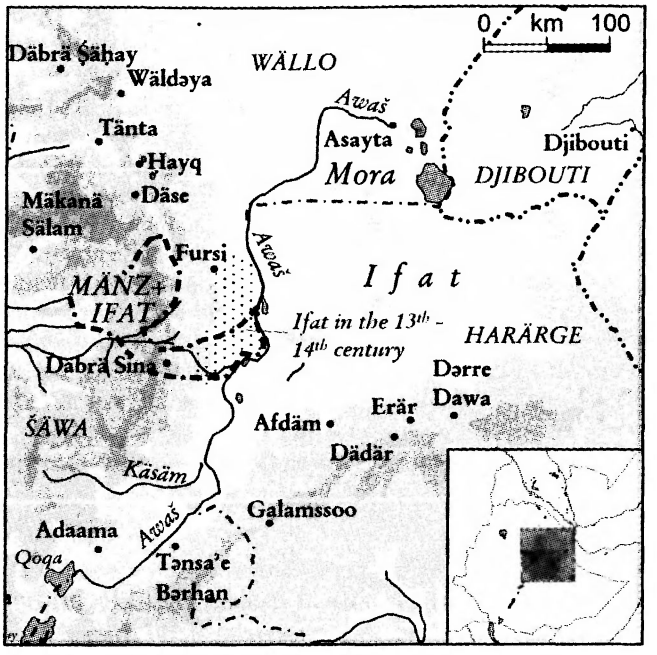
The growth of the power of I. came to a halt in the 14th cent. The strategic importance of I. placed it against the Christian state consolidated by the rulers of the ↗Solomonic dynasty, whose ambition was to control the caravan trade to the Red Sea and the Indian Ocean. The consequence

was a protracted conflict sometimes taking the shape of a religious war (↗*Ǧihād*). It culminated during the reign of *aṣe* ↗ʿAmdä Ṣəyon I, when ca. 1332 ↗Ṣabraddīn b. Dalḥuy b. Manṣūr of I. led a Muslim coalition against the Christian Emperor, but was defeated. I. and allied sultanates were then ravaged, their status as tributaries of the Christian empire confirmed.

In the following period Christian monarchs had to apply the entire spectrum of political means in order to keep I. under their sway: using internal strife among the members of the Walašmaʿ dynasty on the one side and applying military power on the other, in the time of such rulers of I. as ↗Ṣabraddīn Muḥammad b. Dalḥuy, ↗ʿAlī b. Ṣabraddīn, ↗Aḥmad Ḥarb Arʿad b. ʿAlī b. Ṣabraddīn, ↗Ḥaqqadin II b. Aḥmad Ḥarb Arʿad (d. 1386). Thereafter, I. was able to consolidate its power again and even incorporated ↗ʿAdal and some other neighbouring principalities. In 1415 *aṣe* ↗Yəsḥaq defeated the rebellious *sulṭān* of I. (before him the rulers of I. had the title *qaṣ*; in ʿAmdä Ṣəyon's time probably *ambäl*, s. Guidi 1889:62), the famous ↗Saʿdaddīn Abū l-Barakāt Muḥammad b. Aḥmad, and killed him at Zaylaʿ. *Aṣe* ↗Zärʾa Yaʿəqob appointed his governors in I. and settled there a contingent of the ↗*ṣäwa*. I. was too much exposed to the power of Christians, and *sulṭān* ↗Aḥmad Badlāy, the representative of the Walašmaʿ dynasty's militant wing, moved his capital to ↗Dakar in 1435–36, I. thereby loosing its central political importance. After a series of battles, Aḥmad Badlāy was defeated by *aṣe* Zärʾa Yaʿəqob in 1445. His son *sulṭān* Muḥammad b. Badlāy sent a diplomatic mission to Egypt in 1452 hoping for help, but in vain; soon, *sulṭān* Muḥammad submitted to *aṣe* ↗Bäʾədä Maryam (Cerulli 1943:293f.), who appointed in I. a governor with the title ↗*wälasma*.

The area of I. was reduced to a battle ground in the course of the wars of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī and the subsequent ↗Oromo migrations. In the 16th–18th cent. I. remained a small region between the Robi and Qäbbänna rivers. The Chronicle of Susənyos reports that in 1602 *aṣe* Susənyos (before ascending the throne) fought the local people and *ṣäwa*, helping ↗Yolyos, whom he appointed over I. and who, however, was not accepted there. Later, ca. 1624, a rebellious Wäldä Qəbrəyal defeated and killed I.'s *wälasma* Ǧuru.

The Muslim scholars (*ʿulamāʾ*) of I. continued to play a front role in spreading Islam to most parts of south central Ethiopia until the late 19th–



early 20th cent. (cp. ↗Education). However, I.'s vulnerable position and the threat of the Oromo (Karrayyuu of ↗Baarentuu) finally forced its rulers to make an alliance with the emerging local dynasty of Šäwa. Although this alliance might have been difficult at the outset, the second ruler of Šäwa ↗Səbəstyanos established ties with the Argobba *wälasmas*, which were strengthened by *märəd azmač* ↗Abbəyye and *wälasma* ↗Maḥammäde. This was followed by further political integration of I. under *nəguś* Sahlä Šəllase (1813–47), which marked the creation of a larger Kingdom of Šäwa. During the era of *aṣe* ↗Mənilək II the territorial extent of I. was again changed: it was reduced losing what later became northern ↗Yärär and south-eastern ↗Bulga in the 19th and 20th-cent., and existed later as ↗Yəfat *awraǧǧa* (Yəfat being the term for the area frequently used in the 19th–20th-cent. sources).

Ignatius of Loyola

I. (b. Iñigo López de Loyola, 24 December 1491, castle of Loyola, Azpeitia, d. 31 July 1556, Rome) was the founder and first general of the ↗Jesuits. He gave priority to pioneering mission work outside Europe, devoting great enthusiasm to the mission to ↗Ethiopia.

The origin of the Jesuit involvement in Ethiopia goes back to the 1540s, when I. entered into contact with the milieu of Pope Paul III, meeting figures like ↗Täsfa Ṣəyon, and with King ↗João III of ↗Portugal. In 1546, there was a first exchange of letters between I. and Dom João on the issue of a mission to the "Preste" (↗Prester John). The two discussed later the possibility of establishing a Catholic patriarch for Ethiopia, and who could be the most appropriate man for such a task – I. having offered himself as a missionary.

Coming to no conclusion, the subject remained dormant for some time, until Dom João appointed in 1553 I. responsible for naming a member of his order as the patriarch. I. started then a general consultation to select the members for the mission to Ethiopia and, on 28 December, he notified the Portuguese monarch of the election of three Portuguese (João Nunes ↗Barreto, Cornelio Gómez and Melchior Carneiro) and two Spaniards (Diego Mirón and Andrés de ↗Oviedo). From those, Dom João was to choose three for patriarch and assistant bishops. Nunes Barreto was finally elected as patriarch, and Oviedo and Carneiro as bishops. Pope Julius III later ratified this decision.

I. continued promoting this enterprise over the following years until in the spring of 1555, the first expedition left Portugal. In an epistle sent to the elected patriarch Nunes Barreto the same year, I. drew up a list of recommendations to the missionaries to Ethiopia. Many of the principles that guided the following generations of missionaries to Ethiopia were included: e.g., the establishment of good relations with the emperor, the reform of the sacramental discipline, elimination of rites from the "Old Law" (i.e. O.T.), as well as the learning of local languages in order to be able to preach the Catholic doctrine properly.

From the theological point of view, I. viewed the Ethiopian Orthodox Church as a schismatic Church. In his 1555 letter addressed to *aṣe* ↗Gälawdewos he presented the patriarch of Alexandria (↗Coptic Church) as a "cut off and rotten member of the mystical body of the Church" that "has neither movement nor virtue, nor can receive it from the body itself". Thus, I. advocated a "return" of the Ethiopian Church to Catholic Orthodoxy. Indeed, no other topic is so carefully discussed in the Ignatian epistolary as Ethiopia.

Leonardo Cohen

Ilg, Alfred

I. (b. 30 March 1854, Frauenfeld, d. 7 January 1916, Zürich) was a Swiss engineer who served *aṣe* ↗Mənilək II as royal engineer, architect, interpreter, counsellor and private secretary for foreign affairs for almost 28 years. He was probably the only foreigner in Ethiopia on whom the title of ↗*bitwäddäd* was conferred, although unconfirmed sources allege that a Greek personal physician of *aṣe* ↗Ḫaylä Śəllase I also attained a similar rank.

Upon his graduation from the Polytechnical Institute in Zürich, he worked for some time for a firm known as Marquardt in Bern. Through the intermediary of the firm Furrer & Escher in

Aden, *nəguś* Mənilək of Šäwa employed him in 1878. He left for Ethiopia in May, but did not reach Šäwa until the end of the year. He was accompanied by two compatriots and friends: a woodworker by the name of Heinrich Appenzeller and a mechanic, Alfred Zimmermann. Both worked intermittently under short contracts as well as in the import-export business until they left the country in the early 1890s, while I.'s first three-year contract was soon changed to a tenure. I.'s higher qualification in engineering, his versatility in other fields of construction and technology, his talent for languages, and above all his honesty and sociability won him the royal confidence within a short time.

In the year of I.'s arrival in Šäwa, Mənilək moved his capital from Ankobär to ↗Ǝnṭoṭṭo, and I. was assigned to supervise the construction of the palace. He subsequently built the churches of ↗Ǝnṭoṭṭo Maryam and ↗Ǝnṭoṭṭo Raguʾel in the vicinity of the palace. When the capital moved to ↗Finfinnee (later Addis Abäba) in 1887, I. built the palace. The city (including the ↗*Gəbbi*) was consumed by fire in 1892, and I. undertook the reconstruction in the next year during which he also provided the palace for the first time in its history with a clocktower, water pipes and a telephone system. I. also built two bridges across the ↗Aqaqi and the ↗Awaš rivers in 1886–87, the latter of which he redesigned and reconstructed in 1894. In 1899, he recruited on behalf of the sovereign a group of Swiss experts who reformed the postal system in Ethiopia and installed telephone and telegraph systems connecting the Ethiopian capital with Djibouti, Asmära and Khartoum, and thereby with Europe.

Every two or three years, I. travelled to Europe partly for vacation and partly to do some purchasing for the royal couple and their notables. On one of these trips, he smuggled in through ↗Zaylaᶜ a machine which he installed in Aman (near Ankobär) to produce cartridges for various types of weapons for which it was difficult to import munitions and spare parts because of restrictions imposed by the colonial powers at the coast. This was of special interest to Mənilək in view of the increasingly hostile relations with Italy. I.'s rival, Count Pietro ↗Antonelli, was discredited on account of the ↗Italo–Ethiopian treaty of 1889 ("Treaty of Wəċale"), and from this time onward the sovereign consulted I. on diplomatic questions as well as in addressing letters to European leaders. I., who, apart from his

Alfred Ilg, around 1906, in his Ethiopian home; photo from the collection of Carl Haertel, courtesy of Johannes Bohnenberger

mother tongue German, had full command of French, Italian and English as well as Amharic, translated the letters which came from abroad and acted as an interpreter when European diplomats arrived. He was also sent on diplomatic missions to ↗France and ↗Switzerland in 1891–92 and 1894–96, during which he gave lectures and interviews in favour of Ethiopia which did not have resident diplomats abroad. Perhaps, his most significant diplomatic activity was his involvement in the negotiations with Italy following the campaign of ᶜAdwa (↗ᶜAdwa, battle of) and the subsequent drafting of the treaty of October 1896 (↗Treaties). A few months later, he was honoured with the title of *bitwäddäd* and was thereafter addressed as "His Excellency".

I. maintained a large household, including his family, servants and their relatives. At first he married Wälättä Maryam from Bulga by whom he had three sons and a daughter (who later married ↗Afäwärq Gäbrä Iyäsus). In 1895, he settled his wife and children in one of his landed properties in Bäčču, to the south-east of Addis Abäba, and married his compatriot, Fanny Gattiker from Zürich, by whom he subsequently had three sons and a daughter.

Like all his peers in the empire, he held state landed properties (to the north-west and south of the capital) which he administered through proxies and from which he derived his income. He also received a salary in cash the amount of

which increased in accordance with the length of his service and the rise of his status. Besides, he ran an import–export business of ↗ivory, ↗coffee and industrial products. In 1894, he won a ↗railway concession from Djibouti to Addis Abäba and beyond to the south-west and he subsequently established jointly with Léon ↗Chefneux a share company – the Compagnie Impériale des Chemins de fer d'Ethiopie – with headquarters in Paris. By the time the railway reached ↗Dərre Dawa in 1902, the funds of the company were depleted. An offer of the French government to finance the project angered Mənilək who wanted the company to remain strictly non-governmental and neutral. I. was suspected of breach of contract by the Ethiopians and foreigners alike, although the sovereign had never issued a statement of the kind. Another concession – the Wälläga Gold Mines Company – which I. founded in 1900 likewise went bankrupt as a result of which a tiring court case developed between I. and the Russian officer Nicolai ↗Leontiev, who was for some time in the service of Mənilək II.

Severely hurt by these failures and their implications to his prestige, I. wished to resign his position and return to Europe. He tendered a letter of resignation in 1902, but it was rejected by the sovereign who expressed his unflinching confidence in the integrity of his official. I.'s rivals (both Ethiopians and Europeans) nonetheless continued to spread defamatory propaganda. Mənilək ignored the rumours until December 1906 when he discovered the Tripartite Treaty in which France, Great Britain and Italy agreed to divide Ethiopia into spheres of influence upon the incapacitation or death of the sovereign. I., who was then in Zürich, did not inform Mənilək about the treaty, a situation which I.'s enemies exploited to convince the sovereign that his counsellor had gone over to his adversaries. Mənilək repeatedly summoned I. to return to Ethiopia, but I. sent only a telegram of resignation and remained for good in his native city where he died almost ten years later. His house in the capital as well as his estates reverted to the government following his resignation, a case which later writers unaware of Ethiopian culture regarded as confiscation and ingratitude.

I.'s contribution to our knowledge of Ethiopian history, culture and laws was at least as significant as the technological know-how he applied in the country. He toured most of the southern regions and collected cultural items, some of which he exhibited in Switzerland in 1892. Many of the articles are preserved today in the Ethnological Museum of Zürich. He also collected and described zoological and botanical specimens on behalf of several scientists in Europe. He published a few essays on various aspects of Ethiopian history and culture. Above all, he preserved an immense amount of both official and private papers which he brought to Zürich before his resignation. They are today indispensable sources for the Mənilək era.

Ilit and Sokodas

Ilit and Sokodas language

The I. and S. (also called "Western Kunama") are two ↗Nilo-Saharan dialects or languages closely related to ↗Kunama. They seem to form a cluster separate from the rest of Kunama, which is

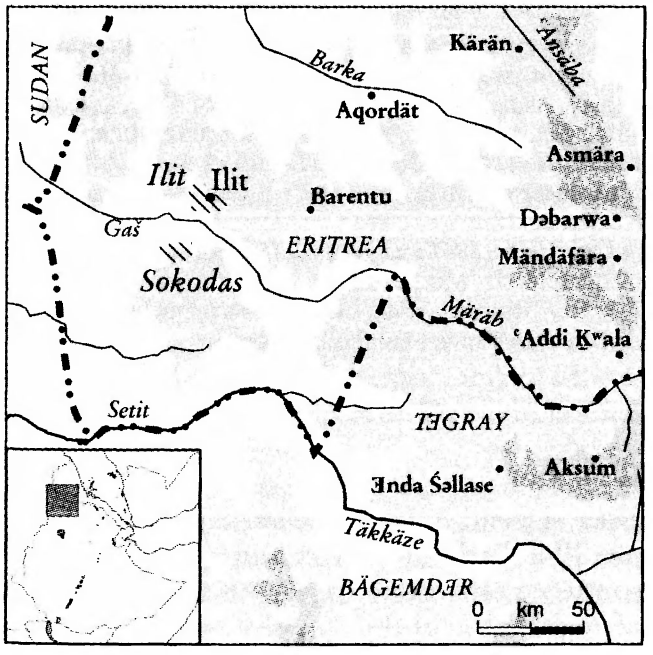
also called, in distinction from I. and S., "Eastern Kunama".

Linguistic research, carried out in the 1990s by John Abraha and Klaus Wedekind, included comparison of the lexicon (based on "basic words" lists) between I.-S. and Kunama, and tests checking the intelligibility of I. and S. with Kunama dialect texts and vice versa (s. Daniel Teclemariam et al. 1997, esp. 7, 21). I. and S. share 71 % of the lexicon one with the other. Kunama dialects and I. have 57 % to 65 % of the lexicon in common. Kunama dialects and S. have 60 % to 70 % in common.

41–71 % of S. texts could be understood by Kunama. At the same time, I. is almost unintelligible for Kunama speakers (only 3–8 % of an I. text can be understood by Barka, Marda, Tika and Taguda speakers; Aymasa speakers, however, understand ca. 71 %, which is explainable by contact). Kunama texts can be understood to a much better degree by I.-S. speakers, which can be explained by the "ethnical" identification of the I.-S. speakers with the Kunama group and their exposure to Kunama radio programmes and Kunama language at school.

No standard of I.-S. has yet been developed.

The consonantal and vocalic phoneme inventory of I.-S. is the same as in Kunama (s. DGE Curriculum Department 1998:61); vowel length and consonant gemination are phonemic. Like Kunama, I.-S. is a tone language, but details have not been studied yet. Within the present entry, the tones were marked only in the ten-word list (elsewhere, only high tone was marked): low tone as ̀, mid tone as ̄, high tone as ́, plus their combinations such as high-low (falling) as ̂, etc. There are at least two tonemes. Words start with a consonant, but different to Kunama do not necessarily end with a vowel; in S. many nouns end in *-a* for sg.



Grammatical differences between I.-S. and Kunama are yet to be studied. The pronoun system of S. is very similar to the Barka and Marda dialects of Kunama, as can be seen from the following table:

Pers.	Barka	Marda	Sokodas
1st sg.	*aba*	*aba*	*aba*
1st dual (incl.)	*kímme*	*kíime*	*kímmamme*
1st dual (excl.)	*ámme*	*áame*	*ámmamme*
1st pl. (incl.)	*kíme*	*kíme*	*kíme*
1st pl. (excl.)	*áme*	*áme*	*áme*
2nd sg.	*ena*	*ena*	*ina*
2nd dual	*émme*	*éeme*	*émmamme*
2nd pl.	*éme*	*éme*	*éme*
3rd sg.	*unu*	*unu*	*ununo*
3rd dual	*ímme*	*íime*	*unummamme*
3rd pl.	*íme*	*íme*	*unumme*

Examples of basic vocabulary for I. (S.): 'one' *éllà* (*éllâ*); 'two' *bálómè* (*bállè*); 'three' *sáttê* (*sáttê*); 'blood' *kòokòbā* (*kòokòbā*); 'tooth' *māyyā* (*māyā*); 'fire' *tōmā́* (*tōmā́*); 'moon' *tèerā* (*tèerā*); 'sun' *wóókíírā* (*ííkííra*); 'water' *bìyā* (*bìyā*).

John Abraha Ashkaba

Ilit and Sokodas ethnography

The Ilit (in Kunama: Iliit, Iiliit, in European sources also Elit) and Sokodasa (also Sogodasa, the suffix *-a* denoting a group) are two groups belonging to the ethnic conglomeration of the ↗Kunama, composed of several virtually independent groups. The I. and S. together are also called "Western Kunama".

Although they are geographically separated from the main Kunama groups, follow a partially different lifestyle and are linguistically distinct, both groups have a strong identity of "being

Kunama". As a consequence both consider their I.-S. language-cluster as mere dialects of Kunama. This self-identification is a remnant of a seemingly ancient system of ethno-political alliances, which included the related Nilo-Saharan groups in the area in a common Kunama "confederacy" based on an idea of common origin and destiny. It remains to be studied which factors strengthened the idea of mutual relationship within that system, and to which degree it included practical assistance in times of conflict, how it was used for inner-Kunama alliances and/or expressed a specific economic relationship. No ethnographic research has ever been carried out among the I. since the times of Werner ↗Munzinger, and not at all among the S., with the exception of a few surveys carried out by the ↗Eritrean People's Liberation Front starting from the late 1980s.

The term I. designates both the group and the region it inhabits, a mountainous area near the Sudanese border on the right bank of the Gaš river, near the Haykota hills, where the hilly Kunamaland ends, north-west of the main Kunama. A settlement called I. lies within a mountain fortress (MunSt 507; Munzinger 1864:5, 21), north of the road from Barentu to Täsänäy. It is only at I., from where it flows into the fertile lowlands of ↗Taka, that the river Gaš gets this name; in the main Kunama areas it is known as Sona. The direct neighbours of the I. are the ↗Hadándowa and the ↗Algäden.

The S. area with the "Sogodàs" mountains (Guida 224) lies further inland on the left side of the Gaš, in front of the I. area and west of the main Kunama. It borders at Ḥomran (↗Ḥamrān).

The I., numbering ca. 1,000 people, have been (mostly) Muslims at least since the mid-19th cent. A remnant of the older religion, which they shared with the "Eastern" Kunama (Barka, Marda) and ↗Nara, was the office of the rain-maker (*alfai*), who resided among the Algäden (this one being inactive since the 1860s), and among the Kunama. The I. and the S. had their own independent law assemblies and traditional jurisdiction, carried out by elders. The socio-political order is communal and non-hierarchical, decisions are traditionally taken by assemblies of elders, based on consent with the village community as a whole. The ↗kinship system is based on matrilineality.

I. houses were reported to have often been built standing on long piles, allowing floods passing underneath it; they were small and also used as granaries (MunSt 507).

The power balance in the area changed, when Egypt expanded into the Sudan and annexed the ↗Barka region after around 1840. The village of I. submitted to the Algäden, the I. becoming their vassals (ibid. 458; Munzinger 1864:5). During the following years of Təgrayan expansion the I. were not included into the realm of the governor of ↗ᶜAdyabo Wäldä Ṣadəq, who had annexed the Kunama in the late 1850s. Instead, the I. were, together with their overlords, the Algäden, included in the Sudanese-Egyptian province of Taka. This historical separation from the main Kunama is remembered by the I. and S.

In 1860, the Algäden started from I., following the Gaš, to raid the May Daᶜəro area (Barka/Balka) in Kunamaland. In 1861 the Hadándowa were attacked near I. by Ethiopian soldiers from ᶜAdyabo, as a part of the Təgrayan expansion (MunSt 442, 459, 462). In that period the Algäden (and with them probably the I.) started to send gifts to ᶜAdyabo in order to keep peace (Munzinger 1864:3).

The I. often understand "Eastern" Kunama (but only "at some low level", s. Daniel Teclemariam 1997:32, 43) and ↗Təgre (MunSt 468), the latter even replacing the I. dialect (Munzinger 1864:9). In official state ethnography the I.-S. are considered part of the Kunama ethnic group. However, due to the distinct linguistic (and religious) identities of the groups it is discussed to prepare their own education material, separate from the Kunama (Daniel Teclemariam et al. 1997:43f.).

Wolbert Smidt

Illubabor

Since the end of the 19th cent. I. (አሉባቦር; Oromo: Illuu Baaboor) was the name of a province in south-western Ethiopia. The historical nucleus of highland I. in the 19th cent. was the ↗Oro-

mo polity of the Gabba Illuu along the River ↗Gabba. The name I. ("Illuu Abbaa Boora") is derived from the Illuu ruler Čalli Sone, popular known under his horse-name Abbaa Boora. According to oral sources, clans of the ↗Mäčča Oromo (Tummee, Buunnoo, Čora, Illuu, Alle, Bidiruu, Hurruumuu, Daarimuu) settled in highland I. during the late 18th cent. Older inhabitants were the *ənsät* growing ↗Šakačo and, towards the western lowlands, the slash-and-burn horticulturalist ↗Mağangir (Yasin Mohammed 1990:105ff; Stauder 1972:154).

From 1882/83 onwards Mənilək's troops, first under *ras* ↗Gobäna Dači and later under *ras* ↗Täsämma Aśmärom, occupied the region. With *ras* Täsämma (1897–98) highland I. fell under the rule of ↗*näftäñña* settlers, largely from Gondär. Included in the province was the lowland of ↗Gambella and the territory of ↗Guummaa, west of Didessa river (GueCopMen, Carte I). The political centre of the province first was ↗Gore. After 1942 the centre shifted to ↗Mättu, which was then better connected by roads to Addis Abäba.

Most of highland I. lies in a moderate zone (*wäyna däga*) at an altitude between 1,000 m and 2,000 m A.S.L. The central I. highland with more than 2,000 mm per annum enjoys sufficient rainfall and can be cultivated throughout the year (EMA 1988:12; GasEth 202). Maize, *ṭef* and sorghum are the most important cereal crops. The economic dynamics of I., however, were linked to the abundance of wild ↗coffee (*Coffea arabica L.*), and the constant expansion of coffee production and trade since the early 20th cent. The arrival and settlement of Greek, Armenian, Indian and Arab traders and coffee brokers until 1936 connected I. strongly with the neighbouring Anglo–Egyptian ↗Sudan (GasEth 156; von zur Mühlen 1935:111–21). The residence of a British consul at Gore underlined this relationship. The last consul, from 1928 Major Esme Erskine, was a classical British imperial "man on the spot". For some years Erskine found an equally skilled Ethiopian imperial counterpart in governor *däğğazmač* ↗Mäkʷännən Ǝndalkačča̤w, a former Ethiopian ambassador to Great Britain (ZerEth 362, 366). Due to its boundaries protected by swollen rivers, I. was inaccessible to Italian troops during the months following the occupation of Addis Abäba in May 1936. For one rainy season Gore became the seat of a short-lived free Ethiopian government under *ras* ↗Ǝmməru Ḫaylä Śəllase (BZHist 168).

The administrative boundaries of I. have changed several times (EMA 3). For most of the 20th cent. I. included the lowlands of Gambella (ZerEth 362). Rivers structured the boundaries of the province. Towards the Sudan the rivers Aqobo, Ṗibor and Barro (Baro) defined the border. The catchment area of these rivers towards the escarpment of Gurafärda and towards ↗Gimira defined the southern boundaries. In the north the Birbir and the Gabba rivers divided the country from Wälläga. In the east the Didessa divided from Ǧimma and the Gibe states (ZerEth ibid; GuèCopMen, Carte VIII).

In 1935 I. had a population of 560,000 inhabitants (ZerEth). Under Italian rule (1936–41) highland I. was renamed *Commissariato di Gore*, excluding Gambella, within the *Governato dei Galla e Sidama* (Dei Gaselini 1940–41:48). During the 1980s I. was divided into five *awraǧǧas*: Gambella, ↗Moča, Gore, ↗Buno Bäddälle, and Sor and Gabba (EMA ibid.). While the latter three *awraǧǧas* had a strong majority of Oromo, lowland Gambella was inhabited by Nilotic-speaking ↗Nuer and ↗Añwaa. Moča in the east remained dominated by Šakačo. In total the population of I. was during the 1980s about 960,000 (EMA 22).

After 1991 the policy of "ethnic federalism" changed the boundaries again. Highland I. became a zone within Oromiyaa Regional State, comprising 12 *wäräda*: Daarimuu, Supheenaa Sooddoo, Cooraa, Dega, Baddallee, Geechii, Dhidheessa, Yaayyuu, Mattuu, Aallee, Buree and Nonnoo. Of about 850,000 inhabitants, 750,000 are Oromo. Amhara (62,000) and Təgrayans

(10,700) are the most substantial minorities (CSA 1996:173). The majority of the Šakačo, with the town of Täppi as a regional centre, and many Maǧangir were included into Käfiččo Šakačo Zone within Southern Nations, Nationalities and Peoples Regional State (CSA 1996a:46f.). Gambella became a regional state of its own.

Imām

I. (امام) is etymologically derived from Arab. *amma* 'to lead' and thus originally means 'leader, master'.

In ↗Islam the term was traditionally used for the community leader who was in control of the government and of the ↗*ǧihād* and also led the ritual prayers. The first historical I. was the Prophet ↗Muḥammad himself. Later, the function was taken over by Abū Bakr aṣ-Ṣiddīq and the other *ḫulafāʾ* (↗*Ḫalīfa*) who ruled after him. With the further growth of the Islamic state, *imāma* (the office of the I. as the leader of prayers) was then delegated by the *ḫalīfa* first to the governors and to special appointees (even when the *ḫalīfa* still led the prayers in the capital city till 750, and then the governor of Egypt up to 850).

In ordinary usage, I. is the leader of the Islamic daily and obligatory ritual prayers in a ↗mosque. Every mosque in the Muslim world has at least one designated I. who also generally exercises some administrative authority. An important mosque where the collective prayers on Fridays at noon are performed (*ǧāmiʿ*) may have more than one I. The I. is selected by the local religious or community leaders on the basis of his knowledge of Islam, mastery of, and eloquence in, Arabic – since he may be called to deliver the weekly sermon (*ḫuṭba*) at the Friday congregational prayer (*ṣalāt al-ǧumʿa*) – and good character. If he is the I. of a grand or central mosque, he is also expected to liaise between the Muslim community and the secular authorities. In practise, with time a distinction came into existence between the office of the I. as a political leader or head of state (called *al-imāma al-kubrā*) and that of the I. who leads prayers (known as *al-imāma aṣ-ṣuǧrā*).

In Šīʿite Islam the I. must be a descendant of the fourth *ḫalīfa*, ʿAlī b. Abī Ṭālib (r. 656–61), a paternal cousin and son-in-law of the Prophet as he was the husband of his daughter Fāṭima. According to Šīʿite doctrine, the I., is vested with strong religious power; he is both the spiritual and temporal head of the community, and is considered sinless and infallible (*maʿṣūm*). The institution or office of the Šīʿite I. (the "imāmate") was firmly established in Iraq, Iran, Egypt (under the Fāṭimids) and Yemen. In the 17th cent., the two Zaydī I. of Yemen, al-Muʾayyad billāh Muḥammad (r. 1620–44) and al-Mutawakkil ʿalā Allāh Ismāʿīl (r. 1645–76), maintained diplomatic relations with Ethiopia during the reign of *aṣe* ↗Fasilädäs (expecting the latter to convert to Islam).

The founders of the four canonical schools of Sunnī Islamic law (*maḏāhib*, sg. *maḏhab*) – the *ḥanafī*, *mālikī*, *šāfiʿī* and *ḥanbalī*, – were accorded the honorific title of I. The first of them, Abū Ḥanīfa (d. 767), was also known as *al-imām al-aʿẓam* (the greatest I.).

In the Sunnī world, as in the case of Sudan for example, Muḥammad Aḥmad b. ʿAbdallāh (d. 1885), the founder of the ↗Mahdist state which survived until 1898, was known as *al-imām al-mahdī*.

In Ethiopia, the title was employed by rulers who sought religious legitimisation of their power, while those who saw their rule as based on more secular principles called themselves ↗*amīr* or ↗*sulṭān*. Among prominent I. were ↗Abādir ʿUmar ar-Riḍā of ↗Harär and ↗Maḥfūz b. Muḥammad of Zaylaʿ. Later, ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") assumed the title of I. After his death, rulers of Harär and ↗Awsa were referred to as I. in the local Arabic sources. In Wärrä Himäno, ↗Wällo, during the 18th and 19th cent., the hereditary rulers of the ↗Mammädočč dynasty, as well as the chiefs of Gärfa, a district north of Qallu, also adopted the title. The last I. of the Mammädočč family was Muḥammad ʿAlī, known after his conversion to Christianity as ↗Mikaʾel ʿAlī. His rival, I.

Amäde Libän ("Abba Watäw"), converted with the name Ḫaylä Maryam.

I. has also been used as a proper name, taking in Wällo the form Yəmam (e.g., *ras* ↗Yəmam Gugsa), used also by local Christians.

Imperial Bodyguard

After becoming Regent and Heir to the throne in 1916, *ras* Täfäri Makʷännən (↗Ḫaylä Śəllase I) arranged for several Russian military officers (↗Russia) to train Ethiopian troops (↗Army). A year later, he formed the Imperial Guard (in 1929 renamed to I.B., **የንጉሥ ጦር**, *yänəguś ṭəbbäqa*; also **የክብር ዘብ**, *yäkəbr zäb*; s. KaneDic 1642) that reported directly to the sovereign despite the fact that it was formally under army command. Ethiopians who had undergone training in the King's African Rifles in Kenya and a few others who had learned soldiering from the Italians in Tripoli staffed the I.B.

In 1929, Ḫaylä Śəllase sought to improve the I.B.'s capabilities by engaging a Belgian military mission to train and to modernize the unit. The following year, ten Belgian officers, led by Major Dothée, arrived in Ethiopia, and eventually established bases in Arsi Aṣbi Täfäri, Däse, Goğğam, Harär, Ǧimma, Sidamo, and Wälläga. By February 1933, the I.B. had some 2,100 ↗infantry and 150 ↗cavalry. In April 1933, a Belgian security team – which included four gendarmes, a cavalry officer, and three army officers – arrived in Ethiopia. The gendarmes and cavalry officer reorganized the police while the army officers, accompanied by two Ethiopian officers who had been trained at France's St. Cyr Academy and 14 non-commissioned officers, established the I.B. Cadet Training Centre at ↗Gobba in Bale.

During the ↗Italian war of 1935–36, the I.B. constituted the most capable unit in the Emperor's armed forces. It consisted of six well-trained and armed infantry battalions and an artillery brigade with some 30 guns. Marshal Pietro ↗Badoglio, commander of Italian forces in Ethiopia, reported that I.B. units were "solid" and its troops enjoyed "high morale and an aggressive spirit". He also noted that, during the battle of Mecan Pass, the I.B. advanced against Italian forces in "rushes" and demonstrated a "remarkable degree of training and contempt of danger".

Gala uniform of the Imperial Bodyguard; photo by Marianne Franke, courtesy of the Staatliches Museum für Völkerkunde München (inv. no. 00–322 980 a–c)

However, in late 1935, Stuart Emeny, correspondent with the *News-Chronicle*, reported that the I.B.'s elite status had alienated irregular Ethiopian forces at Däbrä Bərhan, primarily because the former had "smart uniforms and superior equipment". The relentless Italian military campaign also slowly eroded the I.B.'s capabilities. By April 1936, the unit was in a state of disintegration.

When *aṣe* Ḫaylä Śəllase returned to Ethiopia from exile in Britain in 1941, the I.B. already had recruited some 2,000 personnel from refugee camps in Djibouti, Egypt, Kenya, and Sudan. Ḫaylä Śəllase appointed ↗Mulugeta Buli as commander of the revived I.B., which participated in the final allied offensive against Italian forces.

In 1955, ↗Mängəśtu Nəway replaced Mulugeta Buli as I.B. commander. During his tenure, Mängəśtu established a state security system and thwarted two coup attempts. He also selected I.B. personnel to serve in the ↗Qañňäw Battal-

ion that in 1951 was deployed to Korea to fight with United Nations forces as part of the United States 7th Division. During the conflict, 120 Ethiopians were killed in action while 536 sustained wounds. In 1960, Mängəśtu facilitated the initial deployment of some 3,000 I.B. personnel to serve with the United Nations Operations in the Congo (UNOC). By 1960, the I.B. numbered about 6,000 personnel who were organized into nine infantry battalions equipped with light armoured vehicles.

Gradually, Mängəśtu became increasingly disenchanted with the Emperor and his policies. Growing national discontent about issues such as hieratic immobility, lack of land reform, growing disparity between rich and poor, antiquated taxation laws, and widespread government corruption eventually convinced Mängəśtu that the Emperor's removal was the only way to facilitate modernization and liberalization.

On 13 December 1960, Mängəśtu Nəway and his younger brother, Gərmame Nəway, staged a coup (↗Coup d'état 1960, s. EAE vol. 2: 1081–82) while Ḫaylä Śəllase was visiting Brazil. However, the Army and the Air Force remained loyal to the Emperor. Within days, it became apparent that the coup had failed. Upon his return to Ethiopia, Ḫaylä Śəllase reorganized the I.B. to prevent further unrest.

The I.B. had a sports club, among members of which were the Olympic champions ↗Abbäbä Biqila and ↗Mammo Wälde. The I.B. jazz band was among the first of the type in Ethiopia; it produced numerous famous musicians (↗Music).

Imperial Federal Council

The I.F.C. was a legal body of the Federal Government and the highest administrative unit of the ↗Ethiopian–Eritrean Federation. However, it remained largely theoretic, as from the beginning it was limited in its activities and, against the letter of the Federal Act and of the Eritrean ↗Constitution of 1952, was fully dominated by the Ethiopian government.

The I.F.C. was created by § 5 of the UN Resolution 390 A (V) of 2 December 1950 (the wording being exactly reproduced later by the Federal Act and the Eritrean Constitution). It was decided, that the I.F.C. would be "composed of equal numbers of Ethiopian and Eritrean representatives" and should "advise upon the common affairs of the Federation". It was supposed to meet at least once a year. The I.F.C. was then established by the "Imperial Federal Council Order" of 11 September 1952. Five of its ten members were to be citizens of Eritrea, selected by the Eritrean Chief Executive (↗Tädla Bayru), and the other five designated by a Special Decree of the Emperor. The ten members of the I.F.C. were announced in the ↗*Nägarit Gazeṭa* of 30 December 1952, with later changes also being gazetted in the same journal (Marein 1955:22f., 48).

The "affairs of the Federation", which fell under the advisory competence of the I.F.C., were defined through the competence of the Federal Government. § 3 of the Resolution (and § 3 of the Federal Act) specified that the Federal Government would be responsible for defence, foreign affairs, currency and finance, and foreign

Ratification of the Eritrean Constitution of 11 August 1952 by *aṣe* Ḫaylä Śəllase I (on the right Prime Minister Aklilu Habtä Wäld); photo from ZREtra 359

and international commerce and communication (cp. Guggenheim et al. 1952:25). The jurisdiction of both the Ethiopian and Eritrean governments would extend to all matters not vested in the Federal Government. The Federal Government, according to § 5, would integrate Eritreans into its executive, judicial and legislative branches according to the proportion of the Eritrean population. However, no detail-provisions were set up how the federal legislature, judiciary and executive would be established apart from the Ethiopian government. Therefore, the Federal Act, with its very general provisions, remained the main source for the competences of the Federal Government (contrary to the provisions of the Federal Act, the Ethiopian Constitution of 1931 was then even made applicable to Eritrea by Order No. 6/1952, s. Marein 1955:23).

After UN Resolution 390 A (V) of 2 December 1950 the drafting process of the Eritrean Constitution had started under the UN High Commissioner for Eritrea (Eduardo ↗Anze Matienzo); in his meetings with Eritrean representatives he stressed that Eritrea would receive a democratic government and full autonomy within the federal system. The governments of Ethiopia and Eritrea would be distinct from the Federal Government; the authority of the Eritrean government would "emanate from the Eritrean people" (s. his Final Report, Anze Matienzo 1952, § 194). A group of legal experts studying the Resolution and the Federal Act confirmed that the sovereignty of the Ethiopian Crown would not entail the right to change the jurisdictions of the Federation (ibid. § 203). In the process of drafting of the Constitution, however, due to difficult discussions with the Ethiopian government, this distinction was not clearly regulated by the Eritrean Constitution, which came into force in September 1952. The wording of article 3 of the Constitution (and § 1 of the Federal Act) that the federation would be placed "under the sovereignty of the Ethiopian Crown" meant that the Emperor would lead the Federal Government; in practice the Ethiopian Government took over the task of a federal government, the I.F.C. becoming therefore nothing more than an advisory body within the Ethiopian Government.

The Final Report of the UN High Commissioner underlines that the sovereignty of the Ethiopian Crown confirms the formal unity of the Federation, meaning that the Federal Government would be able to act "in the name of the Emperor" (ibid. § 204); on the international level the Ethiopian Empire would not be replaced by a new entity (ibid., § 202; s. also Guggenheim et al. 1952:24). This was the practical reason which made any procedure against breaches of the Eritrean Constitution (by the Imperial Representative in Eritrea, the Eritrean government itself or the Emperor) impossible, even if it was stated several times before 1952 that the UN General Assembly could be ceased on such matters (e.g., Guggenheim et al. 1952:20–23). Already by the first election period of the ↗Eritrean Assembly the I.F.C. ceased to be of any practical importance.

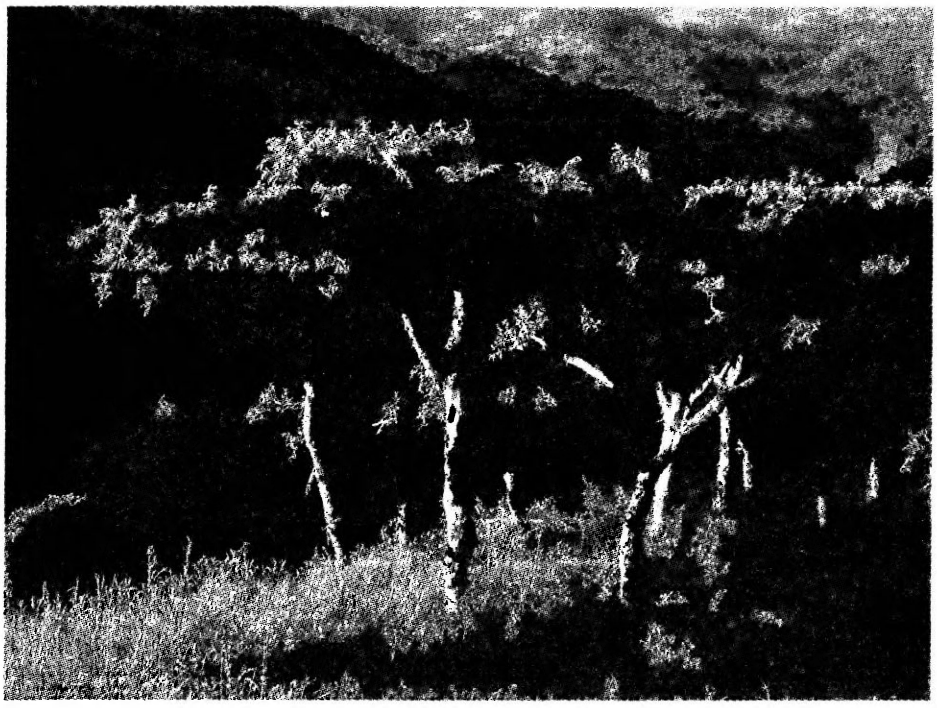
Incense

Historical background

I. (from Late Lat. *incensum*, 'burnt [matter]') is both a substance (often a mixture of aromatic gums, resins and spices) producing a fragrant smell when burned and the perfume and/or smoke thereof. Restrictively, it applies to the particular gums and resins that are, as a rule, I.'s main ingredients.

I. gums and resins are usually exuded by various species of I.-trees on incision of their bark. The most widely used sorts of I. are frankincense and myrrh – along with gold, the traditional gifts of the ↗Magi. Frankincense, or I. by excellence, is a resin of diverse *Boswellia* trees (native to ↗Arabia, ↗Soqotra, East Africa and ↗India); only two species of the genus, *B. Carteri* and *B. sacra*, release "true frankincense" – the commodity so highly appreciated in ancient times, when it was mainly burnt in honour of the gods, at funerals, and in private homes, and used as a



Incense trees of the species *Boswellia papyrifera* (Del.) in the mountains of Tämben above the Wärᶜi river, Təgray; photo 2005, courtesy of Wolbert Smidt

medicine, a spice for food or drinks as well as, to a lesser extent, in perfumery (Crone 1987:12f., 52ff.). Six varieties of *Boswellia* are known from Ethiopia and Eritrea, the main ones being *B. papyrifera* (bitter frankincense, Amh. **እጣን፡ ዛፍ** *əṭan zaf*, **መቅር** *mäqär*, Orom. *galgalem*, *kafal*, Tgn. *mäqär*, Har. *libānät*) and *B. rivae* (incense tree, Amh. *əṭan zaf*, Orom. *qura*).

Yielded by various species of *Commiphora* (native to Somalia and Arabia), of the same Burseraceae family as *Boswellia*, myrrh (Gəᶜəz, Amh. **ከርቤ**, *kärbe*) was used as an I., or an ingredient therein, and esp. in the manufacture of ointments, perfumes, and medicines, as well as in embalming, and was at periods prized much higher than frankincense. Other *Commiphora* trees (native to Somalia and India) produce an I. called bdellium, often regarded as a type of myrrh (Crone 1987:13, 53f., 67–70). In Ethiopia and Eritrea both myrrh-producing (e.g., *Commiphora myrrha*, *C. Gileadensis* and *C. Habessinica*, Orom. *čallanga/čallanqa*, Amh. *anqʷa*) and bdellium-producing species (*C. Erythraea*, Orom. *hagarsuu*, Somali *ḥagar* [*xagar*], and *C. africana*, Amh. *anqʷa*) are found.

A number of plants whose wood or bark is employed as I. (e.g., sandalwood *Santalum album*, Amh. *sändäl*), are also found in the Ethio-Eritrean region (s. Göttsch 1986:84ff.; VSAe II 102f.).

The Gəᶜəz word for I., **ዕጣን** (*ᶜəṭan*), applied both to I. in its broad meaning (corresponding to Gr. *thymíama*) and to frankincense (Gr. *libanōtós*; s. DillmLex 1018). Probably related to Semitic **ᶜṭr*, 'perfume, scent, incense' (s. Banti – Contini 1997:175), it passed into all modern Ethio-Semitic and a few Cushitic languages.

Another Gəᶜəz designation of I., **ልጦን** (*ləbn*), is used (often in collocation: *mayä ləbn*, lit. 'water/sap of the *l.*') to render Gr. *staktḗ* 'aromatic resin/oil' (lit. 'oozing out in drops [vz. myrrh]'); but also, at least once, Gr. *styrakínē* (*rhábdos*), '(rod/bar) of storax' (DillmLex 42f.), i.e., of either *Styrax officinalis*, of the Storacaceae family, or *Liquidambar orientalis*, of the Hamamelidaceae – the latter tree, native of the eastern Mediterranean, yielding an I. called storax (exported to Arabia, as well; s. Sima 2000:271 and n. 49). Gəᶜəz *ləbn* is in fact related to Semitic terms for frankincense (e.g., Arab. *lubān*, Hebrew *lᵊḇōnâ*) and storax (Arab. *lubnā*, Qatabanic *lbny*; ibid., 271f.; Bulakh 2006:189f.).

As general names for I., Gəᶜəz *ᶜəṭan* and *ləbn* were, at a certain point, interchangeable, as indicated by the alternative form Ǝṭanä Dəngəl (which is behind ↗Giovio's "Atanadingil") for the royal name ↗Ləbnä Dəngəl. Further term for I., **ስጋን** (*səḫin*), was derived from the verb **ስጎነ/ ስጎነ** (*səḫnä/säḫanä*, 'to become warm'; DillmLex 367f.).

I. was an important commercial good since ancient times. Called *ᶜntyw* ('frankincense' or 'myrrh') by the Egyptians, it was one of their significant imports from the land of ↗Punt, i.e. ↗Somalia (s. Groom 1981:22–29; Müller 1978:739f.). Frankincense was known as *líbanos* (Sem. *LBN*) or *libanōtós* (Sem. *LBNT*) in Greek, but also as *thýos*, borrowed as *t(h)us* (the pl., *tura*, meaning just 'aromatics') in Latin. Along with myrrh (Gr. *smýrna/-ē*, Lat. *murra* or *myrrha*), it held a considerable place in the classical world, particularly in Rome (from archaic symposia and funeral rituals to medicine and imperial cult, s. Treitinger 1938:67–71; De Romanis 1997), where it was primarily imported from South Arabia.

In Ethiopia, I. altars and burners found at the archaeological sites of ↗Mälazo, ↗Yəḥa, ↗ᶜAddi Gälämo, ↗Mäṭära, Darᵓa, ↗ᶜAddi Kramatən ᶜAddi Käwəḥ (all being settlements where the strong South Arabian cultural component is present) prove that in pre-Aksumite cultures the ceremonial use of I. was known (Fattovich 1990:6; RIÉ 39-46). A South Arabian origin was rightly proposed for an I. burner from Yəḥa (Anfray 1963). This draws attention to the relationship between the western coast of the Red Sea and the main areas of I. production and export – historical ↗Ḥaḍramawt, i.e. the easternmost kingdom of Arabia, and esp. the adjoining Ḏufār (Ẓufār), i.e. the southern region of today's Oman (Morris 1997). Around the mid of the 1st cent. A.D., the ↗*Periplus of the Erythraean Sea* speaks of "aloe and frankincense" as typical Arabian products, and of Kanē, i.e. Qaniᶜ (or Qanaᶜ) in Ḥaḍramawt, as the sole port for shipping frankincense, some of which, under special circumstances, was also carried out of Móscha Limēn, i.e. Khor Rori (Ḥawr Rawrī) in Ḏufār (§ 28f. and 32, ed. Frisk 1927:9 and 11).

For a short time, in the 3rd cent., Aksum exerted suzerainty, if not always direct control, over the fertile and populous southern highlands of Arabia (↗Ḥimyar), as it was again in the 6th cent., following the military expeditions of *nəguś* ↗Kaleb ƎllӒ Aṣbəḥa (↗Nağrān). These were both an attempt at recovering a lost province and a peripheral episode of the international struggle between the Byzantine Empire and the Sasanians for the monopoly of long distance trade – in which I. had a major share.

As already suggested by the Egyptian intercourses with Punt, and again by the *Periplus of the Erythraean Sea* (§ 8, ed. Frisk 1927:3), Somalia was also important for gathering and selling I. since the beginning of the "spice ↗trade", in the 7th cent. B.C. There, frankincense is still extracted from *Boswellia Carteri* (Somali *moḥor* [*moxor*]) and *B. Frereana* (Somali *yagᶜar* [*yagcar*]) trees; myrrh and bdellium from *Commiphora myrrha* (Somali *ḍeddin* [*dheddin*]) and, respectively, *C. Erythraea* (Somali *hadi*) trees.

On a lesser scale, I. could also be obtained from other areas of the Horn of Africa, namely ↗Təgray and Eritrea, where it is even now harvested from the stunted resin-bearing trees growing there. Such toponyms as Liban or Libän, found both here – e.g., a village and district near Ḥəmbərti – and in South Arabia (*LBNT*), should they be etymologically connected with frankincense, might well plead for an ancient presence of I. trees in the relevant areas (s. Conti Rossini 1931:172; Müller 1978:703; cp. Banti – Contini 1997:172f.). A similar toponym could be *ᶜəṭan zorä* (lit. 'the incense went around') appearing in a few Gəᶜəz and Təgrəññа documents where it also designates, however, a form of land grant (s. Bausi 2001:150f. and nn. 18–20).

A strategic location across the Red Sea, opposite to the south-west of Arabia, and a growing involvement in Roman and then Byzantine politics granted Aksum, with its "port of trade" of Adulis (Fiaccadori 2004:112, 118ff., 128, 137f., 154), a unique position within the vast trade network covering the countries between the Mediterranean Sea and the Indian Ocean (Id. 1992:45–48 and passim, figs. 5–6 [xxviii, xxx]), and including the I. route that ran along the western edge of Arabia's central desert (the ancient country of the Gebbanitae), from Šabwa(t) in Ḥaḍramawt to the north of Sinai and the town of Gaza (Crone 1987:17–26, 37ff., 42–45) – which is indeed tied to ↗Makəddа in Ethiopic tradition. Along this inland caravan route "in sixty-five stages divided by halts for camels" (Pliny, *Nat. hist.*, XII, 30, 54 and 32, 63f., ed. Rackham 1945:38 and 44, 46), not only did the Arabs – chiefly Minaean, Gerrhean and Nabatean distributors and cameleers – bring I. to the Roman market, but thwy also transported spices, gold, ivory, pearls, precious stones, textiles and other goods, all of which arrived at the local ports from Africa, India, and the Far East.

Greek writers of the Roman and Byzantine periods attest to frankincense's pivotal role among the products of Aksumite trade. In the 1st cent. B.C., the geographer Artemidorus, whose lost work is partially embodied in ↗Strabo's, compares the immense traffic along the desert routes to that of an army: the Sabaean merchants "trade in aromatics, both the local kinds and those from Ethiopia; to get the latter they sail across the straits in leathern boats" (*Geogr.*, XVI, 4, 19, ed. Jones 1930:346, 348). From Somalia, I. seems to have been transferred to Qaniᶜ and then exported to the north along with South Arabian produce (Groom 1981:147). For the 6th cent., however, ↗Cosmas Indicopleustes informs that from "Barbaria", i.e. Somalia, "most aromatics", namely "casia, sweet flag, and many others", were shipped to Adulis (*Top. Christ.*, II, 49, ed. Wolska-Conus 1968:358), which played a central rôle in the regional commercial network, being

at the head of the subsequent sea and land trade route to (and from) the Nile delta (Fiaccadori 2004:121, 126).

This old political and commercial system, with its Indian Ocean extension, suffered greatly, from the 570s, because of the Sasanian presence in Yemen (↗Iran) and, before that, owing to a heavy reduction in I. demand by the Roman market (Crone 1987:27ff.). It was finally to collapse, as no longer of economic consequence to the Mediterranean world, by the mid-7th cent. The subsequent expansion of Islam into the Red Sea and to Egypt, and the ensuing diversion of traffic to the Persian Gulf and the overland routes of Arabia (ibid. 26–29), sealed the decline of Aksum, too, as a trading and maritime power.

I. fortunes would not revive to a recognizable level until the 9th cent., as did sea-trade in the western Indian Ocean, yet with a quite different orientation (on the Persian Gulf and the new Abbasid capital, Bagdad), the Ethio-Eritrean region being unable to resume its old role. Following the inland retreat of the Christian kingdom, I. trade transformed itself, rather, into a local African issue, the main historical markets for it and related products becoming, over the next several centuries, ↗Berbera, ↗Zaylaᶜ and ↗Mäqälä.

At the beginning of the 17th cent., myrrh and frankincense – the former at least being exported, inter alia, from Somalia (Zaylaᶜ and Mogadishu) to the Arabian trade port of al-Mūḫa (s. DonMurad 52) – ranged among the stuff "of little value" and "null importance", at the lowest grade in the list of average prices for aromatics (Brouwer 2007:81f., 89). Myrrh was also exported from Zaylaᶜ to Massawa (DonMurad 143).

Maria Bulakh – Gianfranco Fiaccadori

Use of incense

I. produces its typical perfumed smoke when burnt on charcoal, either in fixed burners or, as prescribed by Church practice, in portable censers (↗*Maᶜəṭänt*) – live coals (*fəḥm*), then, being often made from ↗acacia wood. The I. burner for private (profane) use is normally made of clay, and is an open vessel with a decorated or glazed foot.

I. is used in Christianity, Islam and other religions in the Horn of Africa. Widely used as a

↗trade item, both in the inner and outer markets, I. is frequently sold or exchanged even by clergymen (PankSoc 47, 50, 252). Frankincense is one of the important export goods in Ethiopia, though the largest share of the product is consumed inside the country. Whereas the overall production is estimated at over 30,000 tons annually, from 1995 to 2000 Ethiopia exported between 800 and 1,800 tons of I. per year, mainly to Europe and the Near East.

Several grades of quality of frankincense are recognized on local markets, mainly according to the colour of the resin: white (the highest quality), black (older resin, lower quality) and red (low quality, can contain pieces of wood). Frankincense is also classifiable according to its origin, e.g., Təgrayan'(good quality), Asmära (somewhat lower quality, black), Ogaden (low quality, used in perfumery) etc. The highest quality (whitest) grains are offered for worship in the church. Medium quality frankincense used in the home is often referred to in Amharic as *set ʿəṭan* ('ladies' I.'). Mixtures of various aromatic materials can be employed as substitutes for frankincense, as a low quality I. called *məṭṭən ʿəṭan* ('measured I.'). Mixtures based on frankincense are especially popular among Ethiopian Muslims. Two most widely used sorts are *lubanǧa* (high-quality mix imported from South Arabia, Djibouti, Somalia), and *misketi* (produced in ↗Dərre Dawa; among its ingredients are *lubanǧa*, sugar, and sandalwood powder). In Harär I., called *mustaka*, is used for chewing.

There are hints that I. was used in the rituals of ↗traditional religions, vehemently fought by the Church (cp., for instance, the Acts of ↗Fəre Mikaʾel, reports how the saint found I. of "sorcerers" and destroyed it; Turaiev 1905:8 [text]). In the Ethiopian highlands, the clergy exhort people to use sandalwood to perfume their homes and preserve the use of frankincense for church worship (cf. Ex 30:37–38). Still, I. is often used for divination; it is related to the domestic cult of the *adbar* ↗spirits. Since the mid-20th cent., I. has been an essential component of the Təgrayan and Amhara ↗coffee ceremony (with priests blessing the smoke to make sure it is directed to God).

The ↗Arbore in southern Ethiopia use I. in the ceremonies of the *ayaan* cult. It is burnt to protect the houses. Small amounts of I. (*gudunte*) are worn wrapped in cloth by members of certain clans to protect against cursing, to bring well-being and to give the power to bless. Additionally, little pieces of I. can be spit onto people, sacrificed animals and places to bless them.

I. is also widely used in the practices of Islam, its use deemed to be recommended by the *sunna* of the Prophet ↗Muḥammad where the *ḥadīṯ* enforce the (limited) use of perfume. I. is burnt in ↗mosques during the daily and Friday prayers. The tradition of ↗Harär encourages people to give thanks to God at dusk, and ask him to remember the dead of those whose names they spell out on offering I. at the bottom of certain trees and rocks (the *iǧāb*). As the cheapest and most widely available type of offering, I. is a central item in the veneration of Harari saints (↗*Āw*). I. is brought to the saints' shrines during the *ziyāra* (↗Pilgrimage), and is constantly burnt during prayers, in order to please the saints. Burning I. is usually the task of the *murīd*, the shrine leader. I. is regularly burnt at socially appropriate times and generally accompanies short *duwā* (Arab. *duʿāʾ*) prayers. It is credited with the ability to establish connection to the spiritual world, accelerate the speed of prayers reaching their destination, facilitate communication with the spirits, and gladden angels responsible for opening the gates to heaven. Smoke rising from I. is believed to have the power to dispel evil, drive demons away, and safeguard a person's life and property. It is an indispensable element of the *mistiǧāb*, i.e. the ritual of "feeding the deceased", which takes place at the end of the day. Usually performed by the eldest female in the household, the ceremony includes placing the I. burner at the doorway of the main room and throwing I. onto the hot coals, accompanying these gestures by prayers for forgiveness (Gibb 2006:130).

Kerstin Volker-Saad – Red.

Use of incense in the liturgy of the Ethiopian Orthodox Church

Although strictly forbidden in the worship of the early Church because of its association with "pagan" worship, especially of the Roman emperor, the use of I. spread throughout the Christian world soon after Constantine allowed freedom for the Church (313). By the end of the century, a sig-nificant change of attitude began that led to the full integration of I. into Christian liturgical practice – probably, more for secular than for religious purposes, as a means to create pleasing odours at banquets and funerals (Taft 1978:150). To this fumigatory use, others were soon added: honorific, when objects (such as icons, gifts, or the altar), or persons are censed in veneration; exorcistic, clearing away evil spirits (e.g., from the church, censed at the beginning of a service); oblationary, when I. is burnt in offering, as a sign of propitiation, according to a notion esp. found in Syrian and Coptic traditions.

The Church developed her liturgy in continuity with the O.T., fulfilling its typology in her rites on the basis of the biblical text, although not literally: e.g., the preparation of I. (Ex 30:34–39); the burning of I. every morning and evening (Ex 30:1–10); the symbolism of the glowing coal (Is 6:6); the association of the fragrant perfume rising up with the prayers of the saints ascending to God (Rev 5:8; 8:3–4); the evocation of the bloodless sacrifice of the ↗Eucharist offered with sincerity throughout the world (Mal 1:11 quoted in the Anaphora of St. Mark); the sacrifice of Zechariah (Lk 1:11). Ps 141:1 ("O Lord, I have cried towards you, ... Let my prayer go up like incense, an evening sacrifice"), always linked with evening services, is also quoted at the "blessing of I." in each service. I. emphasizes the rapport obtained between the liturgy accomplished here and now and the heavenly liturgy (Rev 4-5). In the Ethiopian Orthodox Täwaḥədo Church, as in all other Eastern Churches, I. is compulsory at every service – with the exception of the rites of Penance (↗*Nəssəḥa*) and the Reconciliation of Apostates (*Mäṣḥafä* ↗*qedər*). A large church is believed to use up to 150 kg I. per year (mostly frankincense of the highest quality).

I. is indispensable during marriage (↗Matrimony), ↗birth, ↗baptism and ↗funeral rites.

I. is blessed and offered by the priest (or ↗*eppisqoppos* or ↗*qomos*, when present) according to the order of the 'Prayer of I.' (*Ṣälotä ʿəṭan*). Each morning, every church celebrates the *Ṣälotä ʿəṭan* alone or during the ↗*Maḫlet* or ↗*Säʿatat*, according to circumstances; the service is always concluded by the *Ṣälotä kidan* ('Prayer of the Covenant'). On the eve of solemnities, it is done during the ↗*Wazema*. At Mass, the blessing of five selected grains of I., and then the main incensation, using three of them, take place during and after the ↗*Bäʾəntä qəddəsat* litany, resp. Followed by the Liturgy of the Word, this solemn incensation constitutes the last of the ancient Entry rites (MQ 23–27, nos. 99–130; MD 37–43, nos. 98a–130):

1. *Aśərqot* (stating the date of the current service in order to relate it to the Incarnation and Work of Jesus Christ; cf. MD 37, no. 98a).
2. Prayer (MD 37, no. 99).
3. Invocations (MD 37, nos. 100–02).
4. Blessing of the five grains of I. (MD 37f., nos. 102–04).
5. Laying of three grains of I. and first I. offering (MD 38, nos. 105–07).
6. Prayer of the I. (MD 38f., nos. 108–10).
7. Triple intercession around the altar for the Church, the hierarchy, and the assembly (MD 39, nos. 111–17).
8. Dialogues and Hymn of the "Golden Censer" (MD 40f., nos. 118–122).
9. Solemn incensation of the altar and the four corners, the bishop and priests, the doors, and finally around the altar and the offerings (MD 41ff., nos. 123–30).

Each major offering of I. is an act of adoration of the Holy Trinity: when the priests either turn towards the four corners of the church, or stand before the altar and walk around it, or walk round to each of the doors of the building. According to oral tradition, the latter, unique to the Ethiopian Church, represents either the adoration of the faithful which has risen to heaven (Rev 8:3-4), or their veneration of the saints represented on the murals and the icons. There are usually three entrances to the church, corresponding to the categories of the faithful modelled after Noah as priest, his male, and female relatives when they boarded the Ark. The I. offering at the northern door carries to heaven prayers of men; at the southern, of women, at the centre of the *qəne maḫlet*, of the clergy.

Since St. ↗Ephrem (d. 373), I. has also been offered for the expiation of sins (e.g., MD 37f., 47, nos. 99, 102, 105, 151), particularly in Syrian and Alexandrine contexts (Taft 1978:150; cf. Ligier 1963:24–48), but also in Ethiopian tradition. In Orthodox theology, though I. symbolizes the believers' entreaty for forgiveness, the latter is actually granted through Jesus Christ's work of redemption made present for the congregation in

the Eucharist. I. symbolically expresses the expiatory character of the Eucharist; in no way, however, is it meant to replace or parallel the Eucharist. The "pure I." that is offered represents the pure prayer coming out of pure hearts; these prayers are answered by God through the communion in the Eucharistic flesh and blood of Jesus Christ whereby communion with God is achieved.

The fourth grain of I. blessed at Mass is offered as an act of reverence to the Gospel book before it is read; the fifth grain, as an act of reverence to the Eucharistic bread and wine, generally before the Institution Narrative (MD 52f., no. 188; 73, no. 34). The priest also offers I.: after the reading from the *Acts of the ↗Apostles*, during the hymn *Zəwəʾətu gize* ('This is the Time ...'), as he recites the "Prayer of the Gospel", and again before the Creed (MD 47–50, 51, 63, nos. 151–73; IV, 28ff.). The assistant priest incenses for most of the remaining time: going to and from the *betäleḥem*, accompanying the Gospel before and during its reading, during the *Särawitä mäläʾəktihu* ('The Hosts of the Angels'; MD 77, nos. 63–65), the *əgziʾota* (MD 81, nos. 92–93), and whenever he is free from any other work. Finally, the priest perfumes his hands with I. before he blesses each member of the congregation after the final blessing.

It is worth noting that, during the celebration of the Ninth Hour of Good Friday, frankincense is replaced with myrrh (*kärbe*), in keeping with the Gospel account on the death of Jesus (cf. Mk 15:23; Jn 19:39; *Wəddase Maryam*, strophe 3 of Thursday; VelMe I, 84; II, 291; cf. Mt 2:11).

Only bishops and priests may hold the censer by its top for offering I., as Aaron did in the O.T., and the Heavenly Priests (s. *↗Kəhnät*) in the N.T. Likened to the Levites, deacons may help with the coals or with carrying the container of I. (*muday*), but not with offering I., since it is a significant liturgical function. Disobedience to this rule is liable to punishment, and the *↗Andəmta* recalls instances in which individuals have transgressed it in the past: the *Andəmta* commentary of Cyriacus of Behnesa's Anaphora of Mary (Böll 1998:103f.) mentions how King Uzziah was affected by leprosy (2 Chr 26:19f.) and how the rebellious sons of Korah were swallowed by the earth (Num 16–17:15; mentioned already in the *↗Didəsqəłya*, s. Harden 1920:49, 92).

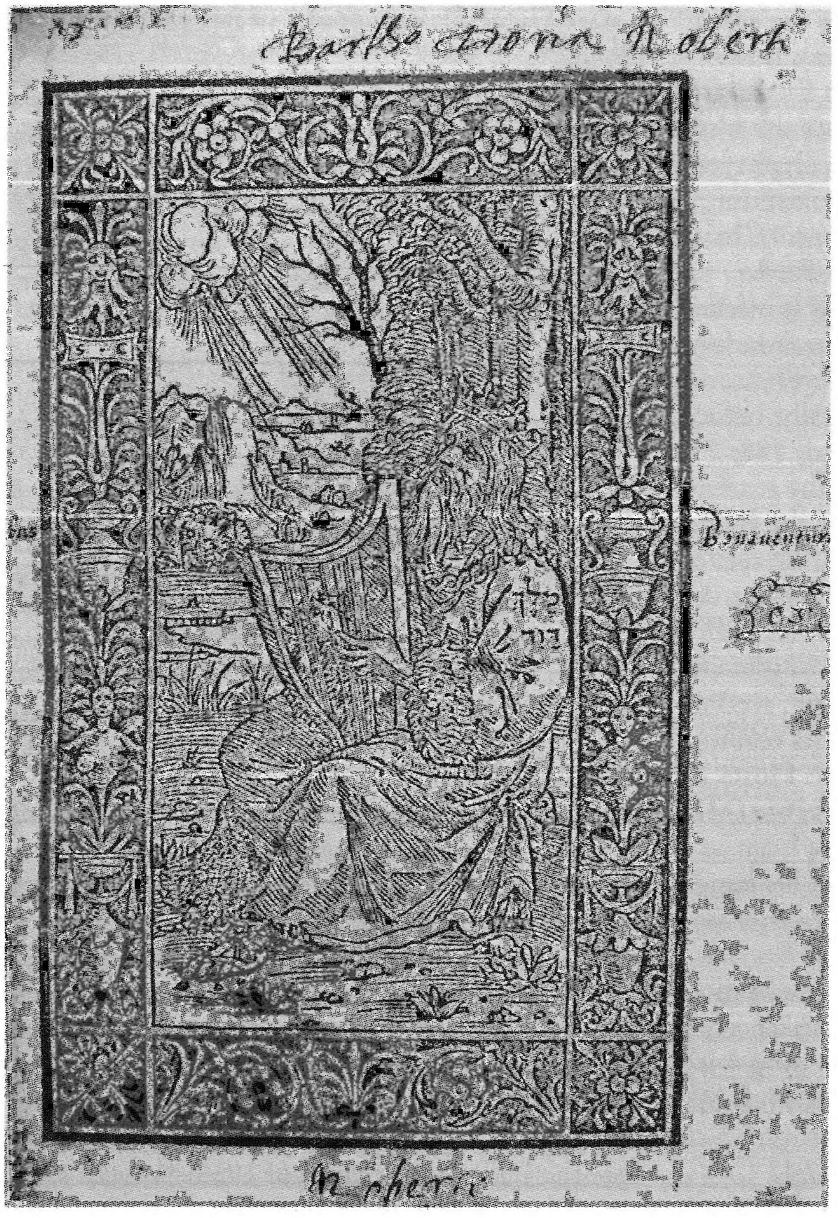
Incunabula

I. (pl. of Late Lat. *incunabulum*, lit. 'swaddling clothes, cradle', hence 'cradle books', i.e. books of the early days of printing) are technically the earliest printed books, dating from the invention of movable type in ca. 1440/50, up to 1500 (or 1520). No such books exist in Ethiopia or in Ethiopic, but the term was effectively usurped by Stephen Wright (1967) to style, with a few arbitrarily limitations, all printed books produced in Ethiopia (including then the former Colonia Eritrea) before the Italian occupation of 1936–41 – the earliest of them dating from 1864.

Originally, the term brings into relief the formative period of typography, with such celebrated 15th-cent. printers as Johann Gensfleisch zum Gutenberg and Aldus Manutius. It is therefore fitting to describe here those books that bear witness to the beginnings and early development of printing with Gəʿəz movable type, albeit issued in Europe, during the 16th cent., which were sometimes designated for circulation within Ethiopia proper (cp. Smitskamp 1992:XLf.).

Early printed books focusing on Ethiopia but published in other languages than Gəʿəz, even if they belong in the same cultural framework – e.g., the anonymous *Carta das novas que vieram a el rei nosso senhor do descobrimento do preste João* (Lisboa 1521), about the expedition by de ↗Lima, or the better known works by de ↗Gois (1533 and 1540) and ↗Alvares (1540) – will not be taken into consideration here.



King David playing the harp, frontpage of Potken [*Psalterium Davidis*], Rome 1513, with notes in Hebrew and Latin; Roma, Accademia Nazionale dei Lincei, ms. Conti Rossini 12, from Strelcyn in PICES 4, vol. 2, 23, fig. 8

16th-cent. Ethiopic printed books

Apart from the woodcut "Alphabetum Ethiopicum" (a Gəᶜəz syllabarium) found in Bernard von Breydenbach's *Sancte peregrinationes or Opus transmarine peregrinationis* (only by artificial convention, *Peregrinatio*[*nes*] *in Terram Sanctam*), printed at Mainz in 1486, at Spira in 1490, 1502 and 1503, with interesting remarks on the "Indians or Abyssinians" (CerEt vol. 2, 299–318, pl. XXIII [figs. 25–26]; Lefevre 1966:12f., ill.; Smitskamp 1991:245, no. 241k; Bobzin 1994:92–96 and 101, fig. 3; Pelusi 2000:168f., no. 112), the first book printed in Gəᶜəz was the ↗Psalter published in 1513 by the provost of Cologne, Johannes ↗Potken, which still remains the cornerstone of Ethiopic I. (Smitskamp 1991:227f., nos. 233f.).

In 1511 Potken met Ethiopian monks at ↗Santo Stefano dei Mori in Rome; two years later he had an Ethiopic type cut. With the aid of monk Tomas Wäldä Samuᵓel he was thus able to issue a handsome quarto of the Psalter, printed in Rome by Marcel Silber (alias Franck) and paid for by Potken himself – who called Gəᶜəz "Chaldaic", possibly conforming to a designation used by the monks of Santo Stefano in accordance with their beliefs about the origin of that language (Bobzin 1994:82–86; Contini 1994:87ff. and nn. 40–41). The Psalter was followed by a selection of Old Testament Hymns and by the Song of Songs (a combination typical for Gəᶜəz manuscripts), as well as by a Gəᶜəz syllabarium and a short grammar – a list of numerals with a few remarks about their use and pronunciation – meant to acquaint the reader with the Ethiopic language and script. The first page of the volume, standing for the titlepage, has a red woodcut of David playing the harp with no inscription (Lefevre 1966:15–24, ills.). It was the first work to offer to Western *literati* a text of substantial length in an exotic character other than Hebrew.

On returning to Cologne, Potken took the type with him and in 1518 had Johann Heil print the *Psalterium in quator linguis*: *Hebraea, Graeca, Chaldaea, Latina* (Smitskamp 1976:16, no. 4 ; Bobzin 1994:86–92 and 99, fig. 1). Later, he published four leaves containing, among others, the *Oratio Dominica*, the *Salutatio angelica*, and the *Symbolum Patrum*, as well as, again, a Gəᶜəz syllabarium and a short grammar (Wijnman 1960:xv, dating those leaves to 1522, yet with no source).

In 1539, Teseo Ambrogio degli Albonesi issued an *Introduction to the Chaldean Language*, i.e. Ethiopic, that also included a Gəᶜəz syllabarium, and was printed in Pavia by Giovanni Maria Simonetta (Smitskamp 1991:238–41, no. 240; Pelusi 2000:167f., no. 110).

In 1548, the second most outstanding Gəᶜəz book of that century was printed by the Dorigo

brothers in Rome, the edition of the New Testament by ↗Täsfa Ṣəyon (who was helped by Tənsaʾe Wäldä Mässäle, Zäśəllase and other monks of Santo Stefano dei Mori). The running commentary Täsfa Ṣəyon provided throughout is of great interest. The initiative in publishing this book clearly came from the so-called Catholic reformed circle, led by cardinal Nicolò Ridolfi, and its growing attention to Oriental studies as a key to the most ancient biblical text. Täsfa Ṣəyon, on his part, wanted the edition to compensate for the Gospel books burnt by ↗Aḥmad b. Ibrāhīm al-Ġāzī (an interesting note on him is found in Täsfa Ṣəyon's commentary, c. 100v). A new font was cut, and the volume came out as a magnificent quarto in eighths printed in red and black, ornamented with woodcut images and borders (Löfgren 1965:160ff.; Juel-Jensen 1996:488–93). In addition to the Gospels, the edition included the Revelation, the Catholic Epistles and the Acts of the Apostles, along with the *Introitus Missae*, three of the most commonly used Anaphoras (i.e., those of the Apostles, of the Lord and of the Virgin Mary). As he could not find a complete Ethiopic translation of the Pauline Epistles, Täsfa Ṣəyon only included that to the Hebrews. A Gəʿəz syllabarium was added, copied from Potken's *Psalterium*.

The Ethiopic "title page" exhibits different recipients and different coats of arms for each single copy (at least three exemplars are known printed on vellum): Pope Paul III was the main dedicatee; other recipients, beside cardinal Ridolfi, were his colleagues Giulio della Rovere, Ranuccio Farnese and Giovanni Maria Giocchi (later Julius III), Reginald Pole and Juan Alvarez, as well as the emperors Henri II of France and Charles V of Spain. A copy was given by Täsfa Ṣəyon to a fellow countryman, Säwa Dəngəl, with an autograph presentation inscription complaining of "the many mistakes, for the printers were ignorant of our language" (Juel-Jensen 1994–96:441f. and fig. 8; cp. Smitskamp 1994, no. 85). In December 1548, thanks to the mediation of Cardinal Pietro Bembo, Täsfa Ṣəyon obtained a copy of the Pauline Epistles from the Ethiopian community in Cyprus (Raineri 1984; Juel-Jensen 1994–96:491). The manuscript, now kept in Florence, (Biblioteca Medicea Laurenziana, Pal. Or. 70 [ex xvi] = Aeth. 3) has pen-marked typography direction and two proof-read bifolios interfiled (s. Marrassini 1984–86:88–91, no. 2). He had the text issued in 1549 by the same printer as a second volume of the edition (Guidi 1886:273–78; Raineri 1984:396).

Aided by Bernardino Sandri of Cremona and Pietro Paolo Gualteri of Arezzo, in 1549 Täsfa Ṣəyon published in Rome one (or two) small quarto(s) with woodcuts: the *Modus Baptizandi* ... (the Baptismal service, including a translation of the 1541 letter from *aṣe* ↗Gälawdewos to Pope Paul III, for which cp. Raineri 2005:79–83, no. 13) and the *Missa, qua Ethiopes communiter utuntur, quae etiam Canon universalis appellatur*, in fact, the last part of the previous edition (Juel-Jensen 1994–96:493–96). The background to it was the widespread belief that the Ethiopians baptized their infants with fire (s. Fiaccadori 2005:45f. and nn. 12f.; ↗Baptism; ↗*Qəddase*). Täsfa Ṣəyon was assisted by his friend Mariano ↗Vittori of Rieti, who later used the New Testament's font to publish the first Gəʿəz grammar (Romae 1552).

In 1583, Joseph Scaliger issued in Paris the treatise *De emendatione temporum*, with many eastern calendars, among them the "Ethiopian computus". Seven full-pages of Ethiopic type were printed in red and black from wooden blocks. Scaliger gives the Ethiopic text first, then its Hebrew equivalent, in the third column the pronunciation and, finally, Latin translation in the fourth (Smitskamp 1976:59, no. 64). The second ed. (Leiden 1598) had the same passages set with new Ethiopic (and Arabic) movable type-faces probably designed by Josse de Hondt (Jodocus Hondius) and cut by Thomas de Vechter (Wijnman 1960:23; but cp. Smitskamp 1976:60, no. 65).

Gianfranco Fiaccadori – Bent Juel-Jensen

Early prints in Ethiopia and Eritrea

The first printed material circulating in Ethiopia and/or Eritrea comprised a number of books mostly with biblical texts, published abroad and imported by different missions. An active role was played by the ↗British and Foreign Bible Society, the ↗Church Missionary Society (esp. by ↗Isenberg) and the press of ↗St. Chrischona-Pilgermission. In the first half of the 19th cent., it was much easier to import printed matter into the region than to set up a ↗printing press – an innovation for the local cultural tradition that would also have to be operated in conditions of constant political instability. Still largely unexplored, these "I." are of primary importance for the understanding of the period in which they were produced.

Early books printed in the Colonia Eritrea

The first book printed in the region was most probably the "Amharic catechism", or a Təgrəñña translation of it, "composed, printed and published by bishop Lorenzo ↗Biancheri" at the Imprimerie Catholique of Massawa in 1864 (s. Fumagalli 1893, no. 2677): information on it is most uncertain, as no exemplar seems to be extant; consequently the book has been equated to a unique 1867 exemplar in Təgrəñña, with similar title, content, and printer, kept in the library of Scuola Orientale of the University of Rome (Strelcyn III, 39). A few years after Biancheri's death, however after 1867, the press went out of use.

The next book, a ↗*Säwasəw* compiled by *abba* Gäbrä Mikaʾel and revised by *däbtära* ↗Kəflä Giyorgis was issued in 1879 at a small printing press set up by the ↗Lazarists in Kärän. It was followed by other religious books in Amharic and Təgrəñña (Fumagalli 1893:271), most of them for the Catholic Church – e.g., the *Təmhərtä krəstiyan* prepared by ↗Coulbeaux and Kəflä Giyorgis (1880), and the *Śərʿatä qəddase zäbetä krəstiyan katolikawit* ... by Coulbeaux (1890). By 1907, some 20 books had been produced at this press (Strelcyn III, 39).

The ↗Franciscan printing press, set up in Asmära ca. 1912, printed ca. 120 books before 1934. The ↗Swedish Evangelical Mission at Ǝmkullu printed nine books between 1885 and 1895. It was then transferred to Asmära where it produced ca. 130 more titles (Strelcyn III, 39f.), working until 1934.

These first "I." were chiefly biblical books or renarrations of biblical stories, different religious and/or didactic books, as well as syllabaries, grammars of local languages, and lexicons. Since printed books were intended mostly for the needs of the missions and their schools in particular, indigenous languages of the region – Təgrəñña, Təgre, but also Amharic and Oromiffa – were given preference. The presses were operated by Europeans, and many of the books were prepared by Europeans as well – Olle Eriksson, Karl Rodén, Wilhelm Norlén, Teresa de Pertis etc., with the help of local converts.

Some of these "I." were written and printed in Eritrea by the critics of the politics of the Ethiopian regime: e.g. the treatise *Aṭe Mənilәkənna*

Ityoṗya by ↗Gäbrä Ḥəywät Baykädañ that appeared in the Swedish Protestant missionary periodical ↗*Bərhan yəḵun* (Wright no. M9) and fostered the Ethiopian discussions on "modernization", or Afäwärq Gäbrä Iyäsus's poem on *ləğ* ↗Iyasu's deposition (Fusella in PICES 5a). Such Eritrean early printed books as *Yä'ityoṗya ḥəzb tarik* by *aläqa* ↗Tayyä Gäbrä Maryam (1922 and ²1927; Wright nos. M15 and M33) were widely known and distributed in Ethiopia as well.

The thematic range of early Eritrean "I." in local languages remained quite narrow even in the first decades of the 20th cent., the main share continuing to be held by religious texts. A number of Italian printing presses in Asmära and Massawa (e.g., La *Tipografia Militare di Massaua, La Tipografia e Libreria Italiana*) issued books, booklets, newspapers, leaflets, forms etc., mostly serving, however, the colonial administration and the Italian community (Strelcyn II, 114–21, and in III, 41f.).

Books printed in Ethiopia

In Ethiopia proper, the early printed matter was supposed to meet the needs of the nascent institutions of the modern Ethiopian state, its political leadership and culture. At the same time, traditional ↗manuscript culture was still flourishing. Here, printing is believed to have started with the establishment of the French St. Lazare printing press in ↗Dərre Dawa and the Imprimerie Éthiopienne (የኢትዮጵያ፡ መንተሚያ [Yä'ityoṗya M[äḫ]atämiya], later ሞርሐ፡ ጥበብ [Märḥa Ṭəbäb]) in Addis Abäba in 1908 and 1910, respectively; nonetheless, at least one earlier printed work, though of obscure origin, is known, the edict of 1899 A.M. [1906/07 A.D.] regulating the import and export of alcohol (Strelcyn II, 99, no. x1). To the same category – less known and consulted by historians, yet of major importance – also belong other printed works of government decrees and orders. In addition to the aforementioned edict, we know of, e.g., the *Rules* (*Dänb*) concerning issuing documents to Ethiopians going abroad, of 1908 A.M. [1915/16 A.D.] (Strelcyn II, 99f., no. x6); the *Rules of the Loans* and the *Rules Concerning the Administration of the Slaves and Freedom*, both of 1916 A.M. [1923/24 A.D.] (Wright nos. C14 and C15). A large number of documents relating to the operation of the Addis Abäba–Djibouti ↗Railway was also issued by St. Lazare printing press (Strelcyn III, 46).

Some official documents were printed in two versions, usually Amharic and French: e.g., the *Statutes of the National Bank of Ethiopia* of 1932 (Wright nos. E8 and D7); cp. also the regulations regarding the ↗Special Court (Strelcyn I, 468, no. B1).

The earliest printed laws were the Penal Code of *Mäskäräm* 1923 A.M. [1930/31 A.D.] (↗Criminal Codes), followed by the first Ethiopian ↗Constitution of 9 *Ḫamle* 1923 A.M. [16 July 1931 A.D.] (Wright nos. C37, and D8: Imprimerie du Régent Ras Tafari [set up in 1929; after 1941 ↗*Bərhanənna sälam*] and the Märḥa Ṭəbäb respectively).

Printing was quickly adopted for political purposes. Whilst the will of *aṣe* Mənilək II concerning his successor to the throne, *ləğ* Iyasu, was apparently written down and read publicly (s. GueCopMen 541f.) but not printed, the "manifest" on Iyasu's deposition of 18 *Mäskäräm* 1909 A.M. [28 September 1916], produced at the Imprimerie Éthiopienne, became the earliest "political I." (Morin 1999:260). The next to appear was a poem on the battle of ↗Sägälle, praising the victorious party, written and privately printed by *aläqa* Gäbru (Fusella in PICES 6). It was followed by a number of panegyric works, mostly by courtiers and high-ranking officials, extolling on different occasions *ətege* Zäwditu, *ras* Täfäri (future *aṣe* ↗Ḫaylä Śəllase I), *ətege* Mänän etc. (Wright nos. A6; Strelcyn II, 98, no. S3; ibid. 83f., nos. E1–3; for a poem in honour of *ləğ* Iyasu, cp. Strelcyn II, 75, 99, nos. A2, X4–5), "addressed" to them (Wright no. C10), or describing their activities (Wright nos. C9, 21). Also remarkable are two programmes of *ras* Täfäri's ↗coronation festivals, printed at Märḥa Ṭəbäb press in 1928 and 1930 (Wright nos. D6–7; Strelcyn II, 83, no. D2).

Still, the bulk of early printed production was composed of church books. Many of these were issued at the Imprimerie du Régent Ras Tafari Makonnen. The remarkable feature of these books was the addition of Amharic translations or traditional commentaries (↗*Andəmta*) to ↗Gəᶜəz texts, an innovation which was not always welcomed by the Ethiopian Church. Among these "I.", in fact, were the most important church books, such as the ↗*Wəddase Maryam* (1915 A.M.; Wright no. C5), the ↗*Təmhərtä ḫabuʾat* (Strelcyn II, 79, B20); the *Mäṣḥafä* ↗*qəddase* (1918 A.M.; Wright nos. C19–20) in Gəᶜəz with Amharic translation; the homilies of ↗John Chrysostom (1915, 1923 and 1924 A.M. [Wright nos. C7, C39, C40]), the *Mar Yəsḥaq* (↗Isaac of Nineveh) and the *Mäṣaḥəftä mänäkʷäsat* (ibid. C28; cp. ↗Monastic literature).

Biblical texts held a central position. In 1924–25, the Imprimerie du Régent Ras Tafari printed the Gospels (Wright no. C16) and the books of Solomon and Sirach (ibid. no. C17; cp. Strelcyn I, 510, no. C5) with Amharic commentaries. In Dərre Dawa, St. Lazare press issued in 1924 Ezekiel with an Amharic translation prepared by ↗Kidanä Wäld Kəfle at the request of *ras* Täfäri (ibid. no. S3–4). The production of religious books in other Ethiopian languages was insignificant (but the Imprimerie du Régent Ras Tafari issued the Gospel of John in "Galləñña", i.e. ↗Oromiffa, in 1921; Wright no. C27; cp. Strelcyn III, 48f.).

The Bible was immediately followed by Orthodox doctrinal books (e.g. the *Məṣtirä śəllase*, s. Wright no. A1), as well as pious and didactic books, in a few cases prepared by missionaries (or translated from Protestant works, such as Strelcyn II, 81, no. C28). The Goha Ṣəbaḥ printing press, associated with *blattengeta* ↗Həruy Wäldä Śəllase, produced religious literature for the missions: e.g., the Gospel of Matthew in "Gudela" (↗Hadiyya) in 1935, for the British and Foreign Bible Society (Wright no. E26; cp. E28, 29, 31). The same printing press worked for the Adventists (Wright nos. E9–11, 16, 18, 20) and, eventually, for the Swedish Evangelical Mission (ibid. E25, 30). In 1935, the Imprimerie Artistique (the future ↗Artistic Printing Press) printed an Amharic translation of J.E. Esslemont's *Bahá'u'lláh and the New Era* (Wright no. H3) for the newly established ↗Bahā'ī community, a mark of the vivid and "cosmopolitan" atmosphere of pre-war Addis Abäba.

The most interesting among the Ethiopian "I." are printed works marking the beginning of Ethiopian public debate: patriotic poems, speeches and treatises discussing the way for the Empire to follow and the contemporary situation of Ethiopia, increasingly precarious in the 1930s. Together with a few early newspapers (↗Press; ↗*Bərhanna sälam* weekly playing the leading role), they constituted a small forum of the nascent Ethiopian "intelligentsia". The scene was dominated by Ḫəruy Wäldä Śəllase, who by 1935 had published over 20 works, some of them twice (mostly in the Imprimerie du Régent and Goha Ṣəbaḥ). Other voices were those of ↗Gäbrä Ḫəywät Baykädañ with his pioneering *Mängəśtənna yäḥəzb astädadär* (printed posthumously, s. Wright no. C12), or ↗Afäwärq Gäbrä Iyäsus with speeches on entering the office of the customs director (Strelcyn II, 100, no. X7), and *bäğərond* ↗Täklä Ḫawaryat on the new Constitution etc. (Wright no. C43; Strelcyn II, 82, no. C35).

Though in quality, technical and artistic execution, most Ethiopian "I." are hardly comparable to those of other Oriental countries with a similarly recent printing tradition, e.g., Turkey (Rohnström 1988), the quantitive growth of Ethiopian print production during the 1910s–30s was remarkable, in particular after the fall of *ləğ* Iyasu, as a part of the modernizing policy of *ras* Täfäri.

The "I." bear a most valuable witness to the beginning of the transformation of Ethiopian society, its scope and patterns. Noticeably, there are almost no teaching books among the "I.", except for a few basic works on Amharic, since modern ↗education was given mainly in European languages, whereas traditional education needed no such books. The virtual absence of translated technical literature points to the fact that, despite the strive for modernization, the transfer of modern technologies to Ethiopia was insignificant.

Ethiopian "I." sometimes demonstrate remarkable links with the old traditions and practices: such is the case of religious texts, panegyrics, etc.; even administrative acts were not only printed, but certainly also announced in the traditional form of ↗*ʿawağ*. At the same time, "I." were really innovative in content and function. Printing contributed to the introduction of a book culture addressed directly to the reading public, and thus different from the traditional (ecclesiastic) one. Printed administrative documents were supposed to be consulted and to provide guidelines for both officials and citizens. Religious books could be read and meditated upon not only in the church by clerics, but also by any person privately at home, thanks to the Amharic translations. The same was true for discourses, didactic treatises and other early works of ↗Amharic literature, in particular Ḫəruy Wäldä Śəllase's books, which, although propagating *ras* Täfäri's politics, took their readers far beyond the genres of ↗Gəʿəz literature. In any case, the potential influence of "I." was limited by their small print run and circulation, the latter being confined to main towns (primarily Addis Abäba), as well as by the country's low ↗literacy rate. The proper readership of these books only came after 1941.

Independence Bloc

The I.B., a party founded on 25 July 1949 in ↗Asmära, was the first significant attempt to create a modern coalition of sectarian forces in ↗Eritrea. The goal was to coordinate interests and work jointly for the independence of the ex-Italian colony.

In October 1946 the British had allowed the formation of political parties and various groups began organizing, with the issue of Eritrea's future finding a place on local and international agendas. Most Christians, and some leading Muslim notables, had established the ↗Unionist Party aimed at uniting Eritrea with Ethiopia. Other options voiced at that time were full independence, partition of Eritrea, and certain forms of dependence on either Italy or Britain. In December 1946 ↗Ibrāhīm Sulṭān ᶜAlī established the ↗Muslim League, which called for full independence. It was soon rivaled by a new National Muslim Party of Massawa (established April 1947). In February 1947 the Independence and Progress Party, known as the LPP, was established, led by the Christians ↗Wäldä Ab Wäldä Maryam and *ras* ↗Täsämma Asbärom. In September 1947 the New Eritrean ↗Pro-Italian Party began working towards Italian trusteeship in an independent Eritrea, but this option was ruled out, together with the option of partition, and in May 1949 the party was renamed The New Eritrea Party. While the United Nations (UN) was preparing a commission to tour Eritrea in February 1950, to gauge public opinion and submit recommendations (↗United Nations Commissions for Eritrea), the only two options left were either unification with Ethiopia or independence.

In April and May 1949, after failing to convince the international community to vote for the independence option, delegations of the Muslim League and New Eritrean Pro-Italian Party met at the UN. They decided to join forces and proceeded to form the I.B. together with the LPP and some other minor movements. In a ceremony attended by British, Italian and Ethiopian officials, the goals of the new Bloc were declared: immediate independence, self-determination, rejection of partition, establishment of a democratic government, and maintaining Eritrea's territorial integrity.

The I.B. survived less than two years. As the work of the UN Commission energized debates and tensions in Eritrea, two factors sabotaged the joint effort for independence. First, both Britain and the United States hinted that they would not accept an independent Eritrea. Second, Ethiopia's imperial government, through the Unionist Party, the Church and other agents, circulated threats in order to undermine the I.B. Their intimidation campaign culminated in riots in Asmära in February 1950. The inclusion of the former Pro-Italian party, and Italian financial support for the Bloc, helped expose it as an imperialist tool while Ibrāhīm Sulṭān ᶜAlī's promise that he would allow transit rights to Ethiopia enabled his rivals to doubt his patriotism.

Amid internal strife and violence the first to break away were followers of *šayḫ* ↗ᶜAli Mäḥämmäd Mūsā Radāʾī of western Eritrea's Təgre. *Šayḫ* ᶜAli Mäḥämmäd Mūsā Radāʾī first supported partition and then annexation of western Eritrea to the Sudan. After having been assured by Addis Abäba of a special arrangement for his region, he established an Independent Muslim League and reached a truce with the Un-

ionist Party. A number of members of the LLP followed this pattern, and established a Liberal Unionist Party. In December 1950 the I.B. was virtually dissolved, and in January 1951 its remaining leaders formed the Eritrean Democratic Front. They ran in the elections for the first ↗Eritrean Assembly in 1952, hoping to limit the powers of the Emperor's representative in the new Eritrean Executive. They were unsuccessful, and as the Emperor's representative and the Unionist Party gradually destroyed all aspects of Eritrea's autonomy, the leaders of the former I.B. went into exile in the 1950s. However, their defeat was short-termed. The concept of uniting regional and religious sectors into an all-Eritrean movement, first realized in the short-lived I.B., would be revived with greater success by both the ↗Eritrean Liberation Front and the ↗Eritrean People's Liberation Front.

India, relations with

Contacts between Ethiopia and historical I., facilitated by the monsoons and trade winds in the ↗Red Sea and Indian Ocean, appear to date back several millennia. This is suggested by the expedition of the Egyptian Queen Hatshepsut to the Land of ↗Punt, in ca. 1495 B.C., which acquired cinnamon, supposedly taken there from I. or Ceylon, as well as by early Indian texts that are believed to reflect a knowledge of Africa. Such texts likewise refer to pearls and red coral thought to have come from the Red Sea. It was a part, in fact, of the broader traffic system between the Mediterranean Sea and the Indian Ocean, i.e. one of the several routes taken by ↗trade with I., which soon centred on the port of ↗Adulis, known since biblical times, and later engulfed by ↗Aksum (De Romanis 1996:59–62 and 152–56; Fiaccadori 2004:108, 112, 118ff., 126, 137f.). The possibility of a much earlier relationship has been postulated, namely of migrations of Indians to the Horn of Africa. This would suggest a tight kinship, in terms of anthropological descent, between them and the Ethiopians, as well as the Egyptians (s., e.g., Muthanna [1961]:18ff.).

At a much later age, the extent of Indo–Ethiopian commerce is evident from the ↗*Periplus of the Erythraean Sea* of the 1st cent. A.D. It reports considerable trade between Adulis and thereby Aksum on the one side, and Ariaca and Barygaza, in north-west I., on the other. The latter supplied the Aksumites with clothes and coloured lace. ↗Iron (steel) as raw material is said in the *Periplus* to have come from I., which probably served here as a trading intermediary to ↗China (cp. Fiaccadori 1992: 56f., n. 31).

The existence of Indo–Ethiopian commerce, testified by Palladius (s. ↗Moses of Adulis) and ↗Cosmas Indicopleustes for the early 5th and early 6th cent. respectively, is confirmed by the discovery at Däbrä Damo, in northern Ethiopia, of 2rd-cent. Kuṣāna coins from north-west I., and of early contemporary artefacts of Indian provenance in Adulis (Fiaccadori 1992:56ff., n. 32 and XXXIX n. 81). Conversely, Aksumite gold coins (esp. the 4th-cent. ones) acquired a certain importance as international trade coins, auxiliary to the Roman gold issues, and are therefore also found on the south-west Indian coast (Kerala): the hoard of Mangalore has yielded 17 pieces of Ousanas (including a contemporary forgery) and six of ʿEzana, as well as 21 Roman gold coins (Hahn 1998, 1999; Metlich 2006; cp. Munro-Hay 1995:50).

Such transcontinental contacts probably led to the introduction into I. of ↗cotton from Ethiopia, and of Indian sugar and papayas into Ethiopia. ↗Lions may likewise have moved from Ethiopia to Gujarat, in north-western I. The Gəʿəz word ነኄ, *näge*, '↗elephant' (pl. *nägeyat*), possibly traceable to Sanskrit *nāga*, 'elephant', but also 'serpent, dragon' (cp. DillmLex 685), may suggest an early presence of Indian elephants and/or elephant-related knowledge in Ethiopia (Littmann 1926:414, on which Pankhurst in PICES 4, 219 and n. 76, and Fiaccadori 1992:54f., n. 26), as later implied, too, by the Amh. አንካሴ, *ankasse*, 'stout stick or staff' (with an iron point and, resp., hooks at its two ends; KaneDic 1226), a direct calque from Hindi *ankuś*, 'goad(ing rod/hook) for driving elephants'. There was similarly some apparent cross-continental diffusion of culture; and a considerable likelihood of Indian

influence on the Ethiopic syllabary, based on the addition of smaller signs to the basic consonants to indicate vowel combination – a development that took place in the Brāhmī and Kharoṣṭī writings, with sets of characters representing syllables, a few centuries earlier (Chatterji 1967:53; Pankhurst in PICES 4, 220f.). Also, Ethiopians and Indians make use of similar looms, clothing, and food. (On linguistic influences s. Littmann 1926:406-11).

Indian trade with Ethiopia and the Horn of Africa, through the ports of Massawa, Zayla^{c} and Berbera, is well documented, for the 16th cent., by the Italian travellers Ludovico di ↗Varthema and Andrea ↗Corsali, as well as by the Ethiopians interviewed by Alessandro ↗Zorzi. Indian ↗silks, pearls, ↗jewellery, pepper and other ↗spices were then being imported into Ethiopia. Numerous Ethiopian slaves meanwhile were transported to I., from at least the early 13th cent. onwards. Known as Habši (from Arab. *al-Ḥabašī* 'Abyssinians'), and Siddi (from Arab. *sayyidī*, 'my lord'), they arrived in many areas, including Gujarat, Cambay, Deccan, the south-west Indian coast, and Bengal.

The Siddis constituted an on-going dynasty at Jangira, near Bombay, also known as the Habši dynasty (Yule – Burnell 1986:806). Their influx increased in the early 16th cent., when prisoners taken in the Abyssinian interior by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī were exported as slaves to Arabia, and thence shipped to I. Some, employed there as soldiers, rose to important positions, and seized supreme power, establishing ruling dynasties.

Still today, in the south of I., an ethnic group is called Habši (sometimes also Siddi). Their oral tradition suggests that they are of heterogeneous origin, maybe Oromo and Somali, and that they settled in the area already several hundreds of years ago, i.e. before European colonisation. All members of the group are Muslims and speak Hindi; research suggests that they have not retained any words from their ancestors' languages, who came to I. as slaves and soldiers (Jayasuriya – Pankhurst 2003; Astair Mengesha 2003).

Ties between Ethiopia and I. were intensified, in the 16th cent., by the advent of the Portuguese, who used their colonies at ↗Goa and ↗Diu as the base for relations with Ethiopia. Most Portuguese visiting Ethiopia, and Ethiopians travelling to I., thus passed by way of these cities (e.g., *abba* ↗Gorgoryos; Antonio d'↗Andrade). The ↗Jesuit missionaries of the late 16th and early 17th cent. subsequently brought many Indian craftsmen to Ethiopia. One of them, from Gujarat (cp. ↗Indians in Ethiopia), introduced the use of mortar, while others were involved in palace building, at ↗Dänqäz and later at ↗Gondär, and built the first bridge over the Blue Nile. Many Indian luxury goods were at that time imported into Ethiopia, either directly or via Arabia and its major market of al-Muḫā, to which Indians delivered, among others, such aromatics as sandalwood (Brouwer 2007:69f.). *Aṣe* ↗Susənyos thus wore clothes, slippers and a gold cross from India, and a crown decorated with Indian pearls; and had an Indian umbrella, and Indian bed-clothes. In the 17th cent., generations of contacts with I. also led to a significant influence on Ethiopian art, especially illumination and mural painting, that was first exerted

Fəlsätä lämaryam ('Assumption of Mary'), with Indian influences, in the Prayers to Our Lady Mary, ms. IES no. 73, fol. 113v; from AfrZion 251, no. 117

through Goa and the Jesuits (Pankhurst in PICES 4, 296ff., and esp. Heldman in AfrZion 251f., no. 117, on IES MS 73, fol. 113v, with a miniature of the Assumption [↗Fəlsäta] the immediate model of which may have been made by a Deccani artist familiar with a European Baroque engraving of the Immaculate Conception).

After the expulsion of the Jesuits, *aṣe* ↗Fasilädäs sought closer ties with Mogul I. He despatched his Armenian trade agent *ḫoğa* ↗Murād, in 1663, with presents to the Mogul emperor Awrangzīb. The latter reciprocated with costly gifts: fine clothes, silks, a sword, trumpets and drums, and gold for the construction of a mosque which was never in fact erected. This period witnessed the arrival of two African ↗elephants and a zebra at the Mogul court, and of an Indian parrot at the Ethiopian court that spoke Hindustani and Portuguese, as well as Ethiopian. On his later travels to Batavia (Jakarta), Murād always stopped at Surat, where he was also received by Dutch officials (e.g., in November 1675). Indonesia being already a Dutch colony, the ↗United East India Company became a strong power in the Indian Ocean, influencing I.'s trade relations with Ethiopia as well (DonMurad).

The early 19th cent. with the rising number of European travellers coming to Ethiopia saw also the first Ethiopians visiting India, mostly accompanying Europeans. Missionaries took with them ↗Mərčʿa Wärqe and his brother for education in I.; ↗Samuʾel Giyorgis also visited I., using his missionary contacts. Diplomatic contacts between the Ethiopian rulers and I. were extremely restricted in the 19th cent.; *aṣe* Tewodros II in his contact with Queen Victoria seems not to have accepted the idea that she bore the title of Empress of India, as he never mentioned it when addressing her in his letters; and even in his contacts with the British residents at ↗Aden, which was under the Indian government, he did not contact them as representatives of the Indian government, which they were. Tewodros's fall was directly linked with the British-Indian government – the ↗Napier expedition in 1867-68 was an important event in the relations between both regions, as it was a British-Indian intervention army, under the responsibility of the Indian government, but not supported by I. nationalist opinion (Pankhurst 1981:390-418). This was the first time that a large number of Indians came to Ethiopia, and also was an event following which several young Ethiopians subsequently went to I., accompanying the British-Indian army on its return to I. One of them was ↗Wärqənäh Ešäte ("Dr. Martin"), later a well-known minister, who then grew up in I. Another child who followed the army to I. was the later Muslim convert Sulaymān b. Haftū ("Soliaman Bin Haftoo"), originally called Mäšäša (Habtu?), who joined the African Cavalry Guard of the king of Hyderabad in Deccan. Later, he claimed to be the son of Tewodros II and Täwabäčč Ali (s. Harris 1969), but was more probably a son of one of the king's followers. The monarch's actual son, ↗Alämayyähu Tewodros, was later taken to I., by his sometime guardian or tutor Captain Charles ↗Speedy.

Indian currency played a certain role in the Ethiopian economy. Rupees gained some circulation in Mənilək II's days, notably in British Somaliland, where they became an official currency, and in Ogaden and Harär. They also provided the basis of the Italian colonial rupee currency of Somalia (Pankhurst 1963:63, 72, 108ff.) and influenced Mənilək's newly introduced monetary system (↗Currency). The East African Shilling, introduced by the British as an official currency in Ethiopia in 1941 during the British Military Administration of Ethiopia, depended on the rupee monetary system, and consequently showed both English and Hindi inscriptions.

Indian troops in 1941 played a significant role in the overall Ethiopian ↗war of liberation. They fought, fiercely but victoriously, at the battle of ↗Kärän, where they suffered some 5,000 casualties.

Hindi loan-words in Ethiopian usage, in Amh., but partially also Tgn., include *surat* (Amh., 'snuff'), called after the homonymous Indian port that handled export of such commodity, *gari* for a 'hand-cart', and *kuli* for a 'coolie'.

Commercial contacts between Ethiopia and I., escalated at the end of the 19th cent., when Indian traders settled in ↗Harär, and later ↗Addis Abäba. Most traders were, however, expelled during the Italian occupation.

Diplomatic relations between Ethiopia and I. (which became independent in 1947) were established in 1950. Indian officers, led by Colonel N.C. Rawley, were recruited in 1958 to run the ↗Harär Military Academy (s. "Haile Sellassie Military Academy" 1958:79f.; Pankhurst 1960:331f.). Several hundred I. teachers were soon also employed by the Ethiopian Ministry of Education, serving in secondary schools in the provinces as well as in the capital. The Indian community in Ethio-

pia built the Ghandi Memorial Hospital a maternity institution for children, which was headed by an Indian physician, Dr. Rama Rao, in 1955 (ibid. 333-36). Indian firms, among them those of Nathan Mooljee, J. Premjee and J.J. Kothari, were active in the import-export business ("Indian Merchants ..." 1960:338-42), while the Indian firm of Birla established the Indo-Ethiopian Textile Mill at ↗Aqaqi in 1960 (ibid. 337f.).

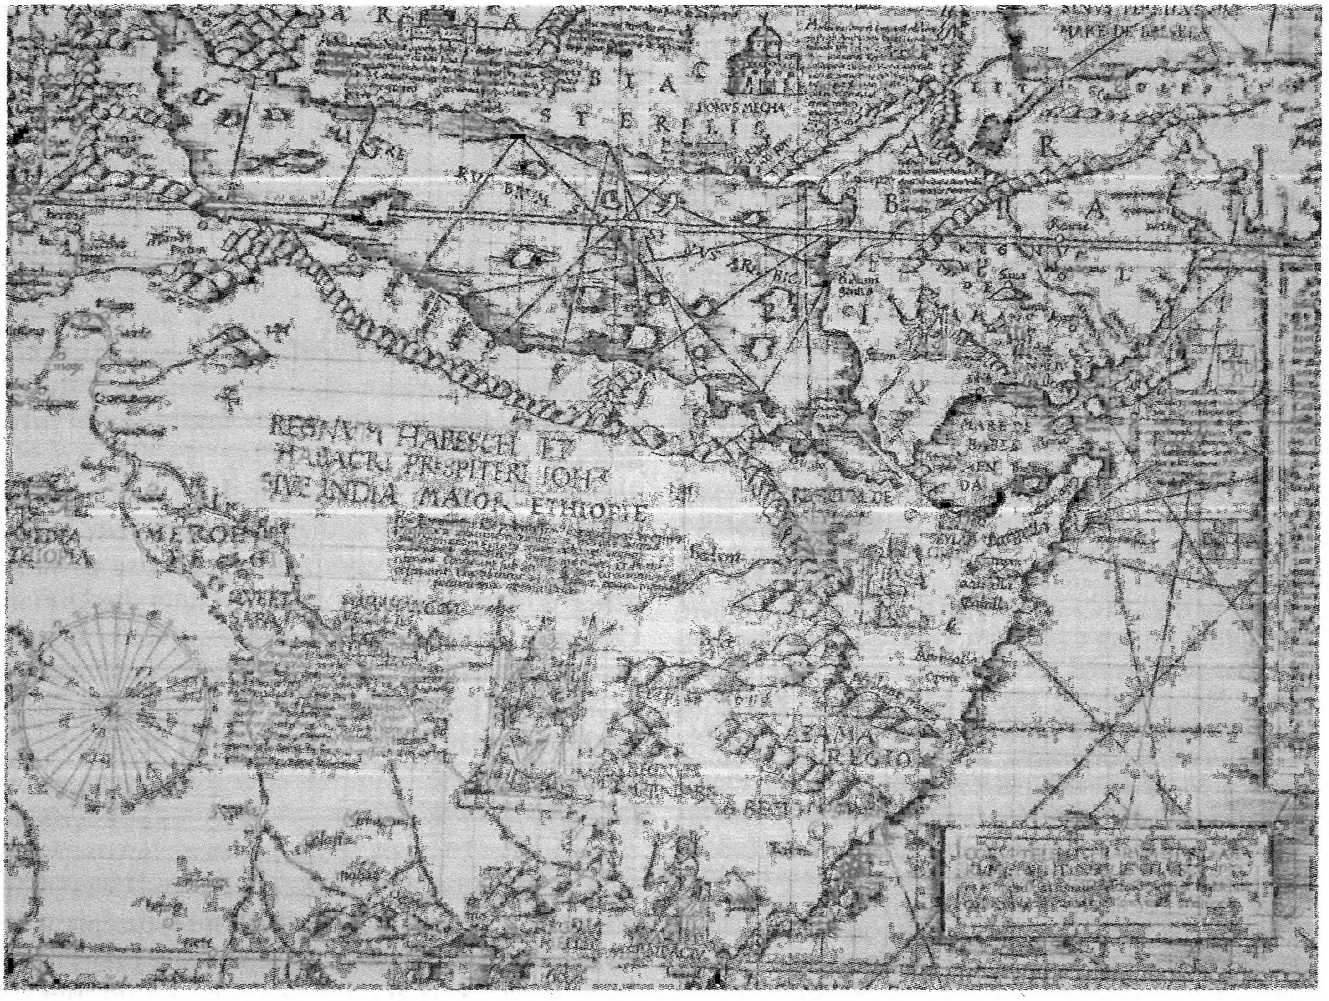
Richard Pankhurst – Red.

"India" as name of Ethiopia

In Greek and Roman sources, the name I. (from Old Pers. *Hinduš*, referring to Sindh, and in turn derived from Sanskrit *Sindhu*, '[Indus] River') applied not only to historical I. or *I. minor* ('Lesser I.'), i.e. the Indian subcontinent, home of the Indus Valley civilization, but also to such other countries on the Red Sea and the Indian Ocean as South ↗Arabia, ↗Somalia and ↗Ethiopia (cp. ↗Aithiopía) that formed instead *I. maior* ('Greater I.') – a name used sometimes, though, for I. proper as well, the perception of which became dimmer and dimmer after the 4th cent. A.D. (Mayerson 1993:169ff.).

Since the 2nd cent. B.C. at least, but perhaps already in the age of ↗Alexander the Great, the distinction between I., Arabia and Ethiopia – in terms of distances and seas separating them from each other – was clear to ancient authors, but all three received the name "I.". This terminological ambiguity resulted more often in geographical confusion between I., Ethiopia and Arabia (s., e.g., Fiaccadori 2006a:74 and n. 164, and 2006b:140f. and nn. 59–60, esp. for Byzantine and Christian Oriental sources, in which Georgia is also "I.": cp. Id. 1992:XII and n. 8, 54 and n. 26, and MHAlex [I] 71 and n. 186); and was favoured by both ↗Ptolemy's idea of a physical connection between the Indian peninsula and north-eastern Africa – according to which the Erythraean Sea, i.e. the Indian Ocean, was but a inland lake – and the fact that those countries actually were on the trade routes to and from I. (s. Ancient Greek and Roman ↗historiography). Equally confused were the relevant ethnic designations: such is the case, e.g., of ↗Theophilus the Indian, who visited South Arabia and Ethiopia around the mid of the 4th cent., and then returned to his homeland, "the other I." – possibly, the Maldive islands.

Thus the statement by Diodorus of Sicily (1st cent. B.C.) that the ↗Nile rises in I. (*Hist.* I, 37-41) was thought to imply the river's flowing out of the Indian peninsula into Egypt (Honigmann 1936:558): a view also spread by Arrian of Ni-



Early Renaissance map by Martin Waldseemüller ("Carta marina navigatoria") showing the Horn of Africa as "India Maior", with the kingdom of "Seylam" (Zayla^{c}) in its upper right, Prester John of the kingdom of "Habesch" ('Abyssinia') in its centre, the "Hamaharic [Amhara] king's (capital) city" to his left, dated 1516; from Doresse 1959:108

comedia (*Anab.* VI, 1, 1–4) in the 2nd cent. A.D., and still shared – as a conventional association of India with Ethiopia – by ↗Procopius of Caesarea (*Hist.* VI, 1, 1) and Theophylact Simocatta (*Hist.* VII, 17, 1) in the 6th and 7th cent. resp. Yet, Ethiopia ("I.") was originally meant by Diodorus, in which the Nile really has its sources.

The classical regions of *I. maior* and *I. minor* were also called *I. interior* or *ulterior* and *I. exterior* or *citerior*: in the words of ↗Rufinus of Aquileia (ca. 345–410), the former was evangelised by Saint Barthelemy, the latter by Frumentius (↗Sälama Käśatä Bərhan) – thus being undoubtedly Aksumite Ethiopia (cp. Mayerson 1993:171f.). Around 600 A.D., Pseudo-Abdias distinguished three "Indias", one of which "lying toward Ethiopia [*Aethiopia(m)*, Gr. **Aithiopía*]" (*Apostol. hist.* VIII, 1). This threefold conception of I. (later, *I. prima*, *secunda* and *tertia*) remained popular in Christian literature. More confusingly, for Isidor of Seville (d. 636), "Indians" are an "eastern nation [*populus*, Gr. **éthnos*] of Ethiopians, rising from the Indus river, near Egypt, between the Nile and the Ocean" (*Etymol.* IX, 2, 127f., cp. XIV, 5, 14 and 16).

Western medieval tradition only partially followed such classical or late antique partitions, especially after the 13th cent., when a better acquaintance with the Indian subcontinent suggested the application of the name *I. maior*, whereas *I. minor* ended sometimes by designating the Horn of Africa, styled elsewhere as *I. media*. Towards 1298, the three Indias are so described by Marco ↗Polo: "Greater India is that which extends from Maabar to Kesmacoran [i.e. from Coromandel to Mekran], and contains 13 great kingdoms [...]. Lesser India extends from the Province of Champa to Mutfili [i.e. from Cochin-China to the Kistna Delta], and contains 8 great kingdoms [...]. Abash [↗Abyssinia] is a very great province, and you must know that it constitutes Middle India" (*Mil.* CXCIII–IV). However, it was not before the 14th cent., when the "Indian" realm of the mysterious ↗Prester

John ("King of *I. maior* [and *minor*]") was eventually identified with Ethiopia, that European scholars established a new nomenclature, clearly distinguishing between I. and Ethiopia – still called *I. minor* and *maior*, respectively, in the classicizing ↗cartography of the Renaissance.

Gianfranco Fiaccadori

Indians in Ethiopia

Commercial and other contacts between Ethiopia and ↗India, which date back to Aksumite times (s. above), led to a more or less permanent Indian presence along the Red Sea and Gulf of Aden coast of Africa (↗Somalia, esp. in the Migiurtinia region): a seal inscribed in Brāhmī was found in ↗Adulis (RIÉ 291; cp. Fiaccadori 1992:39 n. 81); and Indian craftsmen have been often called upon for the carving of the rock-hewn buildings at ↗Lalibäla.

Jesuit records for the late 16th and early 17th cent. – the earliest available – indicate the presence at ↗Massawa of a significant ↗*banyan* trading community, some of whom traded far inland. The I. at the port were largely involved in money-lending, as well as the export of ↗ivory and

Example of Indian-style woodcarving in Harär, early 20th cent.: entrance to the house of the then governor of Harär *däğğazmač* Täfäri Mäkʷannən (later *aṣe* Ḫaylä Śəllase I); photo 2000, courtesy of Wolbert Smidt

↗zibeth. The name of one of them, "Quica", is recorded.

Over the centuries, however, two major waves of Indian settlement can be distinguished in the interior of the country. The first one to reach there arrived at the Ethiopian court, then situated in the Lake Ṭana area, at about the same time. They came with the ↗Jesuits, who were based in Portuguese India (↗Goa), and brought with them a considerable number of Indian craftsmen and domestic servants. An Indian builder, referred to by the Jesuit Manoel de ↗Almeida, was responsible, in the early 1620s, for the discovery of "a kind of fine, light and as it were worm-eaten stone", similar to that used for the manufacture of lime in Gujarat, i.e. north-western India. This led, in the Lake Ṭana area, to the extensive use of mortar, the value of which, Almeida says, was recognized by *aṣe* ↗Susənyos and his grandees. The result was that "many beautiful churches", built of stone and lime, were soon erected in many parts of the country. Another Indian craftsman built Susənyos the first stone bridge over the Blue Nile (↗Abbay). He was possibly a certain ᶜAbdalkarīm who, according to the chronicle of that emperor, was involved, with other foreigners, in constructing the ↗Dänqäz palace in 1629–30.

Though *aṣe* ↗Fasilädäs soon afterwards expelled the Jesuits, there is good reason to suppose that not a few of their Indian craftsmen remained in the country. One of them, according to the Yemeni ambassador al-Ḥasan b. Aḥmad al-↗Ḥaymī, who visited Ethiopia in 1648, was the "master builder" responsible for erecting Fasilädäs's great palace at Gondär a few years earlier. This is, however, the only record on the authorship of the building.

The young *däğğazmač* Täfäri Mäkʷännən receiving the visit of leading Hindu and Muslim Indian merchants in Addis Abäba, with Gujarati caption: 'In the year 1905 A.D. this photograph was taken when the renowned and respected Mohtā Seṭhji *saheb* [1st row, on the left] and the respected Mahamad Alī Sekh Saraf Alī *saheb* [1st row, second from left] came to Addis Abäba [Eḍḍis Abbā] and visited you, *däğğač* Täfäri Mäkʷännən's [Tafrī Mukhanan, 1st row, third from the left], in your residence for a meeting'; 2nd row, behind Täfäri, Abdullahbhai Kera, 2nd row, third from left: *Dawood bhay*, 'my brother Dawood'; from the Hulton-Deutsch Collection, courtesy of Corbis

war, gained a reputation as one of *aṣe* Mənilək's principal builders. He erected the church of Raguʾel at ↗ƎnṭoṭṭoTo, and worked on the palaces at Addis Abäba and ↗Addis ᶜAläm. Indian masons and carpenters also constructed many houses for the nobility, and thereby introduced a new style of architecture, based on stone buildings with wooden balustraded verandahs.

A number of old wood houses especially in Addis Abäba and Harär, sometimes with exquisite Indian wood carvings (like at the house of *däğğazmač* Täfäri Mäkʷännən in Harär), are witnesses of this period; the finest Indian houses in Addis Abäba are in Arada (Piyasa), the old commercial centre, but are mostly in bad condition. Among them is the late 19th-cent. house of the merchant G.M. Mohamedally, built by the Armenian architect Minas Kherbekian, which is now on the list of endangered cultural heritage by the US-American foundation World Monument Fund (s. Wiren 2007:8f.; ↗Mohamedally and Company).

The Indian presence in the Gondär area later petered out, but traders from India continued to be prominent at the coast, both as merchants, and, at Massawa, as jewellers. In the first years of the 19th cent. there were reportedly 18 resident Indian traders at Massawa, as well as a few others at ↗Zaylaᶜ and ↗Berbera, in ↗Somalia. Such merchants, who at times almost monopolized much of the import-export trade, were visited during the trading season by large numbers of their compatriots, who sailed in annually from Aden and the sub-continent.

The opening of diplomatic relations between the ↗United Kingdom of Great Britain and Northern Ireland and Ethiopia in 1897 was followed by the arrival in ↗Harär, and almost afterwards in ↗Addis Abäba, of a second wave of Indian immigrants: British I., mainly from Aden and Bombay. These settlers, both industrious artisans and astute merchants, were remarkably successful. Content, when necessary, with little remuneration, they overcame all competition. The Indian craftsman *ḥāğğī* Ḫawas, from Pesha-

Two large Indian import-export firms, Mohamedally & Co. and Djewadji, acquired a dominant position in the Ethiopian economy. The former company had the largest store in the capital, as well as a commercial network throughout the country. I. indeed penetrated far into the Ethiopian interior, and soon constituted the third largest foreign community, after the Greeks and Arabs, with a population of no less than 3,000 in 1935, according to Adrien Zervos (ZerÉth).

During the ensuing Italian occupation, this sizable Indian community was resented by the authorities for two main reasons. Firstly, because the I. were perceived as subjects of the British Empire, regarded as Italy's potential if not actual enemy. Secondly, because it was planned to settle Italian nationals throughout the country, which would prove to be impossible as long as the pro-

posed Italian immigrants had to compete with I., already established and content to live quite modestly. The majority of the Indian community was therefore expelled.

Not a few I. returned to Ethiopia after the Liberation in 1941, mostly as teachers and experts on short-term contracts. Ḫaylä Śəllase I himself employed a number of Indian teachers for schools founded by him. One of them, Rev. Paul ↗Varghese, of the Malankara Orthodox Syrian Church, became his personal advisor in the 1960s, and was later appointed metropolitan of Delhi under the name of Paulos *mar* Gregorios. Today, I. continue to perform these two activities, and constitute an important foreign community, mainly centred in Addis Abäba.

Infantry

I. (Amh. **የእግረኛ፡ ጦር**, *yä'əgräññña ṭor*, 'foot soldiers, I.') always constituted the larger part (up to 90 %) of the traditional ↗army of the Christian Ethiopian empire. Though some infantrymen used ↗mules and ↗horses for riding whilst on march, they did not fight on horseback. The arms a common infantryman had before the introduction of ↗fire-arms were: one or two lances for throwing (**ዘገር**, *zägär*), one ↗spear for close fighting (**ጦር**, *ṭor*), a ↗shield (**ጋሻ**, *gašša*), a dagger, a sabre of *gorade* or *šotäl*-type (↗Swords) and a club made of hard and heavy wood (**ቦሎታ**, *bolota*). Coats of mail, helmets etc. were imported and rare. With the spreading of fire-arms, spears were slowly substituted by rifles. However, most of the soldiers mastered spear-throwing, and sabres remained the main weapon for hand-to-hand combat.

Formerly, the main traditional tactics of the Ethiopian infantrymen were to close on the enemy's troops outflanking them, attack them and charge in hand-to-hand fighting. With the introduction of fire-arms these tactics were slightly modified, but the headlong assault – preceded by fire-arm battle – and hand-to-hand combat remained the main method for achieving victory. In the battle, every infantryman acted independently, trying to close in and kill an enemy individually (Arnoldi 1907:110; Bulatovitch 2000:109f.).

Traditionally, Ethiopian troops were differentiated into: 1) permanent troops of the emperor (including the ↗*čäwa* military units); 2) permanent troops of individual war-lords; 3) levies mobilized in case of emergency; 4) irregular volunteers who sought booty and joined any troops during the campaign. This system corresponded precisely with the general distribution of these troops in the empire of ↗Mənilək II, where the imperial troops were quartered in the centre and served as a strategic reserve to the troops of warlords along endangered frontiers.

The soldiers followed the command of their lords only. In case of necessity a major army could be easily summoned; levies and irregulars could be enlisted both by the emperor and lords (Arnoldi 1907:15). At least in the Ethiopian highlands, almost every adult peasant was a potential soldier and readily responded to the emperor's or his lords's call in case of a campaign, hoping for booty and praise (cp. ↗Meritorious complex). This contributed to sometimes exaggerated observations concerning the number of Ethiopian troops available to the Emperor (Rein 1920:254f.).

In the time of Mənilək II measures were taken in order to organize better the Ethiopian army, the I. in particular. The imperial troops were divided into 1,000, 100 and 50 infantrymen-units (regiments, companies, half-companies). The smallest unit was under the command of a **ያምሳ፡ አለቃ** (*yamsa aläqa*, 'commander of 50'; Arnoldi 1907:9; cp. Bulatovich 2000:102ff.). It was a unit with its own common supply transport replenished by looting. At the turn of the 20th cent. a *yamsa aläqa* himself recruited his men among volunteers who had only to produce a **ተያዥ** (*täyaž*, 'guarantor') for the rifle they received. All the troops were recruited according to this pattern, except for imperial regiments which were manned mostly by sons of the noble military class (**ጨዋ፡ ልጆች**, ↗*čäwa ləǧočč*) who were introduced to the emperor. This made their future

career easier, but otherwise they lived the life of a common soldier and were promoted only for personal bravery and success.

Foreign observers praised Ethiopian soldiers, in particular infantrymen, for their durability on march and bravery in battle, cleverness and ability to act independently in any situation. Such an army effectively defended Ethiopian independence until the 20th cent.; it was clear, however, that the lack of strong organisation and proper technical and economic basis made such an army very vulnerable in front of 20th-cent. European troops, mechanized and equipped with automatic weapons. Being only in the early stages of its reorganization, the Ethiopian army, indeed, proved to be ineffective during the ↗Italian war 1935–36, although in the following ↗Resistance struggle the Ethiopians inflicted heavy casualities on the enemy, applying the tactics of guerilla warfare.

Sevir Chernetsov – Denis Nosnitsin

Initiation

I. can be defined as a socially accepted and culturally styled transition to a new social position or status, usually to adulthood and social responsibility, and is a virtually universal feature in all human cultures. I. in Ethiopian and other African societies is a prominent feature of life and an important focus of ritual attention. It should be distinguished from both life cycle and commemorative, or religious rituals, and reflects a status change of either individuals - such as young males to become adult, females to become nubile, a married man to become father, or the accession to a religious office or dignity or of such collective social groups, as "secret societies", age grades/groups (↗Age group systems), occupational or fighting groups. I. usually signifies the accession to a "higher", more mature stage. Research so far has shown that in Ethiopia it is more common, among males and male groups than among females, probably because the former as a rule dominate the public and political sphere in society. In some cases, women have their own, closed I. rituals marking social transition or access to certain functions or group membership after that (as in the case of several spirit ↗possession cults or the ↗Harari ↗*afōča*). However, usually women, especially when married, enter a new status or I. grade in a derivative fashion, after the I. of their husband. I. (re-)defines gender relations, roles and mutual obligations. The initiants have to show their social worthiness to ascend to the new life stage via a marking ritual, often in the form of a rite of passage, that extinguishes the previous stage or personality.

In anthropological and sociological studies on Ethiopian peoples, I. in its various cultural styles has received much attention from researchers. I. is notable in its variety across cultures as to complexity, meaning and ritual form. As I. represents a precarious moment of transition and sometimes crisis in the social order, it is connected to issues of power: those who are initiated come to replace or push back the established group or generation. The I. rituals therefore often show ambivalence and reversal.

I. can be effected through a variety of means: modifications of the body, such as ↗circumcision, removing incisors, or scarification (↗Body ornamentation); temporary isolation and ritual teaching; dance and song; or novices performing trying tasks or showing skills of performance. Often a combination of these modes is involved. In Ethiopia, the ↗sacrifice of stock animals is a part of many I. rituals as well, but sacrificial acts are not a necessary part of I. procedures. In most rural societies of Ethiopia, I. is a formal feature of socio-cultural life, tied to a certain historical, religious and ethnic tradition, and creates a predictable and socially "manageable" path to adulthood in such societies. In modernized urban societies I. is usually less of a ritually marked occasion, but can be recognized in, e.g., formal education (the entry into school or university), peer groups (as in street gangs or criminal groups), and the religious (Christian or Muslim) life cycle.

Among the Ethiopian ethno-cultural traditions in which I. is prominent, and well-described, are for instance the ↗Gamo societies (Abélès 1983; Freeman 2002), the Surmic-speaking ↗Mursi and ↗Suri, several Oromo groups like ↗Guğği and ↗Boorana (Hinnant 1978;

Bassi 1996), the ↗Sidaama (Hamer 1970; 1976), ↗Konso (Hallpike 1972), ↗Đáasanač (Almagor 1978), ↗Añwaa, ↗Gumuz, ↗Hamär (Strecker 1988), and ↗Arbore (Tadesse Wolde Gossa 2002; Ayalew Gebre 1995).

In most of the agro-pastoral societies of southern and western Ethiopia, I. is focused on the transformation of youths into young adults or "warriors" or into (junior) elders. This is often connected to the entry into a new age grade. Women often have parallel grades, though socio-politically less important. The most salient example is provided by the fascinating and complex ↗*gaada* age (generation)-grading system among the ↗Gideʾo, Guğği, Boorana and Konso peoples of southern Ethiopia. Here, the various grades (up to eight) are ritually entered after an I. ceremony, and each grade traditionally had a body of rules and regulations defining the members' behaviour. The grades originally also reflected a social division of labour. The I. itself is here only important as the way of entry into the grades. A highly interesting I. system is that in the Gamo highlands (Freeman 2002), where I. confirms seniority and social status, being performed by successful men, who for some time take up responsibilities for the community after having offered a series of feasts and then become "community fathers" (↗Meritorious complex). Another example is the *ukuli* (cattle jumping) ritual of the Hamär: the culmination of a series of ritual I. acts, it is meant to "create" or integrate a young person as a potentially productive and active member of the society (cf. Strecker 1988:205f.). Among the Suri and Mursi peoples of the south-west, there is a periodic age-grade I. ceremony every 15 to 20 years, which allows young men entry in to the junior elders' grade, entailing the achievement of social maturity, entry into the public debating assembly and the abandonment of youthful exploits like ceremonial duelling and random raiding (Abbink 1998:326f.; 2000:84; Turton 1955:104ff.; 2002:178f.). Among the Arbore, both boys and girls are initiated (Ayalew Gebre 1995:73). They also have I. of age or generation groups (Tadesse Wolde Gossa 2002:38). The ↗Ñaŋatom people in the south-west have complex, graded I. ceremonies concerned with the regulation of social order and fertility (Tornay 1986, 2001). The Đáasanač have a major I. related to the generation-set system, and also know a special I. ritual called *dimi*, whereby fathers perform a fertility ceremony for their daughter(s) and themselves are elevated to the status of senior elder (Almagor 1978:33f.). Among some other southern and eastern Ethiopian peoples, a male initiant could until recently only be allowed to enter an I. after having killed a human enemy or a wild animal.

Among sedentary agricultural societies in central and northern Ethiopia (Amhara, Oromo, Təgray), there are few if any formal I. ceremonies, although prestige and status accrue to persons reaching a certain stage in life on the basis of marriage, having borne children, religious status, or advanced age, which allows people to become respected elders who can be active in conflict mediation and community matters. In some respects, the ordination of priests and monks in Christian Ethiopia after years of training can also be considered as I. The originally Agäw-speaking ↗Kəmant people in the Gondär region had the *qenona* I. for babies 3-4 weeks after birth, making them members of Kəmant society. The ordination of the Kəmant ritual leader, the *wämbär,* also had elements of I. In general, various life-cycle rituals, such as baptism, naming, male/female circumcision, symbolic "fertility" rituals, etc. resemble I., transforming the status and identity of individuals. Certain secular rituals regarding recruitment, membership and internal mobility in modern social and political movements (e.g., insurgent or "liberation" movements) also had clear aspects of I. More comparative studies of I. in Ethiopian societies are needed to reveal historical and social similarities as well as recent changes. In a trend foreshadowing the era of mass tourism in Ethiopia, some I. ceremonies, such as for instance the *ukuli* ceremony among the Hamär, have now, in a specially staged form, become tourist attractions.

Inscriptions

1. Introduction
2. Epigraphic South Arabian inscriptions in Arabia (with subsection Ethiopia in Epigraphic South Arabian inscriptions)
3. Sabaic inscriptions in Ethiopia and Eritrea
4. Greek inscriptions in Ethiopia/Eritrea
5. Gəᶜəz inscriptions in Ethiopia/Eritrea in antiquity
6. Gəᶜəz inscriptions in South Arabia
7. Gəᶜəz inscriptions in Ethiopia/Eritrea in medieval and modern times
8. Arabic inscriptions in the Ethiopian regions

Introduction

Along with an extremely rich documentation of graffiti in cursive writing, I. in ↗Epigraphic South Arabian, ↗Gəᶜəz, ↗Greek, and ↗Arabic form the fascinating epigraphic corpus of Ethiopia and Eritrea; very few I. in Gəᶜəz and Greek, also relevant to the same corpus, have been found outside the country: i.e. in Yemen (South ↗Arabia), Sudan (↗Meroë) and ↗Egypt. Besides, a case of indirect transmission is the ↗Monumentum Adulitanum, a lost Greek I., included, though, in the text of ↗Cosmas Indicopleustes. Two I. (*Səḥuf əmni*, RIÉ 287, and the I. from ↗Kawa) are written in Ethiopic script, but could not be deciphered. All these I. range from the early centuries of the first millennium B.C. up to the present times.

Two major scholarly enterprises have been crucial in gathering and studying the ancient and medieval I. of the Ethio-Eritrean region, which shed an absolutely authentic light on the latter's past, so scantly represented in literary sources (↗Historiography). In 1906, the ↗Deutsche Aksum-Expedition, led by ↗Littmann, carried out research on the highlands; then, in 1952, the Addis Abäba Maison d'archéologie undertook further studies, entrusted to several scholars (mainly epigraphists and Semitists Abraham Johannes Drewes and Roger ↗Schneider, flanked by Etienne Bernand for the Greek inscriptions). The *Recueil des inscriptions de l'Éthiopie des périodes pré-axoumite et axoumite* of the 1990s (RIÉ) made more than four hundred texts fully available in photographic reproduction and transcription, with translation and commentary only for the Greek documents.

There are a number of historical issues arising from ancient Ethiopian epigraphic material. Only a few of them can be summarized here:

1. Relations with Arabia

The oldest Ethiopian I., from the first millennium B.C., are in Sabaic (↗Epigraphic South Arabian). In the late 1800s, on being found, they seemed to confirm the commonly-held theory, first put forward by Hiob ↗Ludolf as early as 1681, that classical sources, linguistic data and elements of history and culture – including, e.g., the famous legendary meeting between the King of Israel Solomon and the Queen of Sheba (↗Makəda) – all point to Ethiopian culture originating from South Arabia. Ludolf's theory has been since challenged. Though these I. come from markedly South-Arabian archaeological contexts, a group of them can be isolated that possess a number of linguistic features different from standard Sabaic, thus betraying the interference of the local language and culture. In recent years, many scholars have underscored such features, up to judging the South-Arabian presence in Ethiopia ephemeral, and belittling its rôle in the origins and development of the most ancient Ethiopian civilization. Indeed, in the first half of the 1st millennium B.C., a cultural *koiné* was created on both shores of the ↗Red Sea; the documentation in monumental South Arabian script bears witness to contacts of long duration that cannot be dismissed as ephemeral.

2. Hellenism

From the late 4th cent. B.C., a non-sporadic Greek presence on the Eritrean coast was especially felt in the harbour zone of ↗Adulis, a long-standing "port of trade". Here the Monumentum Adulitanum marked the place as the southernmost tip of the Ptolemaic lands. Furthermore, the first inscription bearing the name of an Ethiopian king,

from ↗Däqqamḥare, is also in Greek: it was dictated by ↗Sembrouthes "the greatest from among the Aksumite kings", at the end of the 2nd/beginning of the 3rd cent. A.D.

3. Birth and evolution of Gəᶜəz writing

Ethiopic ↗script started to be used for writing not earlier than the 1st or 2nd cent. A.D., and in ca. 325/30, during the reign of ↗ᶜEzana, there is the earliest testimony of the most significant reform in the history of the Ethiopic writing tradition, namely the introduction of vowels through a regular modification of the signs used for consonant writing. By the middle of the 6th cent., epigraphic script (e.g., RIÉ 232) has assumed the (palaeo)graphical features that can be found much later on parchment ↗manuscripts.

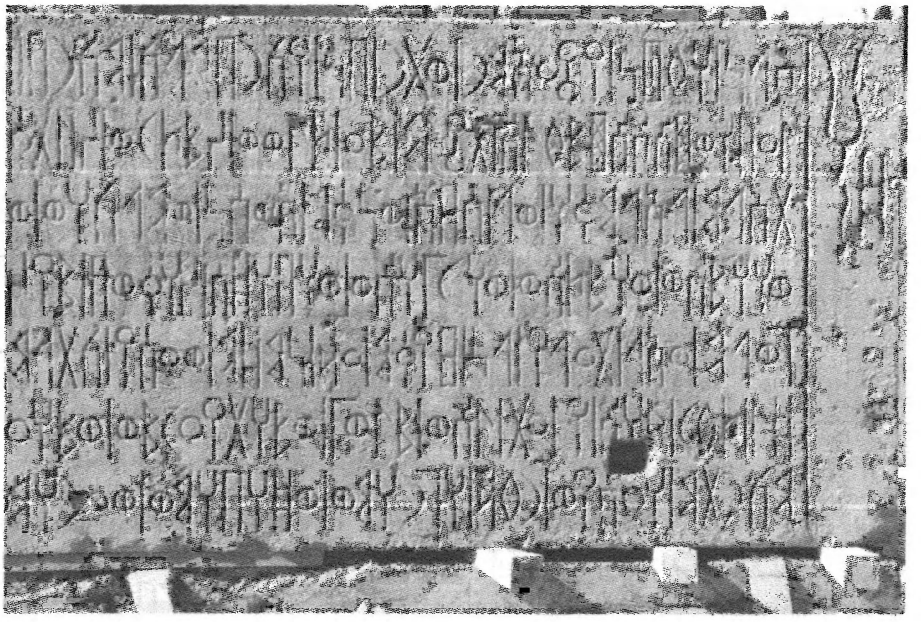
Epigraphic South Arabian inscriptions in Arabia

The ↗Epigraphic South Arabian (E.S.A.) language, with its four main dialects (Sabaic, Minaic, Qatabānic and Ḥaḍramitic), has been only transmitted epigraphically. The I. appear in the first place on specially prepared stone surfaces: limestone or, sometimes, sandstone blocks and smoothened rock walls. E.S.A. I. have also been preserved, even if much more rarely, on metal items such as metal plates, statuettes, vessels, weapons, amulets, measures of capacity, weights and coins. Besides, wooden sticks and palm leave stalks bear I. in minuscule cursive script.

A set of 29 graphemes composing the monumental South Arabian script are equally used for all the dialects. The text usually runs from right to left, however, bustrophedon is predominant for Old Sabaic (8th–3rd cent. B.C.). The letters of Old Sabaic follow the geometrical rules of straight lines, square angles and rounded shapes. At the same time the principles of symmetry and proportion play a great role as can also be seen in the architecture of the period. The letters of Middle Sabaic period (1st cent B.C.–late 4th cent. A.D.) appear broader and more ornamental due to the thickening of lines and sharpening of their endings. The Late Sabaic monotheistic period of 5th–6th cent. A.D. is particularly characterized by stone relieved letters that obtain a broader shape. Equally significant for Late Sabaic epigraphy are letters organized into more or less symmetric monograms.

Of over 8,500 published I. ca. 5,300 are in the best documented Sabaic dialect. The rest are ca. 1,700 Qatabānic, 850 Minaic and 750 Ḥaḍramitic (except for the Raybūn Corpus) I. Their length varies from graffiti that sometimes consist of only one proper name to extensive reports of kings' and chiefs' activities counting up to over 1,000 words. Language, style and specific text genres are strongly influenced by the public character of the epigraphic monuments. By far the most widely spread texts in all dialects are dedications. They are followed by construction reports, tomb, commemorative, and penitential I. as well as various legal documents such as definitions of borders, irrigation regulations, contracts, certificates, decrees of rulers. All of these provide an insight into the public and – to a lesser part – private life in pre-Islamic societies of South ↗Arabia.

The I. in minuscule script were only first discovered in the early 1970s in Yemen; so far several thousand I. have become known, most of them are expecting to be analyzed in the National Museum of Ṣanᶜāᵓ. These documents are comparable with Akkadian epistolography on clay tablets or with Arabic papyri from Egypt and provide insight into the everyday legal and economic matters that could not be reflected in the lapidary I. meant for public presentation. Difficult to decipher, only 40 minuscule I. have been published so far, among them business and private letters, legal documents, name lists as well as spelling exercises (alphabet). The majority of the known wood-stick I. come from one place, the ancient Naššān (today as-Sawdāᵓ) in Ǧawf, Yemen, and are written in the Sabaic – some in the Minaic – dialect. Few examples of Ḥaḍramitic I. have been excavated by the Russian expedition in Raybūn. The texts in minuscule script date to Old, Middle and Late Sabaic periods and show corresponding palaeographic differences.



Monumental Sabaic inscription (extract) by Yiṯaᶜʾamar Watar from Ṣirwāḥ, ca. 715 B.C. (DAI Ṣirwāḥ 2005–50), courtesy of the author

The oldest dateable I. was excavated in December 2005 by the German Institute of Archaeology in the Almaqah temple of Ṣirwāḥ. It is a monumental record of reign of Yiṯaᶜʾamar Watar b. Yakrubmalik, a ruler mentioned in the Annals of the Assyrian king Sargon II and therefore dateable to ca. 715 B.C. The most recent I. (CIH 325) is a fragmentary construction report from the eastern Wādī Mawr in northern Yemeni Tihāma. It was composed in the year 669 of the Ḥimyarite era which corresponds to 559 A.D.

The first (useable) I. in E.S.A. to be presented to European scholarly audience was published by Joseph von Hammer in 1811. It was a fragment of a mid-5th-cent. construction report (CIH 620) found by Ulrich Jasper Seetzen during his first travel in Yemen in July 1810 in Mankaṯ near the ancient Ḥimyarite capital Ẓafār. This fragment together with such other later published I. as the famous rock I. of Ḥusn al-Ġurāb (CIH 621) and the Ḥaḍramitic construction I. of Naqb al-Haǧar (RES 2640) enabled Wilhelm Gesenius and Emil Roediger to nearly completely decipher the Ancient South Arabian alphabet in the 1840s. The Ethiopic ↗script, deriving from Sabaic, was of significant help in their efforts.

Norbert Nebes

Ethiopia in Epigraphic South Arabian inscriptions

Ethiopia-relevant I. in E.S.A. are found on both the Arabian and the African continent. This subarticle deals with the I. found on the South Arabian territory which testify to ↗Aksum's involvement in ↗Arabia. They can be chronologically roughly divided into two main periods: late 2nd cent. – 270s (the "First Abyssinian Intervention") and early to mid-6th cent., all of them written in the Sabaic dialect.

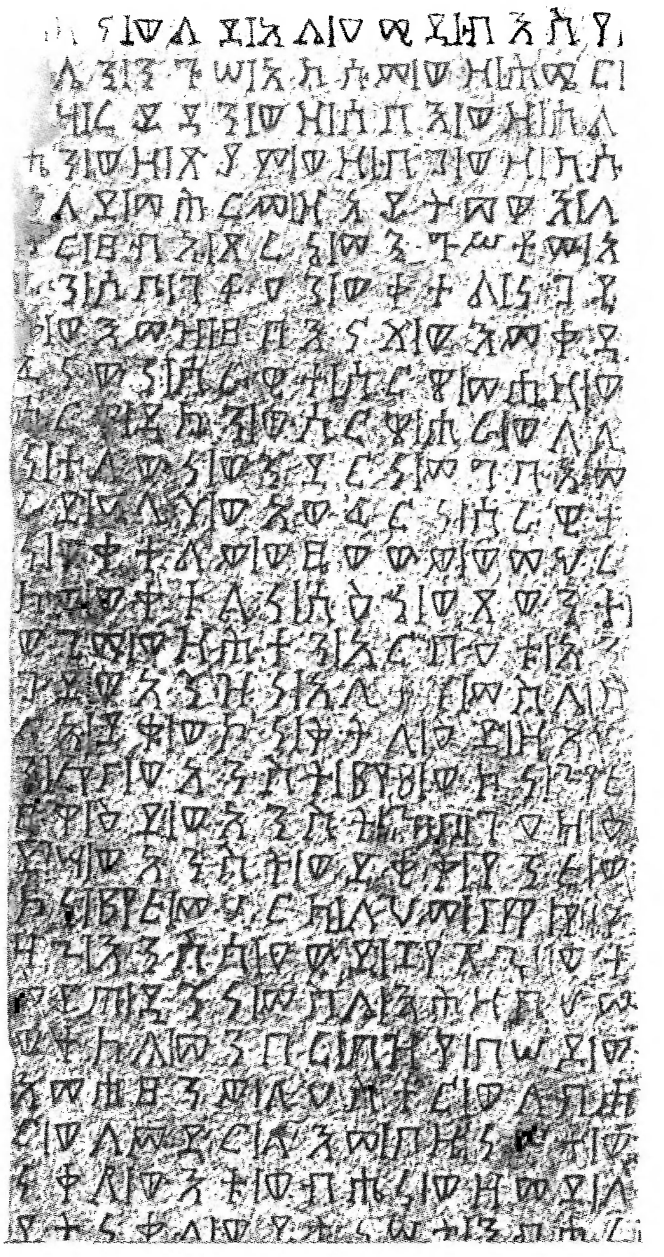
The term used for Ethiopia or, more precisely, "↗Abyssinia", is usually *ʾrḍ/ḥbšt* or simply *ḥbšt* (e.g. Ry 508/8), seldom *ḥbštn* in *mlk/ḥbštn* (CIH 308/11 pass.), meaning the inhabitants of the Ethiopian highlands (cp. ↗*Ḥabašāt*). The term *ʾksmn*, as in *mlk/ʾksmn* (Ja 576/11) 'King of the Aksumites', *mlk/ḥbšt/w-ʾksmn* (Ja 631/13) 'King of Abyssinia and of the Aksumites' or *ʾrḍ/ḥbšt/w-ʾksmn* (E 28 § 1) 'land of Abyssinia and of the Aksumites' has to be understood as the *nisba* plural [Aksūmān] and therefore does not designate the ancient Ethiopian capital but the residents of the Aksumite kingdom (Müller 1998:218). To refer to the Ethiopian king the Sabaic *mlk* is used, or the

word *ngšy-n*, borrowed into Sabaic from ↗Gəᶜəz (e.g., Ja 585/14f., CIH 541/88). The Abyssinian clans dwelling or stationed in the Yemeni Tihāma were called the *ʾḥzb* / *ʾḥbšn* or *ḥbšt*; the name of only one such clan is known: GMD (*ḥzb* / *gmd* [sic l.!]; MAFRAY Miᶜsāl 5/11).

The earliest dateable I. mentioning Ethiopia go back to the period of the joint reign of the Sabaean kings ᶜAlhān Nahfān and his son Šāᶜirum Awtar at the end of the 2nd cent. Among the early I. are, e.g., CIH 308 informing us of an alliance of ↗GDRT and the Sabaean king ᶜAlhān; NNAG 13+14 mentioning Abyssinia as part of an anti-Ḥimyarite coalition; Ja 631/13 confirming GDRT's diplomatic relations with Šāᶜirum; E 12 and, possibly, Ry 533/21f. hinting at the reasons for the collapse of the coalition. Later I. testify to Šāᶜirum's unsuccessful attempts to diminish the Ethiopian influence (Ja 635/24; DAI Barʾān 2000–1/6), to military campaigns of the Abyssinians under prince BYGT and their eventual defeat (Ja 631/20–36; Nebes 2005:341–44).

Mid-3rd-cent. I. such as Ja 576, CIH 314+954 inform us that, during the wars of the Sabaean kings Ilšaraḥ Yaḥḍib and Yaʾzil Bayyin against Ḥimyar, the Abyssinians supported the Ḥimyarites. They were defeated, and so were later the Abyssinian deputy of the Ethiopian king in ↗Nağrān who surrendered to the Sabaeans (Ja 577/12). The relations with ↗Ḥimyar, however, seem to have deteriorated later on. The unpublished rock I. of Ǧabal Miᶜsāl (MAFRAY Miᶜsāl 3/8f.; cf. Robin 1989:151; Bāfaqīh 1990:397) and, even more so, the I. MAFRAY Miᶜsāl 5 from the year 272/3, speak of the military campaigns against the Abyssinians, as a result of which they lost completely their regional influence.

The I. from the first half of the 4th cent. A.D. bear witness to diplomatic contacts between Aksum and Ḥimyar (E 28). King ᶜEzana's I. (e.g., RIÉ 188) claim dominion over Ḥimyar and Sabaʾ and their dynasties Raydān and Salḥīn, but there is so far no indication on the South Arabian side to confirm his statements. With the conversion of the Ḥimyarite rulers to monotheism after mid-4th cent. the dedications from such polytheistic holy sites as the Awām temple in Mārib, that until then had been the most important source for the political history of South Arabia, disappear. The epigraphic documents give no information on the relationships between Ḥimyar and Aksum during the following 150 years. This can be explained by the fact that we so far have no documents from Ẓafār, which became the centre of power in South Arabia, archaeological research on the Ḥimyarite capital being in its early stage. The conflict between the South Arabian ruler ↗Yūsuf Asʾar Yaṯʾar and Ethiopia in the first quarter of the 6th cent. A.D. is, however, well documented in Greek and Syriac sources and is confirmed by epigraphic evidence (e.g., Ja 1028, Ry 507 and Ry 508) on the South Arabian side.



Gəᶜəz inscription of ᶜEzana (RIÉ 188); from Buxton 1970:206, no. 27

The latest known Sabaic I. with relevance to Ethiopian history are those of ↗Abraha: CIH 541 (dating from 547/48 [542/43]), Ry 506 (from 552 [547]) and Ja 544–47 (558 [553]).

Norbert Nebes

Sabaic inscriptions in Ethiopia and Eritrea

Numerous I. in ↗Epigraphic South Arabian script and Sabaic language have been found in the northern Ethiopian and Eritrean highlands since the late 19th cent. In 1893 ↗Bent made copies and squeezes of six Sabaic I. (RIÉ 33, 36, 38, 40, 42, 43) in ↗Yəḥa, which were published, as the last chapter of his book (1893), by D. H. ↗Müller, whose study of the same texts appeared a year later (1894). Four of these fragmentary I. (cf. RES 2629–32) had already been copied by ↗Salt (1814). Further Sabaic I. were found in 1906 by the ↗Deutsche Aksum-Expedition and published by ↗Littmann (DAE IV). The number of known Ethio-Sabaic I. has considerably increased in the second half of the 20th cent. due to the activities of such scholars as Francis Anfray, Roger ↗Schneider and Abraham Johannes Drewes.

The RIÉ contains 179 Sabaic I. from the pre-Aksumite period (RIÉ 1–179); a half a dozen more texts have come to light since then. They all date from the first half of the first millennium B.C.; the oldest texts go back to the 8th–7th cent. B.C. and testify to an undeniable cultural South Arabian influence in Ethiopia and Eritrea.

The first group of the Ethio-Sabaic I. consists of 18 texts (RIÉ 20–24; 26–30; 39; 41; 53; 55–58; 61) that were found in the region of ↗Ḥawəlti and ↗Mälazo, in Yəḥa, ↗ʿAddi Kramatən and ↗Mäṭära. The I., to a great deal fragmentary, are in a more or less pure Sabaic, written bustrophedon in monumental script of the earlier palaeographic period. The epigraphic texts were found carved upon ↗incense-burners, various kinds of altars or votive-stones dedicated by private persons to supreme deities of the Sabaean pantheon, like ↗Almaqah, ʿAṯtar (↗ʿAstär), ↗Dāt Ḥimyam or Dāt Baʿdān. The texts indicate that their authors were South Arabian immigrants, with typical Old Sabaean names like Yaqdumʾil or Ṣubḥumū, who came from the Sabaean capital Mārib or from Ḥadaqān in the Yemeni highland, and practised the craft of a stonemason (*grbyn*; RIÉ 26; 39).

The second, more numerous group of Sabaic I. from the pre-Aksumite period, though contemporary with the former, shows linguistic features different from South Arabian Sabaic that are undoubtedly the result of interference with the vernacular language. These texts, which are usually short and show a simple phraseology, were most probably carved by Ethiopians who spoke a local idiom and used Sabaic only in writing. The interdental phonemes *ṯ* and *ẓ* are replaced by *s* and *ṣ*, e.g. *ʿstr* 'ʿAstär' (RIÉ 1) (Sabaic *ʿṯtr*), *ʾnst* 'wife' (RIÉ 8) (Sabaic *ʾnṯt*), *ʾwsn* 'stelae' (RIÉ 5) (Sabaic *ʾwṯn*), *hḥds* 'to create, make, dedicate' (RIÉ 1) (Sabaic *hḥdṯ*), the hitherto unexplained *bsqt* 'by the guarantee of' (RIÉ 10) (root *wṯq*; cf. Sabaic *hwṯq* 'to guarantee') and *ṣlm* 'black' (RIÉ 5) (Sabaic *ẓlm*). The suffixed pronoun of the third person plural is written *-mw* 'their' (RIÉ 5) (Sabaic *-hmw*; cf. ↗Gəʿəz *-omu*), and the diphthongs *aw* and *ay* appear in reduced form as *o* and *e*, e.g., *hbs* 'Hobas' (RIÉ 62) (Sabaic ↗HWBS) and *šmn* 'šeman, the patron deity' (RIÉ 10) (Sabaic *šymn*). The indirect object of the verb *hqny* 'to dedicate' is often introduced by the preposition *l-*, e.g. *hqny lʾlmqh* (RIÉ 31) versus *hqny ʾlmqh* (RIÉ 28). Despite the limited

vocabulary of the I., there is a number of words unattested in Sabaic: e.g., *gbr* 'to make' (RIÉ 7) (cf. Gəᶜəz *gäbrä*), *mṭry* 'property' (RIÉ 37) (cf. Gəᶜəz *aṭräyä* 'to possess') and the attached particle *-hy* (RIÉ 5) (cf. Gəᶜəz *-hi* 'also, and'); deities unknown elsewhere, like *ṣdqn* (RIÉ 47) and *šyḥn* (RIÉ 51), occur as well.

A smaller part of this second group of texts are royal I. (RIÉ 1–13) of independent rulers bearing Semitic names who were kings of a territory or tribe called ↗DᶜMT, the centre of which was in the region between ↗Aksum and ↗ᶜAddi Gälämo and ↗Mäqälä and ↗Käskase. The style of these I., which date to the 8th–7th cent. B.C., shows common features with the oldest Sabaic I., e.g., in the invocation formula of the deities at the end of the texts. The rulers called themselves *ygᶜḏyn* – the same root as in Gəᶜəz (s. ↗Agᶜazi) – and were not only addressed as *mlk*, 'king', but also as *mkrb dᶜmt wsbʾ* '*mukarrib* of DᶜMT and Sabaʾ', i.e. of the indigenous population and of the immigrant Sabaeans, to which the term *ʾdm wṣlm*, 'the red and the black', i.e. the fair-skinned and the dark-skinned people, is also likely to refer.

The majority of I. of this second group (RIÉ 14–19; 25; 31–38; 40; 42–52; 54; 60; 62–179) are, with few exceptions, smaller fragments of texts and rock-graffiti in cursive writing that have been found in the regions of Mälazo, Yəḥa, Mäqälä, ↗Sänᶜafe and ↗ᶜAddi Qäyyəḥ. Unique is the inscription bearing the South Arabian alphabet (RIÉ 165) written in two bustrophedon lines, in which the signs for the letters *ġ* and *ś* are missing, while the letter *ẓ*, which likewise does not occur in the Ethio-Sabaic I., is obviously included.

Two copies of a royal I. from the reign of ↗ᶜEzana present, besides the Greek version, the Gəᶜəz text in two different scripts, one in Ethiopic characters and the other one in South Arabian characters, the so-called "pseudo-Sabaic" (RIÉ 185 and 185bis). Another inscription from the time of ᶜEzana (RIÉ 190) has a Greek and a "pseudo-Sabaic" version, while three I. exist only in a "pseudo-Sabaic" version, one of a brother of ᶜEzana (RIÉ 186), another of King ↗Kaleb (RIÉ 191) and the third of King ↗WᶜZB (RIÉ 192). These "pseudo-Sabaic" I. show some South Arabian linguistic features: the Gəᶜəz word *wäld* 'son' is replaced by Sabaic *bn* and the Gəᶜəz word ↗*nəguś* by Sabaic *mlk* in the title of the king, the specific South Arabic consonants *ṯ*, *ḏ* and *ś* are used, as well as the matres lectionis *w* and *y*, e.g. *ʾkswmm* 'Aksum' and *dqyqm* 'children'; the mimation *-m*, characteristic of Epigraphic South Arabian, is frequently employed as a purely graphic element for all parts of speech (cp. the two examples cited above; also *ʾsrgwnhmm* 'we adorned them'; *mnglnm* 'towards us'). The pseudo-Sabaic version of the royal I. reflected ᶜEzana's intention to express the ideological claim of the Ethiopian sovereign to be, at the same time, ruler of South Arabia as well.

Epigraphic South Arabian inscription found in ᶜAmdä Ṣəyon, 10 km south-west of Aksum, referring to the kingdom of DᶜMT; from RIÉ 1

Walter W. Müller

Greek inscriptions in Ethiopia/Eritrea

The number of ↗Greek I. available for Ethiopia and Eritrea is quite limited: some 20 pieces, with a chronological range from the 3rd cent. B.C. to the mid-6th cent. A.D. Apart from the ↗Monumentum Adulitanum, transmitted only within ↗Cosmas Indicopleustes's *Christian Topography*, a few of them are known since as early as 1805, from the copies taken by Henry ↗Salt during his visit to Aksum; others have come to light during the past century. After the pivotal though partial publication by Enno ↗Littmann in 1913 (DAE IV), a more or less complete corpus was edited by Étienne Bernand in 1991, and translated and commented upon by him in 2000 (RIÉ I–II and, resp., IIIA: nos. 269–286A, no. 273 being, however, in ↗Gəᶜəz, s. Fiaccadori 1981).

The use of Greek, not only internationally, as in coin legends (on gold, until the end of the ↗coinage), but also internally in epigraphs and such inscribed objects as clay lamps, pottery, amphorae (bearing the usual *tituli*, 'labels', and monograms, s. Littmann 1957:754ff.) and cast jewellery, most of them likely to be imported from Egypt, testify to the importance of both that language – rather a *lingua franca* of the Red Sea area – and the Hellenistic culture it conveyed, which were to spread from the Eritrean coast, with the "port of trade" of ↗Adulis (ruled, in the 1st cent. A.D., by King ↗Zoskales, "skilled in Greek letters"), to the far inland kingdom of ↗Aksum, centred on the nowadays Eritrean and Ethiopian mountain regions.

As a chosen official language, written Greek preceded the common use of Gəᶜəz: largely directed towards such foreign residents and visitors as traders and sailors, it was understood by a small portion of the ruling class and the merchant community. Yet, a body of learned people – special clerks or, later, ecclesiastics acquainted with the Greek language and literature – must have acted as scribes in preparing the drafts for the epigraphic documents (MHAksum 245). The early use of Greek for monumental I. may have been "an important factor towards the 'stylistic confidence' shown by the Gəᶜəz I." (ibid. 247).

The most ancient Greek I. is the first part of the Monumentum Adulitanum, by Ptolemy III, ca. 245–43 A.D. (RIÉ 276 = ODWG 1), which only survives in the incomplete copy made around 518/20 at Adulis – significantly, on the request of King ↗Kaleb – by Cosmas, who also recorded, as a continuation to it, another I., acephalous and equally lost, by an Aksumite king of the 2nd/3rd cent. A.D. (RIÉ 277 = ODWG 5 = FHN 234). Possibly the same as ↗Sembrouthes of the epigraph found at ↗Däqqamḥare (RIÉ 275 = ODWG 8), this anonymous king had an I. engraved that seems to match, or rather emulate, Ptolemy's text, thus providing evidence to the unshaken continuity of local Hellenism.

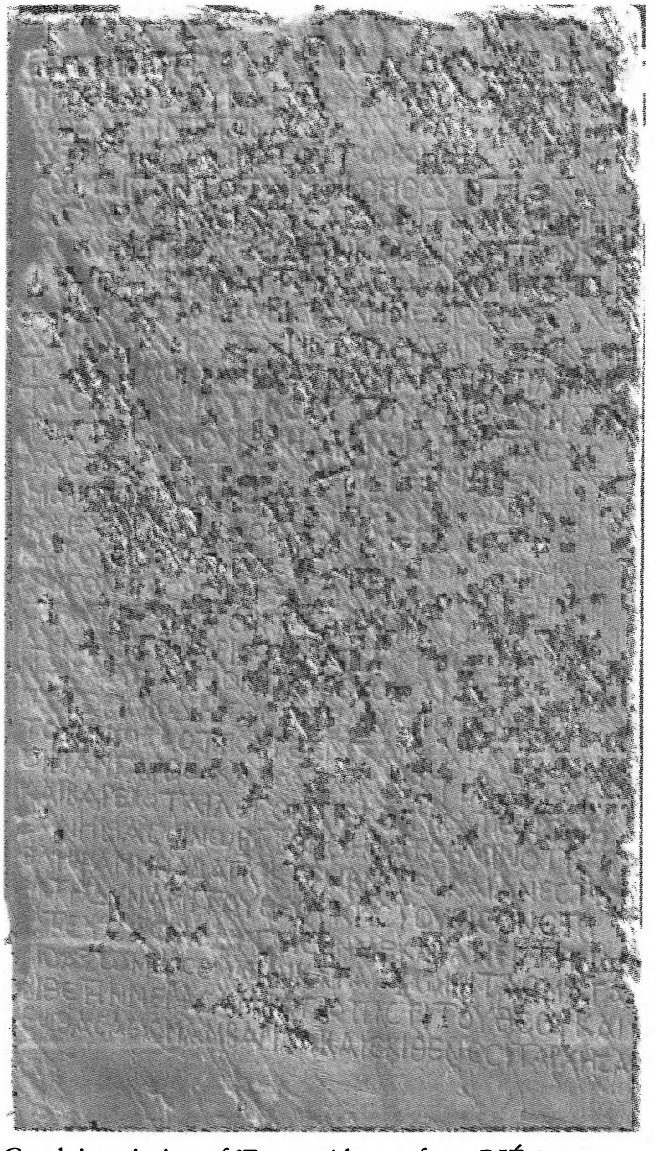
Slightly older proves to be the scant memorial from Ǝnda Abba ↗Pänṭälewon near Aksum – where a further epigraphic fragment, of uncertain reading and dating, is preserved (RIÉ 272) – in which another anonymous king hints at the order he was able to enforce on both sides of the Red Sea (RIÉ 269 = ODWG 6). Outside Aksum, later Greek I., left by an unnamed Aksumite king and also meant for foreign readers as a means of propaganda, are known from 3rd/4th-cent. ↗Meroë (RIÉ 286 [= ODWG 9] and 286A = FHN 297 and 298) – indeed a much more Hellenized milieu than Aksum.

In the first half of the 4th cent., Greek versions of Aksumite royal I. emanating from King ↗ᶜEzana appear in bilingual contexts, on votive thrones or stelae/obelisks, next to the corresponding Gəᶜəz and "pseudo-Sabaic" texts, from which they differ by minor variants or, sometimes, meaningful additions or subtractions. Two of those versions are concerned with the king's victorious campaign against the ↗Beğa (RIÉ 270 and 270bis = FHN 297 and 298). Another one, which reports about him waging war to the ↗Noba/Nubians in their own country, was only recently published (RIÉ 271 = FHN 299). It is all the more historically momentous as, unlike the two already available I. on ᶜEzana's Nubian campaign(s) (RIÉ 189 and 190, in Ethiopic and "pseudo-Sabaic" respectively), it explicitly acknowledges the king's debt to the Christian God and "his son Jesus Christ" or "the God Christ", opens with an interesting Trinitarian profession formula, and conceals a few biblical allusions. This Trinitarian formula is somehow echoed in the isopsephic siglum at the end of a lost Greek I., copied by ↗Pearce in Aksum, that should be dated between the 370s and 380s, and contains the beginning of Ps. 47 (48) or rather 87 (88). The only biblical quotation hitherto attested for

Greek epigraphy in Ethiopia and Eritrea, it provides sound evidence to the Vorlage of the Gəᶜəz translation of the ↗Bible in Aksumite times; moreover, by reflecting a certain amount of literacy, it bears witness to the complexity of the theological Hellenism within which the earliest Aksumite literature, translated from Greek, was to take shape (Fiaccadori 2003).

A newly-discovered (and still unpublished) Greek funerary I. from Gumala, to the northeast of Aksum, datable to the 5th/6th cent. A.D., records the burial of a Christian (as indicated by the formulary applied): *Kyriakós*, 'Cyriacus', ten-year-old, possibly a member of the Greek community then active in Aksum (Id. 2007).

The language of Greek I. is not always skilfully handled, but generally correct, as on the one side it mirrors the spoken vernacular of the Red Sea, on the other it shows peculiarities of orthography (frequent itacism, i.e. incorrect representation of vowels), lexicon, grammar and syntax (favouring N.T. constructions) that are usually shared by late antique texts particularly from ↗Egypt – Egyptian I. and papyri serving in fact as reference material for palaeography (Fiaccadori 2004:113, 122). The language of Ethiopian epigraphy also points to Egypt, and then to Nubia and Palestine for Christian documents (cp. Bingen 1982:352f.).



Greek inscription of ᶜEzana, Aksum; from RIÉ 271

Owing to the development of Gəᶜəz, Greek I. and, possibly, Greek itself were out of use by the time of Kaleb – who had the Monumentum Adulitanum copied by a passing trader.

Gianfranco Fiaccadori

Gəᶜəz inscriptions in Ethiopia/Eritrea in antiquity

More than 200 antique Gəᶜəz I. of various length, written on stone, rock, pottery etc., are known (most of which are collected in RIÉ; for some I. not included there s., e.g., Ricci 1988, in Kaye-Les, 2002, 2003). The majority of them are located in northern Ethiopia (esp. Aksum and its surroundings) and in Eritrea (e.g., ↗Mäṭära, region of ↗ᶜAddi Qäyyəḥ, Kärän), but there are several Gəᶜəz I. found in Sudan and Yemen as well.

It is commonly assumed that Gəᶜəz did not appear in written form before the kingdom of ↗Aksum was established, at the earliest in the 1st/2nd cent. A.D.; no evidence is known from the long period between the end of the reign of ↗DᶜMT and the beginning of Aksumite era. The oldest available epigraphic evidence is in a script known as "Protoethiopic", a forerunner of the properly Ethiopic one, bearing some similarity to cursive South Arabian. In one of these I., RIÉ 180 (Kropp 1994), on a metal object, the name of Aksum and of its king, GDR, appear for the first time in Ethiopic epigraphy. If GDR was the Ethiopian king ↗GDRT referred to in South Arabian I. as ally of Sabaʾ against ↗Ḥimyar (a still uncertain hypothesis), RIÉ 180 could be dated to the early 3rd cent. A.D. Some I. in "Protoethiopic" script probably contain the most ancient records of ↗customary law (such as RIÉ 183; cf. Drewes 1962:62).

The first I. in the so-called "ancient Ethiopic" (e.g., RIÉ 218), the earliest form of Ethiopic ↗script, are unvocalized. Remarkably, since its first appearance, Ethiopic script was written left-to-right, probably by influence of Greek writing (Ullendorff 1951:209f.).

From the end of the pre-Christian period, i.e., the early 4th cent., to the late 6th cent. A.D., a few major royal I. were engraved on stone plates, votive thrones or impressive ↗stelae/obelisks typical of Aksumite architecture. Some of them were copied already by ↗Salt, ↗Rüppel and ↗Bent (scholarly published by D.H. ↗Müller in 1893 and 1894). These and a few more such texts were photographed, copied and published by Littmann in 1913 (DAE IV). Five further royal I. have since come to light and are included in RIÉ. The majority of these I. are in Ethiopic script. A few I. (RIÉ 185 I, 185 bis I, 186, 190, 191, 192) employ South Arabian characters, their texts showing a few orthography and vocabulary peculiarities owing to deliberate imitation of ↗Epigraphic South Arabian (these I. are called "pseudo-Sabaic"; s. Sima 2003-04). A "pseudo-Sabaic" I. can be accompanied by a parallel version in Greek, e.g., RIÉ 190, 271. A special case is the "trilingual" (in fact, bilingual) I., with one Greek and two Gəᶜəz versions (the latter in South Arabian and Ethiopic script respectively). This I. is attested in two copies (RIÉ 185, 270 and RIÉ 185 bis, 270 bis). There was, apparently, a twofold impact in Aksum by Hellenism and South Arabian civilization, the latter by that time only a shadow of its former self.

The monumental royal I., indeed annals written on stone (↗Historiography), contain reports of "heroic deeds" of Aksumite rulers. Several I. were left by ↗ᶜEzana. The "trilingual" I. gives a detailed account of ᶜEzana's military expedition against the ↗Beğa people forced by him to submit and move to another territory assigned to them at that time. Of even greater historical importance is another major I. of ᶜEzana, by then a convert to ↗Christianity, telling of his victories against the Nubians (↗Noba), and very cautiously substituting the single God to the pre-Christian deities invoked in his earlier I. (RIÉ 189).

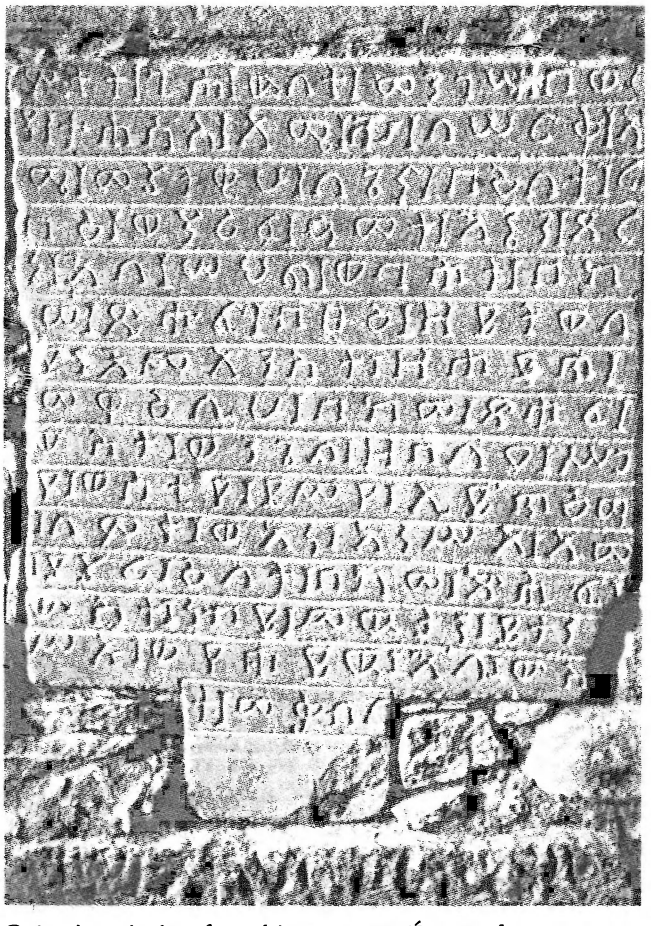
There is no doubt that the introduction of Christianity around the mid-4th cent. under ᶜEzana coincided with the farthest-reaching reform of Ethiopic orthography, i.e. the introduction of vowels by means of a regular modification of the signs already in use for consonant writing (e.g., in RIÉ 189). As a parallel for this unusual approach to vocalizing a consonant type, thus creating the syllabary still used today, the Indian example has been rightly resorted to (↗India). Yet, the lack of specific studies makes it difficult to establish whether this is a mere typological parallel (still allowing the hypothesis of Greek vowel graphemes appended to the Ethiopic characters, but s. Dillmann 1907:25 n. 2), or the reformers of Ethiopic writing were actually inspired by that or any other extant model. What is certain is that this novelty prevailed over time, but not without setbacks, as can be seen from the uncertain or partial vocalization of a number of I. (e.g., RIÉ 193, 194). The most complete contribution available on the evolution of epigraphic Ethiopic script is still that by Drewes and Schneider (1976).

The Ethiopic script appears in its definitive form in I. dating to the first half of the 6th cent., such as an I. left by ↗Kaleb at Mārib (RIÉ 195, in two fragments; s. below). Both this and another I. by Kaleb (RIÉ 191:34-35) refer to his military expedition(s) against ↗Ḥimyar (s. ↗Naǧrān). As a few other I. (RIÉ 192, 250), they offer brief biblical quotations, providing the first clear evidence for the existence of a translation into Gəᶜəz of at least some parts of the ↗Bible (Knibb 1999:46–52; Beaucamp et al. 1999–2000 39 and n. 98).

In addition to monumental royal I., short Gəᶜəz I. are found that often commemorate a person (as RIÉ 202), or contain a dedication of an object (RIÉ 198; similar dedications, to pre-Christian deities or the Christian god, also occur in royal I., e.g. RIÉ 191:38–39). Numerous graf-

fiti, especially abundant in ↗Toḳonda^{c} and the ↗Qoḥayto region, are quite interesting for local onomastics; they are frequently in the form of monograms, also found in Yemen.

By the end of the 6th cent., documents dry up to their almost total disappearance; the scant pieces of evidence from between the second half of the 6th and the mid-12th cent. are hard to date. Among them, mention should be made of the engraved alabaster lamp found in Yemen (RIÉ 265), an I. from Sinai, on the route Ethiopian pilgrims took to the Holy Land since late antiquity (Fiaccadori 1992:xxxiiif.), and the two (or three) I. left in Aksum by *ḥaṣani* ↗Danə^{ʾ}el towards the end of the 10th cent. (RIÉ 193, 194), as well as of the interesting funerary epitaph from the Eritrean village of ↗Ham (RIÉ 232), dated to the 10th–11th cent. (Fiaccadori 1990:325ff., 338–41; a different dating has been proposed by Kropp 1999). The latter has an exceptional wealth of biblical quotations (Knibb 1999:52ff.; Beaucamp – Briquel-Chatonnet – Robin 1999–2000:39, n. 98), and is by that a forerunner of later Ethiopic epigraphy. This impoverishment in writing I. has been ascribed to the more general political, cultural and material crisis of Ethiopia during the expansion of Islam in Egypt and Yemen.



Gəᶜəz inscription found in Ḥam (RIÉ 232); from Buxton 1970:206, no. 27

Linguistically, the I. are not homogeneous, but rather provide evidence for different varieties of Gəᶜəz or dialects closely related to it. Some peculiarities of the epigraphic language shed light on the history of Gəᶜəz. Thus, in earlier I., a more or less consistent distinction is drawn between certain graphemes (ᶜ/ʾ, *h*/*ḥ*/*ḫ*, *s*/*ś*, *ṣ*/*ṣ́*) that are often interchangeable in post-Aksumite period; the archaic ending *-e* (against *-ä* of the classical language) in prepositions and conjuctions is attested in independent forms (*məsle* 'with' in RIÉ 188:16, but *məslä* in RIÉ 187:34); an example of jussive form of causative stem has vowel *ä* in the prefix (against *a* of classical Gəᶜəz): *yäṣnəᶜ* 'let him make strong' in RIÉ 189:46 (cf. DAE IV 76–82; Diem 1988; Drewes in KayeLes; Bausi 2005).

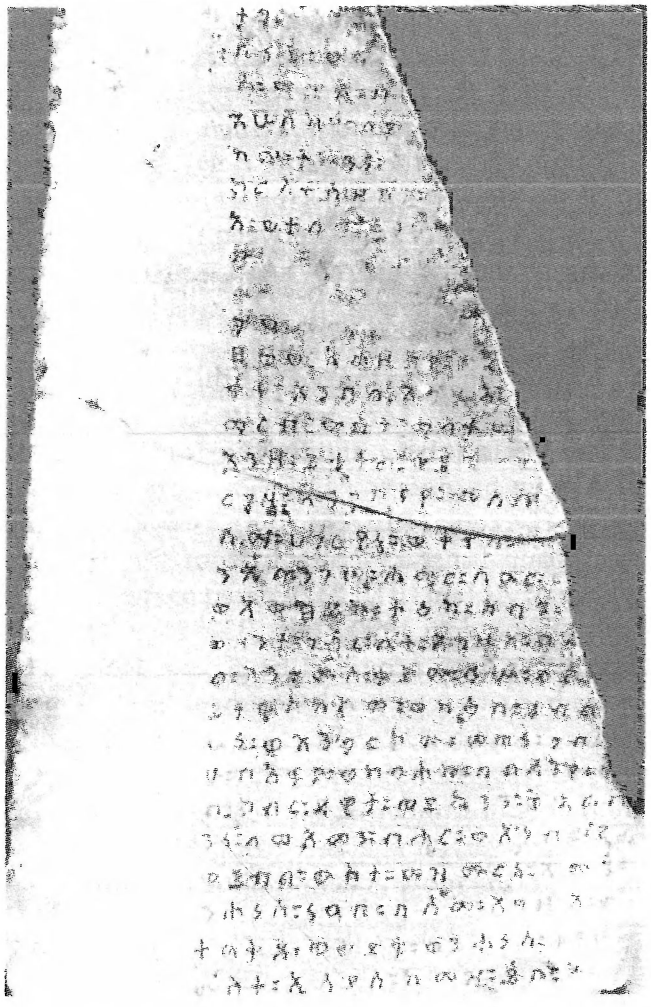
Alessandra Avanzini

Gəʿəz inscriptions in South Arabia

Albeit the corpus of the Gəʿəz I. originating in South Arabia is very restricted, they proved to be of great value for studying the development of Ethiopian syllabic writing, early Gəʿəz literature and the Aksumite campaign against the Ḥimyarite kingdom. The largest of these I., discovered in Mārib, consists of two fragmentary of a carved alabaster slab (RIÉ 195 I–II; s. Pirenne – Gigar Tesfaye 1982; MHAksum 230; Schneider in PICES 4, 767–79). It was composed ca. 525 A.D. to commemorate the expedition to Yemen undertaken by King ↗Kaleb ƎllätA Aṣbəḥa as a reaction to the persecution of Christians by ↗Yūsuf Asʾar Yaṯʾar. Its extant passages mention the landing of Ethiopian troops on the South Arabian coast (RIÉ 195 I.9–13) and some other events probably connected with the cruel treatment of the Christian community in Mārib (**ማርብ**, Marəb) and al-Hağarayn (**ሀገረይኑ**, Hagäräyne), a settlement localized in Ḥaḍramawt (RIÉ 195 II.10–16), as well as with retaliatory measures of Kaleb, including the burning of the Sabaean royal palace (**ታዕካ፡ ሰባእ**, *taʿəka Säbaʾ*, RIÉ 195 II.18), obviously identical to ↗Sälḥen. Perhaps the destruction of such a major symbol of ancient South Arabian sovereignty caused this I. to be set at Mārib.

RIÉ 195 presents the decisive argument in favour of the existence of a Gəʿəz translation of the Bible by the beginning of the 6th cent. A.D., since many quotations from the Psalms (19:8–9 = RIÉ 195 II.26–28; 65:16–17 = RIÉ 195 II.21–23; 67:2 = RIÉ 195 I.5–6), one from Matthew (6:33 = RIÉ 195 II.20–21) and a reference to Isaiah (RIÉ 195 II.29) occur in it.



Gəʿəz inscription found in Mārib, South Arabia; from RIÉ 195 II

Two other Gəʿəz inscriptions of South Arabian origin were found in Ẓafar, the capital of the Ḥimyarite state (RIÉ 263, 264). These small, seriously damaged fragments date from the same period as RIÉ 195. By the shape of their characters, all the three texts are attributed to a more advanced palaeographic stage in comparison with the inscriptions of ↗ʿEzana.

To this group of epigraphic materials two fragmentary texts purchased in Yemen also belong (RIÉ 265, 266), the exact provenance of which remains unknown.

Gəʿəz graffiti, in the form of monograms, were also found in Yemen at Yarīm (Grohmann 1927:148 and fig. 38; cp. Fiaccadori 1992:XXIV and n. 36, XXVI, fig. 4).

Serguei A. Frantsouzoff

Gəᶜəz inscriptions in Ethiopia/Eritrea in medieval and modern times

After the 10th/11th cent., during the "dark ages" that witnessed the final collapse of what still remained of the Aksumite civilization, the scope of epigraphy, no longer tied to the kingdom's life, became more restricted.

Leaving aside the few obscure hints scattered in the literature on "ancient churches" (e.g., Mordini 1961:55), the first dated "medieval" I. hitherto known was found outside Ethiopia and Eritrea, at Suhāğ (Fayyūm, ↗Egypt). Here pilgrims heading to the Holy Land from ↗Goğğam, namely from ↗Däbrä Wärq, had it painted "in colour" on 8 *Säne* 222 A.M., i.e. 2 June 1038 or 1114, in a chapel of Dayr al-Abyaḍ (Conti Rossini 1923:461f., corrected by Chaîne 1925:191f.). This chapel has since been destroyed, and the I. only survives in a faithful copy by Wladimir de Bock (1901:54, fig. 65).

Datable to and soon after the reign of *nəguś* ↗Lalibäla is a consistent series of wooden I. discovered over the past 30 years in churches of ↗Lalibäla and the surrounding area. Quite remarkable in terms of palaeography (UhPal 168), they are skilfully carved on *mänabərt* (pl. of ↗*mänbär*[*ä tabot*]') and fragmentary panels, and include a few long and complex texts. Four of them mention the king; one, the king and his wife, ↗Mäsqäl Kəbra, portrayed with him on the same *mänbär* (Strelcyn 1979; Gigar Tesfaye – Pirenne 1984).

A reflection of the ↗Zagʷe cultural framework, and its renewed contacts with Egypt and ↗Jerusalem, most of these I. swarms with theological issues and biblical quotations and allusions. In one case, a most important document is transmitted in which the king praises "the greatness and glory of Sunday" with expressions that are partly identical to those of the 13th/14th-cent. *Homily on the Sabbaths* attributed to the ↗Rətuᶜa Haymanot (Fiaccadori 1992:XXXIII; cp. Lusini 1990:349, and n. 35 [352]), and would rather point to the existence of a mutual source – and to an earlier date for the beginning of the Ethiopian controversy on the celebration of Saturday-Sabbath (↗Ewosṭatewos).

A few decades later, an official statement by King ↗Yəkunno Amlak comes in the form of an I. within his portrait as a donor painted on a pier face of the ↗Gännätä Maryam rock-hewn church, not far from Lalibäla (Heldman – Getatchew Haile 1987:2ff., fig. 1; UhPal 169). It supplies fundamental historical information by referring to persons who might have played important roles in (re)establishing the ↗Solomonic dynasty (1270). In this and other churches of ↗Lasta and nearby ↗Angot (↗Ǝmäkina Mädḫane ᶜAläm and ↗Waša Mikaᵓel), with similar 13th-cent. I. hinting at historical persons (Balicka-Witakowska 2004:28 and nn. 103–04, figs. 37–38; Mercier 2002:143ff.), painted labels on murals are also employed, either as simple slips aimed at identifying the represented persons, esp. patrons, founders and saints, or as prayers accompanying the latter's images.

Such painted I. were soon diffused all over Ethiopia, even on textiles (s., e.g., DAE III, 50f., pl. III, fig. 149, with a 15th-cent. I. from Däbrä Damo), and became the almost exclusive form of epigraphy in the next many centuries. Among the best known instances are those on the 15th-cent. panels by ↗Fəre Ṣəyon and his school, with rather peculiar texts (one from the ↗*Aksimaros*) and features (Mercier 2005); and in the more or less contemporary Təgrayan rock-hewn churches of Maryam Baḥ(ə)ra (Lepage – Mercier 2005:140–46, ills.; cp. Fiaccadori 1993:185 and n. 77 [197f.], figs. 29f.) and ↗Gʷəḥ Yəmᵓata (Lepage – Mercier 2005:170–80, ills.). As for I. preserving unique historical documents (similarly to ↗manuscript colophons), attention can be drawn, e.g., to the later murals in the church of ↗Mäᶜaquddi Yoḥannəs executed in 1657: the portrait of the founder, *abba* Gäbrä Mäsqäl of ↗Däbrä Mäᶜar (beginning of the 14th cent.), is paired with a long "↗genealogy" I. mentioning, among others, the patron of the paintings, Gäbrä Iyäsus, and his spiritual ancestry (Lepage – Mercier 2005:193, ill.; cp. Fiaccadori 2006:139 n. 54).

Written in Gəᶜəz, but influenced in their layout and appearance – incised or carved stone or

Inscription on a wooden *tabot*, upper side: *Zätabotä Nä'akkʷəto Lä'ab wätabotä Ṣəyon. / tabotä śəllus qəddus* 'This is the *tabot* of Nä'akkʷəto Lä'ab and the *tabot* of Ṣəyon [i.e. Mary]. Tabot of the Threefold Holy [i.e. the Holy Trinity]'; first half of the 15th cent., Museo sacro della Biblioteca Apostolica Vaticana, no. 3016, Musei Vaticani, Città del Vaticano; from Hanssens – Raes 1951 (no. VII)

marble slabs – by Latin and Italian contemporary epigraphy are, abroad, the funerary I. in the Roman monastery of ↗Santo Stefano dei Mori, ranging from the 16th to the 19th cent., and including the famous bilingual epitaph of ↗Täsfa Ṣəyon, in Ethiopic and Latin (Gallina 1888; Chaîne 1911:26–36; Euringer 1926).

Incised or carved I. kept being used for ↗pottery, ↗jewellery and liturgical implements – *mänabərt*, *tabotat* ('altar tablets'), hand and processional ↗crosses, Eucharist spoons, chalices, etc. Countless examples exist, most of which unpublished, that bear quite often significant wordings. Among the edited material, mention should be made, at least, of the collection of 16th-18th wooden *mänabərt* now in the Musei Vaticani, formerly in the Museo Sacro of the Biblioteca Apostolica (Hanssens – Raes 1951, s. ill.); of the cross donated, before 1478, by *aṣe* ↗Bä'ədä Maryam "to the Amhara so that they pray with it in ↗Gorgora", now at Florence, Museo del Bargello (Tedeschi 1991; ↗Italy); of the golden chalice in London, Victoria & Albert Museum, presented by *aṣe* ↗Iyasu and his wife Məntəwwab (↗Bərhan Mogäsa) "to the *tabot* of [the church of ↗Däbrä Ṣäḥay] Qʷəsqʷam" sometimes around 1746 (BudHist vol. 2, 516 and facing ill.; Heldman in AfrZion 248f., no. 112, and ill. [221]); and the brass, gilt processional cross (for an unknown church of Gondär) with the engraved portraits of the same donors (Heldman in AfrZion, 250, no. 114, and ill. [222f.]; cp. Di Salvo 2006:76 and n. 30 [85], fig. 31). Also, an interesting example from the South, surviving only in a much disputed copy (CecZeila vol. 2, 483ff.), is the *tabot* given by ↗Säpänhi, ruler of ↗Ǝnnarya, credited with bringing it from Jerusalem, to Betä Giyorgis of Baha (↗Käfa) in ca. mid-16th cent. (s. Huntingford 1955, 1956; Ullendorff 1955; Lange 1982:31ff., 301ff.).

I. on murals, icons – sometimes labelled with the artists' names: among others, ↗Brancaleon, ↗Afnin and Fəre Ṣəyon – or simple daily life objects, as well as on monumental structures (e.g., the inscribed plaster slab commemorating the restoration of the Nile bridge at Säbbara Dəldəy in Goǧǧam under ↗Mənilək II: s. Anfray in PICES 8, vol. 1, 20f. [no. 42], 43, pl. XIVc), attest to the uninterrupted continuity of epigraphic practice, and of the use of Gəᶜəz as the only relevant (prestige) language, up to modern and contemporary times (s., e.g., DAE III, 103, pl. x, figs. 295, 298f., with crosses), when Amharic and Təgrəñña are occasionally employed, alongside Gəᶜəz, for captions and legends in such popular contexts as wall and canvas paintings (s., e.g., Ricci 1989 and Raineri 1996:140f.). The systematic collection – still an urgent desideratum in Ethiopian studies – of all these I. shall also provide significant points of comparison to coeval manuscript writing.

Gianfranco Fiaccadori

Arabic inscriptions in the Ethiopian regions

There are primarily five geographical locations in Ethiopia and Eritrea in which Arabic I. have been found to date: 1) the necropolis on the island of ↗Dahlak Kabīr, whose corpus consists of either 302 (according to Oman 1987:XIII) or 269 I. (according to Schneider 1983:50, 431–39); 2) eastern ↗Təgray, 21 I.; 3) southern ↗Šäwa, four I.; 4) the ↗Harär region, 16 I.; 5) south-western Ethiopia, eight I. Additionally, smaller groups of I. are scattered around other cities (e.g. two I. in Massawa, originating from Dahlak, mentioned by Cresti [1990:417ff.]). It is likely that further large scale excavations would reveal more epigraphic material that presumably exists but remains undiscovered (s., e.g., the results of the survey by Kebedde Geleta 2000). Virtually all of the I. discovered so far are funerary texts, with the exception of an I. that, according to Cerulli (CerStud I, 52f.), was written on the minaret door of the *Ǧāmiʿ* in Harär to commemorate its completion (1175 H. [1761/62 A.D.]), and an I. found in Wəqro.

1) The I. from Dahlak Kabīr are pre-eminent among the Islamic epigraphy of Ethiopia and Eritrea, and the wide range of associated bibliography attests to their importance. Various other factors contribute to the value of this corpus. From a purely quantitative point of view, the I. of Dahlak Kabīr represent not only the most numerous epigraphic corpus in Ethiopia and Eritrea, but one of the most conspicuous epigraphic findings in African Islamic countries (Oman 1976:273). The I. provide us with crucial information on the sultanate that ruled the islands of Dahlak from 1090 to 1250 (Wiet 1951–52; Cuoq 1981:49–52), and on the general development of the Islamic society of the archipelago from 980 (the earliest dated I. from Dahlak) to 1540 (the latest dated I.). They provide a valuable example of the Arabic epigraphic techniques used in north-east Africa in addition to useful palaeographic and calligraphic data on the evolution of Arabic writing on the African Red Sea coast (Schneider 1983:81–103). Last but not least, from an artistic point of view, the I. of Dahlak Kabīr present a wide range of ornamental patterns exemplifying the varying artistic capabilities of the local craftsmen (Schneider 1983:51–58).

In 2) Təgray, the existence of Arabic I. was first mentioned by Pearce at the beginning of the 19th cent. (1831:121–24). Conti Rossini (1938), confirming Pearce's assertions, found four I. outside the village of Wəgär Hariba near ↗Kʷiḥa, in ↗Ǝndärta. Moreover, Conti Rossini was told that another I. from the same location had already been sent to the town of Brescia together

Arabic funerary inscription from Wəgär Ḥariba near Kʷiḥa, Təgray; from Doresse 1956:97

with the accoutrements of a regiment of the Italian Camicie Nere: information on the destiny of this I. is presently not available. Further Arabic epigraphic monuments in that region were discovered and studied by Pansera (in CRStud, four stelae of which he was able to decipher two), Schneider (1967; 12 I. discovered in 1962 in the same location in Ǝndärta and brought to the Archeological Museum in Addis Abäba; two more I. were photographed and left in place) and recently by Smidt who published an Arabic I. he found in Kʷiḥa (StudAeth 259–68) and another one in Wəqro. Historically speaking, the I. of Ǝndärta demonstrate the existence of a Muslim community there since the beginning of the 11th cent. (the oldest I. may date to 1001 according to Schneider 1967:108 n. 2). This Islamic presence in Təgray was closely linked to that on Dahlak Kabīr; the name of Ḥafṣ b. ʿUmar al-Yamāmī, a person originating from the region of Yamāma in Arabia, is mentioned in both places. It is thus very likely that the Muslims who settled in Ǝndärta came from the Dahlak islands and they acted as a fixed outpost for the Muslim trade along the commercial road from the coast to the highland, gathering goods from the Ethiopian mainland and directing them to markets overseas (Lusini 1993–97:250f.). The palaeographic analysis of the Ǝndärta I. may also provide further support for the connection between Dahlak Kabīr and Ǝndärta (Smidt in StudAeth 264), even if the graphical quality of the Təgrayan stelae is incomparably lower than that of the Dahlak I. (Lusini 1993–97:248f.), except the latest I. discovered in eastern Təgray (Wəqro).

In 3) southern Šäwa, two I. were found in Bišoftuu (↗Däbrä Zäyt) and its surroundings (in 1965 and 1968) and another stela, characterized by the presence of two "seals of Solomon" (the hexagram as a mystical-magical symbol in Islam) on its superior edges, was discovered in Didimtu near Wänği (↗Adaamaa) in 1969 (s. Schneider 1970). The writing on the stelae is barely legible due to the poor conditions of their conservation. They have been hypothetically dated to the 12th cent., and thus could be considered a concrete witness to the ancient Muslim presence in the area that was associated with the Islamic sultanate of Šäwa (Cerulli 1941).

A fourth very recent I. was discovered in 1970 by M. Taïb near ʿAddi Ḥəywät in the surroundings of Adaamaa and published by M. Schneider (2006): it is in remembering of a *šayḫ* called Ibrāhīm who died there while travelling on a pilgrimage to ↗Šayḫ Ḥusayn.

4) In the region of Harär, Arabic I. were found by ↗Azaïs and ↗Chambard during their stay in Ethiopia between 1922 and 1926 (Azaïs – Chambard 1931): two in Heyssa, seven in Lafto, three in ↗Č̣ällänqo and two in Bate. Photographs of these 14 I. were published by Ravaisse (1923) and further examined by Littmann (1924), who studied in detail their writing and qualified it as an "archaizing kufic", in some cases similar to ancient Syrian graffiti and I. but also to the script of modern Ethiopian amulets (↗magic scrolls), or, in other cases, closer to an imitation of the "creeping kufic" style. A wider corpus of 18 I., including four found in Munessa (s. [5] below), was then published by Ravaisse as an appendix to the volume by Azaïs and Chambard (1931:283–309) and further analyzed by Huntingford (1955). Two more I., discovered in Harla near Dərre Dawa, were examined by M. Schneider (1969).

Of this entire group, only two of the Lafto I. are dated: Littmann (1924:240f.) estimated 662 H. [1263 A.D.] and 666 H. [1267/68]. The two I. from Bate which were recently re-analyzed with much care by M. Schneider (2005), present some

palaeographical peculiarities which set them apart from the rest of the corpus: they are written with good kufic characters and not coarse "semi-cursive script" (Huntingford 1955:231, quoting the opinion of D.S. Rice) and could be the work of a foreigner who created them around the year 1000 (ibid. 232f.). Schneider (2005:348–54) considers that the artisan, possibly a Persian, who engraved the two I., was inspired by some graphical and stylistical forms used in Dahlak and Ḥiǧāz and worked in the Bate area between the end of the 11th and the beginning of the 12th cent. The presence of Islamic communities in the region should be considered within the framework of the Muslim traders commercial activities along the trade route linking the Indian Ocean, especially the port of Zaylaᶜ, to the highland. Trader settlements naturally flourished at the main junctures of the caravan route due to the highly profitable trade.

As for 5) south-western Ethiopia, four Arabic I. were discovered by Azaïs and Chambard in Munessa near lake Langano. Three are too fragmentary and not translatable; the fourth (Azaïs – Chambard 1931:299ff. [no. 16]), later in Museo Coloniale in Rome (Rossi 1942:277f., 281) is tentatively dated to the 13th cent. They fit in the same general socio-historical pattern from which the I. from the Harär region originated.

The Museo Coloniale in Rome kept four more Arabic I. generally indicated as originating from Arsi ("paese degli Arussi") but whose real origin is unknown: they, too, are all hypothetically dated to the 13th cent. (Rossi 1942).

Alessandro Gori

Institut national des Langues et Civilisations orientales

Behind the origin of INALCO there are two different institutions of the French monarchy, aimed at teaching Oriental languages and training dragomen (i.e., future interpreters), that were founded at the end of the 17th cent.: the École des Jeunes de langues of Pera (1689), in Istanbul, and the Chambre des Arméniens (also called the École des langues orientales) at the Collège Louis le Grand in Paris. However, the foundation itself is due to a Convention decree of 30 March 1795, issued thanks to the efforts of Louis-Mathieu Langlès, from 1795 the first president of the then École spéciale des langues orientales vivantes (or École des langues orientales vivantes, ELOV). In 1824, after his death, the administration of the École was taken over by Antoine-Isaac Silvestre de Sacy, the leading orientalist of the time, who remained in charge till 1838. The institution changed its status and name several times (in 1914 it became École

nationale des langues orientales vivantes, ENLOV; in 1969, Centre universitaire des langues orientales vivantes): in 1971 it eventually took the name INALCO, informally designated as Langues orientales or Langues O'. After moving several times within Paris, in 1873 it was finally settled at its present location, 2 rue de Lille.

The first languages taught were literary and spoken Arabic, Turkish, Crimean Tatar, Persian and Malaysian. In 2006, 11,300 students were studying 90 languages of all continents except those of Western Europe.

In 1898 Casimir ↗Mondon-Vidailhet was entrusted with a newly introduced course on "Abyssinian" (called ↗Amharic starting from 1948). He was succeeded in 1910 by Marcel ↗Cohen, who stayed until 1950 with an interruption between 1940 and 1944, when the course was held by Marcel ↗Griaule. In 1926 the post was changed into a professoral chair, in which Joseph Tubiana followed Cohen from 1950 (at first as "chargé de cours", becoming professor in 1957) until 1974. He was in turn followed by Mäkʷännən Argaw as "maître de conférence", then replaced by Dəlwänbära Nägga in the autumn of 2001. Starting from 1937, the professors were assisted by tutors: Mäkbəb Damṭe (1937), Täklä Bərhan Gərmu (1938–39, 1945–56), Taffäsä Habtä Mikaʾel (1942–45), Yosef Mäkʷərya (1956–59), Bərhanu Abbäbä (1959–65), Mäkʷännən Argaw (1965–74), Mäᶜaza Ḫaylä Revol-Tissot (since 1974 and now in charge of Təgreññа as "maître de conférence"). Most notable among the students were Jacques ↗Faitlovitch, Erich Weizinger, Roger ↗Chambard, Deborah ↗Lifchitz, Wolf ↗Leslau, Maxime ↗Rodinson, Roger ↗Schneider, Stefan ↗Strelcyn, and many others.

↗Təgrəññа, as well as ↗Oromiffa and other Cushitic languages, and aspects of Ethiopian culture (such as history, ethnology, literature, art) have also been taught at different stages.

Alain Rouaud

Institute of Ethiopian Studies

Founded in 1963 as a subdivision of ↗Addis Ababa University, the I.E.S. (**የኢትዮጵያ ጥናት ምርምር ተቋም**, *Yäʾityopya ṭənatənna mərəmmər täqʷam*) is located in Ras Mäkʷännən Hall, formerly ↗Ḫaylä Śəllase I's palace (↗Gännätä Ləᶜul). The Institute's objectives are to conduct, promote and co-ordinate research and publications on Ethiopia, emphasizing the humanities and cultural studies; and to preserve Ethiopia's cultural heritage by collecting and displaying in the Museum, Ethiopian artefacts and items of cultural value. There are three Departments: library, museum, and research and publications. The I.E.S. also assists visiting scholars.

The library, a famous collection of aethiopica, comprises more than 80,000 foreign-language books on Ethiopia published abroad, over 18,000 monographs in Ethiopian languages printed in the country, numerous periodicals, over 500 manuscripts, and 20,000 photographs, as well as other non-print media. The library holds some 10,000 microfilm reels, among them a set of all Ethiopian manuscript microfilms filmed by the ↗EMML project in Collegeville, Minnesota; microfilms of Ethiopian manuscripts in European and North American libraries, donated by embassies; and a microfilm collection of foreign diplomatic papers relating to Ethiopia initiated by Sven Rubenson. Both the library and the museum, which holds some 10,000 ethnographic and art items, originated in small collections made by Stanisław Chojnacki, Librarian of the University College of Addis Abäba, later the first Librarian and Museum Curator of the I.E.S.

The first publication of the I.E.S. was the inter-disciplinary bi-annual ↗*Journal of Ethiopian Studies*, 1963ff. (starting from vol. 1, no. 2, since the first issue of the Journal appeared prior to establishment of I.E.S.). The Journal was edited until 1976 by the Institute's first Director, Richard Pankhurst, and by Stanisław Chojnacki. Bibliographies included *A List of Current Periodical Publications in Ethiopia*, published every two years, 1964–74, and *Ethiopian Publications*, a bibliography of locally published material in foreign languages, which appeared annually, 1964–75 and irregularly until 1989. Other publications included the *Register of Research on Ethiopia and the Horn of Africa*, 1964–74, and the *Dictionary of Ethiopian Biography* (DicEthBio) of which volume one appeared in 1975. Traditional Ethiopian scholars, most notably *aläqa* ↗Ənbaqom Qalä Wäld, who worked under the voluntary supervision of ↗Mängəśtu Lämma attached to the Institute produced a series of *Qəne Collections*

(s. ↗*Qəne*), and three monographs on Ethiopian land tenure were published 1965–66.

The I.E.S. organizes and publishes the proceedings of its scholarly gatherings. Among these was the Third ↗International Conference of Ethiopian Studies, the first to be held in Ethiopia in 1966. Under a succession of Ethiopian directors (Fäqadu Gadamu, Taddäsä Tammərat, Taddäsä Bäyyänä, Baḫru Zäwde, Abdussamad Ahmäd, Bayyä Yəmam – who launched the plan for a new I.E.S. library building, and Elizabet Wäldä Giyorgis who inaugurated a graduate course in Ethiopian studies, as well as the library's automation), librarians (Däggəffe Gäbrä Ṣadəq and Salomon Dässaläññ) and museum curators (Gərma Kidane, Ahmäd Zäkariya, Ḥasän Sayid), the I.E.S. grew greatly. There followed the 8th (1984), 11th (1991) and 14th (2000) International Conferences, the First (1990), and Second (1992) National Conferences of Ethiopian Studies, and the Third International Conference on the History of Ethiopian Art (1993). Other gatherings were held on the Centenaries of the Foundation of Addis Abäba (1987), the battles of ↗Dogᶜali (1987) and ↗ᶜAdwa (1996), and on the anniversaries of the battles of ↗Mäqdäla and ↗Mätämma (1990). The I.E.S. also publishes the work of individual scholars, including the work of the first group of Ethiopian historians to undertake full-time research.

An important development was the acquisition of the former emperor's majestic reception hall, earlier used for graduations etc., for the expanding Library. From 1976 to 1999 this was directed by Däggəffe Gäbrä Ṣadəq who was responsible for acquiring and preserving clandestine literature under several regimes, and for making it available by compiling *A Catalogue of Clandestine Literature on Ethiopia* (1995). He was assiduous in preserving government and personal archives of the post-Mənilək period. They are housed in a building donated to the Institute by *blattengeta* ↗Maḫtämä Śəllase Wäldä Mäsqäl, and named after his father (Wäldä Mäsqäl).

The first publications on the ethnographic holdings of the museum were Hecht's *The Pottery Collection* (1969) and Moore's *Ethiopian Processional Crosses* (1971). The museum acquired philatelic and numismatic collections and expanded into part of an upper floor of the former palace, which developed into a unique gallery of Ethiopian Christian icons and crosses, Muslim exhibits, and modern art in traditional style. The gallery was designed by the French museologist, Anne Saurat, who prepared a guide and catalogue of the museum, published by the Institute in 1989. In 1999 a project of the then curator, Ahmäd Zäkariya, materialized when an ethno-musicology section was opened, with French, Italian and Swiss support. It was followed by the publication of a catalogue, *Musical Instruments of Ethiopia* (1999), by the Centre français des Études éthiopiennes. The Society of Friends of the Institute of Ethiopian Studies was closely involved in developing this section of the museum: the Society was established in 1968, to raise funds for special museum and library acquisitions, and, in 1999, to this end, opened a shop, near the museum entrance, selling locally produced artefacts. It also organizes monthly public lectures on aspects of Ethiopian culture. Both library and museum collaborate in exhibitions, at home and abroad. Information on the I.E.S.'s current activities, and articles of a popular nature, are published in the Institute's quarterly *Bulletin*, inaugurated in 1994.

Instruments, musical

Ethnomusicologists classify I. on the basis of two criteria: their vibrating material and the modes of creating that vibration. In this entry, I. will be presented within the usual Sachs-Hornbos-

tel classification (s. Sachs – Hornbostel 1961), which consists of grouping by the way in which the sound is produced (air, string, membrane, or other self-sounding material). The sample of Ethiopian I. will thus be dispatched in four instrumental families: aerophones, chordophones, membranophones and idiophones. The fifth category, electrophones, applies in Ethiopia since the late 20th cent., with ↗*mäsinqo* and ↗*kərar* players using electronically amplified instruments.

Due to the considerable ethnic diversity of Ethiopia, one can observe substantial instrumental diversity in the country. Some I. are specific to one or more societies and constitute the instrumental distinctive features of these societies. Other I. are shared by all Ethiopian societies, even though they vary in their name, form, size, playing techniques, function, circumstances of performance, etc. As for their denomination, Kimberlin's (1980:236) statements are still valid: "Many problems in Ethiopian organology have arisen because of semantics. The large number of languages and dialects in Ethiopia produce a great many different names for equivalent instruments".

Aerophone family

In the aerophone family, two types of flutes are common in most Ethiopian societies. The first one, known as ↗*wašənt* or *šämbäqo* in the high plateaus (Morand 2004:94–102), *ululle*, *garri* or *faga* among ↗Oromo, *šulungo* among ↗Maale (Ferran 2005 [CD], 28), *šungi* among ↗Aari (Fournel 2001:131–37), *kaen* among ↗Nuer, *woissa* among ↗Hamar, *moru* among ↗Mursi (Lagatta in Tourny [ed.]), *hindeeru* among ↗Arbore (Gabbert in Tourny [ed.]) and ↗Bäšada (s. Strecker 2003 [CD]), is a simple end-blown flute played alone. This flute is usually made from bamboo and has generally two to four finger-holes.

The second type comprises several flutes played together, with either each instrument producing a rhythmic formula on the single tone it produces, creating a polyphony called interlocking-parts or hocket. This polyphony is either strictly instrumental, as in Aari *weyssa* (Fournel 2001:94–129) and ↗Gumuz *qome* (s. Gottlieb 1980 [CD]), or voco-instrumental, as in Maale *pele* (Ferran 2002, 2005 [CD], 24, 28). Some flutes in the orchestras can produce two sounds, such as the ↗*əmbilta* found in the high plateaus. The flutists can thus play many tunes by combining resources of their differently pitched instruments (they usually play the upper harmonics, i.e the first two pitches; s. Timkehet Teffera 2005:135–38).

Some regions are characterized by the presence of panpipes, as the Gawwada *palale* (Institute of Ethiopian Studies 1999:32) and the ↗Konso *fanfa*, or globular flutes, as the Maale *umburko* (Ferran 2005 [CD], 24). The flutes are usually used during ritual, entertainment, field or cattle keeping circumstances. Some *fanfa* flutes have been reported to exist in other areas (↗Gurage, Oromo, etc.), but it seems they have been more or less abandoned.

The aerophone family is also composed by trumpets. Like the flutes, trumpets are played alone, as the Aari *šora* (Fournel 2001:37) and the Nuer *kan*, or in orchestras, as the ↗Wälaytta *č̣akaze* or *čekka zaye* (Institute of Ethiopian Studies 1999:32) and the ↗Berta *waza* (s. Robert Gottlieb, *Soudan I. Music of the Blue Nile Province. The Ingessana and Berta Tribes*, UNESCO Collection, Auvidis, D 8073, Berlin 1980). All of them can be made from wood (↗Käfa *hoora*), from bamboo (Wälaytta *č̣akaze*), from metal (↗*mäläkät* of the ↗Amhara and ↗Təgrəññña; Arsi Oromo *turumba*) or from the horn of a cow (Aari *šora*), an antelope (↗Sidamo or ↗Mağaŋgir), an oryx (Maale *šoroki zaye* and ↗Ñaŋatom *amwara edir*), a water-bull (Maale *dokosi zaye*), a wild goat (Maale *malkiti zaye*) or an elephant (as in Western Oromiyaa region). End-blown trumpets (as the Käfa *hoora* and the Wälaytta *č̣akaze*) differ from lateral trumpets (as the Aari *šora* and the Maale *malkiti zaye*, or the one found in Mursi). In their orchestras, ↗Dawro include both end-blown and lateral trumpets. All the present known trumpets do not have any finger-holes. Some produce a single sound, whereas others can make different notes by playing with the harmonics or by modulating the pitch with the hand by covering more or less the larger extremity of the trump. In some regions, the trumpeters also alternate vocal and instrumental sounds. Trumpets are sometimes insignias of power (as the *dokosi zaye* of the Maale which was exclusively played by chiefs; also *mäläkät* of the Ethiopian highlands). They can also be blown to gather together the members of a work group (as among Aari) or an agricultural association (as among Maale). Trumpet orchestras are often used in funeral contexts.

Although it looks like a gourd rattle, the bottle gourd *ariva* used by the Berta is another kind of aerophone. A narrow tube is inserted into the opening at the tip that is used as a blowing hole.

Producing only one note, the instrument is used by the leader of the instrumental ensemble to conduct the performance.

Chordophone family

The chordophone category is represented in Ethiopia by lyres, spike-fiddles and the musical bow. The lyre family is morphologically divided into bowl-lyres and box-lyres. The bowl-lyres are known as *kərar* in the Ethiopian highlands, and as *golo* (Maale), *šungi* (Aari), *goala* (Hamar and Bäšada), *kihayta* (Konso), *ditsa* (↗Dorze), *tum* (Nuer), *sangwa* (Gumuz), etc. in southern and western communities. Comprised of five or six strings, bowl-lyres can usually either be plucked with the right hand with a plectrum – the other hand fingers preventing the strings not played from sounding – or be plucked individually by the fingers of one hand. When played with the plectrum, the bowl-lyre produces sounds with a more pronounced attack.

The other type of lyre, associated with the Ethiopian highlands, is the ↗*bägäna* (Kimberlin 1978; Weisser 2005). Made of wood (pillars, yoke, decorations, soundbox, tuning pegs, bridge), skin (soundboard) and gut (strings), this ten-stringed box-lyre has the highest status among the cordophones of the Amhara and Təgrəñña.

The one-stringed spike-fiddle *mäsinqo* is another historically important instrument of northern Ethiopia, the emblematic instrument of the ↗*azmari* poets-musicians-comedians.

The only musical bow in Ethiopia is found in southern regions among the Hamar-speaking ↗Kara. The instrument called *tingle* consists of a three-string bow, played by inserting one end of the bow into the player's mouth, and plucking the strings with the fingers. The player can modulate the timbre of the sounds by changing the volume and form of his mouth cavity. Usually played by an adolescent boy, it is used for personal meditation (Strecker 2003 [CD], 3).

Membranophone family

The membranophone family is composed of different types of drums. In many Ethiopian communities, drums are symbols of authority and political power, in the Ethiopian highlands, as well as among the Añwaa, Käfa, ↗Šeko, ↗Boorana and Konso, etc. (Levine 1974:57).

Drums can constitute the instrumental accompaniment of religious and secular music. They are sometimes the exclusive propriety of artisanal castes.

Generic terms are used by Nuer (*bol*) and Añwaa (*bul*) to designate all types of drums. ↗*Käbäro* is the Amharic and Təgrəñña term for the cylindrical double membrane drum. In southern areas, the *käbäro*'s name is *darbe* (in Maale and ↗Gofa) or *karabe* (in Wälaytta). In Ometo societies, people distinguish between the "drum's father" (*darbe ade* or *karabe ade*) and the "drum's mother" (*darbe inde* or *karab inde*). The first, generally held under the arm and played with a stick, is smaller than the latter, which is often laid on the ground and beaten with one or two hands.

Among the Arsi, many songs are accompanied by the *dibbe* (general term for cylindrical or hemispherical, single or double membrane drums of various sizes), hand clapping and repetitive body movements. The *dibbe* is played with the hands (sometimes a wooden stick can be used) by unmarried women and used to accompany wedding and spiritual songs. In the lowlands, the term *dibbe* generally refers to a cylindrical double membrane drum, whereas in the highlands, it is the general term that contains three subcategories of hemispherical single membrane drums: *manḍii'a* is the largest, *ledii* is medium sized and *dibbe ǧidduu galeessa* is the smallest.

In Harär, several types of traditional drums are called ↗*käräbu* and are used by men and women for accompaniment in religious and secular singing. The drums played by local Oromo and Argobba females are very similar to Harari women's *käräbu*, while playing techniques and rhythmical patterns vary.

Harari songs may be accompanied by the *däf*, a round tambourine with double metal disks inserted into its wooden frame. Introduced in Harär only in the last century, the *däf* has become a crucial element in current traditional musical practices. Most are imported, but occasionally some Harari manufacture their own. It is commonly hit on one side of the membrane by the right hand, but expert musicians can play it on both sides using the fingertips of both hands.

In the Ethiopian highlands, another type of drum is the ↗*nägarit*, a hemispherical instrument with only one membrane. Among the Berta, the *negero* (flat kettledrum) accompanies the *bol-negero* flute ensemble.

The small drum called *atamo* is used by the Boorana, the Gurage and south-western peoples (Institute of Ethiopian Studies 1999:24). In western Gurage, the *atamo* is also known under

the name *andär* and are produced by women belonging to a social group the so-called ↗*fuga*. The instrument is generally beaten by unmarried girls to accompany heroes' songs (Kruczynski 2004:147–57). It is played as well to accompany wedding songs, called *leilao-leilao*, similar to those of neighbouring Oromo.

Idiophone family

Many types of idiophones compose the last organological family. Xylophones are present in Aari. Lamellophones are mostly found in south-western Ethiopia, as in Mağaŋgir, Nuer and Añwaa, where they are known as *tum* (or *tom*) and *sansa* (Lacombe in Tourny [ed.]).

Several types of idiophones are used as rhythmic accompaniment. Rattles made of gourds, tortoise shell, hide and wood are present all over Ethiopia. Small bells strung on cords tied to the legs of dancers are also often found. Wooden blocks are the most common of all. Among the Arsi Oromo, they are called *kabala*, and are played by unmarried women to accompany wedding songs. In Harär they are called ↗*käbäl* and are usually performed in association with the local drums (*käräbu*) and with the *däf*.

Among some southern pastoralists, cow horns (*bučoo* among the Arsi Oromo) are used instead of blocks. Betä Ǝsraʾel priests used a small round metal gong called ↗*qaṣ̌əl* (or *metqe*) to play, in association with the *nägarit*, a five-beat rhythmic pattern that accompanies their chants (Shelemay 1986:77). It is worth to notice here that the *nägarit* – in Christian Ethiopia a secular musical I., traditionally devoted to the royal court in the past – is strictly associated with the liturgical music of Betä Ǝsraʾel, whereas the ↗*käbäro* – reserved for religious ceremonies of the Christian church – was used for non-liturgical purpose (Tourny 1999:15).

At church, the ↗*däwäl*, stone or wooden bells, were traditionally used to call for prayers. During the main liturgical offices, the hand-held sistrum (↗*ṣänaṣəl*) made of bronze or silver is used to demark rhythmic patterns and to accompany chants sung during the main liturgical offices. Church musicians both lean on prayer staffs (↗*Mäqqʷamiya*) during long hours of worship and wave and strike the staffs on the ground during liturgical chanting and dance. The strikes are performed on precise syllables of the chanting. With the *käbäro*, the sistrum and prayer staffs are used in a musical and gesture liturgical practice called ↗*aqʷaqʷam* (Shelemay – Jeffery 1994–97; Damon 2006:267ff.).

Music recordings are an important research tool for I.; some recent discography includes:
ANNE DAMON, *Eglise chrétienne orthodoxe d'Ethiopie. ʾAqwaqwam, la musique et la danse des cieux*, Maison des Cultures du Monde, Collection Terrains, Inédit, W 260121, Paris 2005; HUGO FERRAN, *Southern Ethiopia: Music of the Maale: Praises and Blessings*, Maison des Cultures du Monde, Collection Terrains, Auvidis Inédit, W 260120, Paris 2005; THIERRY FOURNEL, *Ari Polyphonies*, Ocora Radio France, C 560174, Paris 2002; ROBERT GOTTLIEB, *Soudan I. Music of the Blue Nile Province: the Gumuz Tribe*, UNESCO Collection, Auvidis, D 8072, Berlin 1980; GILLES LÉOTHAUD – BERNARD LORTAT-JACOB – HUGO ZEMP, *Musical Instruments of the World/Les instruments de musique du monde*, Paris: CNRS/Musée de l'Homme, Le Chant du Monde LDX 274 675, 1990; IVO STRECKER, *Nyabole: Music of the Hamar, Southern Ethiopia*, Wergo/Spectrum SM 1707, Berlin 2003; STÉPHANIE WEISSER, *Ethiopie. Chants de bagana*, text and recordings, AIMP LXXVIII/VDE 1206, 2006.

I. can be played alone or used to accompany song and dance. Different combinations of orchestral and vocal groupings are found: singers with drummers and lyre players, flutists with trump players, etc. Their apprenticeship is usually accomplished with imitation, sometimes with training by specialists. As for their making, some I. can be manufactured by everyone while others need certain kinds of professionalism. In today's Ethiopia, the extinction of some musical traditions leads to that of the I. associated with them. The inventory of all of them, still in process, is then not only a matter of scientific interest: it is a way to protect them.

Inter-ethnic clan relations

I. is a concept for identifying and understanding the phenomenon whereby certain descent groups are present in more than one ethnic group. Traditionally, anthropologists have written monographs on ethnic groups after learning only one of the ethnic languages involved. This biases their perceptions towards privileging intra-ethnic interactions and neglecting inter-ethnic ones. Consequently, the phenomenon of I. may be far more prevalent than we suspect. European writers tend to regard clans as subunits of ethnic groups: one ethnic group consists of a multitude of clans. In southern Ethiopia, northern ↗Kenya and possibly many other parts of the world, the same clans appear to exist in two or more ethnic groups. Rather than one being a part of the other, this view transforms the relationship between clan and ethnic group into intersecting categories on the same scale: clans need not be smaller than ethnic groups, if all the representations of a clan in different ethnic groups are taken into account.

The idea of members of the same clan existing among different ethnic groups may simply stem from beliefs based on the similarity of names or other indications which a trained historian would reject as inconclusive. It is difficult to ascertain whether such beliefs influence inter-ethnic attitudes. I. are sometimes contractual: at a certain point in history, groups with different origins may have made a mutual decision to regard each other as brothers. In such cases one may speak of "collective adoptions". In many instances, however, clans from different groups are believed to share a common ancestor, and closer scrutiny of such claims corroborates them. Many clans among the Gabra, Rendille, Sakuye and ↗Garre of the Kenyan–Ethiopian borderlands share clan-specific cultural features across ethnic divisions. Such features may be (1) special rituals and relevant avoidances (or the recollections of ritual tasks and of particular states of purity which may have been lost); (2) camel brands or other property marks; (3) oral traditions concerning common descent and (4) sometimes clan names (e.g., the Matarba among the Rendille, Gabra and Sakuye). In other cases they have traditions about equivalences of named groups that typically have the formula "the A among the Y are the same as the B among the Z" (e.g. the Harraw among the Rendille are the same as the Usmalo among the Gabra). The aforementioned evidence suggests the likelihood that there is some historical reality underlying such claims of shared descent.

The phenomenon of I. may arise from two different situations: an earlier population may have been ethnically undifferentiated or differentiated in a way that did not correspond to later divisions. This situation may have given rise to ethno-genesis – the primary emergence of ethnic differentiation in a setting hitherto undifferentiated by ethnicized distinctions –, or extant ethnic boundaries may have been relocated. Ethnic divisions that cut across clans lead to I. Alternatively, in a situation where ethnic identities have already been clearly established, a clan may divide with one party migrating and living among a different ethnic group. Such migrants may be ritually incorporated or they may be assimilated over generations of exchange and intermarriage without their status as strangers being formally abolished. In other cases, parts of a clan may have been forcefully abducted by enemies. If

their incorporation into the new ethnic environment remains incomplete and a memory of an alien origin is preserved, this may likewise lead to the emergence of an I.

Ethnic distinctions may be based on (or result in) abrupt cultural discontinuities. The Rendille and the Gabra speak mutually unintelligible languages; however, the Rendille language and the ↗Boorana dialect of ↗Oromo, spoken with minor peculiarities by the Gabra, both belong to the Lowland branch of Eastern ↗Cushitic languages, as does ↗Somali. The Gabra and Rendille adhere to their own belief systems. Even though some of them have recently converted to either Christianity or Islam (↗Conversions), they typically have not given up earlier practices. On the other hand, the Garre – most of whom regard themselves as Somali and all of whom are recognised as Somali by other Somali – have a longer tradition of Islam, and classify their Boorana and Gabra neighbours as infidels (*kufaar*, from Arab. *kuffār*). That the relationships between the numerous clans shared by these groups are to be classified as inter-ethnic, is beyond doubt, because they span clear ethnic divides.

↗Ethnicity is a politicised issue and does not necessarily correlate with specific levels of cultural or linguistic differences. The web of I. described extends eastwards to groups speaking Maymay. Maymay is classified as a Somali dialect even though it differs from Standard Somali (Maḥatiri) more than the Rendille language does. The ↗Raḥanween people, who speak Maymay, comprise clan groups that are present in northern Kenya and additionally possess elements of all major northern Somali clan groups. Consequently, one can say that the I. of southern Ethiopia and northern Kenya are reflected eastward in the overlapping clan composition of the different sub-ethnicities of the Somali.

In this context the Raḥanween (↗Digil and Ǧirifle) should be classed as a "sub-ethnic" group for the simple reason that there is a more comprehensive "ethnic" label ("Somali") that includes them as well as others. Their description as one of four major "clans" or "clan groups" is a recent phenomenon that serves political convenience – for the purposes of the 2002 internationally sponsored peace process – and has no social or historical reality. The Raḥanween are perfectly aware of the fact that they are composed of many fragments of clans who also live elsewhere, as members of other major "clans" or "clan families"; they realise that it is not agnatic descent but co-residence, shared local culture and multiple bilateral contractual arrangements, that unite them. The linguistic unity amongst them is not based on sharing a uniform "Maymay" language, but on a negative criterion: they do not speak Maḥatiri as their first language but a number of quite different southern Somali speech varieties.

Recent ethnic differentiations – the processes which ultimately resulted in the emergence of the present ethnic/sub-ethnic mosaic of northern Kenya, southern and eastern Ethiopia and southern Somalia – were primarily caused by the 16th-cent. Oromo expansion, Islamisation and Somali migrations. The language of the dominant Oromo (often incorrectly associated with a non–Islamic identity) and Islam were rejected by some groups and accepted by others; this situation led to new differentiations. The later expansion of certain Somali groups and their political dominance then led to a strengthened "Somali" identity among some groups who had a claim to such an identity in terms of clan origins, and other groups whose claims were doubtful.

I. also play a role in the Lower Omo area. Turton's (1994) "political" territorial groups – which would qualify as "ethnic" groups in the terminology of other authors – are relatively unstable due to their violent interactions. Decimated groups that have lost territory or other resources occasionally combine into demographically and militarily stronger units under a new ethnic label. These new units consist of new combinations of clans and clan fragments, and the probability that fragments of the same clans end up in different ethnic groups is high. With respect to this phenomenon Turton points specifically to shared clan identities among the ↗Mursi, ↗Čai and Tirma (↗Tirmaga).

Widespread I. also seem to exist in the ↗Omotic speaking highlands. Of the 170 clans Data Dea (2003) identified among the ↗Dawro, only two claimed to be native to Dawro. Others claimed to originate from ↗Käfa, ↗Wälaytta, ↗Gofa, ↗Maale and even from northern Ethiopia. In this instance, though a detailed study of I. has not been performed, the same processes seen in the Kenyan-Ethiopian borderlands are expected: ethnic splits across clans and the migration of some of the resultant groups across ethnic boundaries. Clans of ↗Hadiyya origin in a variety of ethnic groups bridge even wider linguistic divides than the one between Oromo and Somali. The recent Hadiyya language is Highland East Cushitic, but numer-

ous Hadiyya clans can be found among ↗Arsi and ↗Ittuu Oromo (Lowland East Cushites) and the ↗Wälaytta (Omotic speakers). Two thirds of the Arsi clans are of Hadiyya origin. This makes the Arsi a good example of the extent to which Oromo ethnogenesis is the effect of linguistic and ethnic conversion of non-Oromo (s. BrHad).

In addition to the historical aspects of I. and investigations into their origins, they also generate a high sociological interest. Inter-ethnic communication takes place along sociological lines and can provide the means (via re-affiliation, s. for example ↗*Guddifačaa*, ↗*Moassa*) through which refuge for victims of natural disasters and warfare is accessed.

International Conferences of Ethiopian Studies

Since 1959, ↗Ethiopian studies have benefited from a series of international, inter-disciplinary conferences held at various venues in Europe and America, Japan and, naturally, in Ethiopia (ICES). By convention, since 1991 every third conference has taken place in ↗Addis Abäba. ICES have been organised in liaison with an international committee of scholars, at first informal and later formalised, and in collaboration with the ↗Institute of Ethiopian Studies (IES) of ↗Addis Ababa University.

The First ICES, initiated by Enrico ↗Cerulli, was conceived as part of an Orientalist seminar series. It was held in Rome, 2–4 April 1959 under the sponsorship and in the palace of the Accademia dei Lincei – an intellectual peace move 18 years after the end of the Italian occupation of Ethiopia. The 35 published papers, read in English, French, German or Italian, came largely from the scholarly communities of Western Europe, more than a third from Italy itself. The theme was historical and included cultural contacts between Ethiopia and countries of the Orient. All the historical contributions were on the Aksumite or medieval periods; those devoted to religion discussed Christian texts, and the philological papers dealt mostly with Semitic languages. Three papers were on geographical topics. Given the conference theme, there were few anthropologists. Only one paper by an Ethiopian was published, though several Ethiopian clerics from the Collegio Etiopico (↗Santo Stefano dei Mori), Rome, read papers, some in Amharic. There was also only one paper by a woman. The suggestion that further such conferences should take place was made by Aklilu Habte, who represented University College of Addis Abäba. The meticulously and anonymously edited proceedings, published the following year by the Accademia dei Lincei, included discussions of papers and a detailed name index, neither of which features reappeared in later published proceedings.

The Second ICES, convened by Edward Ullendorff and Charles ↗Beckingham, took place 8–11 July 1963 at Manchester University and had no declared theme. Among the 78 participants 35 read papers, of which 31 were published. Thirteen Ethiopians attended, three produced papers, but only one contribution was published. The papers ranged more widely than at the first conference. Though they fell mostly within the traditional fields of history, Semitic languages and religious studies, there were also papers on Somali studies, the Oromo, and modern Amharic literature. Resolutions were passed on the need for a law of deposit and an inventory of Ethiopian churches and manuscripts. The proceedings, edited by the convenors and published in the ↗*Journal of Semitic Studies*, 1964, listed scholars who had died since the previous conference, and published a group photograph. Unfortunately neither innovation became a regular feature of subsequent conferences.

The Third and much larger ICES, the first held in Ethiopia (3–7 April 1966), was convened by the IES (Richard Pankhurst, Director, and Stanisław Chojnacki, Librarian and Museum Curator). Invitations went to all research workers listed in the Institute's *Register of Current Research on Ethiopia and the Horn of Africa,* one being later withdrawn for political reasons. Scholars from 14 countries registered. Some participants, who had devoted their lives to Ethiopian studies, had never before visited the country. Because of the number of participants (116) parallel sessions be-

came necessary and a special room was set aside for traditional scholars who debated traditional topics in Amharic. To satisfy the interest aroused by the conference, closed circuit television was installed and the media took a lively interest. Social scientists came to the fore, reporting on fieldwork with various ethnic groups, and for the first time there were presentations on economics, politics and education. Ethiopians made a substantial contribution with 21 papers out of the 80 published. At the business meeting an international conference co-ordinating committee was established and participants once again appealed for an Ethiopian law of deposit. Because of the generous hospitality provided, there were no funds left for the immediate editing of the proceedings, a process complicated by the inexperience of local compositors in working with foreign languages. The proceedings were anonymously edited and eventually published by the Institute, vol. 1 in 1969 and vols. 2 and 3 in 1970.

After some delay in finding a venue, the Fourth ICES (10–15 April 1972), like the First, was convened by Cerulli in Rome, and sponsored by the Accademia dei Lincei. A smaller gathering for selected participants, its theme was once again Ethiopia as culturally a part of the Christian Orient and several Italian Arabists contributed, as did, in absentia, 11 Soviet Ethiopianists. Ten papers were related to the Aksumite period, while one third of the 59 published were devoted to linguistics. In line with Cerulli's aim of encouraging young Ethiopian scholars, ten from Addis Ababa University were invited, and altogether the Ethiopian contribution amounted to 20 %. The Proceedings of the Fourth ICES were anonymously edited and published by the Accademia dei Lincei in 1974. The exclusion of American social scientists not concerned with Ethiopia's position in the ↗Middle East led to the First (and only) United States Conference on Ethiopian Studies, 1973.

One of two Fifth ICES, the first after the outbreak of the Ethiopian ↗Revolution, was convened in Nice by Joseph ↗Tubiana (19–22 December 1977), and sponsored by the Association française pour la recherche scientifique en Afrique de l'Est (↗ARESAE). It was the first focusing on recent times, the theme being modern Ethiopia since the accession of *aṣe* ↗Mənilək II. Uncharacteristically, several papers dealt with contemporary political issues, and films made their first conference appearance. Because of political upheavals in Ethiopia the delegation from the re-named Addis Ababa University did not arrive, and only two Ethiopian contributions were published. 35 papers were edited by the convener and published in 1980. It was indicative of developing interest in non-Semitic languages that, of the six philological contributions, four discussed Oromo, Cushitic or Somali questions. Scholars from the traditional European centres of Ethiopian studies were joined by more contributors than before from the United States (7).

The other Fifth ICES ("Session B"), 13–16 April 1978, the first on the American continent, took place mainly in Chicago, sponsored by the University of Chicago, Northwestern University and the University of Illinois. It arose out of uncertainties about the proposed conference in France, and was co-ordinated by Donald Levine. The largest of the conferences to date, it comprised 82 participants – two thirds from US centres of learning – and 72 presentations. The proceedings included six Ethiopians living in the United States. The organizers eschewed a thematic approach in favour of a review of the whole field of Ethiopian scholarship. Levine, in the Introduction to the proceedings (ed. by Robert L. Hess 1979), summed up the results: "New kinds of data were made available, for example by archaeological finds in central Ethiopia, access to untapped archival sources on modern Ethiopian history, the microfilming of old Ethiopic manuscripts in obscure monasteries, and basic lexicographic work on languages in the southern and western parts of the country. Fresh analytical approaches were pursued in the comparative analysis of feudal systems, reconsideration of Ethiopian origins, and novel economic and political analysis of the question of Ethiopia's destiny in a 'modernising' world". The social sciences made a strong impact, whereas the only paper on a religious topic was on Betä Ǝsraʾel liturgical history. It was indicative of the preponderance of English in international discourse that only five of the 61 published papers were in another language – a trend already observable in Nice, where the percentage of papers in English was higher than in Manchester 15 years earlier.

The Sixth ICES, Tel Aviv, 14–17 April 1980, was sponsored by the Israel Academy of Sciences and Humanities and organized by Gideon Goldenberg. For political reasons it was poorly attended, there being no participation from Ethiopia, Eastern Europe and the USSR. Nevertheless, 40 scholars came from eleven countries,

with a strong contingent from Germany. The 31 published papers, edited by the convenor, appeared in 1980. Though there was no conference theme, several scholars discussed the Betä Ǝsra'el and Ethiopian contacts with Jerusalem. More than 40 % of the papers were on linguistic topics, especially Semitic languages.

The Seventh ICES, Lund, 26–29 April 1982, sponsored by Lund University and the Swedish Agency for Research Cooperation with Developing Countries, was convened by Sven Rubenson. It met in a spirit of optimism and did not suffer from political embargos. After a virtual absence of ten years, Ethiopian scholars were back in strength. Funds were secured for those coming from Ethiopia, and, participation being limited, papers were screened for quality. Ethiopians contributed 23 of the 71 papers, which were edited by the convenor, and published in 1984.There was a wider spread of, and within, subjects, including a review and bibliography of earlier conferences. History and philology were particularly well represented.

The Eighth ICES, 26–30 November 1984, the second organized by the Institute of Ethiopian Studies (Taddäsä Bäyyänä, Director), was sponsored by Addis Ababa University. Because of the unprecedented number of participants, and 217 presentations, papers other than those of general relevance and interdisciplinary character, were grouped into six panels, including three for history and one entirely for anthropology. Perhaps in deference to Ethiopian participants papers were predominantly in English, with a few in French. This pattern continued at subsequent conferences, except for one paper in German at the tenth, and one in Italian at the 11th conference. The Proceedings of the Eighth ICES, edited by Taddäsä Bäyyänä and published in 1988, contained 140 papers. Prehistory and archaeology for the first time attracted 12 papers and anthropology 16. Interest in contemporary issues continued, with 29 papers. Ethiopians participated in greater number than ever before, with 45 involved in published papers. The 17 other nationalities represented included Austria, Canada, Czechoslovakia, Denmark, Greece, Luxembourg, and, for the first time, Japan. There was a significant increase in Russian interest. It was decided at the business meeting to hold every third conference in Ethiopia.

The Ninth ICES, Moscow, 26–29 August 1986, was sponsored by the Africa Institute of the USSR Academy of Sciences, and convened by Anatolij Andreevič Gromyko. Provision was made for simultaneous translation. Of the 145 participants 35 % were Soviet scholars and 9 came from Eastern Europe, many of them attending an ICES for the first (and last) time. Almost a third of the papers were on contemporary political topics, which were discussed from a theoretical Marxist point of view, with little dependence on scrutiny of Ethiopian sources or fieldwork. The proceedings were edited by the convenor, and published by the Africa Institute in 1988 in six small volumes.

The Tenth ICES, Paris, 23–28 August 1988, the largest to that date, took place in the prestigious Palais de Chaillot, headquarters of UNESCO. It was organized by the Société française pour les études éthiopiennes and convened by Jean Leclant. Among the more than 500 participants 180 presented papers, grouped in six panels, art being for the first time allocated its own panel. Unforeseen circumstances led to a delay of six years before publication of one volume of proceedings. The second, covering linguistics, sociology and contemporary issues, is still awaiting publication. The 76 papers published in 1994 and edited by Claude Lepage, revealed that archaeology and prehistory, art and social anthropology had attracted a growing number of scholars, though few from Ethiopia. Of the fourteen whose papers were published, more than half were historians of the post-1968 period.

The Eleventh ICES, Addis Abäba, 1–6 April 1991, was again convened by the Institute of Ethiopian Studies (Bahru Zäwde, Director). Although there were over 300 preliminary registrations, political tensions led to many cancellations. The conference was overshadowed, for some participants, by the attempt by the geographer Mäsfən Wäldä Maryam to bring about an end to the civil war then raging by involving elders in arbitration. Only 174 papers were presented, grouped into nine panels, with an additional session commemorating the 50th anniversary of Ethiopia's liberation from Italian rule. To achieve more focussed discussions the heterogeneous category "contemporary issues" was split into three: development; education and fine arts; and law and contemporary politics. Of the 113 papers, edited by Bahru Zäwde, Richard Pankhurst and Taddäsä Bäyyänä, and published in 1994, the largest number – 24 – were broadly in the area of social anthropology. The propor-

tion of Ethiopian contributors was for the first time over 40 %, 48 scholars having authored or co-authored papers.

The Twelfth ICES, East Lansing, Michigan, 5–10 September 1994, preliminarily registering 534 participants, was hosted by Michigan State University and convened by Harold G. ↗Marcus. With over 220 presentations, four round tables (Science and Technology; Research Needs and Historical Preservation; Personality and Political Culture; and Higher Education), as well as a general session entitled "Rethinking Ethiopia", this conference had a massive number of speakers and engendered considerable debate. Instead of the division into panels the papers were grouped by session under specific subject headings. As the papers, edited by the convenor, were published before the conference, in two volumes, they comprised only 149 papers, authored or co-authored by 162 scholars. With 75 Ethiopian scholars contributing, some from United States universities, there was a higher proportion of Ethiopians than at any previous conference. Among the 16 other nationalities represented, the largest contingents, apart from the United States itself (20 scholars), came from Britain (14) and Germany (11). An area of studies new to the conference series was agriculture, with seven papers.

The Thirteenth ICES, Kyoto, 12–17 December 1997, the first to be held in East Asia, was convened by Katsuyoshi Fukui, and assembled over 200 participants, of whom 77 came from Japan, 30 from the United States and 100 from 13 other countries. The editors of the proceedings stated that, in addition to papers on the growing "core" subjects — "history, Ethio-Semitic linguistics and art", there was an effort "to re-evaluate Ethiopia and Ethiopian studies in a broader perspective — historically, regionally and theoretically". There were thus more papers "dealing with peripheral peoples and regions, and those arguing Ethiopian issues in a comparative perspective". The questionable practice of publishing pre-proceedings, was once again followed. They appeared in three volumes, edited by the convenor, Eisei Kurimoto and Masayoshi Shigeta. There were an unprecedented 37 papers in anthropology and five on Ethio-Japanese relations, as well as, for the first time, four on gender issues and one paper on palaeontology. Out of the 185 persons who authored, or co-authored the 165 papers, 76 or 41 % were Ethiopians, of whom 43 came to Kyoto from Ethiopia. The percentage of the 158 published papers by women reached 28, compared with 3 % at the first conference. Except for three papers in French, all contributions were in English.

The Fourteenth Conference was held in Addis Abäba 6–11 November 2000, during the 50th Anniversary celebrations of the foundation of higher education in Ethiopia. The Conference, the fourth to be held in Ethiopia, was sponsored by Addis Ababa University and organised by the Institute of Ethiopian Studies (Director Baye Yəmam). The Minister of Education, Gännät Zäwde, opened the Conference, for which 209 scholars registered. Plenary sessions were devoted to overviews of past research and publications by leading scholars, mostly from Addis Ababa University, in five fields: Development, History, Linguistics, Literature and Social Anthropology. History continued to attract the greatest number of papers, of which eight were on the overlapping subject of archaeology and as many as seven on the history of Ethiopian art. The next most popular subject was social anthropology, with more than 30 % of papers presented. 20 participants discussed topics in the new discipline of development studies, and five papers considered Ethiopian music and dance. Among the 20 nationalities represented at the Conference, Ethiopians, mostly men, were the overwhelming majority, presenting more than 40 % of the papers. 40 participants came from Germany, the largest group from outside Ethiopia, an indication of the growing strength of Ethiopian studies in Germany, as was to be borne out at the next conference. Apart from a few papers read in Amharic all the papers were in English. Participants were able to see four special exhibitions: one in the entrance to Ras Mäkʷännən Building, the former palace of Emperor Ḫaylä Śəllase, on the history of the building, and three in the IES Museum: on women's costumes from Eastern Ethiopia; Ethiopian head-rests, and *aṣe* Mənilək's Swiss adviser, Alfred ↗Ilg. The proceedings, edited by Baye Yimam et al., were published in 2002.

The Fifteenth ICES was held in Hamburg, in the newly erected building of the Asia Africa Institute of Hamburg University, 21–25 July 2003. It was convened by Siegbert Uhlig and organized by him and a team of members of the Ethiopian Studies Research Unit at Hamburg University with the financial support from numerous German foundations. This generous help ensured

the participation of a large number of Ethiopians: of 388 scholars who arrived in Hamburg for the conference (266 of them with papers), 59 came from Ethiopia, a further 74 came from centres of learning abroad. The strongest group were naturally residents of the host country, 120 registered participants. The presentations were organized into twelve thematic sections: Language and linguistics, Literature and philology, Religion, Arts, History, Anthropology, Law and politics and Environmental, economic and educational issues. Every day opened with a plenary session devoted to current trends in a branch of Ethiopian studies. The evening program ranged from receptions (e.g., at the Hamburg City Hall) to an art exhibition, from sightseeing tours to information evenings (panel on Ethiopian studies in Germany). The proceedings (ed. by Siegbert Uhlig, Maria Bulakh, Denis Nosnitsin and Thomas Rave) contain a selection of 130 papers, the most numerous sections being Language and linguistics with 26 papers and History with 25 papers. The 15th ICES was immediately followed by an international workshop on Historical and Anthropological Insights into Missionary Activities in Ethiopia (Hamburg, 25–26 July 2005.

The Sixteenth ICES was convened by Svein Ege and held at the Norwegian University of Science and Technology in Trondheim from 2 to 6 July 2007. In seven parallel sessions (History and Archaeology; Anthropology; Politics and Development; Urban Studies, Children, Gender, and Human Rights; Linguistics and Literature; Music and Fine Arts; Islam, Ethiopian Orthodox Church, Education) ca. 200 papers were presented whilst over 250 registered participants attended the conference, 62 of them from Ethiopia. A film panel was an interesting innovation.

Despite the advent of other Ethiopian studies conferences (notably Orbis Aethiopicus 1999– and the Littmann conferences 2002–), political pressures, and problems arising from the increasing volume and diversity of Ethiopian scholarship, it is expected that ICES will continue, as they have done for more than forty years, to bring together students of Ethiopian cultures and history in colloquia which are stimulating, fruitful and enjoyable.

One offshoot of the above conferences has been the International Conferences on the History of Ethiopian Art. The first took place in London in 1986 and since then, they have continued at three or four year intervals. Since 2001, International Conferences of Eritrean Studies have dealt with research concentrated on the Eritrean area.

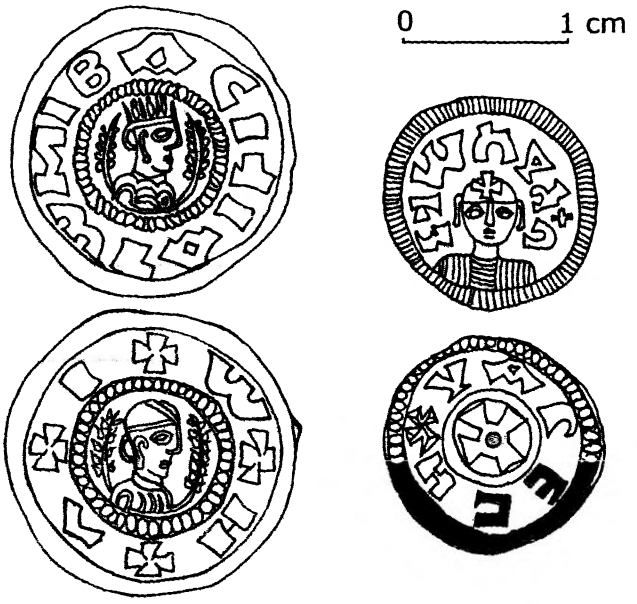
Ioel

I. (Gr. IωHΛ, i.e Ἰωήλ, *Iōēl*; Gəᶜəz ኢዮኤል, *Iyoʾel*) was a king of ↗Aksum of the late 6th or early 7th cent. only known from his coins. He was a more or less immediate predecessor of ↗ƎllÄ Gäbäz (II). In keeping with this chronology are both the general style of I.'s ↗coinage and his name, which is indeed a biblical one (Hahn 2001:127 and fig. 8, and 2007:7; cp. Lusini in StudAeth 68 and n. 5, and in AfrHorn 97 and n. 23). He produced several quite common types of silver and copper coins, whereas his gold issues are only rarely attested.

Two gold pieces (Types 127 and 128 in Munro-Hay – Juel-Jensen 1995:234ff., the former discovered at ↗Adulis) bear his image on both sides, half-length profile bust rightwards, wearing a tiara and head cloth respectively; the tiara is of two arches and four points (Type 127) or with only traces of arcading (Type 128), a curved ribbon hanging always behind; the king's figure is flanked by small wheat stalks (the right one held in his hand) encircled by Greek legends within a beaded outer or inner border. The obv. is inscribed: BACIΛEYC AΞωMIT, i.e. *Basiléus Axōmit(ôn)* or BACIΛI AΞωMI, i.e. *Basilé[us] Axōmi[t(ôn)]*, 'King of the Aksumites' (cp. ↗Ǝsraʾel); in no way can the latter var. include a "dative of possession", *basíli* = *basiléi*, followed by a "locative of the town name", *Axṓmi* = *Axṓmei* (cp. Hahn 2007:8 and n. 3). On the rev.: BACIΛEYC IωHΛ, i.e. *Basiléus Iōēl*, '(King) I.', or IωHΛ, i.e. *Iōēl*, 'I.'.

There are also two silver types: one (no. 129 in Munro-Hay – Juel-Jensen 1995:232ff.) with beaded or ribbed outer borders, and the Gəᶜəz legend *ngś ʾyʾl*, 'King Iyoʾel', around I.'s facing bust on the obv. (among the first attestations of this feature), and the Greek legend, sometimes retrograde, APECH X(PICTO)Y, i.e. *Arésē* [Arési]



Gold and silver coins of Ioel; drawing, courtesy of Wolfgang Hahn

= *Arései Ch(risto)û*, 'By the favour of Christ' (instead, an abbreviated rendering of the more usual ΤΟΥΤΟ ΑΡΕCΗ ΤΗ ΧωΡΑ [ΧΥ = ΧΑ, i.e. Χ(ωΡ)Α], *Toûto arésē tê chṓra*, 'May this please the country', + *Christoû*, for Hahn 2007:9f.: "das Zeichen Christi möge dem Lande gefallen"), set around a rather elegant gold-inlaid Greek cross on the rev.; the other type (no. 130 in Munro-Hay - Juel-Jensen 1995:234ff.) simply provides the royal name on the obv. and the word *ngś*, 'King', on the rev.

In two of I.'s copper issues, which include overstruck coins, are found the same iconographies, with slight variants (Types 131–32 and 133–35, *ibid.* 236–44). On the obv., the king is represented mostly head and shoulders profile bust rightwards, wearing a low crown formed by a central cross and two lateral stems topped with discs; often, a small flared-arm Greek cross is set to the right of the head; a few exemplars show four upright spikes and various privy marks (e.g., three dots), possibly for the distinction of different issues, as well as a tail-like ribbon behind. There is a Gəᶜəz legend either to the right or to the left of the bust: *ngś*, 'King'. On the rev. of the most frequent types, a flared-arm Greek cross occupies the whole centre field within a beaded outer border, thus separating the four letters of the Gəᶜəz legend *ʾyʾl*, 'Iyoʾel' (nos. 131–32, *ibid.* 236–40). Other copper issues have here, instead, a Latin style cross – sometimes with a voided area or an incuse gold circle in its centre – that descends close to the base of the coin so as to break the surrounding Gəᶜəz legend *krst msln*, 'Christ (is) with us' (nos. 134–34i).

Gianfranco Fiaccadori

Iorga, Nicolae

I. (also Nicolas Jorga, b. 17 January 1871, Botoşani, Moldavia, d. 27 November 1940, Strejnic, Romania) was a Romanian statesman and major literary figure and scholar. He studied at the Universities of Iaşi, Paris, Berlin and Leipzig, where he obtained his doctoral degree in 1893. Then, at the age of 23, he became a member of the Romanian Academy. Two years later, he was appointed professor of history at Bucharest University. A polyglot devoted to scholarship, he travelled extensively, visiting most European countries.

I. was involved in Liberal politics, becoming minister and briefly (1931–32) prime ministry of Romania. He was later violently murdered by the pro-fascist Romanian Iron Guard.

I. left hundreds of publications devoted chiefly to the history and culture of the Romanian people, the Crusades, Mediterranean cultures and the Christian East etc. Always interested in the history of the Byzantine empire and Eastern Orthodoxy, early in his career he had devoted attention to Ethiopian medieval relationships with Catholic Europe. In his seminal paper on the subject (1910), with the assistance of ↗Guidi and ↗Nallino, he edited and commented upon a valuable anonymous Latin *Itinerary from Venice to India*, i.e. to ↗Ethiopia. It was actually penned by Antonio ↗Bartoli, who was sent as an ambassador of the Republic of Venice to the "Prester ↗John" in 1402 (Italy; cp. CrawItin 28–39) and gathered a wealth of information in southern Ethiopia. The text includes one of the earliest known lists of provinces of the Ethiopian empire, followed by a traveller's phrase-book with samples of Old Amharic and of a related language (Cohen 1931:367–75; Fiaccadori 1990:326 and 330 nn. 22f.).

Richard Pankhurst

Iṛāfálo

I. (Sāho [modern sp. Irhaafalo], ᶜAfar Iḍaafálu, Amh./Tgn. አራፋሎ, Irafalo, Ital. Arafali) is a historical Red Sea harbour located in the Sāho ↗Minifire area at the base of the Gulf of ↗Zula between Foro in the north and the ↗Buri peninsula in the south (for location s. Idda). The town of I. was the administrative centre of the area of the same name, which included the coastal lowlands between Mt. Alid and Badda, part of Akkälä Guzay province. In the new administrative division of 1995 it became part of the Northern Red Sea Region (with the capital in Massawa).

I. lies close to wells and pastures which, during the winter months and especially in the coastal rain season from November to April, attract different Sāho pastoralists from the highlands. The non-Minifire clans traditionally paid taxes to use the I. pastures (formerly to the local leaders and later to the local administration). There is also a local farming population cultivating maize and millet (sorghum). I. lies in an area of high seismic activity and is surrounded by numerous hot springs and volcanoes.

I. appears as Elafal on ↗Fra Mauro's mappamondo (ca. 1460), as Defalo on ↗Almeida's map (BecRaso V, 325), as Dafalo island on the map of ↗Ludolf (1683) and as Adefalo on a map by John Senex (ca. 1700).

The etymology of I. is not clear. One possibility is that I. is a corruption of *eddé* [locative] + *falo* [boasted], i.e. 'boasted in that very place'. Another version suggests a corruption of *eelá*, 'fruit of the doum palm', and *falo*: *eela-dde falo* 'renown for its doum'. A more ancient hypothesis claims a link with Aliaeu (Pliny) or Alaios (*Periplus of the Eritrean Sea*), despite the fact that in those sources the term refers to ↗Dahlak (Müller 1855:289). Since the people of I. share with many other coastal peoples the belief that the first ↗*hiğra* in the 7th cent. landed here on their way to Ethiopia, there exists a folk etymology of the name deriving it from Arab. *arā fīlaⁿ*, 'I see an elephant', pronounced by one of the members of the group on landing (communication from *al-ḥāğğ* ᶜAlī Maḥmūd Yāsir 2004).

There are other possible indications of a connection with ↗Arabia: the whole coastal strip of I. was known as Baḥər Bilal, which could refer to ↗Bilāl b. Rabāḥ al-Ḥabašī (or to another ancestor by the same name). There is also a cemetery of the famous *ḫalīfa* Saᶜīd ᶜUkkāša who may have migrated to I. between the 12th and the 13th cent.

It is difficult to determine when the first settlement appeared at I. According to the Sāho oral tradition, one of the oldest tribes who dominated the coastal area as well as the hinterland, the Afrahat ᶜAre of the Minifire, lived in I. They were later defeated by another Minifire group, the Đasamó, and left the area for Dəbarwa in Säraye, re-identifying themselves as ↗Ğäbärti through intermarriage with the local people.

I. was an important trade centre, linked with the hinterland by two main caravan-routes: one going to the ᶜAfar ↗Ḥazo lands and the other to ↗*Käbäsa*, i.e. to Akkälä Guzay and to ↗Təgray (Mäqälä, Aksum, and ᶜAdwa). The main trade goods were ↗salt, grain, cattle and luxury goods like tobacco, sugar and textiles. During the 16th cent., I. became a military garrison of the ↗Ottoman empire. It is believed that some Sāho in-

vited the Ottomans to save them from inter-clan conflicts. The rebellion of many Sāho leaders, supported by the neighbouring ᶜAfar clans, was suppressed in a major military campaign, and I. returned to Turkish control. Many Sāho were arrested and many fled to the hinterland. According to local tradition, the young Sāho warriors who were arrested were deported in twelve boats to Izmir in Turkey as slaves.

During the years 1635-38, the Jesuit missionaries Apolinar de ↗Almeida and Franceschi (Francisco) hid at and around I. The port lost its importance in the 19th cent., replaced by other commercial centres like Zula, Massawa and other ᶜAfar ports along the Red Sea coast.

Abdulkader Saleh

Iran, relations with Ethiopia

I. Pre-Islamic period

I. is an ethno-political designation for a territory extending from Asia Minor – i.e., later, the eastern frontier of the Roman Empire – to the borders of India. Within such a vast area, Persia is just a south-western region that in certain periods, however, came into dynastic and political prominence, its name being therefore usurped for I. as a whole: e.g., under the Achaemenids and the Sasanians (s. Panaino 2000:29f., n. 31). The latter terminated the rule of the Parthian Arsacids, and shaped a powerful empire reviving the glory of Achaemenid kingship, and rivalling with Rome and then Constantinople until the 630s – which saw the final collapse of the Iranian empire to the Arabs.

Contacts with Nubia

As a matter of fact, early Greek sources about contacts between ↗Aithiopía and the Achaemenid empire ("Persia" in Greek tradition) concern mostly ↗Nubia(ns) [Old Pers. *Kūšǰ(iy)ā*, 'Ethiopia(ns)', s. ↗Kūš]. ↗Herodotus (*Hist.* III, 97, 2f.) mentions "Ethiopians", i.e. Nubians, as subjects of the Persian empire, and lists "Ethiopia" among the Persian satrapies (van Donzel 1999:8f.; cp. ↗Historiography: Ethiopia in Ancient Greek and Roman Historiography). Although Nubia was no satrapy of the Achaemenid empire, and had no tributary relation to it, an exchange of gifts seems to have taken place: from the Nubian side, gold, ebony and ↗ivory were sent, as shown on the reliefs at Persepolis and Susa, in the palace of Darius I (Leroy 1963; van Donzel 1999:8f.; cp. also Kent 1950:137, 141, 143, 151).

The "great king" (as the Pers. title *šāhanšāh*, lit. 'king of kings', was correctly rendered in the Greek sources) Cambyses II (r. 529 B.C.), son of Cyrus II, led his army to the eastern borders of Egypt against the Nubians or the Blemmyes (s. EAE vol. 5), or other nomadic groups in those parts of Egypt. This, however, was a miserably prepared campaign that turned into a military disaster (Herodotus, VII, 17–22) – and is possibly alluded to in ↗Heliodorus's *Aithiopiká*.

In early Greek sources Persians and Ethiopians were sometimes confused with each other, both peoples (and countries) lying far outside the Hellenic world. So, Memnon, "king of Western Ethiopians" in Homer's *Odyssey* (XI, 522), was identified with the Persian great king (Georges 1994:48f., 68f., 267 n. 1; van Donzel 1999:8f.). Even after Greeks earned a better acquaintance with Persians, this connection was rather persistent, e.g., Susa, the capital of the Achaemenid empire, was called in Greek *Memnōneion ásty*, 'city of Memnon', the latter being still "king of the Ethiopians" (Herodotus, V, 54, 2).

There was also an "Ethiopian contingent", described as very bellicose, within the Persian army of Xerxes I that invaded Greece in 480/79 B.C. (ibid. VII, 69, 2). An "Ethiopian", i.e. Nubian, embassy is mentioned – e.g., by Arrianus of Nicomedia (VII, 15, 4–5) and Diodorus of Sicily (XVII [113], 1–2) – among those welcoming Alexander the Great upon his arrival at Babylon in 323 B.C.

Contacts with Aksum

Against this background, between 250 and 275 A.D., Aksum appears as one of the "Four (great)

kingdoms of the world", next to Rome, Persia and the Kuṣāṇa empire, in the Coptic *Kephálaia* ('Chapters [of the Master]') of Mani, an Iranian subject (LXXXVII, ed. [Polotsky] – Böhlig 1940:188; cp. Fiaccadori 1992:84f. and 2004:141). Yet, the earliest historical contacts between I. and Aksumite Ethiopia fall within the 6th cent. A.D.

Chiefly staged in pre-Islamic ↗Arabia or, more specifically, in the coastal area of today's ↗Yemen (↗Ḥadramawt), they were actually triggered by the struggle for the possession of South Arabia between the Sasanians and the ↗Byzantine Empire. The main reason for this struggle was the control of the ↗Red Sea area and the relevant trade routes to ↗India (Harmatta in PICES 4; Bowersock 2004).

Around 518 or 523 A.D., following the persecutions of Christians in ↗Nağrān, the Aksumite king ↗Kaleb ƎllƏ Aṣbəḥa invaded South-Arabia and installed a puppet-ruler, ↗Sumūyafaᶜ Ašwaᶜ, soon overthrown by the local Aksumite garrison and replaced by its commander, ↗Abraha (Fiaccadori 2006a:61ff.). The Byzantine emperor Justinian I (r. 527–565) formed an alliance with the Aksumite ruler in South Arabia against Persia. An attack on ↗Mecca by the troops of Abraha caused a Persian invasion of South Arabia (ibid. 67f. and nn. 119–23). According to other sources, Ḥimyarite nobles, namely the famous Sayf b. Ḏī Yazan, had first asked Justinian and then the Sasanian king Chosroes I Anūšīrvān (r. 531–79) for help against the Aksumites, which led to a Persian military intervention (van Donzel 1999:8f.). The great-king's troops expelled the Aksumites from South Arabia around 570/71 A.D. (Fiaccadori 2006b:132ff. and n. 40).

Since then at least, Persians (Fārsī) were known to Ethiopians: in 630/31, *nəguś* ↗Armah congretulated the Byzantine emperor ↗Heraclius on his victory over the Persians, which led to the recovery of J. from the latter's hands. In Gəᶜəz, Persians are called ፋርስ (*Fars*, adj. ፈርሳዊ [ፈረሳዊ] *Fär[ä]sawi*) a term designating also their country ('Persia'), as well as 'Assyria', 'Media' and 'Chaldaea(ans)', and already used in Aksumite times, as it appears in the Ethiopic translation of the Bible (DillLex 1424). Later texts contain a few hints at Persia and its king: thus, in chs. 72–80 of the ↗*Kəbrä nägäśt*, a Semitic origin is claimed for the rulers of several empires, among whom the Persian great king Darius, considered an 18th-generation descendant of the biblical ↗Salomon (BezKebr 90); in ch. 77, the Persians (ፈረሳዊያን *Färäsawiyan*) are said to be descendants of Perez (*Fars*), son of Tamar (ibid. 102). Of great interest is also the expression ዐረቢሃ: ለፋርስ *ᶜaräbiha läfars*, lit. 'to the west of Persia', occurring, e.g., in the Vita of *əṣṣägge* ↗ᶜƎnbaqom, which might refer to Yemen or, rather, ᶜIrāq as 'western Assyria' (RicEnbYoh I, 97; cp. DonEnbAnq 25f., 28).

II. Medieval and modern periods

In the following centuries, Ethiopia also sometimes surfaces in Persian writings, e.g., in the *Ḥudūd al-ᶜālam min al-mašriq ilā al-maġrib* ('Regions of the World from the East to the West'), an anonymous Persian geographical compilation (on older sources) dedicated to the Ġūrīd ruler Abū l-Ḥariṯ Muḥammad b. Aḥmad, and completed in 982/83 A.D. Here, *Ḥabaša* is mentioned several times, with reference to either the Red Sea coastal areas or Ethiopia itself (ed. Minorsky 1937:51f., 79, 81, 83, 147, 164). A specific passage on Ethiopia reads: "[The inhabitants] of this country have faces of average size. The people are black and lazy, but with high ambitions, and obedient to their king [...]. Rāsun [Ǧaramī], (is) a town on the sea-coast and the king's residence [...], S(u)wār, the town where the army of the Abyssinian king is stationed [...], Ryn [↗Zaylaᶜ], the town where the commander-in-chief resides with [his] army. In this province gold is abundant" (ibid. 164).

Before the age of the Ṣafavids (1501–1736), there are very few indications of Ethio-Persian – only indirect – contacts. A Persian impact on the African coast of the Red Sea is half-legendarily attested for the early Islamic period: tombs in the ↗Beğa region, cisterns in ↗Sawākin and on the ↗Dahlak islands were in fact ascribed to the "Furs" (van Donzel 1999:8f.; CRStor 279f.), whose presence is quite sensible, however, on the East African coast from the 13th cent. onward (s. subarticle below). Since then, Persian connections are repeatedly suggested for the Arab peninsula: e.g., Ibn al-Muǧāwir (d. 1291) has it that the coastal town of Ġalāfiqa, in south-western Arabia, was reconstructed by Persians from Sīrāf or Jeddah (ed. Löfgren 1954:240); Ibn Baṭṭūṭa (14th cent.) reports that Jeddah itself was a Persian establishment on the Red Sea (Gibb 1962:360; cp. van Donzel, 1999:8f.). Furthermore, the foundation of several towns along the East-African coast is attributed to the "Šīrāzī(s)", i.e people coming from the town (and district) of Šīrāz, in the old province of Fārs, central to the former Achaemenid empire.

Direct contacts, albeit sporadic, between Ethiopian and Persian rulers did not take place before the 17th cent., when *aṣe* ↗Fasilädäs, for instance, tried to establish relationships with the Ṣafavid *šāh* ʿAbbās II (r. 1642–66), sending therefore a mission to Persia that was, however, refused (DonMurad 36). This endeavour belongs in a series of attempts made by Ethiopian rulers in order to end the isolation of their own empire, and establish contacts with foreign powers. The Ethiopian side was interested in trading partners as well as in all sort of military innovations.

As to a possible Persian support, Hiob ↗Ludolf reports his meeting with an Armenian merchant of Paris who, in 1683, informed him about an Armenian siege-technician dispatched as an envoy to the Persian court by the Ethiopian emperor, probably personally by *aṣe* ↗Yoḥannəs I (r. 1667–82): among the presents for the *šāh*, there was a zebra (Ludolf 1691:266). A later Ṣafavid ruler, *šāh* Sulṭān Ḥusayn (r. 1694–1722), asked *aṣe* Yostos to send a zebra to his court (Petráček 1957:360).

During the following centuries the Ethio-Iranian trade relations were of indirect nature alone. Arab merchants kept handling the situation in the ports of the Muslim principalities along the Red Sea coast (Zaylaʿ, Baylūl, Massawa, Ḥərgigo and Sawākin). From I., textiles and spices were traded with slaves, gold and silver as well as ivory, leather goods, coffee, saltpetre, butter, oil and honey (DonMurad 78).

Ethio-Iranian relationships in the 19th and early 20th cent. were also restricted to the sphere of trade, run by Arabs as well as by Armenians from the ↗Ottoman empire and I. itself. An aspect of these relationships was also the international slave trade (↗Slavery). The arrival of "Ethiopian" slaves (mostly Oromo) in I. is reported several times in the mid-19th cent. (Austen in PICES 5, 454). Yet, the Persian gulf was not a primary destination for the Ethiopian slaves; it seems they were not used for agricultural work, also owing to the fact that the Iranian plateau was climatically unfavourable to them (ibid. 452–55). Persian chronicles, however, report on their employment in the army and the administration (ibid. 458). The demand for slaves from the Red Sea area was cut in the end of the 19th cent., when the British seized control of the whole region.

III. Contemporary period

After World War II, the Ethio-Iranian relationship was broadened: Ethiopia's interests were of military nature, while I.'s were determined by geo-strategic considerations: for Ethiopia I., like ↗Turkey and ↗Israel, was primarily an arm supplier, chiefly during the Cold War (Matthies 1990:16ff.). I., instead, regarded Ethiopia as a potential ally "in the back" of the Arab states with which it competed over hegemony in the Near and Middle East. Ethiopia also acquired a special importance, on account of the position of Emperor ↗Ḫaylä Śəllase I as the spokesman of the ↗Non-Aligned Movement and a protagonist of the Pan-African movement (↗Pan-Africanism). The relationships was all the more intensified after the foundation of the Bagdad Pact and the South-east Asia Treaty Organization (SEATO, 1954–77) to counterbalance the young Arab states. It was especially following the developments in the Near East (Palestine-conflict, Suez-crisis etc.) that Ethiopia became a strategic partner for a number of countries. Within the framework of these alliances, Great Britain and I. in particular strengthened their ties with Ethiopia. Over the 1950s, an extensive exchange of delegations took place, but only in 1960 did I. and Ethiopia officially establish diplomatic relations. In the following year diplomatic missions in Addis Abäba and Tehran were respectively established. In addition, both emperors paid visits to each other in the 1960s (*šāhanšāh* Muḥammad Riżā Pahlavī visited Addis Abäba in June 1968 and in October 1971) and exchanged such friendly gestures as mutual awards of decorations and honours (e.g., in 1964).

In 1970, in the course of a military-aid-project initiated by the United States, which implied I.'s involvement, and was decided during the preparation of the *šāh*'s official visit to Ethiopia in 1968, US-American F-86F fighter aircrafts were delivered to Ethiopia by I. (Ethiopia was the first sub-Saharan state that had an airforce, systematically built up since 1966, consisting of supersonic fighter aircraft; Matthies 1990:16ff.). A further delivery of F-5E/F and F-5A models followed shortly before the fall of *aṣe* Ḫaylä Śəllase I.

After the overthrow of Ḫaylä Śəllase I in 1974, relations cooled down. At the instigation of the *šāh*, Ethiopia's revolutionary regime was classified as "subversive" (Saikal 1980:177). Following the termination of the Soviet Union's support for ↗Somalia, the I. government stepped in and started to grant military assistance to Somalia (Smolansky – Smolansky 1976:131–153). In 1977 extensive military aid to the regime in Mogadishu was decided (Saikal 1980:162, 168, 180). Starting from

February 1978, I. delivered war-material (paid by the United States) to Somalia – altogether ten shipments of mortars, heavy artillery ammunition and ground-to-air-missiles (Saikal 1980:180). The delivery of "light arms" was granted – yet, with no involvement of I. military personal (Saikal 1980:180). Nevertheless, the diplomatic relations between Ethiopia and I. were maintained by the *Därg*, even after the regime-change in Tehran in 1979. In 1985, following the Soviet refusal to deliver MIG-21 and MIG-23 fighter aircraft to Ethiopia (as the regime of Mängəśtu Ḫaylä Maryam had not paid its debts), the Ethiopian government "returned the favour" for the past support by selling to I. fighter aircraft that had been delivered by the I. government a decade before. After the war between I. and Iraq broke out, F-5E fighter aircrafts were delivered to I. by the Ethiopian government, in order to undermine the United States' embargo against I. (Laffin 1996).

The 1991 events in Addis Abäba led to a radical change in Ethio-Iranian relationships. In 1992, prime minister Tammərat Layne, accompanied by four members of his cabinet, visited I. This was undertaken in order to establish closer relations with Islamic states. In 1996, however, the closure of the Ethiopian diplomatic mission in Tehran was announced, officially due to financial problems. Yet, observers suspected a United States intervention. In spite of occasionally difficult relationships during the following years, visits of foreign ministers took place (in 1998, Ethiopia's foreign minister went to I., in 2002, I.'s foreign minister went to Ethiopia). On the occasion of these visits, several agreements on economic co-operation were signed. Finally, the former Ethiopian ambassador in ↗ᶜAden, ᶜAbdi Dolāl Muḥammad, was appointed new Ethiopian representative in I.

Michael Knüppel – Red.

The "Furs" in North-East Africa

The mention of a *Zand* ('Black' = Arab. *Zanǧ*) kingdom in a Middle Persian inscription of the late-3nd cent. A.D. by the Sasanian king Narses, at Pāykuli, shows the antiquity of the relationships between I. and the western coast of the Indian Ocean and of the Gulf of Aden (s. Monneret de Villard 1938:314, 326ff.). A Persian garrison sent from Yemen seems to have been established at ↗Berbera at the end of the 6th cent. (Paulitschke 1888:97). Further north, on the Red Sea shores, there are also traces, albeit scant, of Iranian set-

Cisternes attributed to the "Furs" on the main Dahlak island; from CRStor, pl. LXVII

tlements (initially meant to balance the growing Aksumite expansion), as confusedly reflected in the local traditions on the *Furs* or 'Persians' – a term encompassing subsequent migration waves from Sasanian I and, much later, the Persian gulf (with the Šīrāzī or Šīrāsī, on whose traditions s. Fiaccadori 1984:263f., n. 16) and ᶜOmān (Puglisi in PICES 3, vol 1, 41ff., 46f.; Tedeschi, ibid. 51; Fiaccadori 1992:48ff. and n. 18). The impact of these migrations becomes definitely sensible, in terms of prosopography and literary and monumental evidence, since the 13th cent., when Iranian people and features are more clearly detectable on the East African coast, from ↗Somalia to Kenya, e.g., in two minarets of Mogadishu, betraying Persian building techniques (Monneret de Villard 1943:129; s., in general, Cerulli in CerIslam 457–69).

The earlier settlements, however, are almost certainly attested on the island of ↗Dahlak (al-) Kabīr, where the Furs are credited with hewn cisterns (CRStoria 295f., pl. LXVII, no. 10, s. ill.), as well as with a church, now ruined (Tedeschi in PICES 3, 51), that might be traced to the presence of ↗Nestorians there (Fiaccadori 1992:XXXI and nn. 51–52). Another cistern, dated between 235 and 575 A.D., has been discovered by the French archaeologist Jules Barthoux in Wadi ᶜAygu, north of ↗Obock (Labrousse 1978:76). On the ↗Buri peninsula, an oral tradition of the ↗ᶜAfar Dammohoyta has it that the stone-made well of Đāᶜērima at Awan, in the Buri mountain, was built by the Persians (MorDic 153). Two ditches at Alᶜattabeyan and Kollādi are said to be the remnants of Persian irrigation channels.

Other sites, such as Gamfura, a mooring place on the western coast of Buri, Ḥaffalé (↗Amfilla), a cape to the east of Miᶜdír (different from the Amfilla [= Miᶜdír] Bay of European sources), "Gammela" (Gimmāḍi), an islet to the east of ᶜIddi (↗ᶜƎdd), have been all reportedly occupied by the Persians (Abb-Geogr 24). Mention should be also made of the "Persian" wells of Kommâlis (south-east of Ḥaffalé), Diḍḍoᶜó and Dobáyu (east of ↗Tīᶜo). The well of ↗Tağūra, which gives its name to the town and the gulf, could have been dug by the "Songo", a pre-ᶜAfar population sometimes merged, in oral tradition, with the Persians. Two ancient cisterns in the island of Saᶜdaddīn are equally claimed to be Songo works (Angoulvant – Vigneras 1902:152).

In today's ᶜAfar and other local languages, *Furs(i)* often designates 'non Arab foreigners' coming from the east across the Red Sea: they include Persians, Turks or Egyptians, but in no way Arabs of Yemen. It is thus frequently used as a political rather than ethnic term; in ᶜAfar, it applies to those belonging to the *barr ᶜağam*, i.e. 'non-Arab territories'. One should note that quite often, in the ᶜAfar tradition too, the name *Furs(i)* does not mean 'Persian', but 'Turk' or 'Egyptian'. This double meaning (paralleled by that of Ethiopian *Turk[i]*, i.e. 'Ottomans' with the inclusion of the 'Egyptians') must go back to ↗Massawa's fall to the Turks in 1557, and the latter's (more or less nominal) subsequent occupation of the coast – until their rights were transferred to the Egyptian *ḫidīw* (1866).

The term also appears in place names. In ᶜAfar, Fursé ('Persian') is the place near Lake ᶜUddumma in which the Egyptian troops led by Werner ↗Munzinger were defeated by the *sulṭān* of ↗Awsa (15 November 1875). An older Fúrsi ("Furzi" on Italian maps), the *sulṭān*'s residence according to Nesbitt (1934:267), precisely Ḥanlé Fursé, was located on the left bank of the Gurmuddali canal, some seven km to the south-east of ↗Asayta (Braca – Comolli 1939:204). There are a few more such toponyms: e.g., Fâris-ti ('the Persian one'), a little summit (433 m) to the south-west of the ᶜAssal Lake.

On the Buri peninsula, the Ankāla tribe has a war cry (*itro*): *anâ Fārísli*, 'Persians, be brave!'.

In addition, the ᶜAfar Dúlum tribe is said to have an ancestor originating from "Dēlam", i.e. the Daylam region of Gīlān, in Persia.

Didier Morin – Gianfranco Fiaccadori

Irob

I. (or ᶜIrob) is a self designation of three ↗Sāho subgroups (*adoḫ ᶜáre* 'three houses'): Buknáyte ᶜÁre 'house of the Buknayto', Adgáde (or Agláde) ᶜÁre 'house of the Adgade', and Ḥasāballá ᶜÁre (or Ḥasāballá-d dik) 'house of the Ḥasāballá' (Strebel 1979:40), in Tgn./Amh. Buk̲näyto/ Bakunayt(i), ƎndaƎdda-Adgäda, Ḥasäbälla (Gigar Tesfaye 1985). Reinisch (1878) divided the I. into only two groups: "Boknayto and Agladā". The I. live on the eastern plateau south of the ᶜƎndäli river (Sāho ᶜ*indéeli*, 'with sand, gravel', ↗ᶜƎdd) which marks the current border between Eritrea and the *zoba* Məbraq (Eastern district) of the ↗Təgray state of Ethiopia (for location s. Idda). To the north live other Sāho subgroups (especially Dabrimēla) and to the south ↗ᶜAfar subgroups (Balᶜossuwa). I. *awraǧǧa* (with the capital in ↗Alitena) covers an area of ca. 340 km² and has a population of ca. 30,000.

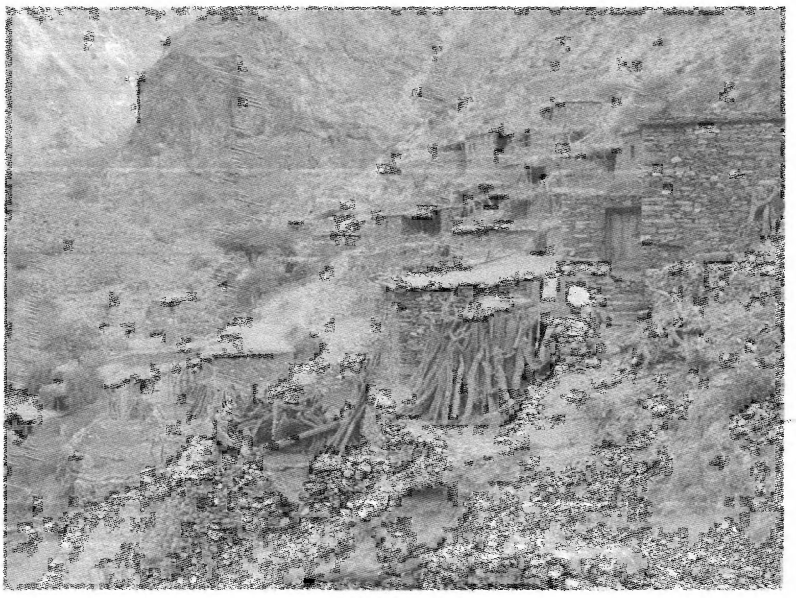
The I. are the only Sāho living in Ethiopia. The less well-known ↗Ǝggäla people, who seem to be a sub-group of the I., settled in the Eritreo-Təgrayan highland west of the I. (Tsegay Berhe in PICES 15, 366). The I. are not regarded as belonging to the traditional seven subgroups of the (Muslim) Sāho. They are believed by some to be an offshoot of the Greeks of ↗Adulis, and therefore called I. (i.e. 'Europeans'). According to another local tradition the name goes back to "Rome" (↗Rum; but more probably the name is to be derived from the Sāho-ᶜAfar root *orob* 'to return'). Three local traditions (one in Tgn. and two in Amh.) were collected by Conti Rossini (1910). Three genealogies of the I. have been found in a manuscript of the ↗*Kəbrä nägäśt* kept at ↗Gundä Gunde (cp. ↗Genealogy). There the history of the I. is said to go back to ↗Ǝndrəyas, the son of a king of Rome and of Helena, daughter of Solomon. I. oral traditions speak of their ancestors arriving from the ↗Kələttä Awlaᶜəlo districts of ↗Ṣəraᶜ, ↗Wämbärta, Dessa and Agʷəllaᶜ.

The I. were not islamized 300 years ago as was the case with the seven other Sāho subgroups. The French ↗Lazarists who founded a mission house in Alitena have since 1846 converted the whole Buknáyte subgroup to Catholicism. The Adgadi and Hāsaballā have remained Orthodox Christians, though some Hāsaballā families are Muslim.

The culture of the I. is strongly influenced by the Təgrəññña-speaking highlanders. Most I. are sedentary (i.e. agriculturalists and cattle-breeders) in contrast to all other nomadic (transhumant) Sāho subgroups. There is a comprehensive description of the Buknáyte ᶜÁre, i.e. the area inhabited by the Buknáyto (Strebel 1979). The Sāho *ᶜáre* (or *dik* or *ḫarák*) 'house' recalls the Ancient Yemen *bayt* which refers to both the land and the lineage (cp. Beeston 1972:256). The leader of a clan, *ᶜona*, is elected for life by a committee of five well-reputed men. Powerful subclans or families have controlled this position for long periods (Tsegay Berhe in PICES 15, 368).

The I. are partly assimilated to the language and mode of life of the Ethiopian highlanders. In the 19th cent. the I. Sabʾagādis family (↗Säbagadis Wäldu) played an important role in the history of Təgray (TrIslam 179).

The language of the I. (also Irobəññña, Iromaññña) is the southernmost dialect (s. in particular Reinisch 1878) of Sāho which is spoken in Eritrea and shows similarities with the adjacent ᶜAfar dialects. According to Morin (1995) I. is closely related to the dialect of the Ḥado (↗Ḥazo) who live in an area stretching up to the Gulf of Zula. Most I. are bilingual in Təgrəññña.



Irob village Mäkaᶜarabur near the Marwa river in the Irob mountains; photo 2004, courtesy of Wolbert Smidt

For the I. language, when written at all, the Ethiopic ↗script is used (cf. the text in Reinisch 1878:121–33). The work by Täsfay Mädḫən (2000) contains much linguistic material, inter alia a list of I. proverbs together with their Tgn. translation. Among other peculiarities, the author introduces for I. orthography an additional sign ʔ̂ which corresponds to Sāho *ḍ* (*l* of Reinisch 1890; e.g. *ḥaḍa* = *hālā* [Reinisch] 'tree') and I. *ṛ* (*r* in Reinisch 1878; e.g. *ḥaṛā* = Sāho *ḥālā* 'tree', *ṛin* = Sāho *ḍīn* 'sleep', *ṛauṛ* = Sāho *ḍaûḍ*, *ḍaûl* 'to take care'). In the Latin-based orthography of the Eritrean Sāho (Vergari – Vergari 2003) the words appear as *xarha* (where *x* stands for *ḥ*), *dhin* and *dhawrh*.

Rainer Voigt

Iron

Native I. (Gəᶜəz: ጎዲን, *ḥaṣṣin*, cp. LesDic 267, but also ሐዲድ, *ḥadid*; Amh. ብረት, *bərät*; Oromo: *sibiila*; Sidaama: *sibiila*), in the form of meteoric or telluric I., is very rare in nature. For the production of tools, metallic I. extracted from ore, which in pre-industrial times was mainly mined in open pits. Forgeable I. (i.e. steel, containing carbon) in solid form is produced in the course of the bloomery process. The production and subsequent handling of I and steel always lie in the hands of specialized artisans (↗Blacksmiths).

The introduction of I.-working changed the economies and influenced social structure more than the use of any other metal. Due to the widespread distribution of ore deposits, the production and diffusion of I. artefacts was less demanding than that of non-ferrous metal items. Agriculture benefited directly from the introduction of more effective tools that facilitated the clearing and tilling of the land as well as harvesting. In warfare I. enabled the arming of all parties with metal ↗weapons.

History

As elsewhere in Africa, I.-working became an integral element of culture throughout the Horn of Africa between the 1st and the 6th cent. A.D. Occasional finds are however datable from the time before the Christian era, e.g., in ↗Yəḥa (s. below). The geographical density of the distribution of I. in the following centuries was uneven and closely connected with the various economic strategies of different ethnic groups.

Reliable written sources and archaeological finds confirming the early use of I. are only extant for the northern Horn of Africa. The oldest I. artefacts dating to the ↗pre-Aksumite period originate from Yəḥa (artefacts made of non-ferrous metals date to even earlier times; Phillipson 1998:44, n. 61). During the early ↗Aksumite period I. was thus still rare. The Periplus of the Eritrean Sea (ca. mid-1st cent. A.D.) mentions that among the items imported via the port of ↗Adulis were, beside brass and bronze, axes, adzes and swords (without indication of the material) and, interestingly, crude steel "which was made into spears" (ch. 6, s. Huntingford 1980:21).

The archaeological record for I. use becomes more frequent for the period of the political expansion of ↗Aksum. I. objects of this time are mainly found in graves. From Aksum, but also from ↗Mäṭära and other places within the Aksumite sphere of influence, come I. weapons such as spear-heads (↗Spears), arrow-heads, ↗knives or poniards, but no swords (Phillipson 1998: 56, 77–80). Other I. objects are sickles, chisels, saws, axes, tweezers, hinges, nails, rings and a number of unidentifiable objects. Of particular interest are I. hammerheads, one with an I. handle, and I. bars (Munro-Hay 1989: 223, 225–28, fig. 15.141; other I. objects: idem. 221–28, 234).

Although workshops have not so far been identified, the type of objects suggests that in this period I. was processed by local smiths. The origin of the raw material as well as the mode of mining remain unknown. Beside I. finds, the frequency of artefacts made of copper alloys from the heyday of Aksum is remarkable. In the 6th cent. A.D. the Aksumites had, as Cosmas Indicopleustes reports, enough I. to use it as exchange-equivalent in trade with the south. This indicates that the people south of the Aksumite sphere of influence came into contact with I. at the beginning of the 6th cent. A.D. at the latest (Amborn 1976:182).

Later in the Middle Ages, accounts of the Jesuits and early travellers bear witness to the presence of smiths producing agricultural implements and various types of spears throughout the Ethiopian empire (PankSoc 59ff.). Although there must have been considerable need for I. objects, especially military equipment, no large iron-processing centres (such as are known in other parts of East Africa) have so far been identified. I. was probably rare and additional raw material had to be imported. At the end of the 18th cent. Bruce could still observe wooden ploughshares in use (BruNile vol. 3, 561).

Blacksmith forging an iron hoe; his wife in the background is blowing the bellows, Tuuro, Konso *wäräda*; photo 1974, courtesy of the author

As far as raw material is concerned, the Ethiopians seem to have been more I. consumers than producers. According to Gerson ben Elizer, ca. 1630 the weight of I. equalled that of gold among the ↗Betä Ǝsraʾel, who where responsible for supplying the ↗Amhara (Borchart 1923/24:264). I. bars served as a means of payment from the post-Aksumite period till the introduction of monetary ↗currency by Mənilək II (↗Ḥakunu).

At the beginning of the 19th cent. the variety of I. objects increases noticeably. Apart from agricultural implements like sickles, axes and adzes, there is evidence for ploughshares and tools such as hammers, drills, saws and files. For daily use there were knives, razors, tweezers, scissors, needles, nails and pans as well as jewellery (for different parts of the body), and for military use spear-heads, daggers, swords, tent-pegs, bullets and even spare parts for rifles. There are reports from this period about I.-smelting. I. technology changed little during the centuries from the decline of Aksum till the second half of the 19th cent. A reason for this was that in Christian Ethiopia blacksmiths were held in low repute and, where possible, ↗handicrafts were left to special groups like the Betä Ǝsraʾel, the ↗Betä Abrəham

and the ↗Gafat (Simoons 1960:180). Additionally the upper classes had access to trade goods like slaves (↗Slavery), ↗gold and ↗ivory, by which means they could obtain preferable manufactured items from the outside world. At times, this resulted in a decrease of I. production. There were attempts to boost production, for instance by *nəguś* ↗Śahlä Śəllase and especially by *aṣe* ↗Tewodros II, who established a manufacture in Gafat, where I. ore was smelted in ca. one-metre-high shaft furnaces (PankSoc 237, 322f.). In the following decades Ethiopian I. production decreased, and only in some parts of the south was I. produced until recently. Today's smiths process industrially produced steel or scrap I.

Since about the 1970s, the recycling of waste metal, which is mostly old sheet I., has developed considerably in urban centres. The conditioning of sheet metal can be carried out without heating and with simple tools. A wide range of products of high quality can be found in Mädäbbär market in Asmära; as can a great variety of household goods made from recycled I. in the Märkato of Addis Abäba (↗Addis Kätäma).

The iron smelting process

I. in Ethiopia was extracted by way of the bloomery process. To get metallic I., ore, usually oxides, must be reduced (freed from oxygen with the help of carbon). In most cases the I. ore is heated in a shaft furnace with charcoal. In its primitive form the furnace is only a pit. Shaft furnaces are loaded with alternate layers of ore and charcoal. The ore descends slowly while the furnace is burning. This allows a series of physical processes and chemical reactions to take place. The I. oxides combine with other components of the ore and form the liquid slag. While most of this flows downwards (and eventually is allowed to flow out of the furnace) the I. absorbs carbon from the fuel and is transformed into an alloy of I. and carbon (FeC) in the form of a spongy mass: the bloom. The necessary temperature of 1100°–1300° C is reached with the help of bellows. As I. has a melting point above 1300° C, in the bloomery process the I. is directly sintered in a solid state as steel. Higher temperatures would produce cast I. which is too brittle for utilitarian objects and cannot be forged. The bloom must be reheated in a forge and hammered to expel remaining slag particles. The whole process needs great expertise. Experiments by modern engineers trained in modern indirect steel methods have been able to shed some light on the physical-chemical processes, but only resulted in poor quality products. Even experiments engaging indigenous smelters (after years without practising) showed dissatisfying results (Amborn 1976, ch. 1; Schmidt 1997, ch. 5).

One of the first descriptions of I. extraction in northern Ethiopia was given by Pearce (1831:202f.), who probably saw a bloomery pit operated with several pairs of bellows. A similar procedure was witnessed by Harris at the "royal iron-works" near ↗Ankobär (HarAeth vol. 2, 100). Later sources often speak of furnaces which could be a result of misobservation. The technique of I. extraction was probably not very prevalent amongst the Amhara and Təgray. From the south, I. smelting was reported from Harär, Wälläga, Geeraa, Ǧimma, as well as Yäm, Dizi and Käfa. The most informative early account is that of Cecchi (1888:261) about Geeraa. There he describes a two-metre-high hybrid draught shaft-furnace used for the most advanced bloomery process known in Ethiopia. Big, nearly two-metre-high furnaces were also known amongst the ↗Šeko. A number of other ethnic groups, such as different Oromo- and Ometo-speakers, Sidaama, Hadiyya, Somali and the members of the Burǧi-Konso cluster however, seem never to have smelted I.

The best existing documentation of I. working concerns the ↗Dime and some of their neighbours. The Dime knew an elaborated bloomery process. Their shaft furnaces are built of clay over a pit approximately 40 cm deep, and have a conical form, and sometimes reaching 1.5 m height. Combustion air is conducted by tuyeres into the furnace through bellows with up to ten membranes. After the furnace is lit it takes up to 14 hours until the ore is extracted. The rate of yield is about 5 kg of steel (depending on the volume of the furnace). As late as to the 1950s Dime was an important centre for I. production. Metal produced there was traded in the east as far as Konso and Burǧi (from where smiths also provided Guǧǧi and Boorana with their products) and in the north as far as Dawro. I. was traded in wedge-shaped I.-bars or square-edged staffs. Later production decreased but I. was still smelted up to the 1970s, but in smaller furnaces. The neighbours of the Dime, the ↗Čara, who worked with the same principles, continued smelting I. until recently, whilst the ↗Aari groups stopped around the end of the Italian occupation.

Iron and the supernatural

Hardly any other material has influenced the world-view of African people more than I. People were fascinated by the very process of production, i.e., the transformation of natural matter (sand or stone) with the help of fire into formable metal and the shaping of spongy bloomery into cultural items. However, this transformation may have sinister consequences for it links the sacral and profane spheres. The transformation processes invoke the spiritual connection between life and death.

I. itself acquires an ambivalent character. It has blessing and healing as well as dangerous qualities. It serves the protect from harm (Burği, Dawro, Diraašša, Dime, Dorze, Dullay, Yäm, Konso, Oromo), but can also be deadly (in the physical and/or magical sense). Creation, death, and bloody sacrifice are close to each other. In mythology, the working of I. is embedded in the ideas of the beginnings of human culture, connecting humanity and the cosmos. In the mythology of the Yäm this is expressed by an iron pillar which in ancient times linked heaven and earth. This I. was later used to make the first tools (VSAe III, 258).

The "power" inherent in the metal or the metal itself becomes the symbol for the power of creation. Thus, this kind of thinking relates human existence, cosmos and time to each other in a complex manner. There is a fluid transition from the idea of "power(s)" being inherent in the I. and the belief in the (spiritual) power of the smith. Both ideas are mutually interdependent. Due to its ascribed powers, I. is used as the material for cult paraphernalia (e.g., in religious and socio-religious ceremonies) and insignia, e.g. special types of spears, like a two-pronged spear made from I. in Maale and special knives (for sacrifices, anti-damage practices etc.); sceptres and bracelets as insignia worn by socio-religious dignitaries; ceremonial bells and bell straps meant to underline the spiritual atmosphere of rituals (Amborn 1990:79, 322, 346; 1990; 162; Straube 1963:209, 324, 362, 368, Tafel 15,3). Even I. ↗crosses, bells (↗*Qaċəl*) and censers (↗*Maᶜəṭänt*), significant for Christian Ethiopia, may be interpreted in this sense. I. is also known as burial object. The people of the Burği-Konso cluster, e.g., put iron bars into the graves of lineage elders. The rulers of Yäm are said to have been buried in an iron coffin which stood on an iron divan.

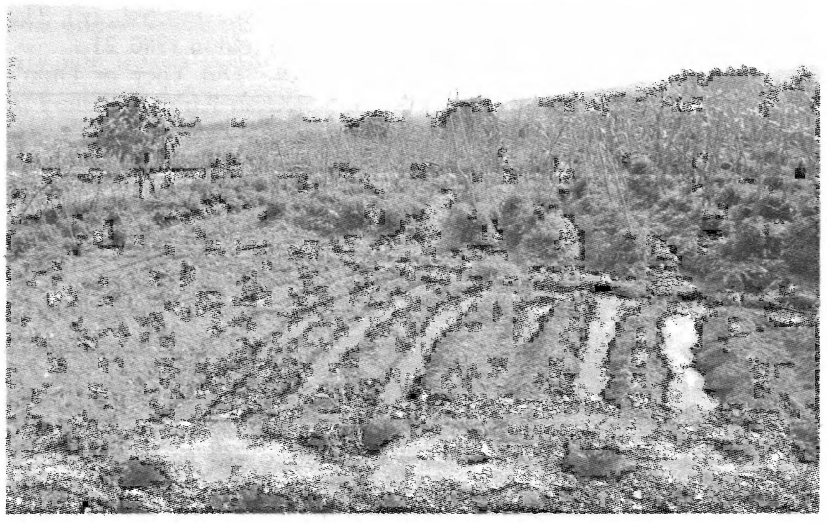
Irrigation

I. has been practised in the Ethio–Eritrean region for more than 2,000 years. The main purpose of this agricultural method is to help crops grow better and faster. I. is also used to dissolve salt residues from soils, to regulate local temperatures and, dependent on ↗water quality, to manure the land (Leser 1997:84). I. depends upon the availability of water (rivers, springs, lakes, pools) as well as upon such artificial devices as dams, canals and cisterns. The decision to practise I. mainly depends on the length of the rainy season, the river discharge system, temperatures, and the grade of evaporation. In particular the northern regions of Ethiopia and Eritrea (long dry season, relatively low rainfall amount) and ↗*qʷälla* and *bäräha* areas (low rainfall amount, high temperatures and evaporation) climate conditions make I. a reasonable feature for land-use. Historically, however, I. can be found in every ↗ecological zone. Besides environmental conditions, I. was and is dependent on the concrete labour, capital, market, legal and political conditions of a given household or farm.

The historical and spatial origins and dynamics of the different types of I. are not well known, especially in southern Ethiopia. From archaeo-



Irrigation of fields in Dängälo, Ṣəraᶜ, Təgray; photo 2004, courtesy of Wolbert Smidt

logical and historical evidence we generally know that I. was quite common in many places where environmental conditions were suitable and peasant households had enough labour to irrigate their land. To peasants high labour input in I. was (and is) more attractive particularly in areas around towns, where they could sell part of their products and profit from its markets.

Different types of I., can be distinguished: (1) field I.: a system of dams, ditches and distribution to irrigate larger areas, this being used in the *qʷälla*, ↗*wäyna däga* and ↗*däga*; (2) garden I., small areas along streams or near a spring in the *qʷälla*, *wäyna däga* and *däga*; (3) I. along river-beds, mainly in the *qʷälla*, and similarly (4) spate I. in the *qʷälla* and *bäräha* of the eastern escarpment. I. type and social structure seem to be linked to a certain extent: field I. needs a clear and strict organisation. This can be found within a well-established village or region, a farm of a high-ranking person or, emerging in the 20th cent., within a private or state owned modern large-size farm. On the other hand, spate I. is typically used by underprivileged peasants. Driven by social circumstances, these people have to use areas of low production security where the drain-off of the rivers is not easy predictable (cp. StStud 359f.).

I. was well-known long before the Aksumite period, as already, more extensively, in South ↗Arabia, e.g., in ↗Ḥaḍramawt. The principles of the Persian system of I. canals (*qanāt*, s. also EI², 528–33) had a major influence on I. methods on both sides of the Red Sea. An analysis of sediments on the banks of the ᶜAnsäba river near Kärän, e.g., shows evidence of agriculture based on I. during the time of the kingdom of ↗Dᶜmt ca. 8th–7th cent. B.C. (Brunner in AfrHorn 32f.). High output and surplus of (partly irrigated) agriculture seem to have been the basis for the political and military power of Aksum throughout the centuries (Jansen 1976:15ff.). In additional to I. systems with running water, the Aksumite culture also knew huge cisterns, like those at Mai Qoḥo (s. ↗Aksum) and at Safəra in ↗Qoḥayto (DAE II, 148–52, fig. 311).

From the 13th to the early 20th cent. I. was quite common in the central and northern area. But there is no evidence that I. was a wide-spread method in every suitable location. Several travellers from the 16th to the early 20th cent. report I. here and there, mainly in small places, along river-beds and in the lower parts of the eastern escarpment (Ritler 1997; 2003). In the 19th cent. Plowden and Salt reported the use of I. techniques in the northern highlands. Salt described how in Təgre water was re-routed from the higher parts of a stream and distributed by a system of channels and ditches watering, e.g., cotton fields (PankSoc 137). Since the early 20th cent. field I. with high capital input was introduced particularly in the Awaš Valley. This kind of I. has been established by modern-orientated landlords and concessionaires, by the Italian colonial administration and by the Ethiopian state in the second half of the 20th cent. Mechanization, concentration of land ownership and capital provided the basis for preparing tens of thousands of hectares of irrigated land in these areas.

I. is important in the highlands of Harärge (Kombolča) for growing potatoes in combination with ↗*čat*. Harärge farmers water their fields, e.g., with kuris which are small reservoirs filled during the night. There is also garden I. in towns.

An interesting example of a broad system of combined agricultural techniques (water conservation, terracing, I.) can be found in traditional ↗Konso. Due to the deficiency of rainfall in the region, water has to be collected and conserved by different types of skilfully built wells and reservoirs. In the river valleys (e.g., of the ↗Sagan river) fields are irrigated with river water. The water is distributed through stone leats into series of walled gardens. Fields out of the reach of a permanent water supply are irrigated by rainwater directed through leats as well (Hallpike 1970:33f.).

ᶜIsa Ḥamza ↗Qatbäre

Isaac of Nineveh

I. (Isḥāq, Eth. ማር፡ ይስሐቅ *mar* Yəṣḥaq, b. Bēṯ Qaṭrāyē, Qaṭar) was ordained bishop of Nineveh by *katholikos* George I (658–80), but resigned after a few months and thereafter lived as a hermit in the desert of Persia. Later he became a monk in the monastery of Rabban Šāḇōr, where he died. His writings were influential for Eastern monasticism and mysticism.

I.'s teachings were almost free of dogmatic elements and, although he belonged to the Church of the East, the so-called Nestorian Church, his writings received wide acceptance from both Chalcedonians and Monophysites. However, despite his popularity only a few of his works survive in the original Syriac (Bedjan 1909; Wensinck 1923; Brock 1995). The identification of his literary legacy is further complicated by confusion with other authors of the same name, e.g., Isaac of Antioch and others. Two monks of the Monastery of St. Saba in Palestine translated a great part of I.'s work into Greek. The Greek text, which also comprised spurious parts, served as a basis for medieval translations into Georgian, Slavonic, Latin and Arabic, as well as for several modern translations (Brock 1999–2000). During the 11th cent. the famous Melkite translator Abū l-Fatḥ ᶜAbdallāh b. al-Faḍl of Antioch translated from Greek into Arabic 35 chapters on the monastic life written by "Isaac the Syrian" (GrafLit vol. 2, 58), comprising at least some texts originally written by I. (e.g., chs. 1–3 are identical with the Syriac text, cf. Bedjan 1909, chs. 4–6). The same corpus of 35 chapters was integrated into a larger collection of writings of "Isaac the Syrian" (GrafLit vol. 1, 439) and also translated separately into Gəᶜəz under the title መጽሐፈ፡ ማር፡ ይስሐቅ (*Mäṣḥafä Mar Yəṣḥaq*, 'The Book of *mar* Yəṣḥaq') in the 15th cent. This translation became an integral part of the highest stage of the traditional education of the Ethiopian Orthodox Church; it was taught at the ↗*mäṣḥaf bet*, where it was studied in the መጻሕፍተ፡ መነኮሳት (*Mäṣaḥəftä mänäkosat*, 'The Books of the Monks'), the fourth and highest partition of the canon (Cowley 1980:44f.). Due to its importance for the training of clerics the *Mäṣḥafä Mar Yəṣḥaq* is extant in many Ethiopic manuscripts; Dawit Berhanu (1997:9) provides a list of 22 mss. which include the text (s. the entry on ↗Monastic literature for a list of 29 mss.).

There is also an Amharic commentary on this work, the ትርጓሜ፡ ለማር፡ ይስሐቅ (*Tərgʷame lämar Yəṣḥaq*, 'Translation of Mar Isaac', cp. Frankfurt, Stadt- und Universitätsbibliothek, ms. or. 7, cf. SixDeu 219ff.), printed in 1915 A.M. [1922/23] (ed. by ↗Kidanä Wäld Kəfle), and again in the *Mäṣaḥəftä mänäkosat*, along with other works on monasticism (1920 A.M. [1927/28 A.D.], cf. Dawit Berhanu 1997:33).

Further texts ascribed to I. extant in Ethiopic are: a homily on the ascetic life (Vat. Aeth. 33, fol. 53–72, Aeth. 61, fol. 9–29 [GreTisVat 158, 234]), some advice on asceticism (Vat. Aeth. 33, fol. 25–34 [GreTisVat 153]), and a prayer ጸሎት፡ ዘጸለየ፡ ይስሐቅ፡ ሶርያዊ (*Ṣälot zä-ṣälläyä Yəṣḥaq Soryawi* 'The Prayer that Isaac the Syrian prayed', ms. Wien, Österreichische Nationalbibliothek, Aeth. 2, fol. 104 [Rhodokanakis 1906:40]).

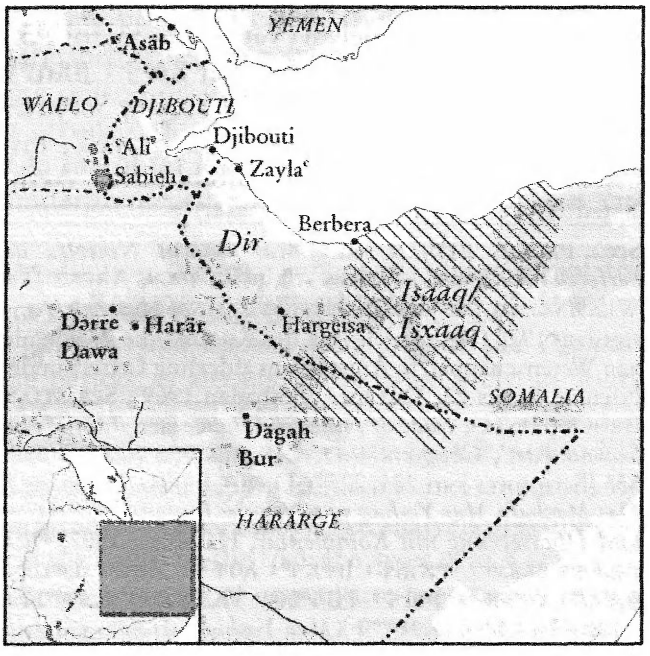
Stefan Weninger

Isaac, Testament of ↗Yəsḥaq: Gädlä Yəsḥaq

Isaaq

I. (for language s. ↗Dir) is one of the most important ↗Somali clans and is formed by the ↗Habar Awal – Saᶜad Muuse (Sacad Muuse) and ᶜIisa Muuse (Ciisa Muuse) sub-clans – who are herders and merchants controlling the port of ↗Berbera; Habar Garḥağis (Habar Garxajis) – Arab, ᶜIidagale (Ciidagale), Habar Yoonis sub-clans – who are located in the Togḍeer (Togdheer) and Sanaag regions, while others have settled in the Hawd and ↗Ogaden (Ogadeen); and Habar Tolğeᶜlo (Habar Toljeclo), Maḥamed Abookor (Maxamed Abookor), Sanbur, Muusa Abookor, and Aḥmad Tolğeᶜlo (Axmad Toljeclo) sub-clans, who are located in the region between Karin and Ḥiis (Xiis).



The I., who claim descent from the Alid *šayḫ* Isḥāq b. Aḥmad al-ᶜAlawī (s. Gori 2003:37–164), are predominately pastoralists and traders. In the 12th cent. *šayḫ* Isḥāq (Isxaaq) arrived in Somalia from Arabia and founded the I. clan family settling in the northern Somali town of Mayḍ (Maydh). During the same century, population pressure, continued Arab immigration, and possibly a series of droughts forced the I. to start migrating to the Tana River region in Kenya and to ↗Harär area in Ethiopia. In the wake of these migrations, two trade routes emerged from ↗Zaylaᶜ to the Šäwan highlands and from Berbera to Harär via the Ogadeen (Metz 1993:6).

During the period of 1527–43, the ↗Daarood clan, supported by some I., joined the *ğihād* led by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī against Ethiopia. By the 16th and 17th cent., the I., along with other Dir clans and the Daarood, had occupied much of the Ogadeen. These migrations had a significant impact on subsequent Ethiopian history, as the I. and other clans have repeatedly fought to end Ethiopian control of the Ogadeen. During the era of Somali nationalism after World War II this was aimed at creating a Greater Somalia, that had to bring Somalis in Djibouti, Ethiopia, and northern Kenya under the authority of the government in Mogadishu. During the 1840s and 1850s, nomadic expansionism and squabbling between various I. sub-clans caused considerable political instability and civil wars throughout parts of present-day Somaliland. By the time Sir Richard Burton visited Somaliland (1854–55), Berbera had been nearly destroyed. In the 1850s, *ḥāğğī* Šarmaarke ᶜAli Saaliḥ (Sharmaarke Cali Saalix), a member of the Habar Yoonis sub-clan who ruled Zaylaᶜ, sought to conquer Berbera, the port of which supplied meat and fresh products to the British garrison in Aden, with an "army" of only 40 Ḥaḍramī musketeers. During the uprising (1899–1920) of ↗Muḥammad ᶜAbdallāh Ḥasan (Maxamed Cabdulle Xasan), the so-called Mad Mullah, and his followers known as Dervishes, some I. such as the ᶜIidagale refused to obey his orders and fight against the British. As

a result, he branded the ʿIidagale as the "servants of the infidel" and ordered his followers to attack them and seize their camels and livestock. He also vilified them in some of his many poems. Many I. joined local levies and participated in all major British military expeditions against the Dervishes (1901, 1902, 1902–03, 1903–04). On 23 November 1920, Maxamed Cabdulle Xasan died after an unspecified illness. I.'s support of the British enabled many of them to accumulate wealth and property. Some travelled abroad in seek of Western education. I. continued to resent the presence of the British. Particular grievances included the presence of Christian missionaries, legislation limiting the ↗*ċat* trade and authorizing capital punishment. In March 1922, there was a brief confrontation between the Habar Yoonis and local British forces because the colonial authorities wanted to introduce taxation.

Shortly before the outbreak of World War II, the I. formed the Somaliland National Society (SNS), which advocated Somali unity, greater educational opportunities, and the abolition of clan differences. The SNS subsequently merged with another local group to form the Somaliland National League (SNL). In May 1947, the Somali Youth League, originally known as the Somali Youth Club (SYC), gained the support of the Daarood and ↗Hawiye major clan groups. A proposed SNL-SYC merger caused a split in the I., with one faction supporting unification and the other faction seeking to preserve the SYC's autonomy because it believed that the Daarood would end up controlling the unified organization. The latter eventually prevailed and adopted the agenda of the old SNS. The SYC also wanted to develop the Somali language and to abolish all legal and constitutional threats to the interests of the Somali people.

Thomas P. Ofcansky

Isaiah, Ascension of

The A.I. is an apocryphon that in its entirety is only preserved in an Ethiopic (Gəʿəz) translation, as *Mäṣḥafä ʿərgätä Isayəyyas* (መጽሐፈ ዕርገተ ኢሳይያስ).

In the first part (chs. 1–5), the "Martyrdom of Isaiah", the work relates how the prophet Isaiah was executed under King Manasse by being cut in two with a wooden saw because of his unwillingness to yield to the power of evil. The second part (chs. 6–11), the true Ascension, gives a description of Isaiah's revelation in the course of which he is guided by an angel through the seven heavens where he sees the deceased righteous, God and his "beloved one", Jesus Christ, on their thrones. In the end (ch. 11), he has a vision of Christ's life and death.

The first part, the "Martyrdom" is based on a Jewish tradition, perhaps a written source, into which a Christian apocalyptic text on the Anti-Christ was inserted (chs. 3:13–4:18). While earlier researchers emphasized the composite character of the A.I. and the role of its redactor as a compiler (cf. Norelli et al. 1995), new research stresses its unity as a literary work and the role of its redactor as an author (cf. Knight 1996).

The A.I. was composed in Greek in the 2nd cent. A.D., probably in Syria, and reflects an early, "angelomorphic" Christology (Knight 1996:139–45). Of the Greek text only a fragment is preserved (Bettiolo 1995:323–51). A Coptic (ibid. 149–87), a Latin (ibid. 191–233), and a Slavonic (ibid. 237–319) translation preserve only parts of the text.

The Ethiopic translation was probably made in the 5th cent. A.D. from a Greek model already including both the "Martyrdom" and the "Ascension", the name of the Ethiopic book deriving from the second part, Isaiah's journey through the heavens. The Ethiopic text is preserved only in a few manuscripts (Norelli 1995:5; Piovanelli 1993:197f. and n. 3), amongst which the oldest are Vat. Aeth. 263, fols. 85–104 (14th to 15th cent.); Bodl. Aeth. d. 13, fols. 95–115; BritLib Orient. 501, fols. 62–69; EMML 1768, fols. 83–88; and EMML 3067, fols. 99–117 (all 15th cent.). One sin-

Scenes from the life, martyrdom and death of Prophet Isaiah; cloth mural in the *qəne maḫlet* of the Trinity church, Č̣äläqot, Təgray, first half of the 18th cent.; photo 2002, courtesy of Michael Gervers

gle fragment (Abba Gärima 2, fol. 307) is definitely older than all other manuscripts. In most manuscripts the A.I. is copied as a sequel to the canonical book of Isaiah (Piovanelli 1990). Although the A.I. can be found in Biblical manuscripts, it is never mentioned as a part of the ↗Bible canon (Brandt 2000:102, 112).

Research on the A.I. concentrates almost entirely on its relevance for apocalypticism, Christology and the history of the early Church. Therefore its impact in Ethiopia is still largely unfathomed (but s. Piovanelli 1993:198 and nn. 5–8). It was probably only minor, because its content proved to be unorthodox, but this subject is indeed open to further research.

Stefan Weninger

Isayəyyas

I. (ኢሳይያስ; b. 1485, Bäᶜatä Qäys, ᶜAgamä, d. 15 September 1572 [not 1589 of KinBibl]) was the sixth abbot of Däbrä Gärzen (↗Gundä Gunde), the major monastery of the ↗Stephanites, followers of ↗Ǝsṭifanos (cf. Mordini 1953: 59).

According to his Acts (Ferenc 1976, edited on the basis of mss. nos. 111, 112, s. Mordini 1953: 50 [= nos. 36, 35 in Schneider 1963: 45], of the late 16th and ca. 18th cent. respectively), I. belonged to the lineage of Gəf Mela (thus being a relative of Ǝsṭifanos), and his ↗*rəst* was at Märwa, not far from Gundä Gunde. His parents were Abel and Amätä Maryam (Ferenc 1976: 244). The Acts of I. tell of I.'s miraculous conception by intercession of the Archangel Gabriel, a frequent topic of the Ethiopian ↗hagiography. When I. was still a child, his father abandoned the family and entered the monastery of Däbrä Gärzen. I.'s mother, following her husband's example, became a nun. It was the father who introduced I. to the monastic life. According to the Acts, I. was consecrated deacon by *abunä* ↗Marqos at the age of 12 (not necessarily a chronological inconsistency, as indicated in ibid. 285, n. 33; Kur in PICES 10, 360) and took the monastic habit at 15 from the hands of ↗Gäbrä Mäśiḥ (the successor of ↗Abäkärazun). Later, he was ordained priest at ↗Bärara.

In the community, I. distinguished himself as an interpreter of the Scriptures (Ferenc 1970:254). About 1554, when the region faced the devastating ↗Oromo and Muslim invasions (ibid. 250f.; Schneider 1998:132), I. succeeded Täklä Näbiyat as the abbot of Däbrä Gärzen (later incorporated into the Gundä Gunde complex).

I. was a faithful imitator of Ǝsṭifanos, and several passages of I.'s Acts are borrowed from the latter's Life. With Ǝsṭifanos I. shared also a special devotion for St. ↗Mary, an attitude different from the one attributed by other sources to

the Stephanite community (cf. Kur in PICES 10, 360). In his Acts, I. is said to have chased away the ↗devil by reciting the ↗*Wəddase Maryam* and to have healed a sterile woman by means of an icon of the Virgin. During I.'s abbotship, the new monastery of ᶜAläqət was reportedly founded (cf. Gigar Tesfaye 1979:98). Yet, the "hermitage [*gädam*] called ᶜAläqət" is mentioned in the 18th-cent. ms. of I.'s Vita as the dwelling place of "the fathers who preceded him" (Ferenc 1970:264, no. 528 = 290, no. 243). I. was followed by ↗Gäbrä Krəstos.

Robert Beylot – Alessandro Bausi

Isenberg, Carl Wilhelm

I. (also known as Charles William I., b. 5 September 1806 Barmen, d. 10 October 1864 Kornthal near Stuttgart) was a Protestant missionary in Ethiopia and India sponsored by the ↗Church Missionary Society (CMS), a London-based organization of the Church of England.

Originally a tinsmith, I. joined the Basle Mission in 1824. After completing his education he first worked as a teacher of Greek there. In 1830 he was transferred to the Church Missionary Society in London and was ordained later by the Church of England. He spent the years 1834–38 in ↗ᶜAdwa, Təgray. Unlike Samuel ↗Gobat, with whom he initially served in Ethiopia, I. kept a social and cultural distance from Ethiopians. He especially expressed his differences with the beliefs and practices of the Ethiopian Orthodox Church in blunt and direct terms which the Orthodox clergy found offensive, and in March of 1838 he was expelled from the country. In 1839 he, together with his new co-missionaries, Johann Ludwig ↗Krapf and Carl Heinrich ↗Blumhardt, at the invitation of *nəguś* ↗Śahlä Śəllase turned to ↗Šäwa. He spent four months there before leaving for London.

There he arranged the publication of a number of small dictionaries in several Ethiopian languages. His ᶜAfar ("Danakil"), Amharic and Oromo ("Galla") dictionaries of 1840, 1841 and 1842 – the latter based on a German manuscript by Krapf – were among the first dictionaries of these languages. His Amharic dictionary (followed by an Amharic grammar in 1842) constitutes a roadmark in the study of the language (cp. Praetorius 1878:8) and retains considerable historical value. I. also wrote texts in Amharic and thus plays a role in early ↗Amharic literature; he also translated the Anglican Book of Common Prayer in 1842 (*Liturgia*) and the Heidelberg Catechism (s. Fumagalli 1893:144). The aim was the production of educative texts for future missionary schools, like his Amharic Church History (*Regni Dei in terris historia Amharice*) of 1841, his Amharic Geography (ጂዎግራፊያ) of 1841 and World History (የዓለም፡ ታሪክ) of 1842 (s. Pankhurst 1962:247f.). These texts were distributed to Ethiopian pilgrims in Jerusalem and by later Protestant missionaries at the court of *aṣe* Tewodros II and subsequently at Gafat, Ğända, ᶜAdwa, Mätämma and in Šäwa (↗St. Chrischona Pilgermission).

On I.'s return in 1842 the mission was refused entry to Šäwa, so he turned to Təgray again. However, in June of 1843, he was again expelled by *däğğazmač* ↗Wəbe Ḫaylä Maryam, ruler of northern Ethiopia, an expulsion which effectively ended CMS activities in Ethiopia. His and Krapf's Journal, published in London in 1843 (IsKrapf) is a valuable historical source. After his return I. helped Thomas Pell Platt in revising of ↗Abu Rumi's Amharic Bible, reedited in 1844 (↗Bible translations, modern: Amharic).

In 1844 I. was re-assigned by the CMS to Bombay in India (later to Sharanpur), where he worked until shortly before his death. The four gospels in Təgrəññа, which had been revised by him, were published posthumously (its manuscript, a gift by I., is kept at the Staatsbibliothek zu Berlin, Ms. or. fol. 445). This constitutes the first Bible translation into this language (↗Bible translations, modern: Təgrəññа).

Donald Crummey – Wolbert Smidt

Islam

I. (Arab. الاسلام, *al-islām*, 'the [religion of] submission [to the will of God]') has a long history in Ethiopia and Eritrea. Doctrinally, ritually and legally, Ethiopian and Eritrean I. belongs to the world of Sunnī (mainstream Orthodox) I. The 1994 CSA census put the percentage of the Muslim population of Ethiopia at 32.8 %, however, this number is doubted by Muslims and many scholars alike. A percentage of ca. 45 % Muslims in Ethiopia and 50 % in Eritrea is believed to be a more realistic estimate. Due to urban migration (↗Population history), ↗conversion and population growth the number is continuing to rise.

Geographical distribution

There are Islamic communities in almost every part of the Ethio–Eritrean region. The greatest concentration of Muslims can perhaps be found in eastern Ethiopia, where the territory of the former emirate of ↗Harär, ↗Bale and the ↗Somali region represent a continuum with an overwhelming majority of Muslims in the population. In neighbouring ↗Somalia and ↗Djibouti I. is also the dominant faith. In south-western Ethiopia, the ↗Berta (↗Beni Šangul), the descendants of the population of the former ↗Oromo Gibe states (↗Ǧimma, ↗Limmu, ↗Gomma, ↗Geeraa) and several groups of ↗Wälläga (e.g., ↗Leeqa, ↗Nonno) are mostly Muslim. In southern central Ethiopia, the ↗Hadiyya, the ↗Qabeena, the ↗Allaaba, the Səlṭe (↗Ǝnnäqor, ↗Səlṭi, ↗Wəlbaräg) and part of the *Säbat bet* ↗Gurage are also Muslim.

Some Muslim groups live in the interior of Ethiopia and Eritrea in traditionally Christian regions: e.g., the Amharic and Təgrəñña-speaking ↗Ǧäbärti can be found in the highlands of Eritrea, ↗Təgray, around Lake ↗Ṭana, in ↗Gondär and ↗Amhara; in ↗Wällo, fully Amharized and Islamized Oromo form a great part of the population, whilst the ↗Azaboo and ↗Rayya Oromo are also Muslims; the ↗Argobba people of central Ethiopia additionally constitute an ancient Muslim population. The ↗Wäyṭo on the shores of Lake Ṭana consider themselves followers of I. even though they seem not fully to implement all the tenets of I. (Grottanelli 1939:169–212). The Nagaadoo of Käfa and other groups in Southern Ethiopia have been strongly influenced by I. and, in some cases, this religious adhesion has been used as an ethnic denomination (CerEt; Biber 1920:146).

In Eritrea, the ↗Təgre, ↗Rašāʾida, ↗Beğa, ↗Marya and part of the ↗Bilin, as well as the ↗Kunama and ↗Nara, between Kärän and the Sudanese border, are Muslim. The ↗Dahlak islands and later ↗Massawa (particularly due to the ↗Ottoman occupation) were centres of I. propagation. Further south, a broad section of the ↗Sāho (esp. ↗Minifire, ↗Asaorta) along with the ↗ʿAfar (↗Dankali, ↗Raḥayta) are predominantly Muslim.

I. is also the religion practised by some communities of foreign origin, scattered across Ethiopia and Eritrea, especially in urban areas. The ↗Tukr-

īr of West African origin live mainly in villages in the eastern part of Eritrea (↗Fellata, ↗Hausa) and in Ethiopia along the border with the ↗Sudan near Mätämma-Qallabat. Immigrants from ↗Yemen (both Zaydī–Šīᶜa and Šāfiᶜī-Sunnī), Indian Muslims (↗Banyan) and Near Eastern Arab merchants and entrepreneurs may be found in almost every Ethiopian and Eritrean town.

Processes of Islamization

There is much debate as to how different forms of I. were originally brought to Ethiopia (HusIslam 30–72). It is generally recognized that there were at least three major agents in the spread of I.: Ṣūfī scholars, learned men (*mašāyiḫ* [sg. ↗*šayḫ*]), sometimes of foreign origin (especially Yemenites educated in Zabīd and Taᶜizz), and traders; an individual could of course belong to one, two or all three groups. The impact of the *šayḫs* could be either limited to small local groups of students or attain regional or even trans-regional importance. The influential descent groups formed by some of the *šayḫ*-families (e.g., ↗ᶜAd Šek) further became new local foci of religious influence attracting many non-Muslim populations.

One can assume that the form of I. introduced by different agents was not the same. Traders probably disseminated only the external aspects of the religion. The evident stress on the execution of formal religious and legal obligations, which can be detected in much of the Islamic literature of Ethiopia both in Arabic and in local languages (e.g., in the *Kitāb al-↗farāʾiḍ*, and in the books by ↗Muḥammad Šāfī), is due to the strong impact that the Ṣūfīs and jurists, especially of the Ḥanafī (↗Ḥanafism) and Šāfiᶜī (↗Šāfiᶜism) schools of law (↗*Šarīᶜa*), had on the very formation of I. in Ethiopia. The deep mystical dimension of Ethiopian I. can be seen not only in the wide-spread practice of *ziyārāt* (↗Pilgrimages) to the shrines of holy men (↗*Walī*) but also in the pietistic character of organized ritual activities (↗*Ḏikr*; ↗*mawlid*, *ᶜāšūrāʾ* and *miᶜrāǧ* celebrations; written and sung *madḥ an-nabī*, *taṣliya* and *duᶜāʾ* and the common practise of making vows, *naḏr*; s. ↗Feasts, Islamic). It is also reflected in literary production. Members of the ↗Islamic brotherhoods, who were often the propagators of I., brought literature belonging to their respective groups (Near-Eastern *Qādirī* and north-west African *Tiǧānī* in particular) and instigated debate among followers of the different mystical schools in Ethiopia and Eritrea.

Characteristics of Ethiopian Islam

Muslims of the Ethio-Eritrean region differ considerably in the degree of adoption and assimilation of Islamic principles and their practical implementation. Different agents propagated different forms of I.; different societies responded differently to Islamic teaching. Recent trends in Islamic thought have led Muslims to question old beliefs and practices considered incompatible with orthodox I.

In its popular manifestations, Ethiopian I. shows traces of assimilated elements of traditional religions. This is reflected in festivals held at the shrines of holy men where pilgrims gather to sing and dance, chewing ↗*ċat* all night long, and sometimes to perform ↗*zar* cult rituals. They seek the intercession of the *walī* so that God might bestow His grace upon them. The veneration of relics, ↗graves, stones, trees, streams and hills which have become sacred through their connection with the *walī* is also a manifestation of syncretism. These traditional cultural activities are condemned as a remnant of pre-Islamic polytheism (*ǧāhilīya*) by many Muslim learned men. Ceremonies held on the occasion of the pilgrimage to ↗Šayḫ Ḥusayn in Anaağina, Bale, show a still greater level of syncretism, as the site's growing prestige became linked with the traditional Oromo pilgrimage to the ↗*abbaa mudaa* on Mount Walaboo (Cerulli 1932:133–81), thus becoming one of the main factors in the Islamization of the Oromo. In the course of time, rites performed at Šayḫ Ḥusayn grew more and more similar to those of the great ↗*ḥaǧǧ* such that they came to be seen as a substitute for the pilgrimage to ↗Mecca for those who could not afford the journey (s. Braukämper 2002:129–51). This is an example of how the veneration of a *walī* may often stand in structural or even direct historical succession to a pre-Islamic cult around a holy place or a holy man such as a spirit medium or a ↗*qaalluu*. Another example of such cultural continuity is the cult around *šayḫ sayyid* Budella of Abrät in Gurage ("*šayḫočč*") who came from a line of priests of the thunder spirit ↗*Božžä* and continued or even increased the spiritual role of his lineage as a Muslim *walī* (ShGurage 20, 192ff.).

Practices linked to the beliefs in ↗*ǧinn* and ↗spirits which often intermingle with the *zar* cult, divination (↗Prophecy) and other magical rituals (↗Magic) are widespread amongst the Muslims of Ethiopia and Eritrea. Ceremonies

Street scene in Harär, Muslim butcher's shop; the painting on the wall indicates that the shop sells ritually pure (*ḥalāl*) meat; photo 2000, courtesy of Wolbert Smidt

which mark the individual life of a Muslim – ↗birth, ↗circumcision, engagement, ↗wedding (e.g., in Harär) and death (↗Burials) – equally bear witness to the syncretism between I. and pre-Islamic traditions. A compilation of some syncretistic local practices in TrIslam (257–62) demonstrates a certain stage of Islamization rather than describes a syncretistic socio-religious system based on I. and pre-Islamic religions (like the ↗*Fandaanano* of the Hadiyya).

I. offers wide room for local customs (*ʿāda* or *ʿurf*) insofar as they do not contradict the fundamental tenets of the religion. Historically, this accounted for the rapid spread of I. amongst the ↗Cushitic peoples of the Horn. At the same time, this folk religious tradition was periodically reformed in the light of orthodox I. An example of a reformer who reacted against "folk I." is *šayḫ* ↗Ǧaʿfar Bukko of Wällo, who preached against the misuse of *č̣at* in Muslim rituals, other "heretic" practices and corrupted *ʿulamāʾ*.

A more complex aspect of the encounter between I. and pre-Islamic practices is represented by the dietary rules which fall under the legal categories of *ḥalāl* and *ḥarām*. In particular, the legitimacy of consuming the flesh of animals slaughtered according to different religious rites and, more so, locally produced alcoholic ↗drinks (↗*ṭäǧǧ*, ↗*ṭälla*; Orom. *faarso*) has been the object of heated discussions. Traces of this can be found in some passages of the hagiographies of *šayḫ* ↗Ḥusayn. *Č̣at* also became a controversial issue, and its acceptability to I. is discussed in the same texts (CerStud II, 8–17).

Another feature of I. in Ethiopia is regular contact between the various Muslim communities in northern, central, southern and eastern Ethiopia through trade, education, the mystical orders, pilgrimage and movement of peoples. In the 16th cent., the *Qādirī* order was first introduced from Yemen to Harär. From there in the late 18th–early 19th cent. it spread to Wällo and Šäwa owing to itinerant Muslim students who often travelled from Harär to Däwwäy in southern Wällo to pursue advanced studies and to Harari merchants who were prominent in the trade of ↗Ifat and its environs. Muslim merchants and scholars from northern Ethiopia settled in the southern and south-western parts of the country where they converted local rulers and their people and founded Islamic schools and ↗mosques. Ethiopian Muslims maintained relations with the wider Muslim world, with some settling there permanently and interacting with the local populations, and others returning with new ideas of reform.

Islamic law and mysticism have had less of an impact upon the nomadic and semi-nomadic groups of Ethiopia, especially the Cushitic-speaking peoples of the northern and eastern lowlands. There (with the exception of towns and cultivated or irrigated river valleys), I. was restricted by the pastoral economy, ↗migrations, the harsh ↗environment, tribal and clan social customs, and scarcity and competition for control of resources. The traditional nomadic ethos, with feuding, raiding, and lax observance of religious obligations, has persisted to the present day. However, the spread of ↗urbanization, the adoption of a sedentary life, the achievement of self-government, and the mobility of people along with the impact of globalization are likely to bring profound changes not only to the economic but also to the religious life of the people, leading to a greater degree of conformity with orthodox I.

Islamic culture

I. in Ethiopia is heterogeneous and incorporates a wide range of cultural phenomena. With the emergence of a kind of Muslim learned class, at the end of the 13th cent., two Ethiopian jurists, ʿAlī b. Abī Bakr al-ʿAqīlī and Abū ʿAbdallāh Muḥammad b. Abī Bakr al-Gidāʾī, went to Yemen to pursue their profession (CerIslam 274ff.),

whilst other Ethiopian Muslims went to Yemen to complete their education (CerStud II, 17ff.) and Yemenite learned men came to Ethiopia to teach (CerIslam 262ff.) – a steady relationship which lasted through the centuries (Martin in USCES 91–100). In the first half of the 14th cent., Islamic cultural institutions in Ethiopia were not flourishing yet according to al-ᶜUmarī who says that Ethiopian Muslims had no *madrasa*, no *ḫānaqah*, no *ribāṭ*, and no ↗*zāwiya*. With time, these basic Islamic institutions developed. The town of Harär became one of the most prominent centres of Muslim culture in Ethiopia and spread its influence to neighbouring regions, especially amongst the Oromo. Centres of education, of Muslim culture and Islamic literature emerged and flourished particularly in rural Wällo, achieving widespread renown in the 18th–19th cent. (HusIslam 91–94). Both in Wällo and Harär, Islamic literature in Arabic and local languages flourished (↗Arabic literature; ↗Harari literature). This development was greatly facilitated by the mystical orders which inspired the composition of hagiographies of Ṣūfī masters. ↗*Manẓūma* poems in praise of the Prophet and the saints were (and still are) recited throughout the country.

Islamic law and administration

A major characteristic of I. in Ethiopia is the coexistence of a multiplicity of schools of Islamic law (*maḏāhib*; sg. *maḏhab*). Three of the four canonical schools are represented: the Šāfiᶜī, Ḥanafī and Mālikī. The first two were introduced from the Ḥiğāz (↗Arabia) and Yemen, and the third from eastern Sudan. Ḥanafism probably preceded Šāfiᶜism but the latter became stronger in later times.

In those parts of the country with a Muslim majority, and in the medieval Muslim sultanates, *Šarīᶜa* was implemented from an early date. In the sultanate of ↗Šäwa, *faqīh* Ibrāhīm b. al-Ḥasan (d. 1255) carried the title of *qāḍī al-quḍāt* and apparently administered justice through a court of law (CerIslam 223f.). Matters relating to marriage and inheritance were dealt with accordingly, although customary laws were also important. *Šarīᶜa* courts have existed since the mid-20th cent.

Members of the political élite who ruled the Islamic states in Ethiopia in medieval and subsequent periods took different titles according to the way their power was conceived: ↗*qaṭ* (*qaṣ*), ↗*sulṭān*, ↗*imām* or ↗*amīr*.

Islamic brotherhoods

There is a great diversity of Muslim orders (*ṭuruq*, sg. *ṭarīqa*) in Ethiopia and Eritrea. The major Ṣūfī orders are the *Qādirīya*, *Tiğānīya*, *Šāḏilīya* and *Sammānīya*. In Eritrea, the *Ḫatmīya* and *Aḥmadīya* are influential. The spread of the orders is closely connected with the revival of the Red Sea trade at the turn of the 19th cent., and the resurgence of Islamic reform movements in the Muslim world (Hussein Ahmed in HirKrSaints 94–113).

Although Ethiopian Muslim scholars did not immediately respond to the Wahhābī call for the rejection of such practices as the veneration of saints and shrines, for their own purposes they adopted the revivalist spirit and militant aspects of the Wahhābī movement. Only very tenuous relations existed between Ethiopian I. and the ↗Mahdist movement in the Sudan in the late 19th cent (↗*ḫalīfa*). Internal factors played a more decisive role in the rise of the revivalist movement of ↗Ḥasan Ǝnǧamo than inspiration from the Mahdists. Of the three forms of 19th-cent. "Islamic revivalism" – Wahhābism, Mahdism and Sufism – it was only to the last that the Ethiopian *ᶜulamāʾ* responded positively and vigorously.

History of Islam in Ethiopia

Early history

I. has been closely associated with the Ethio–Eritrean region ever since its emergence in the Ḥiğāz (↗Arabia). One of the early converts to I. and the first *muʾaḏḏin* was ↗Bilāl b. Rabāḥ al-Ḥabašī, a freed slave of Ethiopian parentage. In 615 A.D., the Prophet ↗Muḥammad advised a group of his first followers, headed by ↗Ğaʿfar b. Abī Ṭālib, to seek asylum in al-Ḥabaša (as the Ethiopian regions were then known to the Arabs; s. ↗Abyssinia) as a consequence of persecution by the ↗Quraysh of ↗Mecca. This episode was known as the first ↗*hiğra*.

Present-day Ethiopian Muslim informants are divided on the question of the local impact of this *hiğra*. Some say that there was no possibility of preaching I. because of the refugee status of the emigrants. Others speculate that during their 13-year sojourn in ↗Aksum, the *muhāğirūn* must have attempted to spread I. Oral tradition asserts that between 30 and 60 local converts accompanied the refugees back to Medina. The ↗Ğäbärti claim that their conversion dates from the time of the *hiğra*.

The most controversial episode associated with the *hiğra* is that of the alleged conversion of the Aksumite ruler *nağāši* ↗Aṣḥam[a] b. Abğar (s. also ↗Ǝllä Ṣäḥam) and his correspondence with the Prophet, extensively dealt with in Arabic sources. Muslims believe that the *nağāšī* had converted to I. secretly and that the letters which he and the Prophet exchanged were genuine. This pious tradition has strengthened the argument that I. in Ethiopia has a long history associated with the first generation of Muslims and that Ethiopia was the earliest country outside Arabia to which I. was conveyed. However, non-Muslim scholars have maintained an attitude of scepticism towards this tradition, partly because the tradition of Arabic ↗historiography did not begin until much later. Nonetheless, Ethiopian and foreign writers have relied on the Arabic sources for the *hiğra* itself, which have always been considered fairly reliable (Hussein Ahmed 1996:47–58; ErlEth 5–11). The *Life of the Prophet* (*Sīrat rasūl allāh*) by ↗Ibn Isḥāq mentions active clerical and political opposition to the *nağāšī*'s favourable attitude towards the Muslim refugees, and the conflict which ensued. It is also possible to argue that the *nağāšī*'s benevolence and hospitality might have been interpreted by the Arab writers as a desire for, or proof of his conversion to I.

The numerous Arabic sources reflect the interest that the Muslim world had in Ethiopia and Ethiopians in early times (e.g., ↗Ibn al-Ğawzī, ↗Muḥammad b. ʿAbdalbāqī al-Buḫārī al-Makkī etc.), and also the special, non-hostile attitude towards the country, expressed in the prophetic saying transmitted, e.g., by Abū Dāwūd (d. 915; s. *Sunan Abī Dāwūd* ..., nos. 4302, 4309) or an-Nasāʾī (d. 815 s. *Sunan an-Nasāʾī* ..., part 6, 43f.; s. van Donzel in StudAeth) and some others, as well as in a remark by ↗Ibn Ḥawqal, according to which Ethiopia is exempt from ↗*ğihād* (Ibn Ḥawqal 1939:56). Historically, these attitudes could have been momentary; however, Islamic tradition still considers Ethiopia as a "neutral" country, not to be attacked as long as it refrains from attacking Muslim territories (s., e.g., Majid Khadduri 1955:253–58).

The spread of Islam

In the early 6th cent. the ↗Red Sea was still under Aksumite control. As Aksum weakened, Red Sea ("Abyssinian") pirates increasingly disrupted trade routes. The Arabs are thought to have responded with punitive expeditions in 630/31 (Muslim troops sent by the Prophet himself) and 642 (an unsuccessful naval expedition sent by *ḫalīfa* ʿUmar b. al-Ḫaṭṭāb), both under the leadership of ʿAlqama b. Muğazziz al-Mudliğī (TrIslam 46f.; van Donzel in EI² vol. 7, 862ff.). The "Abyssinians" raided Jeddah in 702 (Wüstenfeld 1859:44), and the Muslim Arabs reacted by occupying, ca. 702, the ↗Dahlak islands off the ↗Massawa coast (MHAksum 260), where an important nucleus of Muslim population developed and eventually a Muslim sultanate emerged. The Dahlak archipelago became one of the first East African regions to come under Muslim influence. The flourishing of the Islamic community of the Dahlak is testified by epigraphic evidence dated to a period from the 10th to the 16th cent. (Cuoq 1981:40–54; Schneider 1983; Cerulli 1988:578), and in the 12th–13th cent. the Dahlak

archipelago was the seat of an independent Muslim dynasty.

While the Aksumite kingdom was declining and moving its centre southwards, Muslim traders started working along the trade routes from the Red Sea coast into the hinterland. They organized the extensive export of Ethiopian goods (ivory, incense and highly appreciated Abyssinian slaves) for the markets in the Islamic Near East, the Arabian Peninsula and Egypt and slowly created small commercial settlements and entrepôts on the main communication routes. Some Arab groups later migrated from Arabia and were gradually assimilated into the ↗Beğa, introducing I. among the Beğa who inhabited the plains between the Red Sea and the Nile (covering also areas in northern and western present-day Eritrea). Because of trade activity, and the migration of ↗holy men from the Arabian Peninsula (↗*Walī*), by the 13th cent. many ↗ᶜAfar- and ↗Sāho-speakers, and some of the Beğa peoples, had become Muslims. Most oral and historical traditions of Eritrean Muslim groups emphasize the role of Arabian holy men in the process of their adoption of Islam and, sometimes, the foundation of their lineage/group. Such traditions should be taken with caution since some of those adopting them include groups who have converted to I. only in the 19th cent. They usually adopted and adapted such traditions to both shape and accommodate their newly acquired religious and social identities. An eastern Eritrean Muslim tradition, for instance, venerates *faqīh* Muḥammad, the Ḥiğāzī cleric who crossed the Red Sea into the coastal region known as Dankalia (or the ᶜAfar coastlands) in the 11th cent. A.D. and is believed to have converted such important Sāho-speaking clans as ↗Asaorta and ↗Minifire (Miran 2005). The spread of I. further into the Ethiopian hinterland along the trade routes is witnessed by Arabic funerary ↗inscriptions from eastern Təgray – ↗Ǝndärta and ↗Kʷiḥa (Lusini 1993–97; Smidt in StudAeth 259–68), probably the earliest one (in Wägär Ḥariba, Ǝndärta) dating to 1006 A.D. (Pansera in CRStud 5).

In central and southern Ethiopia, I. arrived along another trade route leading from the Gulf of ↗Djibouti through the ↗Awaš River basin to the southern and western parts of the Ethiopian plateau. Groups of Muslim traders, religious teachers and political refugees of different origins settled in the coastal districts around ↗Zaylaᶜ and gradually moved inland carrying I. with them. Various populations scattered along the route from the Red Sea coast and the Gulf of Aden up to the ↗Abbay were converted, as Arabic funerary inscriptions testify the early existence of Muslim communities in southern ↗Šäwa (Schneider 1970) and southern Ethiopia (Littmann 1924; Azaïs – Chambard 1931; Huntingford 1955).

The Muslim sultanates

The rapid expansion of I. in the south culminated in the emergence of several petty Muslim states dominated by a hereditary aristocracy claiming Arab origin.

The founders of the Sultanate of ↗Šäwa, a state exercising control over part of southern Ethiopia, claimed descent from the Meccan clan of Maḫzūm. According to an Arabic document (CerIslam 207–43), the ↗Maḫzūmī dynasty flourished at least from 896/97 A.D., though Taddesse Tamrat (1977:140ff.) has proposed the early 12th cent. as the most likely date for the formation of the state. In the late 13th cent. the dynasty fell and control passed to the rulers of ↗Ifat.

Ruled by the ↗Walašmaᶜ family (originally subject of the rulers of ↗Damot; CerIslam 257–80, esp. 270), who also claimed a remote Arab ancestry, Ifat is considered to have been the earliest indigenous "centralized Islamic state" in sub-Saharan Africa (Lewis 1966:38). Since the trade route to ↗Zaylaᶜ and other trade routes from the Gulf had already been active from the 10th cent. (Taddesse Tamrat 1984:430), it is possible that the emergence of commercial settlements, the spread of I. and the development of the Muslim statehood tradition had started much earlier than the middle of the 13th cent., which may explain the rise of the sultanate of Šäwa.

According to al-ᶜUmarī (UmMasGaud 1), in the middle of the 14th cent. there were seven major Islamic states in Ethiopia: Ifat, ↗Däwaro, ↗Arabäbni, ↗Hadiyya, ↗Šarḫa, ↗Bale and ↗Dära. From other sources we may infer that ↗Fäṭägar was also a Muslim sultanate, and other petty "proto-states" with more or less Islamized rulers probably also existed, such as ↗Gidāya, ↗Mora etc. The populations of these states were most probably of both Semitic and non-Semitic stock. The ↗Sidaama, for instance, formed the majority in Bale (CerStud II, 1–4). From at least the first half of the 15th cent., the main Islamic state in Ethiopia was ↗ᶜAdal. Its capital was first ↗Dakar, and then in 1520 moved to ↗Harär, which, according to the local tradition, had be-

come an important city-state from the beginning of the 13th cent. In the 16th cent., as the capital of ᶜAdal, Harär grew to be one of the leading centres of commerce and Islamic culture in the whole Horn of Africa.

The earliest sources describe the Muslim sultanates mostly as tributaries of the Christian kings. Whilst the latter were trying to extend their power to the south as well as to the north, the Muslim élites strove to loosen this dependency at any suitable opportunity. The sultanates regularly produced religious leaders (cp. ↗*Imām*) who raised substantial forces to fight against the enemies of I., and peaceful coexistence between the Muslim states and the Christian kingdom was frequently overshadowed by conflict. The earliest recorded clash occurred about 1299, when *šayḫ* Muḥammad Abū ᶜAbdallāh rose against "the King of Amḥara" (*al-malik al-Amḥarī*), most probably *aṣe* ↗Wədəm Räᶜad (CerIslam 267–70; TadTChurch 130f.). In his campaigns against Damot, Hadiyya, Fäṭägar and Ifat, the 14th-cent. *aṣe* ↗ᶜAmdä Ṣəyon I struggled to acquire control over the trade routes from the Gulf. In 1332 he defeated the joint forces of Ifat, ᶜAdal and their allies headed by the Walašmaᶜ dynasty, and appointed over them ↗Ğamāladdīn II b. Dalḥūy b. Manṣūr. The latter then allied with *qāḍī* ↗Ṣāliḥ and ᶜAdal and rebelled but was defeated and replaced by Naṣraddīn. Thereafter, despite occasional victories, the rulers of ᶜAdal were repeatedly defeated by Christian emperors, as, for instance, in 1415, when *aṣe* ↗Yəsḥaq reached as far as Zaylaᶜ, routed and killed *sulṭān* ↗Saᶜdaddīn Abū l-Barakāt, or in the 15th cent., when *aṣe* Zärᵓa Yaᶜəqob defeated ↗Aḥmad Badlāy of ᶜAdal, and ↗Bäᵓədä Maryam successfully fought against Islamicized ↗Dobaᵓa.

At the same time, Ethiopian emperors recognized the role of their Muslim subjects and tried to bring about some political and cultural integration. They relied upon the skills and connections of their Muslim commercial agents; Muslim traders kept alive the caravan trade and secured Ethiopia's economic links to the outside world (AbRSea 22). Muslims were employed by ↗Yagbəᵓa Ṣəyon (TadTChurch 129), Zärᵓa Yaᶜəqob and others as leaders of diplomatic missions. Such missions were a regular occurence (the earliest recorded are from the time of the ↗Fāṭimids) because a new metropolitan (↗*Paṗas*) for the Ethiopian Orthodox Church could only be obtained with the permission of the Muslim rulers of Egypt, who tried to use this circumstance as a political means. Some monarchs like *aṣe* Yəsḥaq also attempted to introduce the advanced knowledge of Muslim countries into Ethiopia (TrIslam 75).

The administration of the Muslim provinces was usually left in the hands of the local ruling families on the condition of their loyalty and payment of tributes. Ethiopian Muslims enjoyed a measure of religious freedom and tolerance. The local Muslim élites had ↗conversion as an option which could open for them further possibilities in political life (cp. the case of ↗Ǝleni, Zärᵓa Yaᶜəqob's wife of Hadiyya origin). However, the attentions of the Ethiopian Orthodox Church were more directed against "pagan" religious practices, than against I.

In the 1490s, effective political power in ᶜAdal was held by *imām* ↗Maḥfūẓ b. Muḥammad who was eager to resume the struggle against the Christian kingdom. Although the *sulṭān* of ᶜAdal ↗Muḥammad b. Aẓharaddīn was rather in favour of peaceful coexistence, the warriors and militant religious leaders of ᶜAdal supported Maḥfūẓ, who in 1508 led a series of successful attacks against the eastern and south-eastern provinces. In 1516 or 1517 (cp. Cuoq 1981:166, n. 23) *aṣe* ↗Ləbnä Dəngəl launched a counter-attack and defeated and killed Maḥfūẓ.

Subsequently, *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") assumed the leadership of ᶜAdal, gathered a composite army and launched a new campaign which took the form of a *ğihād*. His decisive victory over the Christian forces in 1529 was followed by his campaigns in Šäwa in 1531 and in the provinces around Lake Ṭana in 1533. By 1540 the Christian kingdom had been completely overrun by the forces of Aḥmad b. Ibrāhīm who fought to establish a unified and strong Muslim Ethiopian state (in which the Solomonic dynasty would still have a rôle; s. ↗Minas). The civil administration of the empire was staffed by members of the local aristocracy, while military authority was supposed to be exercised by his commanders who controlled the civilian governors and were in charge of collecting tribute and taxes from the Christian subjects (Taddesse Tamrat 1977:175ff.). One of the consequences of the military occupation of the Ethiopian highlands was the conversion of a large number of Christians to I., largely but not exclusively induced by the prospect of tax exemption or fear for their lives and property (Taddesse Tamrat 1977:175ff.).

However, Aḥmad b. Ibrāhīm's plans were never fully realized; after his death in 1543 his armies disintegrated, whilst the new administration never became functional. Several more attempts were made by his successors to challenge the Christian state throughout the second half of the 16th cent. (s. ↗Bati Dəl Wämbära). In 1559 *aṣe* ↗Gälawdewos was killed while resisting a major offensive from Harär organized by ↗Nūr b. Muǧāhid. In the end, the efforts of the leaders of ᶜAdal were unsuccessful, and the Muslim regions, including Harär, were devastated and depopulated by the long war and became exposed to the raids of the ↗Oromo. The decline and political disintegration of ᶜAdal was never reversed.

Islam in the late 16th–17th cent.

One result of the Muslim victories over the Christian empire between 1527 and 1543 was the diffusion of I. in the Ethio-Eritrean region, prompting a more complex distribution of Ǧäbärti communities in the highlands. Furthermore, Ethiopia's Muslim neighbours in the Red Sea area reacted to the Christian–Muslim conflict and attempted to exploit the situation to their advantage. The most important instance was the intervention of the ↗Ottoman Empire. Having defeated the ↗Mamlūks, the Turks took over Egypt in 1517 and looked for further gains in the Red Sea region in light of the fierce competition with ↗Portugal. Turkish musketeers were enrolled in the forces of Aḥmad Grañ; in 1557 the Ottoman Turks occupied Massawa and created the coastal province of ↗Ḥabeš (s. ↗Özdemir), which they administered until the mid-19th cent., also making repeated attempts to expand into, and control, the highlands. The Turks and their inland allies were defeated by *aṣe* ↗Śärṣä Dəngəl around 1590, but the coastal areas remained under Ottoman control, and in Massawa Ethiopian Muslims secured an outlet to the rest of the Islamic world, at the same time exercising influence on the population of neighbouring regions.

In the south, the Oromo, too, had been slowly exposed to Islamic influence since the end of 16th cent. In particular, those settling in the Harär region, in ↗Arsi and in Bale embraced I., influenced by the Muslim substratum, a particular role being played by the veneration of *šayḫ* ↗Ḥusayn (Braukämper 2002:106–28, 129–51, 170–84).

The experience of Aḥmad b. Ibrāhīm al-Ġāzī's wars, the Ottoman occupation of the Red Sea coast and the further spread of I. resulted in tension and sometimes led to the persecution of local Muslims by the Christian state. Whilst in the early 16th cent. *aṣe* Ləbnä Dəngəl appointed Muslims as governors of the eastern provinces and as administrators at his court, he was apprehensive of their growing influence and wealth, as well as the rapid advance of I. Therefore, he extorted heavy taxes and discriminated against Muslims. Elsewhere, Muslims were forbidden to carry arms, ride horses and build mosques (BassHist 372).

The move of the political centre of Ethiopia to the Lake Ṭana region and the emergence of the ↗Gondärine kingdom created new conditions. The regions of the Muslim sultanates, which had fought against the Christian state in the 14th–16th cent., were now overrun by the Oromo and were temporarily out of reach of the Gondärine kings. Other important factors that emerged were the interaction with the ↗Balaw population and borderland regions adjoining the Sudan (such as ↗Quba and ↗Mäzäga; s. ↗Funǧ). In the east, the successor of ᶜAdal was ↗Awsa and a number of smaller sultanates (s. ↗Gōbaᶜád). The ᶜAfar controlled the salt-reserves of the ↗ᶜAfar Depression, of vital importance for the economy of the whole of Ethiopia (s. ↗*Amole*). By and large, the time of the large-scale Christian–Muslim confrontations was over and these returned only in the 19th cent.

After the expulsion of the Jesuits, *aṣe* ↗Fasilädäs wanted to secure the country from the Europeans by any means (even with the help of the Turkish governors of Massawa and Sawākin), and sought allies among the Muslim rulers of Yemen. The official stance towards Muslims was moderate, even though there were no fundamental changes insofar as their role in the Gondärine kingdom was concerned. In the meantime, the Muslim population was growing, in Gondär itself and in some other regions (particularly, along the trade routes). In 1668 *aṣe* ↗Yoḥannəs I, alarmed by the progress of I. in his kingdom (TrIslam102), and by the intermixing of followers of different religions (Muslims, Christians, Betä Ǝsraʾel, "pagans"), issued a proclamation separating them and compelling the Muslims of Gondär to live in a separate quarter (Ǝslam Bet). The proclamation was repeated in 1682, but the policy was not followed through. The attention of the monarchs was absorbed by theological controversies and political intrigues, whilst "public opinion" was directed primarily against any contact with the Catholic world.

Islam in the 18th–19th centuries

The growth of I. in Ethiopia gained further momentum from the religious reform movement in the Muslim world which resulted in the introduction and spread of the ↗Islamic brotherhoods. In the 18th and 19th cent., a number of Muslim regional dynasties were established in Wällo and the ↗Gibe region which enhanced for a time the cultural and political significance of I. In Wällo, some of the rulers of the ↗Yägğu dynasty and the family of ↗Wärrä Himano were patrons of I. In Wällo the *Qādirīya* order, brought from Harär, spread as elsewhere in Ethiopia. From Wärrä Himano, the *Šāḏilīya* was disseminated to other areas. In the Gibe region, where the Muslim states of ↗Gomma, ↗Guummaa, ↗Geeraa, ↗Ǧimma Abbaa Ǧifaar and ↗Limmu Ǝnnarya emerged between 1810 and 1830, the *Qādirīya* and *Tiğānīya* were the most influential brotherhoods. The revivalist movements were particularly strong in the Eritrean region, at that time under Egyptian control – a circumstance which became decisive for the nature of I. in Eritrea (s. below).

The Ethiopian emperors of the late 19th cent., particularly ↗Tewodros II and Yoḥannəs IV, took a very rigid stance towards I., considering Muslims – especially those of Wällo – an obstacle to the establishment of a strong unified Ethiopia. They increased pressure upon the Muslim population and gradually undermined the Muslim ruling dynasties. Formally, they required Muslims to adopt their culture and religion. As early as 1856, *aṣe* Tewodros II ordered the Muslim Oromo of Wärrä Himano to convert and rebuild churches or face expulsion. In 1878 the religious council called by *aṣe* ↗Yoḥannəs IV in ↗Boru Meda to resolve doctrinal disputes within the Ethiopian Orthodox Church decreed the conversion of the Muslims of Wällo to Christianity. So, the erstwhile Muḥammad ʿAlī became *ras* ↗Mikaʾel, with Yoḥannəs as his godfather, while Mənilək had Amäde Libän "Abba Waṭäw" baptized as Ḫaylä Maryam and granted him the title of *däğğazmač*. However, by viewing Muslims as the engineers of the division of the country through their dealings with foreigners at the time of the encroaching Egyptian intervention under *ḫidīw* Ismāʿīl (resulting in the ↗Egyptian–Ethiopian war of 1875–84) and, later, during the destructive *ğihād* waged by the ↗Mahdists (ZewYohan 94, 99f.), the emperors ignored the fact that religious and cultural heterogeneity was not the only weak point of the Empire at that period: in the 1870s Yoḥannəs IV's Christian vassals in the north were intriguing and allying themselves with the Egyptian invaders. Many of the persecuted Wällo Muslims fled to other parts of the country where they propagated I. There were also armed protests, mostly inspired and directed by militant Muslim clerics such as *šayḫ* ↗Ṭalḥa b. Ǧaʿfar (Hussein Ahmed 1989:13–30; Conti Rossini 1935:468f.).

Yoḥannəs's harsh policy towards indigenous Muslims was partially mitigated during the reign of ↗Mənilək II. He had to deal with ↗Qabeena and Hadiyya-based resistance, inspired by I. and organized in 1880s by ↗Ḥasan Ǝnğamo, as well as the Mahdist threat on the eastern borders of Wälläga (which persisted till 1889–90, s. ↗Ǧoote Tuulluu; ↗Ḫʷāğalī; ↗Moroda Bakaree). Later, he also had to count with the threat coming from ↗Muḥammad ʿAbdallāh Ḥasan and the Somali. Yet, Mənilək had a more pragmatic approach towards indigenous Muslims inherited from his predecessors, the rulers of Šäwa. The reign of *ləğ* ↗Iyasu, whose policies and their implications still remain unclear and often misunderstood, marked the end of this long historical phase of intermittent peaceful coexistence and bitter incomprehension.

Islam in 20th-century Ethiopia

The first years of *aṣe* ↗Ḫaylä Śəllase I's reign witnessed the pursuit of a policy of partial and half-hearted liberalization towards I. During the ↗Italian war of 1935–36 and the subsequent occupation, the Italians adopted a pro-Muslim policy to win the support of Ethiopian Muslims (Sbacchi 1985:161; ↗Africa Orientale Italiana). The benefits brought by the Italians included: granting full freedom of worship; appointment of Muslim judges (*qāḍī*); teaching of the ↗Arabic language in Muslim schools; construction and repair of mosques; and subsidizing the pilgrimage (in 1939 alone, 3,585 Muslims, a level reached again only in the 1990s). These manifestations of benevolence towards I. left a positive impression of Italian rule upon Ethiopian Muslims (Ahmed Hassen 2002).

The end of the Italian occupation in 1941 was accompanied by the persecution of Muslims who were branded as collaborators (s. ↗Maḥámmad Yāyyó). Punitive action was taken against some Muslim leaders and communities. At the same time, Ḫaylä Śəllase instigated a few measures to satisfy the aspirations of Ethiopian Muslims – e.g., by constituting the ↗*šarīʿa* courts – but he also sanctioned the exclusion of provisions relat-

ing to Muslims from the ↗Civil Code of 1960 (Markakis 1975:340). The *qāḍī* courts were not mentioned in the Courts Proclamation of 1962 or the Civil Code of 1965, although they continued to operate.

Christianity remained the state religion. Muslims could not construct mosques, had limited access to land, and were barred from the civil service and the army. Traditional Muslim ↗education was officially looked down upon – not only because the Islamic schools taught I. but also because the medium of instruction was Arabic. On the other hand, Muslims resented the existing system of modern education, which was believed to have been inspired by Christian ideals. They also resented the functioning of schools on Fridays and Islamic ↗feasts, the use of Amharic in non-Amharic speaking and Muslim areas, and the supposed use of education as a vehicle for the spread of state nationalism (Markakis 1975:74).

In the last three decades of the imperial era, the government pursued the traditional policy of marginalizing I., perceiving it as a threat to the survival of the Ethiopian state. On the eve of the ↗Revolution in 1974, I. still carried the old stigma of being associated with foreign aggression, and Muslims continued to be seen as an alien community constituting a minority of the total population.

The large demonstration of Muslim residents of Addis Abäba and its environs on 20 April 1974 revealed the real weight of the Muslim population (Ottaway 1978:4). Of the eleven demands put forward by the demonstrators, the *Därg* (↗Provisional Military Administrative Council) met only three: the observance of the three main Islamic festivals as national public holidays, land reform, and official adoption of the term "Ethiopian Muslims" to replace the more pejorative "Muslims residing in Ethiopia". However, attempts to secure official and legal recognition for the Ethiopian Supreme Council for Islamic Affairs failed throughout the *Därg* period, although it was allowed to function as a de facto organization (Hussein Ahmed in HirKrSaints). I. acquired a symbolic status of parity with Christianity. There was a higher level of participation in national affairs. The period also witnessed the revival of I. as an enduring basis of unity and identity capable of withstanding the assaults of a state ideology. However, after adopting a Marxist-Leninist ideology, the government considered religion in general and I. in particular as an obvious threat. Its hostility to religion and the restrictions on trade antagonized sections of the Muslim religious élite and the merchant community.

The overthrow of the *Därg* in May 1991 ushered in a new period in the history of Ethiopian I. The new regime's policy of liberalization, and of respect for ethnic and cultural identities, gave impetus to the revival of I. Restrictions imposed by the preceding regime on the import of Islamic publications and pilgrimage were lifted. A number of Islamic religious associations, publishing firms, newspapers and magazines, private schools and colleges were founded; literature flourished and expanded (Hussein Ahmed 1998). New mosques sprang up. In spite of occasional tensions between the state and Muslims (e.g., the 1995 incident in the ↗Ǧāmiᶜ al-Anwar mosque; cp. Hussein Ahmed 2006), the last half decade of the 20th cent. witnessed I.'s increasing prominence and visibility in the public sphere within the general framework of the developing transformation of the Ethiopian state and society, and the continuation of the tradition of peaceful coexistence between the Christian and Muslim communities in the country.

Hussein Ahmed

History of Islam in Eritrea

Islam in the region during the 16th–19th cent.

The conflict between Christians and Muslims that found its expression in the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī rallied external imperialist forces in the Red Sea area and culminated in the ↗Ottoman occupation of ↗Massawa in 1557 which lasted until 1865. In general, Ottoman control of the Red Sea basin revitalized trans-regional commerce and provided a degree of relative stability in the area. One result was the migration of Arabs from the Ḥiǧāz, ↗Yemen and ↗Ḥaḍramawt to the African coastal urban centres, notably Massawa and ↗Ḥərgigo. In terms of religious influence, the construction and renovation of several ↗mosques and shrines (*qubba*), most notably the *šayḫ* Ḥammāl al-Anṣārī religious complex and what became known as the "Ḥanafī" mosque, was characteristic of the Ottoman era in Massawa. The Ottomans introduced ↗Ḥanafism as the official legal rite and sent to Massawa Ḥanafī *qāḍī*s from the Ḥiǧāz in the late 16th and early 17th cent. The prolonged incorporation of Massawa and its close hinterlands into the Ottoman administrative and commercial set-up in the Red Sea area positioned it firmly within a political, religious and cultural sphere of Muslim influence.

The history of I. in the Eritrean – and Ethiopian – region in the 19th cent. is intertwined with Egyptian expansionism in north-east Africa (↗Egypt), the transformation of the political economy of the region, and the religious reform movement in the Muslim world. The "Islamic Revival" was especially manifested by the emergence of new ↗Islamic brotherhoods as well as the revitalization of the older brotherhoods. Egyptian expansion into the Sudan and the reanimation of the trade axes between the Red Sea and the Nile Valley went hand in hand with the spectacular process of Islamic diffusion and the revivification of Islamic belief and practices among societies of the Eritrean region from the 1820s onwards. The ↗ʿAd Šek "holy family" affiliated with the *Qādirīya* order, traders and ↗holy men associated with the politically potent ↗Nāʾib family of ↗Sämhar, and the newly established *Ḫatmīya* were all particularly active in spreading I. The ʿAd Šek family and the Nāʾib's agents were instrumental in converting the ↗Bet Asgäde groups, the ↗Mänsaʿ, the ↗Marya, the ↗Bet Ǧuk, and part of the ↗Bilin from local forms of Christian practice to I. The ʿAd Šek family capitalized on the master/serf structure of ↗Təgre-speaking societies and attracted – often through marriage and the propagation of *baraka* (blessing) – entire families of Təgre vassals to join its ranks and thus undermined these social structures. In due time, the converts joined the "holy family" which gradually developed into a widely influential independent "tribe" (PollEr 168–247; TrIslam 114–17, 153–79, 244–45).

The influence of the new orders in the Eritrean region was set in motion by ↗Muḥammad ʿUṯmān al-Mīrġanī's missionary travels in the western lowlands, the ↗Saḥəl and Sämḥar in the 1810s and 1820s. Since the 1830s, the *Ḫatmīya* made efforts to spread I. among non-Muslims and deepen Islamic practices and piety among the Muslim society they perceived as morally and religiously adrift (e.g., the ↗Beni ʿAmər). The *Ḫatmīya*'s method of expansion was by the incor-

poration of pre-existing religious formations into a supra-community brotherhood network. They initiated local "holy" lineages and notables into the order and appointed ↗*ḫalīfas* who were thus incorporated into the broad-based, supra-ethnic, and cross-regional brotherhood. In stark contrast with the methods of the ᶜAd Šek, communities coming under the influence of the supra-ethnic *Ḫatmīya* were able to preserve their pre-existing social and political structures, much as a sense of stability and continuity. The entrenchment of the brotherhood in the region was facilitated by the intensification of Egyptian encroachments following the conquest of ↗Kassala in 1840. Over the next decades the power balance between the ᶜAd Šek and the *Ḫatmīya* shifted in favour of the latter. From the 1860s to the 1880s the order was able to extend its influence to the ↗Ḥabab as well as to the Sāho-speaking clans of Sämḥar and the eastern highland escarpments especially thanks to the activities of Muḥammad ᶜŪṯmān Sirr al-Ḫatm (1849/50–1903) and *sayyid* Hāšim al-Mīrġānī (d. 1901). In this context of religious revival, other, smaller and more localized Təgre-, Sāho-, and ᶜAfar-speaking religious clans such as the Faqīh Ḥarak, Bet Šek Maḥmūd, Bet Ḫalīfa, ᶜAd Muᶜallim, ᶜAd Darqi, among others, were active in the diffusion of Islamic learning and law in the region. Most claimed prestigious descent originating in the Arabian peninsula (MuhTarih 99f.). By the 1880s all lowland groups but the ↗Kunama and part of the Bilin were Muslim.

The Egyptian occupation of Massawa (1865–85), combined with a new migratory wave of Arab and Muslim merchants and entrepreneurs from the wider Red Sea area and the Islamic world, enhanced Islamic practice in the town and its dependencies. New mosques were built, Islamic legal procedures were reformed and regularized, and several *qāḍīs* and *muftīs* were sent from Egypt and the Sudan. In 1911 some 65 mosques in the greater Massawa area were identified (Odorizzi 1911:119f., 160f., 168f.). Even though we dispose of limited information, the *Qādirīya* and *Šāḏilīya* orders also had adherents in Massawa, while the *Aḥmadīya* appears to have had some following in the villages of ↗ᶜƎdd and ↗Tīᶜo on the ᶜAfar coast. A branch of the *Darqawīya* (*Šāḏilīya*) seems to have been independent on the coast until its disappearance during the ↗Mahdist movement (TrIslam 236; Le Chatelier 1887:126ff.). Several local and regional ↗pilgrimages (*ziyāra*) and commemorative ceremonies (*ḫawlīya*) at the tombs and shrines of local pious saints and holy Ṣūfī leaders also developed in Massawa, ↗Ḥəṭumlo, and ↗Ǝmbärämi (Odorizzi 1911:169f., 1916:35f.).

Some sources also noted the presence of the *Ḥaddādīya* order which was brought from Ḥaḍramawt and drew followers from among the ᶜAd Šek and Arab immigrants. The same sources remarked the presence of the *Sammānīya* which was introduced to the Ğäbärti on the highland plateau by the North African *šayḫ* Ādam al-Kinānī who is buried near ᶜAbiy ᶜAddi in Təgray (PollEr 286ff.; TrIslam 236). It is not clear when these two brotherhoods were introduced to Eritrea and how long they have been active. It is also noted that the *Tiğānīya* and the *Maǧḏūbīya* orders had some following in Dankalia (↗Islamic Brotherhoods).

Islam in the Colonia Eritrea

Following the takeover of Massawa in 1885, the Italian colonial authorities continued, as the Egyptians did beforehand, to grant subventions to mosques, regularized a ↗*waqf* (pl. *awqāf*, 'religious endowment') council in 1888, and granted the ↗*šarīᶜa* court autonomy in matters of personal status, family and inheritance (Marongiu Buonaiuti 1982:41–45, 103–07). The early Italian colonial attitudes were shaped by the need to maintain stability among the "tribes" and, inseparably, by the need to respond to the divided Mahdist and anti-Mahdist loyalties of the *Ḫatmīya*, the ᶜAd Šek and their followers. The Italian authorities were deeply concerned by the spilling-over of the Mahdist rebellion from the Sudan into the colony. In the lowland regions, the politics of conquest and "pacification" sought the co-option of responsive elements in "assisting" the authorities to control and secure the stability of their conquered territories and mobilize local forces against the Mahdists and their supporters. Consequently, the Italians developed a relationship with the anti-Mahdist *Ḫatmīya* Ṣūfī order to the detriment of the ᶜAd Šek holy family who was believed to take an active pro-Mahdist stance and therefore constitute a destabilizing element in the region. An even more elaborate "Islamic policy" was pursued by Governor Ferdinando ↗Martini who sought to form an Eritrean "Islamic sphere" by rallying the colony's Muslims around an "official" and responsive representative of the *Ḫatmīya* branch in Eritrea and thus deflect influences originating beyond the colony's borders. Accordingly, *sayyid* Ğaᶜfar al-Mīrġānī (d. 1943) was persuaded to move into

the colony from Kassala and establish himself in ↗Kärän in 1903; the colonial administration thereafter financed the construction of a mosque there (Italian archives [ACS and ASDMAE, AE]; Romandini 1984:127-31). Furthermore, under the governorship of Martini, the Asmära principal mosque (1900), the shrine for Häšim al-Mīrġanī in Ḥəṭumlo (ca. 1902), and a mosque in ↗Aqordät were constructed with financial or administrative support of the colonial authorities. Martini also undermined the power of the ᶜAd Šek by deliberately dividing the group and placing the ↗Barka and Saḥəl/Sämḥar branches under distinct *commissariati* (1903). Their traditional exemption from tribute payment was ended in 1904–05. These policies consolidated the *Ḫatmīya*'s influence in the colony and contributed to the decline of the ᶜAd Šek. The influence of the *Ḫatmīya* among pastoral, rural and urban communities grew well into the middle decades of the 20th cent.

A more elaborate, wide-ranging and conscious articulation of Italian colonial attitudes to I. may be identified following the conquest of Libya in 1911. They were in part inspired and fuelled by the ideas of promoters of a "pro-Islamic policy", such as Enrico Insabato, and were aimed at fostering Italy's policies in the Mediterranean and vis-à-vis the Ottoman empire. In 1912 the construction of a separate *riwāq* ('living quarters') for Eritreans and Somalis at al-Azhar University was funded by the Italian diplomatic representation in Cairo. In 1916 Odorizzi published a monograph on I. in Eritrea for colonial officials. In the same year a decree granted legal status to the *awqāf* committees in Asmära, Massawa and Kärän (Yassin M. Aberra 1983:206). In 1917 a hostel for the use of pilgrims from the Italian colonies was purchased in Mecca (Colosimo 1918:467–81).

In the 1920s and 1930s, the Fascists employed overt pro-Islamic propaganda, addressed to the public opinion in the Muslim world, seeking sympathy for its imperialist objectives in Africa and the Mediterranean. Eritrean Muslims were able to travel more freely for religious education in the Middle East, especially to Egypt and the Ḥiğāz. Following the conquest of Ethiopia in 1935, pro-Islamic policies were part and parcel of the Italian colonial project. Favouring Muslims became official policy aiming at counterbalancing the power of the traditionally dominant Christian highlanders. Mosques and religious schools were built and renovated throughout the colony (Sbacchi 1985: 161–65). Only in the 1930s congregational mosques were constructed in Ginda, ᶜAlī Gidir, Naqfa, Täsänäy, Sägänäyti and Barentu. In 1937 the ↗Ğāmiᶜ al-Ḫulafāʾ ar-Rāšidīn in Asmära was reconstructed and enlarged by Guido Ferrazza (*Guida* 203). However, unlike in Libya, these policies often clashed with the harsh racial policies applied by the Fascists in ↗Africa Orientale Italiana (Marongiu Buonaiuti 1982: 290f.). Seeking to organize the Muslims in Eritrea and centralize their institutions the Italians appointed ↗Ibrāhīm al-Muḫtār Aḥmad ᶜUmar as Grand Mufti in 1940, a year before Italy's defeat in ↗World War II and the dismantling of its colonies. He was to become a central protagonist in the development of I. over the next few decades (Miran 2002; 2005: 194–203).

British Military Administration period

Under the ↗British Military Administration in Eritrea (1941–52) I. continued to thrive, most notably in the growing urban centres. Islamic institutions in the fields of law and education were developed and reformed. The Islamic legal system was centralized, new judicial ordinances were issued, *qāḍī* conferences were organized, and court procedures and *qāḍī* training were regularized. *Awqāf* committees were established and came under the supervision of the *qāḍī* in the principal towns. Between 1943 and 1952 a dozen schools, and religious institutes (sg. *maᶜhad*) were opened in Asmära, Massawa, ↗Ḥərgigo, Kärän, ↗Mīnifire, Aqordät and in smaller villages. A project of co-operation with al-Azhar University was instituted and teachers from Cairo were sent to teach in Islamic schools employing Egyptian curricula. ↗Arabic was granted the status of an official language on par with ↗Təgrəññа. Its growing dissemination owed much to the flourishing press – most notably the British Military Administration's *Ğarīda al-usbūᶜīya al-ᶜarabīya* and the Muslim League's *Ṣawt ar-rābiṭa al-islāmīya*. Other institutions and associations such as the Supreme Islamic Council (*al-Maǧlis al-islāmī al-ᶜālī*), the "Muslim Youth Association" and the ᶜUlamāʾ Front' (*Ğabhat al-ᶜulamāʾ*) were founded in 1946/47. The foundation of the pro-Independence ↗Muslim League (*ar-Rābiṭa al-islāmīya*) in Kärän in December 1946 aligned ethnically and linguistically diverse Eritrean Muslims under the banner of I., making religious identity an essential component of nationalist aspirations. The politicization of religion during the period led to

religious sectarianism and bred bitter cleavages among Eritrean communities, ultimately leading to violent clashes between Christians and Muslims in 1949–50. The combined impact of all these processes contributed to the development of an Islamic public sphere (Miran 2005:203–07). In demographic terms, the number of Muslims in Eritrea increased from ca. 175,000 in 1905 to 312,000 in 1931 and 528,000 in 1948 (KillHDic 266).

Islam in Eritrea in the second half of the 20th cent.

Under the ↗Ethiopian-Eritrean Federation (1952–62) the position of I. and Muslims in the country declined considerably. ↗Ḫaylä Śəllase I shrewd attempts to co-opt Muslim community leaders in the early 1950s proved unsuccessful. The identification of Muslims with Eritrean nationalist aspirations gradually led to a vigorous and systematic repression of Muslim institutions and political leaders. Arabic-language newspapers were banned and Arabic and Təgrəññña was replaced with ↗Amharic as official language in 1957. The budget of the Office of the Grand Mufti (*Dār al-Iftāʾ*) was not renewed (1954/55) and Arabic and Islamic school curricula were changed to Ethiopian ones. Following the emergence of the armed liberation movements and Ḫaylä Śəllase I's annexation of Eritrea in 1962 these policies were even more outright and brutal. The Ethiopian administration in Asmära intervened ceaselessly with the affairs of the Muslim community. Following the death of the Grand Mufti in 1969, the *Dār al-Iftāʾ* was closed and remained so during the period under the ↗Provisional Military Administrative Council (*Därg*).

In the 1960s and 1970s the association of the ↗Eritrean Liberation Movement and the ↗Eritrean Liberation Front and its breakaway factions with states and liberation movements in the Arab world back-lashed against Muslims in Eritrea. It was characterized by forceful military oppression and the resulting shattering of Muslim communal life. Consequently, many Eritrean Muslim lowlanders fled the country, mainly to countries of the Middle East. During these years the *Ḫatmīya* lost much of its former influence and in 1975 its leaders retreated to Kassala (KillHistDic 314). Two radical Islamic movements, the "National Islamic Front for the Liberation of Eritrea" (*Ǧabhat at-taḥrīr al-waṭanīya al-islāmīya al-iritrīya*) and the "Islamic Vanguard" (*ar-Ruwwād al-muslimīn*), were created in 1982. The two fused with another group creating the militant "Eritrean Islamic Jihad" (*Ḥarakat al-ǧihād al-islāmī al-iritrī*) in late 1988. Although of limited influence, the movement is still active in the eastern Sudan from where it attempts to challenge the authority of the Eritrean government (Tesfatsion Medhanie 1994:78–92).

Since independence in 1991 and notwithstanding the self-avowedly secular ideology of the current Eritrean government the revitalization of Muslim communal life and institutions has slowly and cautiously gained a certain momentum. The office of *muftī* was re-established and *šayḫ* Alamin Osman Alamin (al-Amīn ᶜUṯmān al-Amīn) appointed Grand Mufti in August 1992. *Šarīᶜa* courts, regional and local *awqāf* councils and a *ḥaǧǧ* and *ᶜumra* committee were installed and began operation. Religious schools and institutes were also re-opened. Some funding from Saudi-based Islamic charitable organizations have enabled the renovation and construction of several mosques throughout the country. By 2006 new congregational mosques were built in Gahtälay, ᶜƎdaga Bäray (Massawa), Sänᶜafe, Mändäfära and ᶜAddi K̲ʷala among other sites. Some 30 mosques operate throughout the capital Asmära, a third of which are Friday mosques. With the return of Muslim Eritreans from exile in the Middle East, the use of Arabic throughout the country has been boosted. Even if precise figures are unavailable, it is believed that the Eritrean population is more or less equally split between Muslims and Christians who usually tend to express pride in a historical tradition of peaceful co-existence between their respective religious communities. A vast majority in the Muslim community thus vehemently rejects recent manifestations of individuals referred as "Wahhābī" activists who attempt, with little apparent success, to preach their brand of so-called Islamic "fundamentalism".

Islamic law schools in Eritrea

At the present state of our knowledge it seems impossible to trace with any certainty the early diffusion of the Islamic legal schools (sg. *maḏhab*) from the Arabian Peninsula to the Eritrean coasts. Several secondary sources suggest that the Ḥanafī *maḏhab* was the first to make its mark in the region, yet other evidence point to early Šāfiᶜī influence in Massawa. A more accurate picture pertaining to the development and history of the legal schools in the Yemen might prove crucial in illuminating early influences on the Eritrean coasts. The Ḥanafī school, which was either in-

troduced or reinforced by the Ottomans in the 16th cent., was diffused among the Təgre- and Sāho-speaking Sämhar groups of eastern Eritrea. The Šāfiᶜī school was adopted mainly by the ᶜAfar and some Ǧäbärti. The Mālikī legal school, was influential with groups in the western lowlands, notably the Beni ᶜAmər, but also some groups in Saḥəl. An Italian census of 1931 gave the following proportions: Mālikī 65 %, Ḥanafī 26 % and the Šāfiᶜī 9 % (TrIslam 232f.; Gori 1995:94–97). It seems that nowadays the Mālikī school is still predominant in terms of population, even if the highest legal officials in the country have traditionally been adherents of the Ḥanafī school.

Jonathan Miran

Islamic brotherhoods

Numerous I.b., or mystical orders (*ṭuruq*; sg. *ṭarīqa*), have been long present in the Ethio-Eritrean region. As in other parts of Muslim Africa, the expansion of I.b. played a significant role in the further consolidation of ↗Islam in the area (Braukämper 2003:162; cp. also Muḥammad Tāǧaddīn in print, 2). The most dynamic phase in the long process of Islamization in Ethiopia is associated with the history of the Ṣūfī brotherhoods, replete with both oral traditions about the prominent Ṣūfī teachers and religious literature. They gave impetus to the emergence of centres of Islamic ↗education and local ↗pilgrimage. Annual visitations (*ziyārāt*) are made to numerous shrines scattered throughout the Ethio-Eritrean region, and the festivals are held there not only by the members of the orders but also by the generality of Muslims. By accommodating elements of the traditional cultural and ritualistic heritage of the local people through the ↗*ḏikr* sessions and regular gatherings, the I.b. can be said to have bridged the gap between institutional Islam, on the one hand, and the private and collective desire for spiritual fulfilment, on the other. In Harär some shrines served as vehicles for the conversion to Islam of the Nole, Ǧaarso and Ittuu ↗Oromo (Braukämper 2003:114, 116, 120).

Despite their impact on the process of Islamization, the early history of the I.b. is poorly documented. The current overview is based on a limited amount of materials relevant only to some parts of Ethiopia – ↗Wällo, ↗Šäwa, ↗Harär, the south-western regions – and Eritrea.

The history of introduction

The oldest order to be introduced was the *Qādirīya* founded by the Ḥanbalī jurist, ᶜAbdalqādir al-Ǧīlānī (1077–1166). Some traditions

suggest that the 13th-cent. *šayḫ* ↗Abādir was a Qādirī (Braukämper 2003:36). According to a more credible reconstruction, the order was introduced in Harär in the late 15th or early 16th cent. by a ↗Ḥaḍramawt mystic, Abū Bakr b. ᶜAbdallāh al-ᶜAydarūs (patron saint of ᶜAdan, d. 1508), and enhanced in the 18th cent. by *sayyid* Musāfir (either Yemeni or Maġribī). In the late 18th and early 19th cent., it spread into Wällo through the agency of Aḥmad b. Ṣāliḥ who was initiated by *faqīh* ↗Hāšim b. ᶜAbdalᶜazīz. Aḥmad passed on the Qādirī litany (*wird*; pl. *awrād*) to *faqīh* Zubayr Yaḥyā of Gʷagur in ↗Yäğğu who initiated *šayḫ* ↗Muḥammad Šāfī (d. 1806/7) from whom the order was transmitted to Muḥammad b. *faqīh* Zubayr, and through the latter to *šayḫ* Ğamāladdīn Muḥammad al-Annī (d. 1882) of ↗Rayya (HusIslam 70f.). In the 20th cent. the order was propagated in ↗Č̣ärč̣är by the Wällo-trained *šayḫ* Muḥammad (d. early 1930s; Braukämper 2003:117). The order was also introduced at some point in Eritrea, notably at ↗Massawa where a yearly visitation, the *ziyārat* al-Ğīlānī, to the *mazār* erected in commemoration of the founder of the order was performed by members of the order and others on 11 *Rabīᶜ al-awwal*. During the first half of the 19th cent., the ↗ᶜAd Šek holy family seems to have been active in initiating Təgre-speaking lowlanders into the order in the process of propagating Islam in the region.

In Wällo, the spread of the *Šāḏilīya*, founded by Abū l-Ḥasan al-Šāḏilī (1196-1258), is associated with *šayḫ* Ibrāhīm Nagāš (d. 1948) of ↗Wärrä Himäno who propagated the order in Reqqe, Boräna and Bägemdər. In Eritrea membership in this order has had some influence in the Massawa area. The mid- to late-19th-cent. records of Massawa's Islamic court mention several *ḫalīfa*s of this order, among which were members of the town's mercantile and religious elite. In the 20th cent., ↗mosques named after the founder of the *ṭarīqa* were located in the settled centres on Massawa's mainland, namely in Ḥəṭumlo, Ḥərgigo, Amatäre and ᶜEdaga Bəᶜray.

The *Sammānīya* was introduced by *amīr* Ḥusayn ᶜAbdalwāḥid (d. 1926), the grandson of *šayḫ* Aḥmad aṭ-Ṭayyib b. al-Bašīr (d. 1824), who initiated *šayḫ* Ğawhar b. Ḥaydar b. ᶜAlī (d. 1937). The order later spread to ↗Ğimma. It is worth noting that the celebrated mystic, *al-ḥāğğ* ↗Bušrā Āy Muḥammad (d. 1863) had also been initiated into the order by *šayḫ* Aḥmad aṭ-Ṭayyib himself. The *Sammānīya* was introduced to Eritrea by the Maġribī *šayḫ* Ādam al-Kinānī who was initiated to the order by *šayḫ* Muḥammad as-Sammānī in Medina. *Šayḫ* Ādam al-Kinānī's tomb is located in ᶜAbi ᶜAddi (near Mändäfära), where a yearly pilgrimage to the shrine takes place (Nāwad 2004:169; TrIslam 236, 247).

Sayyid Ğaᶜfar b. Bakrī b. Ğaᶜfar b. Muḥammad ᶜUṯmān al-Mīrġanī (middle, 1871–1943), head of the *Ḫatmīya* order in Eritrea, and his representatives; photo by an unidentified Italian photographer, from the collection of Jonathan Miran

The *Tiğānīya*, founded by Abū ᶜAbbās Aḥmad b. Muḥammad b. al-Muḫtār al-Tiğānī (1737-1815), is predominant in Wälläga, Ğimma, Goğğam and Gondär. In western Ethiopia, a renowned centre of the *Tiğānīya ṭarīqa* is in Yaʾa (southwest of Asosa) where the shrine of *al-faqi* Aḥmad b. ᶜUmar (1953) is located (Ishihara 1997, 2007). According to Trimingham (TrIslam 246), *Tiğānīya* was introduced in Ğimma by a certain *al-ḥāğğ* Yūsif who was initiated to the brotherhood by the famous west African *ḫalīfa* Alfa Hāšim (d. 1934). In Wällo its expansion was the outcome of the efforts of an Oromo scholar teaching in Amharic, *šayḫ* Ḥabīb b. Muḥammad (d. March 1954) who had travelled to Fās, Morocco to be initiated into the order. In Harär it was introduced into the Gara Mullätа area by Saᶜīd Ḥusayn in the early 1930s (Braukämper 2003:117). The *Tiğānīya* was introduced to Dankalia (↗Dänkäl) in Eritrea by *sayyid* Aḥmad b. Muḥammad b. *as-sayyid* Muḫtār aš-Šanqīṭī (Nāwad 2004:169).

Established by the followers of the Maġribī mystic and teacher Aḥmad b. Idrīs al-Fāsī (1750–1837), the *Aḥmadīya* is confined only to parts of

the Eritrean coast, although the 12th-cent. *šayḫ* ↗Ḥusayn of Bale is believed to have been a follower of the order. In Eritrea the *Aḥmadīya* was introduced to Dankalia by *ḥāǧǧ* Ḥasan al-Faḍūlī al-Aḥmadī (d. 1277 H.), who studied with Aḥmad b. Idrīs al-Fāsī (1750-1837). He settled in the coastal ᶜAfar village of ↗ᶜƎdd in 1246 H., and stayed there for 30 years (Nāwad 2004:130). A mosque called the Maqām al-Aḥmadīya was built in ᶜƎdd in 1863, to become the main *ǧāmiᶜ* of the village in the 1880s. In ↗Tīᶜo, too, an Aḥmadī congregational mosque was built in 1907. In Massawa, the order was introduced to Massawa by Ǧaᶜfar Saᶜīd an-Nātī following his return from studies in Medina and Zabīd at some point in the Italian colonial period (possibly 1920s-30s). A *zāwiya* was established in the mainland neighbourhood of Amatäre and a *ḥawlīya* in commemoration of the founder of the order was performed there yearly on 22 *Raǧab*.

The *Ṣāliḥiya ṭarīqa* – probably named after the Sudanese *šayḫ* Muḥammad b. Ṣāliḥ or, according to other sources, Šayḫ b. Muḥammad b. Ṣāliḥ (d. 1919), formerly an outstanding representative of the *Rāšīdīya* – should probably be also considered within the framework of the mystical tradition of Aḥmad b. Idrīs al-Fāsī. The *Ṣāliḥiya* spread into Somalia and Ethiopian ↗Ogaden, mostly thanks to the religious, political and military activities of ↗Muḥammad ᶜAbdallāh Ḥasan – who was, however, eventually expelled from the group by the head of the brotherhood (O'Fahey in EI²).

The *Naqšbandīya*, associated with Muḥammad Bahāʾaddīn an-Naqšbandī (d. 1389), had an insignificant number of adherents. *Šayḫ* ᶜAlī of Gondär (fl. mid-19th cent.) is believed to have been a follower of the order (informant: *šayḫ* Muḥammad Tāǧaddīn). The order also flourished for a short time in Yäǧǧu (informant: *šayḫ* ᶜAbdassalām).

The *Ḫatmīya* order was founded in the early 1830s by ↗Muḥammad ᶜUṯmān al-Mīrġanī, who drew his inspiration from the teachings of Aḥmad b. Idrīs al-Fāsī (b. 1750, d. 1837). The order has had a significant impact on Eritrean Muslims since it was introduced to the region following several missionary tours undertaken by the founder of the order around the first third of the 19th cent. The order extended its influence mainly, but not exclusively, among the Təgre- and Sāho-speaking peoples in the area. Its success went hand in hand with Egyptian imperialism in the region. Members of the family were engaged in propagating Islam among non-Muslims and those Muslims who they perceived as morally and religiously adrift. The *Ḫatmīya*'s method of expansion was by the incorporation of pre-existing religious formations (notables, holy lineages) into a supra-community brotherhood network. In practice this was achieved by what the historian Knut Vikør called the "grafting" model by which ↗*ḫalīfa* and *ḫalīfat al-ḫulafāʾ* were initiated, appointed, and linked into a broad-based trans-ethnic and cross-regional organization covering a wide area. After the Mahdist revolt in the Sudan, several members of the *ṭarīqa* found refuge in Eritrea and gradually developed a relationship with the recently established Italian colonial authorities. Fearing the over-spilling of the Mahdīya into their colony, the Italians attempted to coopt the order so that it would exercise its influence over the region's Muslims and control them. The colonial authorities persuaded Ǧaᶜfar b. Bakrī b. Ǧaᶜfar b. Muḥammad ᶜUṯmān al-Mīrġanī (1871-1943) to move into the colony from Kassala and establish his seat in ↗Kärän in 1903. The authorities elevated him to the position of a quasi-official and exclusive interlocutor between the Muslims and the colonial administration. In that process, the order was able to consolidate its influence and establish itself as the predominant *ṭarīqa* in the colony. Members of the order continued to exercise influence on the religious, social and political spheres well after the colonial period and until the 1970s. Today, shrines of members of the family in Ḥəṭumlo (near Massawa) and in Kärän are sites of lively pilgrimages attracting Muslims from all over the region (Miran 2005:183-200). According to one source the *Maǧḏūbīya* order, which was founded by *sayyid* Muḥammad b. Qamar ad-Dīn al-Maǧḏūb who died in ad-Dāmar in Sudan, was introduced to Eritrea by *šayḫ* Abū Bakr Fāḍil ad-Dankalī from Baylūl (Nāwad 2004:169).

There were no major conflicts among the different I.b., although there must have been frequent frictions, especially between the older ones like the *Qādirīya* and those of the *Tiǧānīya*. Polemical works composed by the defenders of certain orders could, once collected and evaluated, shed additional light on the intellectual impact of the I.b.

Main features of the Islamic brotherhoods in Ethiopia and Eritrea

1. Ṣūfism in general passed through four stages of evolution: individual asceticism, mysti-

cism, scholarly Ṣūfism and the "expansion of the spiritual influence of eminent Ṣūfīs", that led to the emergence of the *ṭarīqa* (Jenkins 1979:43; Trimingham 1971:2-30). In the Ethio-Eritrean region it evolved from the third to the fourth stage.

2. The orders were introduced not only by itinerant scholars from Yemen, Sudan or the Ḥiğāz but also, importantly, by Ethiopian and Eritrean clerics returning after many years in these regions where they became initiated.
3. With the possible exception of the ᶜAd Šek "holy family" in Eritrea, the propagation of the orders was not connected with, or patronized by, local Muslim dynasties, and the heads of the orders had neither political aspiration nor allied themselves with ruling families. They did not also engage in agricultural or commercial activities to supplement their meagre financial resources.
4. Only the propagators and transmitters of the Ṣūfī tradition were familiar with the doctrines, rituals and obligations of the orders as developed by their founders. The majority of the people were not formal members of the I.b. but only active participants in the Ṣūfī rituals and festivals (cp. Glew 1998:137).
5. In some localities (such as the Massawa area in Eritrea), participation in local *ḥawlīya*s has not been restricted to membership in one particular I.b. but included members from throughout the Muslim community, including followers of other orders. This practice reflects how local ↗*šayḫ*s and saints (↗*Walī*) attained local and regional prominence transcending and superseding formal *ṭarīqa* affiliation.
6. Although the objects of popular veneration were the saints and their descendants, the principal event celebrated at the mystical gatherings was the birthday of the Prophet ↗Muḥammad.
7. As in other parts of Africa, elements of old beliefs and practices were observed at the Ṣūfī festivals. These survivals of folk religion provided the justification for Islamic reformist movements led by Ethiopian Muslim scholars in the 18th, 19th and 20th cent.
8. In contrast to Muslim Africa, with the exception of *Ḥusaynīya*, an offshoot of the *Qādirī* order attributed to *šayḫ* Ḥusayn of Bale (Braukämper 2003:140, 162), no independent *ṭarīqa* emerged in Ethio-Eritrean region, testifying to the loyalty and devotion of the indigenous *ᶜulamāʾ* to the founders of the orders.
9. Most Ethiopian and Eritrean Muslim mystics were also accomplished scholars. Not only had they acquired formal Islamic education in the various disciplines prior to their initiation but were also the authors of treatises defending orthodox Islam and criticizing many aspects of its forms which they regarded as incompatible with the *Qurʾān* and the prophetic traditions (cp. *šayḫ* Muḥammad Tāğaddīn, in print, 320). Vigorous attempts (not completely successful) were therefore made by the *ᶜulamāʾ*, through their writings, exhortation and even physical force, to make Ṣūfism conform to Sunnī Islam. The 18th and 19th cent. were a period of a particularly great output of Ṣūfī works dealing with the Islamic reform, as well as with other themes, such as mysticism, hagiographies of holy men, and protest against the dominant Christian dynastic and clerical establishments.

The history of Ṣūfism is thus, on the one hand, a story of Islamic renewal and reform, and a perpetual struggle to rid it of un-Islamic tendencies and influence, and, on the other, a factor that created the conditions for syncretism between Islam and traditional modes of worship. Recent criticisms of Ṣūfism that are conventionally associated with, or attributed to, Wahhābī influence, were a continuation of the long tradition of opposition led by scholars against the degeneration of Ṣūfism into popular Islam.

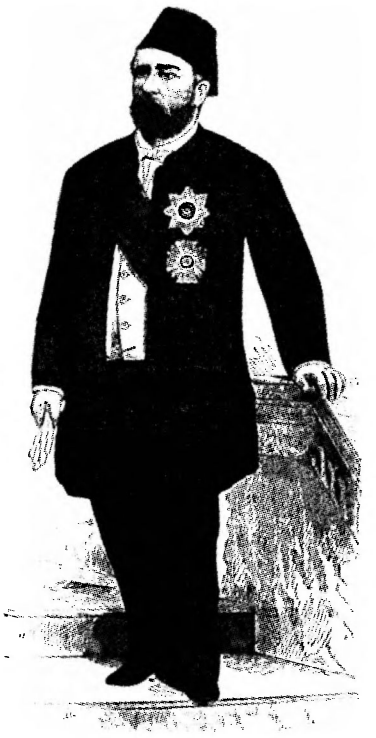
Hussein Ahmed – Jonathan Miran

Ismāʿīl

I. *bāšā* (اسماعيل, r. 1863–79) was the second most important ruler of Egypt in the 19th cent. after his grandfather, ↗Muḥammad ʿAlī *bāšā* (r. 1805–48), the founder of the dynasty that lasted until 1952. Though ↗Egypt in I.'s time was de facto fully independent of the ↗Ottoman Empire, it nominally belonged to it until 1914. In 1866 I. was declared a *ḫidīw* by Istanbul, a title especially introduced to mark Egypt's unique status. While Muḥammad ʿAlī was described as "the founder of modern Egypt", I. was dubbed "the impatient Europeanizer". His accelerated modernization policy for nearly all aspects of Egyptian life brought him into close contact with Ethiopia.

I.'s declared vision was to integrate Egypt into the network of European empires. For this purpose he began developing Egypt's economy – mainly through the export of cotton – borrowing huge sums of money from private Western banks. He envisioned Egypt's admission to Europe through the African–Nile empire he strove to build. I. inaugurated the ↗Suez Canal project, the completion of which in 1869 forced him to take out further loans. Having renewed Egypt's government in ↗Sudan (1865), I. began to occupy the Red Sea coast, as far down as the Indian Ocean. He also occupied ↗Harär in 1875, but his main goal in the Horn of Africa was to occupy the strip of land that later became Eritrea. He had hoped that a modern railway along this strip connecting ↗Massawa to ↗Khartoum would ensure the vitality of the whole enterprise. However, in working towards this goal I. came into conflict with *aṣe* ↗Yoḥannəs IV. The ↗Egyptian–Ethiopian war of 1875–84 reached its climax in the Egyptian defeat at ↗Guraʿ in March 1876. After this event, a wasteful war of attrition with Ethiopia lasted until 1884, and it was no longer possible to construct the railway. In 1881 the Mahdīya (↗Mahdists) revolt started in Sudan, and the Egyptians, lacking a modern infrastructure, were unable to quell it.

I.'s modernization efforts included many social and cultural dimensions that indirectly influenced, and were influenced by, his conflict with Ethiopia. On the one hand, he admired Westerners to the extent that most pivotal positions in his army and his African empire were given to Europeans and Americans (cp. ↗Munzinger in Massawa). On the other hand, rapid urbanization (modern Cairo was now being built in imitation of Paris), the introduction of modern education (a French staffed School of Law was established in 1868), modern newspapers (*Al-Ahrām* was established in 1875), the formation of a council of ministers and council of representatives, etc., created a new and educated public ready to participate actively in politics. One such sector began developing among the army officers. Following the Guraʿ defeat, a group of native Egyptian officers returned from the Ethiopian war severely embittered by their foreign superiors (cp. ↗Loring; ↗Dye). Two months after Guraʿ also saw the start of the financial collapse of I.'s enterprise. Earlier in 1875 I. had to sell his Suez canal shares to the British, and was now forced to put his economy under direct European control. In 1878, the British and the French forced I. to appoint a new government, and this blunt humiliation ignited the Guraʿ veterans and their colleagues. Led by Colonel Aḥmad ʿUrābī, they initiated a protest movement that enabled the European powers to deepen their involvement in Egypt's affairs. In



Contemporary portrait of *ḫidīw* Ismāʿīl *bāšā*; from Loring 1884

June 1879 I. was officially deposed by Istanbul, and his son Tawfīq was proclaimed *ḫidīw* (1879–92). The ensuing revolt of the ᶜUrābī movement led to the British occupation of Egypt in 1882.

I.'s multi-dimensional modernization affected Ethiopia in other ways. In 1874 he recognized the Copts as a civil sector, and not just a religious minority. In line with his treatment of similar groups, he authorized the young modern-educated Copts, led by Buṭrus Ġālī, to establish their own Community Council (*maǧlis millī*). This modern sector of the Copts would later, especially after Ethiopia's victory at ↗ᶜAdwa in 1896, work to enhance a positive image of Ethiopia in Egypt, and contribute to the establishment of modern education (as of 1906) in Addis Abäba.

Israel, relations with

Relations between Ethiopia and the modern state of I., established in 1948, have never been merely political. They have always been influenced by the traditional legacies of both sides, which, together with strategic considerations, created a complex history that can be divided into three periods.

First was the ↗Ḫaylä Śəllase I era (1947–73) in which Ethiopian policy fluctuated between contradictory historical and spiritual influences. On the one hand, many members of the imperial elite conceived the new Jewish state through the perspectives of biblical Christianity, the Solomonic-Zionist ethos (↗Judaism), and the notion of *Däqiqä Ǝsraᵓel* ('children of Israel'). Combined with this conception was the confidence in the resourcefulness, efficiency, and proximity of a non-Muslim partner. On the other hand, there was always the fear that an open alliance with I. would unite the Arab world against Ethiopia and ignite an attempted Grañ-like Islamic reunification (↗Aḥmad b. Ibrāhīm al-Ġāzī) in the Horn of Africa. The Ethiopian foreign ministry – led by ↗Aklilu Habtäwäld, the prime-minister as of 1961 – convinced the Emperor to conceal the otherwise close relations, and appear in public as siding with the Arabs. In November 1947 Ethiopia abstained in the U.N. vote for the partition of Palestine, and a year later voted against the admission of I. to the U.N. In the 1960s, Ethiopia relied on I.'s aid in practically all fields, but no Ethiopian embassy was opened in I., and Ethiopia joined the anti-I. camp in the ↗Organization of African Unity as well. The Israeli victory in the Six-Day War against Egypt, Jordan and Syria of June 1967 was celebrated in Ethiopia as salvation from the pan-Arab threat, but during the October 1973 war in the ↗Middle East (between I. and Egypt and Syria), Ethiopia broke its diplomatic relations with the Jewish state.

Israeli policy during that time was fully pragmatic. David Ben-Gurion, Prime Minister until 1963, conceived in 1958 "the Periphery strategy", designed to outflank the uniting Arab world through an alliance with Turkey, Iran and Ethiopia. He thus also wanted to prove to Washington that I. was a regional strategic asset. An alliance with Ethiopia was also a key for I. to economic and diplomatic gains in Africa. Consequently, throughout the 1960s and up to 1973, I.'s input in Ethiopia was the greatest Israeli foreign aid enterprise ever. Over one hundred experts, some of I.'s best minds, spent years promoting Ethiopia's security, health, agriculture, education, construction and finances. In April 1970, in an effort to convince the Emperor to sign an open alliance, the Israelis returned the keys of the ↗Dayr as-Sulṭān monastery in ↗Jerusalem to the Ethiopian monks. The exodus of Israeli experts following a breakdown of relations in late 1973 significantly weakened the imperial regime towards its end.

The second era, that of 1974–91 (↗Provisonal Military Administrative Council), saw a reversal of attitudes. Ethiopia, under Colonel Mängəśtu Ḫaylä Maryam, relinquished many of its Christian traditional ties with I. and adopted rather an instrumental policy. In late 1975 Israeli military experts were invited to rebuild the armed forces and security units. They organized a new division and the *Därg*'s guard, which in practice helped Mängəśtu eradicate his colleagues. After Mängəśtu managed to win Moscow's favour (↗Russia, relations with), in February 1978, he expelled the Israelis once again. Only after March 1987 – once the Soviets clarified to Mängəśtu that they could not back his radicalism any more nor finance his wars – did Mängəśtu return to court I.

Meanwhile, having begun a direct dialogue with the Arab world (the 1979 peace accord with Egypt), Ethiopia lost its strategic value to I. However, it regained Jewish historical importance via the presence of the ↗Betä Ǝsraʾel community. Socio-political changes in I. – international accusations of Zionism as racism, in addition to Jewish–American initiatives – drove the governments of Menachem Begin (1977–83), Yitzhaq Shamir (1983–84, 1986–92) and Shimon Peres (1984–86) to concentrate on bringing Ethiopia's Jews to Israel. Operation Moses (1984–85) and Operation Solomon (May 1991) ended with the transferral of almost the entire Betä Ǝsraʾel community from Ethiopia to I. I.'s relationship with the Mängəśtu regime during 1987–91 was geared towards preparing the ground for those operations. In spite of U.S. policy, some military equipment was supplied, but in quantities that frustrated Mängəśtu. The complicated situation leading to Operation Solomon – most Betä Ǝsraʾel had left their homes, and by May 1991 were gathered in the besieged city of Addis Abäba – pushed the US government to deepen its involvement. These developments helped avert a battle in Addis Abäba, prior to Mängəśtu's flight in May 1991, between the Ethiopian People's Revolutionary Democratic Front and the central army.

A final era began after 1991, and though it is still too early for an accurate assessment, it seems that both sides have become more amenable towards each other. In this new era, the absorption of the Betä Ǝsraʾel in I. has created the biggest Ethiopian ↗diaspora (outside the total number in the U.S.).

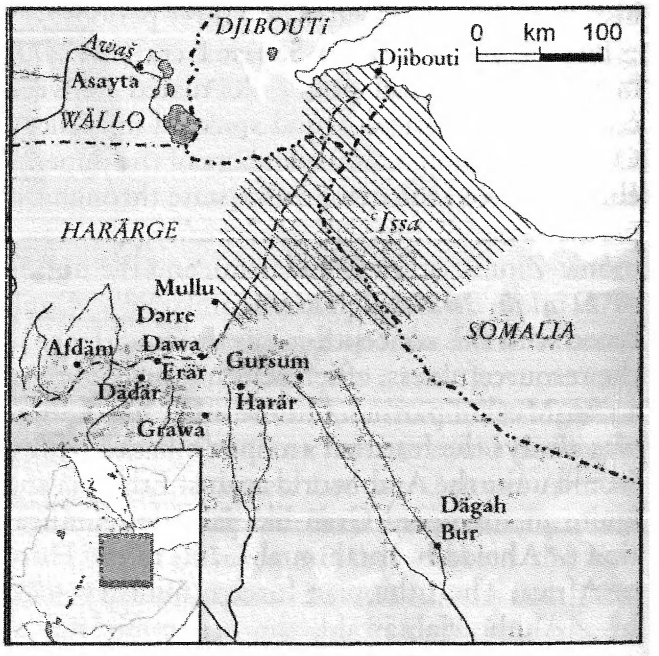
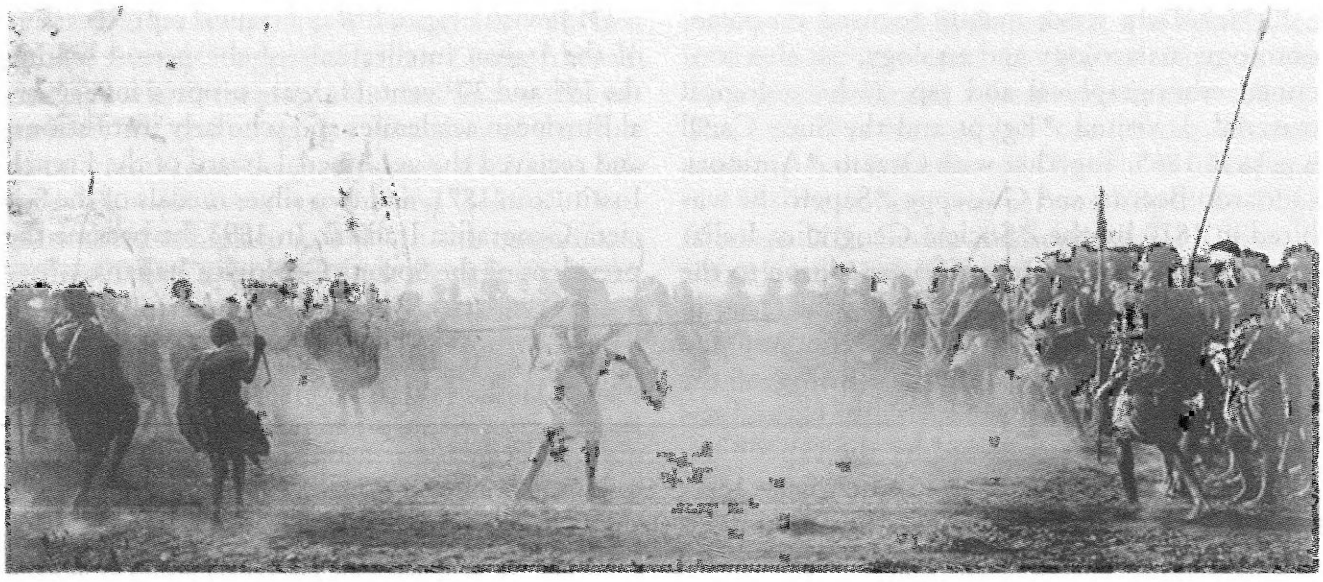
ʿIssa

The I. (Arab. ʿĪsa, Somali Ciise) are a major Northern ↗Somali group living in Ethiopia mainly along the ↗railway from Mullu to ↗Djibouti, in the south-eastern part of the Republic of Djibouti and in north-western Somaliland.

The nomadic ʿI. were traditionally geographically divided into: (1) Ǧahmagarato ('those ignoring the direction of the prayer', 'those never at peace') or ʿI. madow ('Black ʿI.'), raiding the ʿAfar pastoralists beyond the *wadi* Obno towards the right bank of the Awaš river; (2) Banin ğoog ('those living in *Rhigozum somalense*'), grazing east of the Holhol–Djibouti railway portion in winter, and towards Saaweer in Somaliland and further in summer, where they were also known as ʿI. ʿad ('White ʿI.') or Nin ʿad ('White man'); (3) ʿAs ğoog ('those of the red lands') to the south-west of the latter, grazing during the summer between Ayšaaʿa and Dərre Dawa. The old ʿI. nickname Ǧiği-gále ('those of the plain'; common Somali: Gíyi) refers to their grazing between Ayšaaʿa, Harraawe and Gokti; (4) Qoton ğoog, to the south of Ali Sabieh, whose herds passed the summer around Haḍḍagaala.

The ʿI. commonly recognize seven descent clans, six of them descending from one of two sons of their apical ancestor *šayḫ* ʿIise: (1) from ʿEleyye "Bullaale": *reer* Muuse, Mammaasan, Urweyne, all three nicknamed "Abgaal"; (2) from ʿAli: Walaaldoon, Fuurlabe and Horroone (adopted), the three Dalool. The charismatic rain-maker *ugaas* is chosen inside the seventh clan, the Wardiiq (sub-clan Waqtišiile, *reer* Golowwaaq). Until recently, this genealogy mattered in three ways: (I) in extending solidarity through exogamy (marriages were not allowed between members of the same clan); (II) in explaining the hierarchic relationship between the Abgaal, "the most favoured", and their "allied" clans; (III) in linking symbolically the ʿI. to the ↗Dir super-family, because *šayḫ* ʿIise was the brother of *šayḫ* ↗Isaaq, although the ʿI. never joined the Somali Youth League.





War dance of ʿIssa, early 20th cent.; photo by Arnold Holtz, from the collection of André Evalet

Another classification puts on equal terms 12 sub-clans and 44 "great electors" of the *ugaas*. The way the "ethnic narrative" is still accepted shows its integrative function that resolves the heterogeneity of the tribe through the aggregation of non-Somalis (such as the ↗"Ḥarla" included in the lineage of *šayḫ* ʿIise's elder son) and their adoption (like Horroone). The story includes apocryphal traditions like that of *āw* Barḥadle, who is said to be a messenger of ↗Islam and the ancestor of the Wardiiq. Also known among the Isaaq clan of the ↗Habar Awal, this saint is probably the same as ↗Yūsuf al-Akwan, the Arab founder of the ↗Walašmaʿ dynasty of Ifat.

Since the ʿI. are not mentioned in such classical sources as the ↗*Futūḥ al-Ḥabaša*, their original homeland is still questionable, eventhough we know that *šayḫ* ʿIise was buried at Mayḳ (Somaliland). During the last century there has been a steady movement to the north-west while the ʿI. took over the grazing lands of other ʿAfar and Somali (Isaaq, Samarroon) groups. Evidence of this is also found in toponyms: ʿAfar *Holhol* ('footbridge'); *Đaʿas-Biyo*, from ʿAfar *ḳaaʿas búyyi* ('the pond with a red stone'); *Loyada* (Somali: *loowya ʿadde*, 'legs whitened with sand?') from Afar *lee ʿádu* 'white water'. Interestingly, the ʿI. land as described by the Beduins, with its theoretical centre in Sitti (near Ayšaaʿa), consists in 12 *wadis* (*diḥ*) distributed between Dərre Dawa (ʿEl Baḥay) and the coast, with *wadi* Heemal as a land-mark between the Mammaasan and the Samarroon. The location of the graves of Wardiiq *ugaas* (Gokti, Harraawe, Millo etc.), whose lineage goes back to the 16th cent., suggests a second homeland gained from the Oromo (s. toponyms like Haḳḳagaala, Harraawe, etc), possibly connected with their withdrawal from the outskirts of ↗Awsa in the 17th cent.

Travellers' accounts (Bardey; Burton) show that in the 19th cent. some sections of the ʿI. were involved in the transport of goods from ↗Zaylaʿ to ↗Harär. The construction of the railway line (1897–1915), the development of ↗Dərre Dawa and of the port of Djibouti, as well as the introduction of Djibouti franc as hard currency in 1949 offered petty-job opportunities for impoverished communities living in a harsh environment. Groups as the Mammaasan *reer* ʿAwl came entirely from Somaliland, while the *reer* Ḥasan were the only Mammaasan registered in 1936 in the French colony. Rural depopulation increased with the independence of the Republic of Djibouti in 1977, when the Ethio–Somali conflict caused an influx of thousands of refugees from the hinterland.

Didier Morin

Issel, Arturo

I. (b. 11 April 1842, Genoa, d. 27 November 1922, Genoa) was an Italian geologist and naturalist who participated in a number of expeditions to Africa. He earned his degree in natural sciences at the University of Pisa in 1862, and from 1866 to 1917 was professor of mineralogy and geology, then of geology alone at the University of Genoa, where he also taught geography and palaeontology.

I.'s scholarly work mainly focused on palaeontology, malacology and zoology, but also contained ethnographical and esp. anthropological material. I. visited ↗Egypt and the Suez Canal works in 1865. Together with Orazio ↗Antinori, Odoardo Beccari and Giuseppe ↗Sapeto, he was hired in 1870 by the ↗Società Geografica Italiana to participate in a scientific expedition to the ↗Red Sea, with the aim of studying the recently acquired port of ↗[c]Asäb and its economic and commercial potential after the opening of the Suez Canal. I. was entrusted with the natural science material to be collected by the expedition. He departed from Genoa on 14 February 1870, on a ship supplied by the ↗Rubattino Company, and arrived at [c]Asäb with his colleagues on 9 March. After a series of researches in the area, on 5 April, always with his colleagues, he left for ↗Massawa, where he met Werner ↗Munzinger. From there, Antinori and Beccari moved to Kärän in the country of the Bogos (↗Bilin), to inspect the agricultural colony of Šotäl ("Colonia Italiana di Sciotel", founded by the former missionary Giovanni ↗Stella (s. Issel 1872). In the meantime, I. visited the ↗Dahlak archipelago, where he gathered an outstanding collection of molluscs (Issel 1894). On 2 June, he went to Kärän, heading then, on 15 June, to Massawa. Parting company from his colleagues, who remained on the Red Sea coast, he returned to Italy in July 1870, and started to publish the results of the expedition (e.g., Issel 1872). In mid and late 1870, on board of the cutters Corsaro and Violante, owned and commanded by his fellow citizen and friend Captain Enrico d'Albertis, he cruised the Mediterranean, carrying on geological and naturalistic enquiries in such countries as Tunisia, Egypt and Malta (Issel 1878).

A renowned researcher in geology, palaeontology and anthropology, with a keen interest in the Red Sea, he published important textbooks for geologists. His works are especially significant in that they precociously triggered the Italian debate on the theory of evolution just developed by Charles Darwin. His writings touching upon Liguria and Sardinia (his favourite research fields) are also a useful source for local historiography.

Many of the samples he had collected in the Horn of Africa were sent to the Museo civico di Storia naturale at Genoa, founded in 1867 by I.'s fellow citizen and friend Marquis Giacomo Doria, then president of the Società Geografica Italiana.

Of Jewish origin, I. was a typical representative of the Italian intellectuals of the period linking the 19th and 20th cent. He was co-opted into several European academies and scholarly institutions; and received the gold medal award of the French Institute in 1871, and two silver medals of the Società Geografica Italiana. In 1893, he became the president of the Società Geologica Italiana.

Giancarlo Stella – Red.

Istituto Coloniale Italiano

The I.C.I. was founded in 1906 when Italian colonialism was trying to move on from the setback it had suffered at the battle of ↗[c]Adwa in 1896 and reflected Italy's new colonial ambitions (↗Colonialism). The governor of Eritrea, Ferdinando ↗Martini, prepared the path for such a re-launch by organizing in Asmära in 1905 a symposium devoted to the problems of colonisation. The colonial lobby found a voice in the new Institute established in Rome; its objectives were to enlighten the authorities and public opinion on colonial activities. Its first president was a politician, Giacomo De Martino and Cesare Rossetti, an official of the Colonial Department of the Ministry of Foreign Affairs, was its general secretary.

The I.C.I. convened in 1908 and 1911 the first and the second Congress of Italians Living Abroad, contributing to the rise in interest in overseas expansion and encouraging a diversion of the flow of emigrants from the Americas to the Italian colonies. A major event was the first Colonial Congress that took place in 1919 in the magnificent setting of the Capitol in Rome, providing an occasion for championing Italy's colonial program in the aftermath of World War I. The Institute edited the *Rivista coloniale*, a scientific journal as well as a device for exerting political pressure, which – as a result of successive changes and the absorption of other journals – became *L'Oltremare* and later *Rivista delle colonie*. The I.C.I. was renamed *Istituto coloniale fascista* in 1928 and *Istituto fascista dell'Africa italiana* in 1937 and fostered its aims through the new journal *Africa italiana*, a mouthpiece for colonial rhetoric during the Fascist occupation of Ethiopia.

When Italy lost all her colonies in World War II, the I.C.I., under the title *Istituto italiano per l'Africa*, defended the residual rights and expectations of the former colonies, organising in 1947 a Congress on Italian interests in Africa. However, later, it progressively re-oriented its activity in order to suit the diverse realities of Africa in the era of decolonisation. In 1965, the bulletin of the I.C.I. (*Affrica. Rivista mensile di interessi affricani*, 1945–56) became a quarterly and was given a more scientific scope, hosting articles in Italian, English and French (*Africa. rivista trimestrale di studi e documentazione*, 1957ff.). In 1971, the I.C.I. was renamed *Istituto italo-africano* and endorsed a more friendly policy towards independent Africa. Finally, the *Istituto italo-africano* merged in 1995 with the *Istituto italiano per il Medio ed Estremo Oriente* (IsMEO), to form the *Istituto italiano per l'Africa e l'Oriente* (IsIAO).

Giampaolo Calchi Novati

Istituto Universitario Orientale

I.U.O. in Naples (since 2003 Università degli studi di Napoli "L'Orientale") is the oldest Orientalist institution in Europe. It was established in the early 18th cent. by Matteo Ripa as the Collegio dei Cinesi, a Jesuit missionary school. The core was formed by four young Chinese students and a teacher of Chinese in 1724, and in 1732 the college was acknowledged by Pope Clement XII. Beside missionaries for China, it also educated interpreters for the Oostende company. Soon young Neapolitans were also being admitted to the college, and starting from 1747 students from the Ottoman Empire were able to be enrolled. After the Unification of Italy in 1868 the I.O.U. was transformed into the Real Collegio Asiatico, with two sections: one missionary and another, open to young laymen wishing to study oriental languages. In December 1888 the college was transformed into the Regio Istituto Orientale di Napoli. The missionary function was suppressed, and the education was advanced to university level (whereas the Real Collegio Asiatico was at the secondary school level). Since 1975, the I.U.O. has had four faculties: Lettere e Filosofia, Lingue e Letterature Straniere, Scienze Politiche and Scuola di Studi Islamici (now Studi Arabo-Islamici e del Mediterraneo).

The I.U.O. boasts a long tradition in ↗Ethiopian studies. A disciple of Ignazio ↗Guidi, Francesco ↗Gallina, became the first Professor to hold the chair of Amharic language and literature at the Regio Istituto Orientale. Among his students were Enrico ↗Cerulli and Luigi ↗Fusella, who succeeded Gallina in the chair of Gəʿəz and Amharic language and literature. The scholars of the I.U.O. explored not only languages and literatures but also socio-economic features of Ethiopian populations as well as the political history of the country, drawing on sources ranging from oral and written traditions to diplomatic documents (the latter were the object of important investigation by Carlo ↗Zaghi, professor in the departments of Storia Moderna and Africanistica). From the 1960s, Lanfranco ↗Ricci has further widened the I.U.O. multi-disciplinary approach to Ethiopian studies, developing different perspectives and promoting an intense activity of both seminars and field studies. The Seminario di Etiopistica he directed (and intended to transform into a Seminario di Studi Africani) became the first nucleus of Ethiopian studies at the I.U.O. In 1973–74, Ricci headed the "Missione Archeologica Italiana in Etiopia" focusing on ↗Betä Giyorgis hill to the northwest of ↗Aksum. The sites he worked at (two

churches, ʿOna Nägäśt settlement, and a stelae quarry) have been further excavated since 1993 by the archaeological expedition lead by Rodolfo Fattovich. Other members of the I.U.O. have since carried out valuable philological, linguistic, and ethno-historical research.

In 1984, the Dipartimento di Studi e Ricerche su Africa e Paesi Arabi (DSRAPA) was established within the I.U.O. to implement symposia and research activities in many disciplinary areas and in co-operation with both ↗Addis Ababa University and ↗Asmära University as well as within international scientific networks. DSRAPA publishes monographs (e.g., the *Studi Africanistici, Serie Etiopica*) and research periodicals (e.g., the ↗*Rassegna di Studi Etiopici* in co-operation with the Istituto per l'Oriente, Rome, the *Annali IUO* in cooperation with the Dipartimento di Studi Asiatici of the I.U.O.).

Federica Guazzini

Italian East Africa ↗Africa Orientale Italiana

Italian language in Ethiopia and Eritrea

Italian colony

The presence of Italians in the Horn of Africa began in ↗Eritrea (ʿAsäb) in 1869, leading to the foundation of the *Colonia Eritrea* (1890) and in ↗Somalia (*Somalia Italiana*) in 1889. Both regions were later to become part of ↗Africa Orientale Italiana, which existed from the occupation of Ethiopia in 1935–36 until the defeat of the Italians in 1941. The chief aim of Italian colonial policy in Eritrea was to transform this *colonia primordiale* into a settler colony. As a result, Italian immigration to Eritrea was massive and quite effective – whereas the short occupation of Ethiopia had no major impact on the country.

The number of Italians residing in Ethiopia was very substantial, e.g. from January to July 1936 about 131,000 workers were brought over as settlers to Ethiopia. In 1938 Italians represented half of the population of ↗Asmära (*Guida* 199). Although many Italians left the country after the end of Africa Orientale Italiana in 1941, a considerable number remained because they were needed as functionaries by the ↗British Military Administration. On the eve of the 1974 revolution, the number of Italians was estimated at 18,000, with 5,000 of them in Asmära (Habte-Mariam Marcos in BendLang 172).

The purpose of state education in Eritrea and Ethiopia during Italian occupation was primarily to provide a good education for the Italian settlers. The Italian schools were not open to the natives, for whom only elementary education was offered. "Half-castes" (i.e. those recognized by their Italian fathers) were admitted up to 1938. In contrast to Eritrea, education in Ethiopia included secondary schools, so that Eritreans came to Ethiopia for higher education.

The level of education and enrolment in schools generally was very low. The spread of the I.l. throughout the whole colony was consequently largely due to the influence of Italianized Eritreans with their good Italian and the native colonial troops (many of them from Eritrea) using simplified varieties of Italian. The Italian character of Asmära and the massive use of the I.l. there was evident, as manifested, e.g., in the trilingual journal *Il Bollettino*. This came to an end in the nationalization of industries that led to the expulsion of foreigners, among them most of the Italians, through the *Därg* regime in 1975 and later years. However, the I.l. continued to be used as a technical language of instruction manuals, etc. Some native speakers of the I.l. are reported to live in Eritrea even today; besides, a number of Eritreans have knowledge of the I.l. as a second language, acquired at school or in the family (Gordon 2005:112; Pagliarulo 2004).

Simplified Italian of Ethiopia

In his 1976 study based on field research in Asmära and Addis Abäba, Habte-Mariam Marcos (in BendLang) postulated the existence of a so-called Simplified Italian of Ethiopia, used by native uneducated town dwellers for communication with their Italian employers.

Simplified Italian shows the typical restructurings encountered in numerous pidgins. On the phonetic level, some sounds absent from ↗Amharic or ↗Təgrəññña, e.g., [*p*], [*v*], [*ʦ*], [*ʤ*], and the diphthonges [*uo*], [*ie*] were changed to [*b*], [*b*] (in postvocalic position [*β*]) or [*w*], [*s*], [*z*] and [*o*], [*e*] respectively, e.g., *vicino* > *bəčino*, 'near'; *parlare* > *bärlare*, 'speak'. Two consonants in word-initial position were pronounced with a prothetic or epenthetic vowel: *stancato* > *əstänkato*, 'tired'; *scuola* > *əskola*, 'school'; *troppo* > *tərobbo*, 'very'. Unstressed *a* and *i* were changed to *ä* and *ə* respectively: *mattina* > *mätina*, 'morning'; *finito* > *fənito*, 'finished'. Under the influence of so many Təgrəññña words ending in *-i*, a final Italian *-e* is often changed to *-i*: *pesce* > *bäši*, 'fish'; *miele* > *meli*, 'honey', *pane* > *bani*, '(European-style) bread'.

The simplification in grammar is very strong. The definite and indefinite articles and the copula are not expressed: *luy kome madre*, 'he (is) like (a) mother'. The verbal system is reduced to the infinitive (used as present form) and to the past participle (used as past form): *yo läwrare sämbre*, 'I work [< inf. *lavorare*] always [< *sempre*]', *rägasi mänǧato*, 'the children ate' (instead of the standard *i ragazzi/le ragazze hanno mangiato*). The infinitive is also used as imperative and conditional: *bänire domani*, 'come tomorrow!'.

The varieties of the I.l. used in Somalia by house-servants for communication with their Italian employers showed quite similar peculiarities (Banti 1990). The Italian labiodental *v* is realized as *f* or *w*: *lafare* (< *lavare*) , 'to wash'; *lawa* 'he washes'. Ital. [*ʦ*], [*ʤ*] and [*č*] were simplified to *s* and *š* respectively: *kolasione* (< *colazione*), 'breakfast', *biaše* (< *piace*), 'nice'. Observe the special use of the infinitive: *tuti kušinare uguale*, 'all kind of cooking is similar', *berke* (< *perché*) *gridare D.*, 'why is D. crying?'.

Italian influence on Təgrəññña and Amharic

Nowadays one can note a certain knowledge of Italian among the Asmarinos, i.e. the urban population of Asmära. Usually when meeting in town some Italian phrases are used before shifting to Təgrəññña. In the spoken Təgrəññña of Asmära, there are many more loans from the I.l. than in standard literary Təgrəññña. The main fields of borrowing are (especially automobile) technology (*freno*, 'brake'; *marcia indietro* > *marša əndəyätro*, 'reverse gear'; *molla*, 'spring'; *macchina* > *ma/äkkina*, 'car'; *manuale* > *miniwalä*, 'manual, handbook'; *gomma*, 'rubber'; *pompa*, 'pump'; *bicicletta* > *bəšəkläta/bəššəgläta*, 'bike'), cuisine (*salsa* > *səlsi*, 'sauce'; *pasta* > *basta*, 'pasta'; *forno*, 'oven'; *maccheroni* > *mokkəroni*, 'macaroni'; *pane* > *bani*, 'bread'; *minestrone* > *ministroni*, 'potage'; *vino*, 'wine') and household-related words (*luce* > *ləči*, 'light'; *villa*, 'house'; *vaso* > *bazo*, 'vase, chamberpot'; *vasca* > *baska*, 'tub') and others (*bandiera* > *bandera*, 'flag'; *geografia* > *ǧi͡ografya*, 'geography'). Most of these words are listed in Täkkə͡a Tasfay (1999). Italian ↗numerals (*uno*, *due* > *duwä*, etc.) are still used by the older generation in connection with technology and games. Originally Italian Təgrəññña-↗names such as Roma, Ǧorǧo, Lučiya, Stella are widespread.

Most of the loanwords mentioned above for Təgrəññña occur in Amharic as well. In general the Italian impact on Amharic is less strong but still easily recognizable. Other examples are *carcassa* > *kärkassa*, 'worn out, broken down'; *spago* > *sibago*, 'string' (Tubiana 1974). In rare cases the Italian words are fully assimilated to indigenous nominal or verbal forms, note the adjective *kärkassa* (cf. *läslassa*, 'soft') and the normal verb *färrämä*, 'to sign'; *täfärrämä*, 'to be signed' (cp. Tgn. *färämä*, *täfärämä*) derived from the non-assimilated noun *firma* 'signature'. In the same way *fabbrica* > *fabrika*, 'factory' led to the quadriradical verb *fäbärräkä*, 'to manufacture' (cp. Tgn. *fäbräkä*). In recent decades Italian loans have increasingly been replaced by loans from English.

There are some Italian loans in ↗Somali (Mioni 1988). In general the stressed Italian vowel is lengthened: *dolce* > *doolše*, *doorše*, 'sweet'; *televisione* > *telefišoon*, 'television' (but *telefišen* comes from English); *forchetta* > *fargeeto*, 'fork'. Some consonant clusters are not permitted so that we note an epenthetic vowel: *disciplina* > *dišibiliin*, 'discipline'; *complesso* > *kombaleeso*, 'complex'.

Italian Somaliland

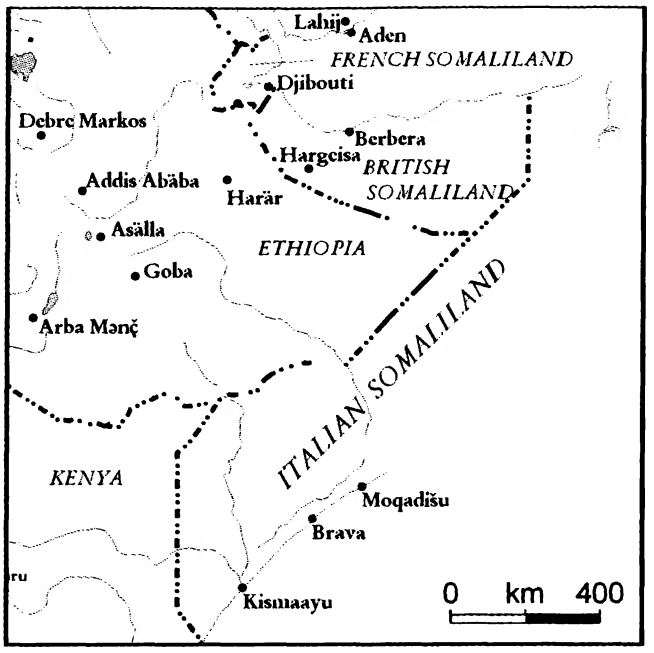
Although Somalis as a people share a common faith, the same language and well-rooted traditions, their access to statehood and sovereignty was achieved through disparate means as a result of the different fate of the Somali-inhabited lands during the colonial period. Indeed, no Somali state or unitary nation existed before colonialism. I.S. (*Somalia italiana*) took shape following a series of annexations of territories which were previously under different authorities. In 1889, Italy concluded separate protectorate agreements with the *sulṭāns* of ↗Obbia and ↗Majerteen. In 1892, thanks to the intermediation of the British, Italy entered into a first convention concerning the Benadir stations which belonged to the *sulṭān* of Zanzibar, who exerted nominal suzerainty over the coast, and in 1905 Italy purchased full sovereignty over Benadir, thereby establishing a form of direct government. The Italian authorities ruled indirectly: via the customary hierarchies in the north and via the commercial companies endowed with quasi-statal prerogatives in the south (*Compagnia Filonardi, Società anonima commerciale italiana del Benadir*). The Colony of I.S., divided into *Colonia della Somalia italiana meridionale* (Benadir) and *Protettorati italiani della Somalia settentrionale*, was proclaimed officially in the constitutive act of 5 April 1908. In the same year, the boundary with Ethiopia, a future bone of contention, was defined by a bilateral agreement but was not demarcated. While Italy was struggling to extend and consolidate her control over the area, I.S. became an additional front of the *ǧihād* conducted by *sayyid* ↗Muḥammad ᶜAbdallāh Ḥassan, the Somali national hero known as the "Mad *Mullah*" in the English press, who mobilized the Somalis to repel foreign influences, coupling nationalism with religious fanaticism and transcending clan feuds (Touval 1963:51, 55–59).

The core of the Italian possessions was to be found in the southern section of the Somali territories, with the ancient city of ↗Mogadishu, the fertile inter-riverine region and the best seaports on the Indian Ocean. Following the Great War, Italy presented an ambitious plan of expansion in the Horn as the reward for her contribution to victory, but the only territorial enlargement actually granted was the cession by Britain of Jubaland (*Oltregiuba*) with the port of ↗Kismaayu that was annexed in 1925. This transfer, admittedly from the perspective of colonial rationale, was to the benefit of the future unification of the Somali territories. All the differences of status of the diverse components were put aside and I.S. began to be officially labelled *Somalia italiana* or just *Somalia*. However, the submission of the Somali territories was virtual rather than real. An effective Italian administration was only set up after the advent of the Fascist regime in Italy. The new governor, Cesare De Vecchi (1923–28), one of the leaders of the March on Rome, carried out a harsh campaign against the still semi-autonomous northern protectorates (the territory of Nogal as well as Obbia and Majerteen), disarming the Somalis with a force of more than 12,000 troops, including three battalions from Eritrea, and support from the sea of a small navy.

The administrative system was centralized around the civil governor (*governatore*). The successors to the militaristic administration of De Vecchi, wishing for a more peaceful evolution, were two members of the colonial service: Guido Corni (1928–31) and Maurizio Rava (1931–35). The governor was assisted by a bureaucratic apparatus as well as selected and salaried chiefs (*capi*); on a local level, the administration of the territory was divided between regional commissaries, residents and vice-residents. Italians and individuals from other "civilised countries" enjoyed the status of citizens (*cittadini*) and were under Italian legislation, whereas the natives of Somalia or from other colonial possessions were subjects (*sudditi*) and kept their original status. To protect traditional rights, the Italian administration recognized as valid both the Muslim *šarīᶜa* and Somali customary law (↗*Ḥeer*), with the sole restriction that native practices should not contravene the basic principles of Italian law. So, for example, the *ḥeer* was consistently overruled in matters of slavery (Hess 1966:109).

According to the census of 1931, the population was about one million, with 1,658 Europeans. The non-Italian population suffered discrimination which became openly racist following to the laws promulgated in 1938 in the metropolis and extended in 1939 to the whole of Italian East Africa. Although modest in size and goals, Italian economic and political activity initiated a gradual social change. A network of roads was built primarily to cope with military exigencies (Ciasca 1940:604). The rural lands not covered by a traditional status, which ignored individual property, were divided into concessions and state property (↗*Terra demaniale*). The management of the concessions was defined by two decrees issued in 1911 and 1912, distinguishing estates between those given over to agriculture, grazing and the gathering of wild fruit. Major programmes of cultivation and resettlement of the indigenous population were accomplished by large private or state companies like the *Società agricola italo-somala* and the *Azienda di Genale*. Italy invested capital and technology in banana and cotton plantations in the region between the ↗Wabi Šäbälle and Juba (↗Ganaalee) rivers (i.e. the large estates named Villaggio Duca degli Abruzzi e Genale). Commerce was strictly controlled by monopolies, in particular for the export of bananas, and by para-statal organizations. Industrial development was poor. The livelihood of the majority of Somalis was linked to pastoralism and their lifestyle remained nomadic. Revenues drawn from the colony continued to be based mainly on customs entries. Little was done to supply formal education: pupils in primary schools numbered less than 2,000, with practically no locals or *indigeni* attending secondary school.

Somalia, like Eritrea, was exploited by Italy in her overall policy aimed at destabilising Ethiopia, moving from the periphery towards the centre of the highlands. A minor clash in December 1934, between an Italian garrison and Ethiopian soldiers at ↗Wälwäl, close to the border of I.S. but apparently within the Ethiopian region of Ogaden, ignited the crisis that led to the Italian invasion and conquest of Ethiopia. After the creation in 1936 of ↗*Africa Orientale Italiana* (A.O.I.) – which included Ethiopia, ↗Eritrea and Somalia – the ↗Ogaden and other regions inhabited by Somalis were detached from Ethiopia and annexed to the *Governo di Somalia*. The Italian strategy was meant to undermine



Ethiopian resistance by promoting regional and national affinities without, however, permitting the development of Somali (or Eritrean) modern nationalism. The practice of land confiscation in order to make land available for colonization and the cultivation of extensive estates were exported to Ethiopia as a whole (Haile Mariam Larebo 1994:76). Somalia preceded by far the other parts of A.O.I. as far as effectively cultivated commercial and demographic concessions were concerned, specifically with regard to cotton production. Nevertheless, Somalia was unable to meet, for example, the needs of the Italian cotton industry. Somalia was a precedent for the system of exploitation of mines as well; the measures adopted were so brutal that they were akin to slavery.

Because of her defeat in ↗World War II (s. also ↗War of Liberation, Italy lost Somalia as well as all her possessions in the Horn, the 1947 Peace Treaty sealing the end of the Italian colonial empire. The war brought the Somali population into contact with the outside world and the West. In the first months of 1941, I.S. was occupied by the British and the colonial government ceased to function. The former Italian colony, treated as an "enemy territory", was subject to the ↗British Military Administration (B.M.A.) that lasted until 1950. The B.M.A. in Somalia – initially embodying the Ogaden and the so called "Reserved Area" of Ethiopia – was less pervasive than the B.M.A. in Eritrea, expecting the decisions at the diplomatic level. The Foreign Office advocated a form of unification of the Somali lands under British jurisdiction and proposed to combine British

Somaliland, Italian Somaliland and the adjacent part of Ethiopia in a trust "so that the nomads should lead their frugal existence with the least possible hindrance". The British administration intensified the process of transformation, further weakening the traditional fabric and opening the way to nationalism. Somali society was traditionally fragmented into clans and *cabile*, but the elite, mostly of urban stock, called for unity and independence. The main political party was the Somali Youth Club, founded in 1943, which later became the Somali Youth League (S.Y.L. or *Liga dei Giovani Somali*). In vain Italy established her own parties like the *Conferenza somala*, aimed at backing up what were in fact the relics of the previous colonial administration.

The discussions regarding the disposal of the former Italian colonies were lengthy and largely influenced by international alignments. The B.M.A. did not conceal its inclination to support the S.Y.L., arousing the resentment of the Italians, both the colonists in place and the authorities in Rome. However, the "Bevin Plan" did not get the necessary support of the Big Powers and the Greater Somalia project was abandoned. In January 1948, while Somalia was being visited by a fact-finding four-power commission, the streets of ↗Mogadishu (S. EAE vol. 5) were the scene of a nationalist rally that degenerated into a massacre of a few dozen Italian residents (Calchi Novati 1992:133–60; Del Boca 1984:168–97). Italy accused the British troops of provocation but London dismissed any responsibility notwithstanding the evidence of some assistance at least with respect to the transport of S.Y.L. militants to Mogadishu and occasional complicity. At the end of the debate at the General Assembly of the U.N., on 21 November 1949, the former I.S. was assigned to Italy as a trusteeship for a ten-year period. With the Trust Administration of Somalia (*Amministrazione Fiduciaria Italiana in Somalia*-A.F.I.S.), post-Fascist Italy was able to display her new democratic profile by collaborating with the S.Y.L., despite initial mutual suspicion, in the preparation of would-be independence institutions. Public expenditure was redirected in order to improve communication, education and health facilities. Unlike the past priority of exporting crops, new emphasis was put on the potentialities of agriculture for domestic consumption. In the period between 1948 and 1954–55, Britain returned the Haud and the Ogaden regions to Ethiopia and confirmed the integrity of Kenya thus thwarting Somali irredentism. The attempts to negotiate a delimitation of the border with Ethiopia which was acceptable to both sides came to nothing.

Italy abided by the UN schedule and in 1960 her former colony became independent. It immediately merged with ↗British Somaliland, giving birth to the Republic of Somalia (with Mogadishu as the capital). The Somali political stage was dominated by the S.Y.L., a party in which a progressive and educated leadership cohabited with the influence of traditional elders. The S.Y.L. was determined, at least nominally, to fight the clan-based power structures as it considered tribalism an obstacle to development and democracy. The whole policy of the new state was subordinated to the fulfilment of the Pan-Somali myth, the reunification of all the Somali lands, claiming Ogaden, the Northern Frontier District of Kenya and French Somaliland (↗Djibouti). The aspiration of a Greater Somalia was in obvious contrast to the conservative policy regarding post-colonial borders that prevailed in the new Africa and was doomed to fail.

Giampaolo Calchi Novati

Italian war 1895–96

The Italo–Ethiopian war of 1895–96 was the start of the Italian offensive to conquer Ethiopia,

which was checked by the defeat at the battle of ↗ʿAdwa.

After unsuccessful attempts in North Africa, Italian colonial interests moved to the Horn, with Ethiopia, the Empire and the rich highlands being the main objectives, whilst ↗Eritrea and ↗Somalia were, to some extent, only preliminary steps. The offensive against Ethiopia coincided with the reinforcement of central power in Ethiopia after a long period of decline. Italian colonial operations culminated in the creation of Eritrea; in particular, the occupation of ↗Massawa in 1885 cut Ethiopia off from access to the sea. The Italian defeat of ↗Dogʿali in 1887 roused enormous emotion in Italy but did not slow down the advance of Italian forces, giving weight to those in the metropolis supporting a major colonial engagement.

The target of the Italian expansion was now ↗Təgray, the core of the Ethiopian state bordering with Eritrea. Təgray had been competing for hegemony over the Empire with Šäwa and the Amhara-speaking people. *Aṣe* ↗Mənilək II, former *nəguś* of Šäwa, pushed the sphere of his dominion south- and eastwards completing the "Great Design": apparently Ethiopia was joining the scramble for territory undertaken by the European nations, but in her perspective territorial expansion was meant to oppose colonialism, not to collude with it.

In fact, at the climax of the partition of Africa, Italy stood as the antagonist of the Empire. Moving from Eritrea and Somalia, Italy practised so-called peripheral diplomacy, but the Wəċale Treaty (2 May 1889; ↗Italo–Ethiopian Convention of 1889), annexing part of Təgray to Eritrea, proved that Italy was now aiming at the very centre. The disputed Art. 17 of the Italian version of the Treaty was read by Italy as the legal basis for an Italian protectorate. Mənilək refuted this interpretation and utilized both diplomacy and military resistance to preserve Ethiopia's independence. In 1893 the Emperor unilaterally denounced the Wəċale Treaty. In December 1894, ↗Bahta Ḥagos lead a short-lived but eventful uprising against the Italians.

In a crescendo of reciprocal distrust and hostility Italy and Ethiopia came to the brink of the war. Italian troops repeatedly crossed the semi-official frontier between Eritrea and Ethiopia. The victory against the Dervishes (↗Mahdists) at the fort of Aqordät (December 1893) and the defeat of ↗Mängäša Yoḥannəs's troops at Kʷäʿatit and Säʿafe (January 1895) granted the Italians a false sense of confidence. The Italian Prime Minister Francesco Crispi was resolved on settling the "Ethiopian question" by force; he put aside the political manoeuvres dear to Count Pietro ↗Antonelli and gave the green light to the aggressive plans of general Oreste ↗Baratieri. Never in the previous years had Ethiopia to fight for her survival as at that fateful hour. So far, Italian expansionism had been tackled by *ras* ↗Alula Ǝngəda on the extreme northern fringes of the Empire.

Mənilək – conscious of the loyalty of such leaders as *ras* Alula, ↗Mäkʷännən Wäldä Mikaʾel and Mängäša – mobilized the entire nation to hold back the colonialist threat. Unlike other African rulers facing the same circumstances, Ethiopia was acquainted with the resources of international diplomacy; ↗France and ↗Russia helped Mənilək by providing him and his army with modern equipment and advisers. In between 1895 and 1896, there ensued a series of battles (↗Ambalage, ↗Mäqälä, ʿAdwa etc.), which proved to be as painful setbacks for Italy as much as gains for Ethiopia.

The victory of Mənilək's army at the battle of ʿAdwa (1 March 1896) had a resounding impact all over the world. During the scramble for Africa the military superiority of the European forces was unchallenged and this outcome in the war between Italy and Ethiopia, at a crucial stage of the history of colonialism in the Horn, was an exception. Italy was a medium power both politically and militarily. On the other hand, the status of Ethiopia, an established state with good foreign relations, could not be compared to most African states, which had been overwhelmed by the advance of colonialism. In Italy the military rout ignited a political crisis that smothered, at least for the moment, any colonial drive. Italian ambitions in Ethiopia were postponed to a remote future. The peace treaty signed in Addis Abäba on 26 October 1896 cancelled Wəċale once and for all and recognized the independence of Ethiopia in due form. Nevertheless, the Addis Abäba Treaty confirmed Eritrea as a colony of Italy, and the ↗boundary at the ↗Märäb was put in writing in an act countersigned by the Emperor.

Later on, Britain feared that the Dervishes, galvanized by the success of the Ethiopian army, would further expand their influence, and consequently waged a war in order to take full control over the Dervishes state. Thus, despite its primarily symbolic importance, Ethiopia's victory in the confrontation with Italy did not stop colonialism in the Horn.

Giampaolo Calchi Novati

Italian war 1935–36

Introduction

The I.W. of 1935–36 (also known as Second Italo-Ethiopian/Abyssinian War; Ital. also *Guerra d'Abissinia/Etiopia*, *Campagna d'Etiopia*) started on 3 October 1935 and ended, formally, on 9 May 1936, with an Italian victory and creation of the ↗Africa Orientale Italiana.

Despite the 1928 Italo-Ethiopian Treaty of Friendship, ↗Mussolini made plans to conquer Ethiopia. Some measures like reconnoitring missions were carried out, and some military plans for Eritrea had been elaborated long before the I.W. After the acquisition of Jubaland (↗Italian Somaliland), Ethiopia became the primary goal of the Fascist government's expansionist policy aimed at geographically unifying the Italian possessions in the Horn of Africa. Mussolini believed that an Italian military invasion of Ethiopia would be "modern, efficient, pitiless and unstoppable" and would elevate Italy to the status of a world power. A victory in Ethiopia would also restore Italy's national honour after its defeat at the Battle of ↗ʿAdwa, in the unsuccessful 1895–96 war against Ethiopia (↗Italian war 1895–96). Mussolini dreamt of establishing Italian hegemony in the whole Mediterranean and he conceived occupying Ethiopia as a jumping board, both militarily and diplomatically, to the ↗Middle East.

The outbreak of the I.W. underscored the political fragility of Europe's great powers and the ↗League of Nations's "collective security" strategy, and helped pave the way for ↗World War II. The events that led to the I.W. elicited no meaningful actions from the League of Nations to defuse the escalating crisis between Italy and Ethiopia. After 5 December 1934 military clash between Italy and Ethiopia at ↗Wälwäl, *aṣe* ↗Ḫaylä Śəllase I unsuccessfully appealed to the League of Nations concerning the Italian aggression and military built-up. However, the League of Nations maintained that neither country bore responsibility for the clash.

Preparations and outbreak of hostilities

The Italian public applauded Rome's intended aggression and believed that the creation of a colonial empire in East Africa would bring "civilization and humanity" to the region, put Italy on an equal footing with other European colonial powers, and allow Italy to send large numbers of Italian colonists to the region.

In February 1935, Rome started deploying troops to Eritrea and Somaliland. Eventually, some 207,000 Italian troops equipped with 150 aircraft, 700 field artillery pieces, and 150 tankettes and light tanks were poised to attack Ḫaylä Śəllase I's Empire. Some 80,000 of these troops were stationed in Somaliland, where the preparation for the war was conducted, from February 1935, by the governor-general ↗Graziani. The Italians were to be supported by strong contingents of colonial army (↗*Askaris*; Eritrean *bandas* and the *Dubat*).

In April 1935, Mussolini authorized the establishment of the Supreme Command in East Africa in ↗Asmära under General Emilio ↗De Bono's command. Within a few months, he had succeeded in building up infrastructure, port facilities, airplane fields in Eritrea and Somalia.

The Regia Aeronautica units that provided air support included the 3rd Air Brigade (Asmära), the 15th Group of Bombers, the Independent Hydroplane Section (Massawa), and the ʿAsäb Air Command. Its mission included supporting ground units by conducting surveillance missions, flying missions against Ethiopian ground forces; and defending Asmära, Asäb, and Massawa. On the eve of hostilities, the Regia Aeronautica had an authorized strength of 350 aircrafts but it had only 126 planes. In the course of the war, it proved to be a disappointment to the Italians since there were few strategic targets such as arsenals and industrial centers, yet, due to the absolute dominance in the air, the raids of the Italian war planes against the towns and Ethiopian ground forces

were very effective and in many cases decisive for outcomes of the battles.

On 2 September 1935, a Royal Decree established the Naval Division of East Africa, under Admiral Guido Vannutelli's command. This unit included two cruisers, two scouts, and two torpedo boats. Vannutelli's mission was to direct all Italian vessels in the Red Sea and to reconnoitre the coast.

Italian military intelligence had a fairly good understanding of the size, strength and capabilities of the Ethiopian ↗army. According to Italian calculations, Ḫaylä Śəllase I could mobilize an estimated 200,000 to 250,000 troops in northern Ethiopia and some 80,000 to 100,000 in the south. It was assessed that about a quarter of Ethiopia's total forces had some kind of modern military training (cp. ↗Infantry) and nearly all Ethiopian troops had repeating rifles of various calibres and models. The army also had some 200 small calibre field guns, about 1,000 heavy and light machine guns, 100 anti-aircraft and anti-tank guns, and a few fighting vehicles. Ḫaylä Śəllase I also had acquired modest amounts of military aid from ↗Sweden and Nazi ↗Germany (cp. David ↗Hall) and had some Belgian, Swedish and Russian military advisers (yet almost no one among Ethiopian supreme commanders had a proper military education). In order to avoid provoking Italy, the Emperor announced the mobilisation only on 28 September.

Southern Danakil (eastern lowlands) together with the 27th and 28th Colonial Battalions, a group of irregulars, and Libyan volunteers supported by the 17th Colonial Battalion.

On 5 October General Ruggiero Santini occupied ʿAddigrat and Lieutenant General Maravigna captured ʿAdwa, a victory that, as Mussolini claimed, had filled "the souls of Italians with pride". *Ras* ↗Śəyyum Mängäša withdrew his forces to Tämben, avoiding battles. On 10 October, the commander of the strategic Mäqälä sector *däğğazmač* ↗Ḫaylä Śəllase Gugsa submitted to De Bono at ʿƎdäga Ḥamus. Aksum was occupied on 11 October, and Mäqälä on 8 November. From these locations, Italian troops gradually extended their control to the east, west, and south. In November 1935, Brigadier General Oreste Mariotti penetrated the ʿAfar Depression from Kululli, the terminus of the railway line from the Eritrean port of Fatima Eri. Securing the left flank of the Italian army, Mariotti and his troops marched across the desert, ascended the plateau via the Ende gorge, where they survived an attack of *däğğazmač* Kaśa Səbḥat's troops on 12–13 November, at Aṣbi. The force then continued to Mäqälä, where it joined the troops of I Corps. On the whole, on this stage of the war the Italians encountered sporadic resistance, the main Ethiopian forces amassing south from Mäqälä and preparing for the counterattacks.

The betrayal of Ḫaylä Śəllase Gugsa was "the blessing in disguise". The Ethiopian line of defence was broken and the Italians could penetrate swiftly inland. Some of Ḫaylä Śəllase's advisors, notably the "White" Russian Konovalov, had tried to convince the Emperor that the old ʿAdwa-style strategy of the frontal collision would not do any more. They advocated letting the Italians in and then conducting guerrilla campaign against their communication lines. The Emperor was said to be convinced, yet the traditional way of assembling forces together was largely retained.

Despite the accomplishments, Mussolini became increasingly impatient with what he felt was De Bono's slow progress. On 14 November 1935, he sacked De Bono and appointed Marshal Pietro ↗Badoglio as commander-in chief of the armed forces and High Commissioner in East Africa. However, Badoglio proved to be as cautious as his predecessor; he quickly realized that the Italian lines were over-extended and his troops were incapable of holding a 300-mile long front in a region peppered with steep mountains and deep gorges. Ethiopian forces started to exploit this situation by launching attacks against isolated outposts and supply convoys and by undertaking operations against ʿAdwa and Mäqälä. To compound Badoglio's problems, the early rainy season had washed out several recently built mountain roads, thus impeding his ability to re-supply troops. The Italians lacked troops for continuous defence lines but strengthened their positions around the biggest occupied towns. Additionally, III Corps was established and stationed south to Mäqälä (IV Corps was formed in the beginning of 1936). In Šire, a few Italian units advanced as far as Täkkäze.

In early October 1935, Graziani began the southern campaign by deploying mobile columns of motorized troops supported by tanks and the Regia Aeronautica. The Italians faced steady Ethiopian resistance by the troops of *grazmač* ↗Afäwärq Wäldä Sämayat in the valley of River Fafan, at Gorahay. Only after Afäwärq was mortally wounded on 7 November, the Italians captured Gorahay, a victory that facilitated the future advance on Harär and ↗Ǧiǧiga. Graziani hoped that the occupation of these two towns would allow his soldiers to prevent weapons' shipments destined for the Emperor's forces from entering Ethiopia from British Somaliland. From Gorahay, the Italians deployed 120 miles up the Fafan valley to Däggah Bur. Attacks of the troops of *däğğazmač* Näsibu Zäʾamanuʾel against Graziani's rear units forced the column to return to Gorahay. Meanwhile, another Italian column advanced to Däggah Bur but had to withdraw to Gabre Darre, just north of Gorahay. By late 1935, Graziani, disposing over limited number of troops, remained largely on the defensive, also being effectively blocked by the army of *däğğazmač* ↗Näsibu (an energetic Turkish General, Wahib *pasha* being his Staff commander) in Harärge and the army of *ras* ↗Dästa Damṭäw in Dolo, Sidamo. Ethiopian units and heavy rains also contributed to Graziani's lack of progress.

In December 1935, the Ethiopian army completed its mobilization, and its generals were quick to finally return to the entrenched tradition of assembling all forces together in preparation for frontal collisions. The army of *ras* ↗Əmməru Ḫaylä Śəllase and *däğğazmač* Ayyaläw reached Šire from the south-west; in Tämben concentrated the armies of *ras* Kaśa Ḫaylu and *ras* Śəyyum Mängäša. The largest army under the command of *ras* ↗Mulugeta Yəggäzu stood to the south

of Mäqälä. In December the Ethiopian military leadership decided to attempt counter-assaults at both fronts.

On 13 December *däğğazmač* Bäyyänä Märəd, the governor of Bale, attempted an assault on the southern front in the Wäbi Šäbälle area to help *ras* Dästa's army. Bäyyänä achieved some success near Gabba, but stopped when faced by larger Italian units.

On 15 December, a battle took place the region of May Ṭəmqät, not far from Täkkäze, where the soldiers of *ras* Ǝmməru advancing from Bägemdər attacked, having crossed the river, the unit of *camicie nere* of Major Criniti. In the following days, there were fierce battles at the passes of Dämbägʷena and ᶜAdd Gäfa, with heavy losses for both sides (the Italians lost some 15 tankettes). *Ras* Ǝmməru's troops failed to widen the assault; however, the Italians also had to leave a large territory, withdring closer to their main positions at Aksum. *Ras* Śəyyum's army tried an attack in Tämben, at ↗ᶜAbiy ᶜAddi, which the Italians repelled thanks to their superior fire power, but, again, they had to withdraw their positions to the north.

Italian frustrations with the slow pace of the military campaign convinced Mussolini to authorize the use of illegal chemical weapons, primarily yperite (mustard gas). During a four-month period, the Regia Aeronautica dropped 330 tons of chemical warfare agents out of a total of 1,829 tons of explosives. Representations by the international community and organizations like the International Committee of the ↗Red Cross and the League of Nations to persuade Italy to stop using chemical weapons were weak and ineffective.

On 30 January 1936, Mussolini warned the Italian population that at least another year would be required to complete the conquest of Ethiopia. League of Nations sanctions and growing war expenditures added to Rome's woes. However, it soon became apparent that such a dire prognosis was unwarranted. Marshal Badoglio's military cunning, the use of chemical weapons, the superiority of Italian armaments, and the success of Italian subversive actions doomed Ethiopia's poorly led and equipped army.

January–May 1936

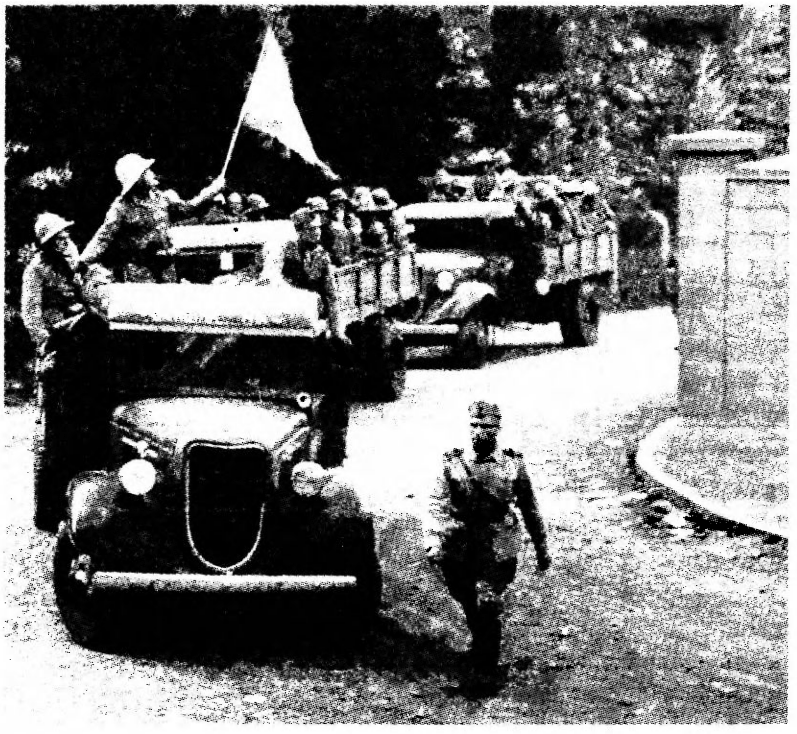
Within several months, Italian forces had scored some impressive victories on the northern and southern fronts. On 12 January 1936 Graziani launched another offensive on the southern front that involved three Italian columns advancing in the valleys of the rivers Doriya Parma, Genaalee Doriya and Wabi Destro. After three days of fighting, the defence of *ras* Dästa collapsed, his troops suffered heavy losses and withdrew from Torbi. Graziani then launched the "hell on wheels" campaign that involved many hundreds of armoured cars, tanks, and trucks. In eight days, he advanced 240 miles to ↗Nagallee, which served as the Ethiopian army's headquarters in the south-west, and on 26 January 1936 he captured Wadera.

On 19–23 January, anticipating an Ethiopian assault in Tämben, III Corps units battled *ras* Kaśa's troops in a bloody four-day fight, that is known also as "the first battle of Tämben" around Däbrä Amba, Lata, and at the passes of Wäriʾu (where Ethiopian fighters encircled 2nd Militia Division of *camicie nere* "28 October" for three days) and Abaro. The news of the effective actions of the Ethiopians in that battle caused anxiety in Rome.

The battle of Ǝndärta occurred on 10–15 February 1936 at Mount ↗Amba Aradom. From this location, Badoglio deployed I and II Corps from Mäqälä and 1 Militia Division of *camicie nere* "23 March" (some 100,000 with 250 artillery pieces) to battle *ras* Mulugeta's 80,000-man army. After a fierce battle, Badoglio's troops scored a decisive victory. Some days later, the *ras* Mulugeta was killed. This victory enabled III Corps to conduct operations against the Ethiopian Army's other two groups. Badoglio's forces then cut the routes between Tämben and Säqota, thereby creating favourable conditions for further Italian activities.

On 27 I Corps approached the ↗Ambalage stronghold, but the Ethiopians already had departed for the south. On 28 February, the Italian Eritrean Army Corps and III Corps prepared to conduct a campaign against a 30,000-man force that was loyal to *ras* Kaśa Ḫaylu and *ras* Śəyyum Mängäša in the southern Tämben (the Wäriʾu pass, Wärq Amba, Amba Ṣällere), from the south and north respectively, with Regia Aeronautica's support. The second battle of Tämben lasted until 1 March, when Italian forces scored one more victory over the Ethiopians. Having left some 1,000 square miles of territory under the Italian control, *ras* Kaśa Ḫaylu and *ras* Śəyyum fled to the south, where they joined the Imperial troops.

Almost simultaneously, the battle of Šire took place on 28 February – 3 March. While II Corps attacked at Säläqläka, pushing *ras* Ǝmməru's



Arrival of Italian troops at Addis Abäba, May 1936; photo from the collection of Johannes Bohnenberger

troops to the east, IV Corps entered from Eritrea advancing, via Ṣäᶜada Mədri and ᶜAz Daro, to the Ethiopians' northernmost positions. In the course of heavy fight, the Ethiopian avoided complete destruction, but had to withdrew with heavy losses beyond Täkkäze, leaving to the Italians substantial territories.

On 20 March the "Colonna Celere" of General Achille Starace, composed of some 3,000 troops on more than 400 vehicles, entered Ethiopia near ↗Om Hağer. After a difficult ca. 380 km march, on 1 April the Italians occupied Gondär without a fight, and soon took the region around Lake Ṭana. Another Italian column went along the Sudanese border, closing British supply routes. The troops of II Corps reached Gondär via May Ṭəmqät and Däbarq. Additionally, an Italian column of ca. 17,000 man deployed from ᶜAsäb to Sardó, in ↗Áwsa, a town that controlled one of the main caravan routes to Addis Abäba. Some 10,000-man Imperial troops had been transferred to the southern Təgray, and Sardó surrendered. The Regia Aeronautica attacked targets in Ğiğiga (15 and 22 March 1936), Harär (29 March 1936), and Addis Abäba (4 April 1936).

In late March, the Imperial government faced another military setback due to the Italian advance. Internal disturbances (e.g., lasting from January 1936 in ↗Goğğam, engineered by *ras* ↗Ḫäylä Täklä Haymanot, in chains by that time, and the Italians) further complicated Ethiopian military operations. Nevertheless, on 31 March – 3 April, the Emperor gave battle at ↗May Çäw. The rest of the Imperial army and the ↗Imperial Bodyguard, led by the Emperor, were defeated by three superior Italian corps. The Italian victory at May Çäw caused northern Ethiopian army to disintegrate. A few small guerrilla groups kept fighting while the Emperor fled to Addis Abäba.

On 7 April 1936, an increasingly desperate Ḫaylä Śəllase issued a proclamation that called to arms all Ethiopian males capable of military service. However, most of those who responded lacked military training and, at best, had antiquated weapons. This disparity was coupled with vicious Italian tactics like mass executions of Ethiopian soldiers and civilians and the use of chemical weapons.

On the southern front, Ḫaylä Śəllase sought to prevent the Italians from occupying Harär and cutting the Addis Abäba–Djibouti railway line by building a double line of field fortifications across the Ogaden. The rest of Dästa Damṭäw's army, located near Nagallee, in Sidamo, prepared to advance on Ethiopia, Kenya, and Somalia border area. The Emperor believed that his soldiers then could invade Somalia and seek to drive Italian forces to the coast. In the Ogaden, the units of *däğğazmač* Mäkʷännən Ǝndälkaččăw, Abbäbä Damṭäw and *däğğazmač* Näsibu (some 28,000) fortified their positions along the line Dagamedo – Birgato – Gunegedo (Ġunagadu) – Wadel, the region which became the scene of the "second battle of Ogaden". On 14 April, Italian motorized columns attacked those fortified positions, the main direction being along River Fafan (here, three Italian units were advancing, led by Generals ↗Nasi, Agostini and Frusci). Fierce fighting also occurred at Gunegedo. By the end of April, the Italians captured the strategic towns of Sassabanee, Dägah Bur, Ğiğğiga.

In the meantime, the Ethiopian troops were demoralized; many deserted while tribal leaders, accepted Italian bribes and then turned against the Imperial forces. On 2 May 1936, Ḫaylä Śəllase and his family left Addis Abäba for Djibouti and eventual exile in the Great Britain. Three days later, the Italians entered the capital. On 7 May

1936, Italian troops deployed from Addis Abäba to join Graziani's troops, which had occupied Harär on 8 May. On 9 May, Graziani and Badoglio met at Dərre Dawa. Herewith, the war ended on the southern front. On 9 May 1936, Rome announced the annexation of Ethiopia; ↗Vittorio Emmanuele III, the King of Italy, was proclaimed the country's new Emperor.

The War and the League of Nations

The League of Nations issued the official condemnation of the Italian aggression on 7 October 1935, yet Ethiopia was left largely in isolation and without help from the side of the large European powers (and its pre-war short-term allies like Germany and ↗Japan), despite the pronounced opposition to the aggression from the side of the smaller European states and the USSR, and vehement indignation of the many countries' broad public. On 18 November 1935, the League of Nations imposed several sanctions against Italy but they failed to deter Mussolini's plans. In December 1935, the ↗Hoare-Laval Plan, designed to end the I.W., was rejected by both Mussolini and Ḫaylä Śəllase. The League of Nations proved to be ineffective for preventing the I.W., as well as other conflicts which led to World War II.

Consequences of the War

Several factors contributed to the Italian victory over the Ethiopian Empire. It was assured because of the inequality of the two countries militaries. The Italian Army, though not on the same level as Nazi Germany's military, was far superior to that of the Ethiopian Army. Strategic and tactical skills of the Italian commanders contributed to Italy's victory. Throughout 1935–36, the Imperial army failed to seize the initiative on the ground. The Ethiopian commanders engaged the Italians in pitched battles, most of which ended in disaster for the Ethiopians (who bested their Italian counterparts only when they resorted to unconventional tactics). Even under such conditions the stubborn, brave, and poorly-equipped Ethiopian soldiers won many engagements. However, Italian technical and military superiority defined the final results. The other problems that were revealed during the I.W. and contributed to its outcome were of non-military character: the uncompleted reforms after slow modernisation and the internal tensions within the newly-built Empire, even though later some members of the Ethiopian leadership considered only the Italian's technical superiority and, in particular, the usage of illegal weapons as decisive.

The cost of the war remains a matter of speculation. Officially, Rome maintained that only some 2,800 Italians and about 1,600 *askaris* had been killed during the war. However, other reports indicated that the Italians lost 10,000–12,000 troops while fatalities among *askaris* totalled at least 3,000. Additionally, more than 200,000 Italian soldiers had sustained wounds or succumbed to various illnesses. Ethiopian losses for soldiers and civilians totalled about 275,000 dead or injured.

Italy's victory was impressive, but not complete. A large part of the country's territory was not under effective Italian control. During his final hours in Ethiopia, the Emperor appointed *bitwäddäd* Wäldä Ṣadəq as President of the Provisional Government of Ethiopia in Gore. On 1 May 1936, Ḫaylä Śəllase named *ras* Ǝmməru Ḫaylä Śəllase as Regent and commander of the Ethiopian Army. In mid-June 1936 *ras* Ǝmməru arrived in Gore with plans to relocate to Sudan. However, a ↗Resistance force called the Black Lions (↗Ṭəqur Anbäsa) persuaded him to remain in Ethiopia, become their commander, and continue the battle against the Italians. Although the Black Lions launched attacks against the Italians and pro-Italian Oromo, a decisive victory was out of the question. In December 1936, *ras* Ǝmməru surrendered to the Italians at Goğäb River. Despite this setback, the Patriots, or the Resistance fighters, remained determined to expel the Italians from Ethiopia. With increasing regularity, they attacked convoys, remote Italian farms and settlements, police stations etc. Eventually, Patriot units occupied parts of the Rift Valley, north-east of Addis Abäba from Mənğar through the Ankobär – Ṭärmabär region to southern and western Wällo Province, northern Šäwa Province, eastern and western Goğğam, and eastern Bägemdər Province. Although scattered and not centralized, the Resistance continued, in fact, till the Liberation of 1941.

Thomas P. Ofcansky

Italo-Ethiopian Treaty of Friendship and Commerce

The I., commonly known as Wəčale Treaty, was signed on 2 May 1889. In the 1880's Italian expansionism (↗Colonialism) moved from the southwest Red Sea coast to the Ethiopian hinterland through both a conquering policy and peaceful means, signing protectorate treaties with the local chiefs. Antonio ↗Baldissera and the military milieu in ↗Massawa were convinced that the Ethiopian empire was easy to win on the battlefield and pursued the conquest of the highland, supporting *ras* ↗Mängäša Yoḥannəs of Təgray (the so-called 'Təgrayan option') in the rivalries inside the Ethiopian empire.

While the Italians availed also themselves of the struggle between the ↗Mahdist Movement and Ethiopia, the Italian envoy in Ethiopia, Count Pietro ↗Antonelli, believed it possible to break up ↗Yoḥannəs IV's rule, supporting the imperial ambitions of Mənilək of Šäwa (the so-called "Šäwan option"; ↗Mənilək II). The king of Šäwa, in his turn, skilfully turned Italian attitude to profit since 1883. Later on, Antonelli induced the ministry of Foreign Affairs to believe that Mənilək would have granted Italy a protectorate over the whole Ethiopia, if duly supported with rifles (agreement of 2 July 1888), thus prevailing the "Šäwan option" inside the government of Rome, headed by Francesco Crispi.

After the death of Yoḥannəs IV, the Italians hurried Mənilək, even before he succeeded to the throne of Solomon, to sign a bilateral treaty of friendship, the I., made at the village of Wəčale on 2 May 1889.

Composed of 20 articles, meticulously dissected by Mənilək and written in Italian and in Amharic, it was undersigned by Mənilək himself and Antonelli, acting as representative of the king of Italy. According to the official aim of the treaty, Art. I assured "perpetual peace and friendship" between the two countries. In exchange for the Italian support, Art. 3 formalized the imperial acceptance of Italian sovereignty over the Red Sea possessions and contained the proposed boundary line to be marked on the ground by a special bilateral commission (↗Boundaries). Mənilək limited as much as possible the territorial losses and in the same way protected the commercial Ethiopian interests in Art. 2, 5–12, the ones devoted to the promotion of common trade.

Mənilək only entered into discussion upon Art. 17. In its Italian version it was written that Mənilək would "consent" to applying to the government of Rome for Ethiopia's diplomatic relations, meaning that he was bound to. On the contrary, the Amharic version reported that Mənilək could eventually recur to the Italians, thus indicating a mere faculty of the *nəguśä nägäśt*.

Despite this imbroglio, shortly after, another treaty – the Italo-Ethiopian Convention of 1 October 1889 – seemed the proof of the good state

of the bilateral relations. The King of Italy ratified the I. on 29 September 1889. Then Crispi's government claimed the Italian protectorate over Ethiopia, notifying it officially according to Art. 34 of the Final Act of the Berlin Conference. As soon as Great Britain and Germany took note of the supposed Italian protectorate, Mənilək felt cheated and immediately protested to Antonelli, asking him in December 1890 to correct the Italian version of the article, strongly stressing that Ethiopia would have never accepted any kind of humiliating infringement of her suzerainty. The Italian envoy, himself fluent in Amharic, ascribed to the interpreter the mistaken translation, but first refused to correct it when asked and, mostly, to suppress the whole Art. 17, thus clearly showing political bad faith.

However, urged by the Emperor, after long and hot discussions, Antonelli prepared a revised draft of the I. He suggested the abrogation of Art. 17, provided that the imperial leadership never accept the protection of any other European power (Rossetti 1910:90f.). Following *ətege* ↗Ṭaytu Bəṭul's strictness, Mənilək quickly rejected this draft. He contested even Art. 2 of the I., realizing that the Italians, having proclaimed the colony of ↗Eritrea on January 1890, tried to encompass more land irrespectively of the border agreed on Art. 3 of the text, seizing the northern edge of the Ethiopian plateau up to the ↗Märäb River. For the following month, negotiations remained pending. Mənilək was not keen on breaking the relations with Italy but the unwillingness of Antonelli to conduct a fair negotiation drove him to stop the dealings.

This diplomatic accident determined the end of Antonelli's mission to the imperial court; the abrupt failure of the 'Šäwan option' led to the breaking off Italo-Ethiopian relations. Menilek's foreign policy was carried on inspired by freedom of action and in February 1893 he definitely repudiated, through a letter sent to all the European governments, the supposed Italian protectorate. The I. became null and void only after Art. 2 of the ↗Addis Ababa Treaty of 1896 put an end to the ↗Italian war 1895–96.

Historians showed a prolonged, deep interest in the reconstruction of the political events connected to the I., perceiving it as a turning point of Ethio–Italian relations that led to the 1895–96 war. In the mid 60's, it has been also the subject of a burning debate between a former Italian colonial historian, Carlo Giglio, and the Swedish africanist Sven Rubenson. The former tried to attribute only to Crispi the responsibility of a policy meant to play on bribery and trickiness in order to make up for the feebleness of Italian political power and economic strength on the Horn of Africa's arena. Giglio tried to demonstrate that the Italian protectorate over Ethiopia remained in force until the 1896 peace treaty. Rubenson denounced the hypocrisy and gambling of Antonelli, who sought Italy to be Ethiopian's main foreign partner, and stressed that the incompatibility of the Art. 17 Italian and Amharic versions void the supposed protectorate. Although there are still few followers of Giglio's stand point (i.e. the international lawyer Scovazzi), Rubenson's interpretation prevailed and has recently found solid evidence in Richard ↗Caulk's posthumous work conducted also on Ethiopian sources.

Federica Guazzini

Italo-Ethiopian Convention of 1889

The Convention was signed on 1 October 1889 by *ras* ↗Mäkʷännən Wäldä Mikaʾel in Naples as a follow-up to the I. The Italian Government was going to establish the colony of ↗Eritrea and intensified its political penetration into Ethiopia by taking advantage of the succession crisis after the death of *aṣe* ↗Yoḥannəs IV. One of the main competitors to the throne of Solomon was *nəguś* Mənilək of Šäwa (↗Mənilək II), who, within the Italian Ministry of Foreign Affairs, was supported by the lobby backing the "Šäwan option", whereas the officials backing the "Təgrayan option" were supporting *ras* ↗Mängäša Yoḥannəs.

A good opportunity to have a hold over Mənilək was the visit to Italy (August–December 1889) paid by his envoy *däğğač* (later *ras*) ↗Mäkʷännən Wäldä Mikaʾel, Governor of Harär, who was still perceived by the Italian diplomacy as a weak

link of the command chain around Mənilək II, the new *nəguśä nägäśt*. In order to impress Mäkʷännən and acquire his benevolence, King Umberto I received him at the Quirinale and was accompanied to tour Italian art cities, industries and military equipment. Mäkʷännən signed with the Italian authorities an additional Convention (*Convenzione addizionale*) – not the "second treaty" wished by some in Rome – to regulate the financial relations between ↗Italy and Ethiopia and some pending matters. The main political issue was the definition of the border of the future Eritrea and, hence, by extension, of the Empire. Mäkʷännən was cheated through the notion of *uti possidetis* – meaning the territory occupied by Italy until then – introduced in the Convention (Battaglia 1958:382), because in the meantime the Italians were quickly occupying more land up to the strategic line of the rivers ↗Märäb-↗Bäläsa-Muna and possibly beyond.

The Convention granted Ethiopia a loan of four million lire at a six per cent interest rate, to be reimbursed in 20 years, warranted by the revenues of Harär customs. Some sources argued that Mäkʷännən accepted the Italian version of the Treaty of Wəčale but nothing allows to infer that he endorsed an Italian protectorate as Francesco Crispi and his entourage claimed. Be it as it may, in the same month of October 1889, Crispi notified the controversial Art. 17 of the Wəčale Treaty to the signatories of the Final Act of the Berlin Conference believing to have established a valid protectorate over the Empire also thanks to the supplementary clauses of the Convention.

Giampaolo Calchi Novati

Italy, relations with

Relations during the 12th–19th cent.

The earliest records of Italians in the ↗Horn of Africa go back to the second half of the 12th cent., when Pope Alexander III sent his personal physician, Filippo, as an envoy to ↗Prester John – whose legend, then not yet staged in Ethiopia, also has an Italian connection, being largely based on information spread in 1145 at the pontifical court in Viterbo (↗Vatican).

The search for new routes to ↗India prompted the maritime republics of Venice and Genoa to make contacts, though indirect, with the countries on the African shores of the ↗Red Sea and the Indian Ocean. Toward the end of the 13th cent., Marco ↗Polo's *Milione* offers the first reliable account of "Abasce", i.e. ↗Abyssinia. A few decades later the Genoese Sorleone Vivaldi unsuccessfully tried to reach ↗ᶜAmdä Ṣəyon's Ethiopia from the Indian Ocean, whilst a few of his fellow countrymen ventured as far south as Egypt and Nubia (↗Dongola), their journeys being reflected in both the ↗*Libro del Conoscimiento* ('Book of Knowledge'), written by an anonymous Franciscan toward the end of the 14th cent., and the contemporary Genoese ↗cartography (Conti Rossini 1917:667–75).

Around 1310, on its way back to Ethiopia, the embassy of *nəguś* ↗Wədəm Räᶜad "to the king of Spain" passed by Avignon and then Rome, "to see the tombs of the Apostles" (as many other Ethiopian monks did earlier and later): at Genoa, before embarking, its members were asked to produce a writing "on the tribes, customs and regions of their country", which was then used by the famous cartographer Giovanni da Carignano (Lachat 1967; Beckingham 1989; cp. Cerulli 1949). No diplomatic relationships, however, between the old Italian states and Ethiopia seem to have been formally established before the 15th cent., when the Florentine Antonio ↗Bartoli was appointed by *aṣe* ↗Dawit (II) as his ambassador to Venice. There, in 1402, Bartoli exchanged precious gifts with the Senate on behalf of the *nəguś*, rising great interest in the latter's fabulous realm (Raineri 1999). From Venice, the ambassador left for Ethiopia accompanied, at Dawit's request, by a few Italian artists and craftsmen, including a Florentine painter and a Neapolitan smith of arms (Conti Rossini 1927:88). Bartoli's return journey resulted in a most important written ↗itinerary (published by ↗Iorga 1910), with a Latin-Amharic phrase book that is the oldest known document of linguistic interest in Ethiopian matters (Cohen 1931:368–75).

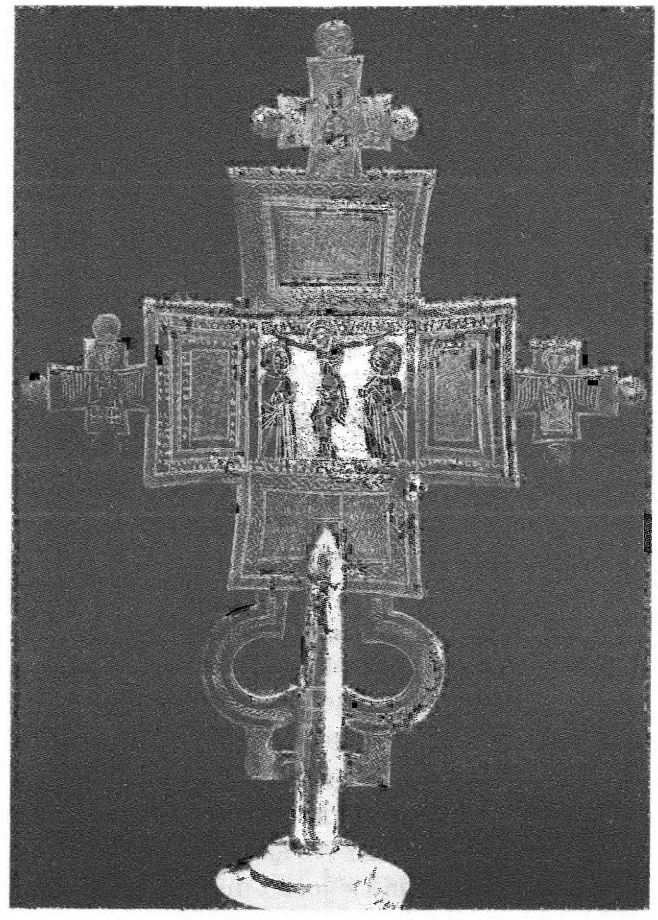
If the year 1441 witnessed the participation of Ethiopians from ↗Jerusalem in the Council of ↗Florence, their presence in Italy accounts for the detailed notions on Abyssinia displayed in a number of humanist works: e.g., the *Historiae* of Flavio Biondo (IV, 2, 34–47), with first-hand materials collected during the Council (Cerulli 1933:350ff.; Bausi 2006:5f. and n. 8); the *India recognita*, written in 1447 by Poggio Bracciolini as book IV of his *De varietate fortunae* (Tede-

schi 1993); the map ↗*Egyptus Novelo*, again reflecting then-current knowledge in Florence; and ↗Fra Mauro's *Mappamondo*, based on data provided by Ethiopians passing through Venice, then a mandatory halt for pilgrims to and from Italy – like the informants of Alessandro ↗Zorzi, who recorded his four itineraries shortly before 1524. With reference to the Council of Florence, a letter by the chancellor of this Republic, Leonardo Bruni, is addressed in 1442 to a fellow countryman, Antonio de' Gualcelli, "residing in Ethiopia" (Hoffmann 1942:232f.).

In the mid-15th cent., following both the example of Venice and the general bias of Aragonese Oriental politics (Garretson 1993), the king of Naples ↗Alfonso V welcomed an official embassy from *aṣe* ↗Zär'a Ya'əqob that was to pass later by Rome, and see Pope Nicolas V (de Witte 1956): it was formed by two Ethiopians and, as an interpreter, the Sicilian Pietro ↗Rombulo da Messina, possibly one and the same with Pietro Napolitano (i.e. "from [the kingdom of] Naples"). A former envoy of the Duke Jean du Berry to Ethiopia in 1432, this Pietro had been dispatched to Constantinople (↗Byzantine Empire) by *aṣe* ↗Yəsḥaq with the aim of engaging craftsmen for Ethiopia. In 1459, the duke of Milan Francesco Sforza wrote to Prester John "Simon Jacopo", i.e. Zär'a Ya'əqob, in order to obtain copies of lost works by the biblical King ↗Solomon for his own library in Pavia (Rozzo 1990:251 and n. 97).

In 1481 the momentous embassy of *aṣe* ↗Ǝskəndər, headed by fra Giovanni Battista Brocchi da Imola, was received in Rome by Pope Sixtus IV (Ghinzoni 1889), and became instrumental in the foundation of ↗Santo Stefano dei Mori and, thereby, in the development of ↗Ethiopian studies in Europe. One year earlier, the Pope had sent a diplomatic mission to the *nəguś* via ↗Jerusalem and the Holy Land: led by Fra Giovanni di Calabria, it included the Venetian painter Niccolò ↗Brancaleone, whom Francisco ↗Alvares was to meet in 1520–26 at the court of *aṣe* ↗Ləbnä Dəngəl. In Ethiopia, the members of this mission encountered some ten Italians, "men of good reputations", who had been living there since 1459 (CrawItin 41–45; cp. Conti Rossini 1927:92). Another Venetian painter(-cum-merchant?), Hieronimo ↗Bicini, was active at the Ethiopian court between ca. 1482 and 1520.

The 15th/16th-cent. Italian colony in Ethiopia had a major impact upon the arts, chiefly ↗painting, sculpture and ↗architecture, but also



Cross of *aṣe* Bä'ədä Maryam, recto, with Crucifixion and inscriptions; Museo del Bargello, Florence, inv. no. 22 OR; from Tedeschi 1991, pl. I

literature (↗Gə'əz) and ↗music: before 1482, an "Italian-style organ" was built in the church of Gännäta Giyorgis in southern ↗Amhara (decorated by Brancaleone), not far from ↗Atronsä Maryam (CrawItin 41, 52; cp. Conti Rossini 1927:92). The influence on literature came either by way of providing sources for Ethiopic works – e.g., the *Gädlä Səbəstyanos* and the so-called *African Symbol* or *Profession of Faith* of ↗Athanasius (modelled on the Latin *Quicumque*) – or by stimulating such cultural and theological issues as those dealt with in the *Mäṣḥafa* ↗*məṣtir*, written by ↗Giyorgis of Sägla after discussions with a "European" (*afrəngǧ*) likely to be *məs(s)ər Zan(ə)*, i.e. "messer Zan(e)" (= "Sir/Mr. John"), a Venetian responsible for giving him the Vorlage of the *African Symbol* (Conti Rossini 1948:15). Also, Italian loanwords (*altare*, *altari*, *səbtəmbryo*) appear in the 14th/15th-cent. hagiography of ↗Aron of Däbrä Daret (Conti Rossini 1940:45ff.).

At the same time, Ethiopian motifs can be traced in 15th/16th-cent. Italian literature. Thus, a poetic *exposé* of the traditional relationships between Ethiopia and Egypt, and the connected question of the former's control over the ↗Nile's

waters, is given in the *Orlando Furioso* by Ludovico Ariosto (XXXIII, 102, 1f.): after Genoese sources, it refers to Emperor "Senapo", i.e. ᶜAmdä Ṣəyon, from (ᶜAbd aṣ)-Ṣalīb, Arab. tr. of his name Gäbrä Mäsqäl ('Servant of the Cross'; s. Cerulli 1932 and 1975:13f.).

The Medici of Florence, also interested in Red Sea trade, made several attempts at establishing contacts with Christian Ethiopia. At the beginning of the 16th cent., they sent Andrea ↗Corsali to Ethiopia; and the two Medici popes, Leo X and ↗Clement VII, openly sponsored ↗Portugal's Ethiopian agenda (Sodini 1996:7). Such an extraordinary piece as the 15th-cent. engraved and inscribed bronze processional cross given by *aṣe* ↗Baʾədä Maryam in gratitude to the ↗Amhara of ↗Gorgora (s. ill.), and kept in Florence at Palazzo Vecchio (Guardaroba generale di S.A.S., inv. no. 94) since before 1771 (now Museo nazionale del Bargello, inv. no. OR 22), might well have found its way to Italy on an occasion of the traditional gift exchanges involved in establishing or fostering those long-standing relationships (cp. Tedeschi 1991). In 1611, within the context of the second ↗Jesuit mission (1603–32), Grand Duke Cosimo II of Tuscany sent a letter to *aṣe* ↗Susənyos (BecRASO XI, 377ff.).

Six Italian Jesuits worked in Ethiopia at the time of this mission. Among them, the Neapolitan Francesco Antonio De Angelis, versed equally in Gəᶜəz, Amharic and Agäw, who stands therefore at the origins of ↗Cushitic studies, and later martyr Bruno Bruni from Abruzzi, responsible for the building of a new church (which was never finished) at ↗Märṭulä Maryam. In the second half of the 17th and in the 18th cent., after the expulsions of the Jesuits and the ensuing persecutions, Ethiopia's ties with the western world, namely with I., loosened, but the Holy See kept trying to resume contacts with the Ethiopian monarchy through a series of missions, most of which were unsuccessful (↗Sacra Congregatio de Propaganda Fide).

In 1857, during the Risorgimento, the prime minister of Savoy, Count of Cavour, strove to get in touch with Ethiopia via the Piedmontese ↗Capuchin mission of Guglielmo ↗Massaja, but the Italian events of 1859 prevented the stipulating of a treatise with the head of ↗Təgray that had been prepared by Father Léon des ↗Avanchers. In 1872, King Vittorio Emanuele II exchanged letters and gifts with the later Emperor ↗Mənilək II, then king of ↗Šäwa, opening thereby the relationships of the newly-born Italian state with Ethiopia.

Gianfranco Fiaccadori

Relations during the 19th–20th cent.

From the earliest contacts with East Africa in the colonial era, I. and the Italians had Ethiopia in mind. Many explorers, travellers and missionaries moved across the Ethiopian highlands paving the way to future take overs. The initial phases of the expansion in the Horn of Africa were restricted to the Red Sea shores, but the ultimate goal was the hinterland with its historical past and its supposed wealth. In spite of widespread opposition (s., e.g., Ulisse ↗Barbieri), the nationalists exhorted newly-born I. to take on her destiny in the world (cp. Scarfoglio 1936:18, speaking of a conflict between Iron Age, i.e. Abyssinia/Africa, and Modern Civilization, i.e. I./Europe).

The dream was to set up a "colony" using the foothold established in ↗^{c}Asäb by the former Lazarist missionary Giuseppe ↗Sapeto on behalf of the ↗Rubattino shipping company in 1869. The Italians planned to set up a port capable of attracting the trade of ↗Harär and Oromo (called Galla in contemporary Italian sources) territories. In Rome, Milan and Naples, geographical and commercial societies flourished (↗Società Geografica Italiana, Società d'Esplorazione Commerciale in Africa, Società Italiana per il Commercio coll'Africa, etc.) that dispatched envoys and missions to Ethiopia and elsewhere in East Africa (cp. Orazio ↗Antinori, Arturo ↗Issel). Carlo ↗Piaggia, a geographer with a keen interest in flora and fauna, visited the Azande region penetrating the territory of Ethiopia up to Lake ↗Ṭana. His travel report, published in 1875 in the *Bollettino della Società Geografica Italiana*, aroused a great interest (Pellegrinetti 1941). A wave of business-like initiatives rose (cp. Luigi ↗Capucci). "Trade geography" gained major popularity and was generously funded by the new bourgeoisie of northern I. (cp. Gian Pietro ↗Porro). In Milan, Manfredo Camperio founded a periodical (*L'Esploratore*) committed to revealing the opportunities in Africa for merchants and entrepreneurs of the rich Lombardy. Cesare Correnti, president of the Società Geografica Italiana, acknowledged that Africa was a "trade vocation of I.".

Such tragedies as the massacres of the ↗Giulietti expedition near Lake Afḍera in 1881, of Gustavo ↗Bianchi and companions in Biḍu in 1884, of Porro and Giovanni Battista ↗Licata at Ǧildessa in 1886, or the ambush at Lafolé near Mogadishu that exterminated the expedition led by Antonio ↗Cecchi in 1896, inflamed the public opinion and stimulated action. Unlike other explorers, Cecchi, who had spent many years travelling in Eritrea, Ethiopia and Somalia (also together with Antinori and Giovanni ↗Chiarini) advocated political involvement and I.'s "civilizing mission" (Ribera 1940:308ff.). He stirred up the decision by Mancini to occupy ↗Massawa as a preliminary step towards Ethiopia. *I grandi italiani d'Africa*, a series by the Ministry of Italian Africa meant to celebrate the forerunners of the imperial conquest, opened with a volume dedicated to Cecchi (volumes were also dedicated to Antinori, Piaggia, Guglielmo ↗Massaja, Ferdinando ↗Martini, Francesco Crispi, Eugenio Ruspoli, among others).

Catholic ↗missions started to spread their wings before the occupation of territories, and peaked after the proclamation of the Empire in 1936 (cp. ↗Capuchins, ↗Lazarists; ↗Catholicism). Cardinal Massaja stands out for the influence he exercised at the court of Mənilək of Šäwa (later ↗Mənilək II) till his expulsion ordered by ↗Yoḥannəs IV in 1879 (he was the subject of a 1939 film by Goffredo Alessandrini, *Abuna Messias*). The ↗Missionari della Consolata opened a Prefettura apostolica in ↗Käfa in 1913. Other missions followed: Suore missionarie della Consolata in 1924, Padri Comboniani in 1936 (cp. also Armido ↗Gasparini), Pontificio Istituto per le Missioni estere in 1937.

Recent research (s. Podestà 1996, 2004) has highlighted how economic issues were pushing I.'s initiative in Eritrea, Ethiopia and Somalia. For many years, unaccountable stories were told of huge deposits of precious minerals. Rumours about the presence of ↗gold in the region of Asmära reached I. in 1897. Gold was mined until ↗World War I by an Italo-British joint venture Società Eritrea per le Miniere d'oro. Experts were divided as to the potential of the mines. Primizio ↗Gandolfi (1910) depicted the entire enterprise as wishful thinking and even as a plot orchestrated by Martini and his entourage to cheat the Italian public. The Società went bankrupt and was closed in 1914. Martini blamed the rebuff of foreign capital that should have saved the enterprise. And yet, later, in 1936, a state company (Azienda Mineraria Africa Orientale) invested a huge amount of money in ↗Ḥamasen with no positive result. The failure of the gold il-

lusion completed the frustrations concerning the bonanza I. awaited from the Horn. Gold mining was particularly harmful for the environment, contributing to pollution and deforestation of a wide region. The local workers engaged in the gold extraction industry were at most ca. 100 in one mine and 50 in another, hardly enough to form the aspired indigenous working class.

Italian authorities supplied weapons and dispensed proofs of goodwill both to Yoḥannəs and Mənilək, oscillating between the two rivals. In 1878–79, Pellegrino ↗Matteucci, Gustavo ↗Bianchi and Giuseppe ("Pippo") ↗Vigoni started a mission with the task of meeting the Emperor and taking him a sample of Italian goods. The final target of their journey was ↗Šäwa, but Yoḥannəs did not grant the needed authorization. Giovanni Giacomo ↗Naretti and his brother Giuseppe, who worked as a royal architect, were stationed at Yoḥannəs's court in ↗Mäqälä in the 1870s and 1880s. In 1876–80, Antinori led the "great expedition" from the Somali coast to ↗Ankobär. He took Mənilək a letter from the King of I. Vittorio Emanuele II (succeeded by ↗Umberto I in 1878), and opened a scientific station at ↗Ləṭ Maräfiya, which he headed until his death in 1882. That year, Pietro ↗Antonelli was appointed special representative of I. in Šäwa. The choice of Mənilək as a potential ally, in contrast to the Təgrayan line, found expression in the Treaty of Friendship and Commerce signed on 21 May 1883. The Left Governments, inspired by Mazzini's ideals, respected in principle the rights of peoples and national values, but the desire of emulating other European powers was indeed to cultivate the colonial issue. Crispi facilitated as much as possible the succession of Mənilək to the Solomonid throne (Palamenghi-Crispi 1928). After Mənilək's coronation, good relations between I. and Ethiopia were sponsored by such personalities as Augusto ↗Salimbeni and Cesare ↗Nerazzini. However, the intensification of the fighting and the dispute over the real sense of the Wəčale treaty of 1889 (↗Italo-Ethiopian treaty of friendship and commerce) ended in general warfare (↗Italian war 1895–96) that culminated into the rout of the Italian army at ↗ʿAdwa.

Ethiopia, and Africa at large, were dropped from the agenda of Italian policies. Martini departed in 1897 to take up the charge of first Civil Governor of the ↗Colonia Eritrea, entrusted with discreetly managing the colony and, if necessary, getting rid of it. It was deemed to be useless to waste in Africa resources badly needed for internal development. The Italian possessions in Africa were threatened more by a negative public opinion in I. than by a potential offensive by Mənilək or the manoeuvres of foreign powers. The Società Geografica Italiana put Africa aside and concentrated on studying home geography. Martini went against the mainstream: he first settled the problems of the borders of the colony and of the relations with Ethiopia, and then promoted his own idea of Eritrea, fostering a re-approach between the colony and Africa. The Colonial Congress he summoned in Asmära, the new capital city, from 25 September to 14 October 1905 marked the formal return of East Africa into the discourse of the Italian society and policies. The message transmitted through the Congress was that Eritrea could become profitable for I. if properly administered and exploited. In 1906, the pro-colonial lobby founded the ↗Istituto Coloniale Italiano. During his tenure, Martini introduced the Italian public to different aspects of Eritrean folklore, customs, arts, crafts, etc. in a number of exhibitions (*Mostre della Colonia Eritrea*) hosted in Italian cities (Florence, Ravenna, Milan) and in Asmära. They were an integral part of the Italian colonial policy, both raising funds and strengthening a colonial mentality (Labanca 1992).

A main target of the Italian expansion in East Africa were the wide land estates that were supposed to be void and untilled. At the beginning of the 20th cent., Gino Bartolommei-Gioli, Professor of Agrarian Sciences and director of the future Istituto Agronomico d'Oltremare of Florence, was charged by the Italian Government to survey the characteristics of the Eritrean soil. Whilst Martini did not personally support the program of white settlement in East Africa, farming assets were always taken into serious account. Gaining access to ↗Kärän and Asmära, and in the 1930s to the Ethiopian highlands, drastically transformed I.'s strategies as far as the agriculture potential was concerned. Italian agrarian scientists were requested to identify the best suited crops for those hard conditions. Alessandro ↗Lessona, a nationalist politician who became minister of the Colonies with Mussolini, fantasized of deploying "millions" of settlers (*coloni*) in Africa.

Ethiopia was the unspoken focus of the colonial project renewed after World War I. Italian policy makers maintained the basic point that Eritrea and Ethiopia were interlinked and therefore indivisible. I. did not thwart the admission

of Ethiopia to the ↗League of Nations. ↗Mussolini was initially against it, but he preferred to cast a positive vote for tactical reasons. In 1924 *ras* Täfäri (↗Ḫaylä Śəllase I) visited I. during his tour of Europe, and was received by the King at the Quirinale Palace, and by the Pope in the ↗Vatican – through which a considerable part of the Italian relationships with Ethiopia were to pass in the years to come. Täfäri's expectations were largely disappointed. Mussolini did not comply with his request to obtain an access to the sea through the Italian territories. Nevertheless, in 1928 I. and Ethiopia stipulated an agreement of co-operation championed by Giuliano Cora. The respect for Ḫaylä Śəllase as a person lasted until the coronation in 1930. Corrado ↗Zoli (1930:402–09), quoting a long correspondence by Guelfo Civinini to the *Corriere della Sera*, eulogized the Emperor as a great protagonist of the unification of the Empire, reformer and modernizer, open to cordial relations with foreign powers. However, the days of peaceful partnership were elapsing (Conti Rossini 1935). It seems that Mussolini had thought of invading Ethiopia already before 1925, and in 1932 the military plans were defined.

During the Fascist regime, I.'s colonial policy was more aggressive. At the same time, a great deal of research was devoted to surveying the archaeology, history, languages and civilizations, agriculture, climate, etc. of the African possessions, providing an impetus to the development of ↗Ethiopian studies in I. For reasons of propaganda, the results of such studies were sometimes manipulated. The proceedings of the three colonial symposia held in the 1930s are a witness to the commitment of Italian academy on Ethiopia and the other Italian colonies (Calchi Novati 1992:77–103). Italian writers and novelists produced a significant bulk of literature centred on colonial matter. Numerous feature films were produced (apart from the *Abuna Messias* such works as *Matrimonio abissino*, 1909, *Eritrea,* 1920 and *Il grande appello*, 1936, can be mentioned). An example of the ambiguity in the way of dealing with colonial topics is the only novel by Ennio Flaiano *Tempo di uccidere*, published in 1947 (adapted for the screen by Giuliano Montaldo in 1989).

The last round of the long story of Italo–Ethiopian relations was a naked aggression followed by usurpation and occupation (↗Italian war 1935–36). Nationalist outlook in I. had suffered since 1896 for the stigma of ᶜAdwa. Fascism was anxious to revenge ↗Baratieri and his troops, and

The Italian mining expedition of 1903 entering ᶜAdwa, Təgray; from Annaratone 1911:45

Mussolini exploited the ↗Wälwäl skirmish (cp. Roberto ↗Cimmaruta) to resolve the feud that had vilified a generation of Italians (Del Boca 1979:347). Historians, writers and journalists applauded Mussolini's enterprise with unprecedented emphasis. In his four-volume well-documented but largely unbalanced work (1936-38), the diplomat Luca dei Sabelli (↗Pietromarchi) justified the invasion as "a mission of justice" against "an island of barbarism" (vol. 4, 209ff.).

Thanks to the invasion of Ethiopia and the creation of an Empire for King ↗Vittorio Emanuele III, the Duce attained nation-wide consent, an unparalleled peak in the 20 years of the Fascist regime. Filippo Tommaso Marinetti called the writers and artists of Italy to join the war in Africa. His appeal was picked up, among others, by the playwright Sem Benelli, who reneged on his previous criticism of the regime and left voluntarily for the front (Benelli 1937). Mussolini's instruction to the nation of the newly proclaimed Empire was to start a new life, less bourgeois and more heroic. The journalists were exhorted to spread the new morale, and many popular writers followed this request (Bacchelli 1937; Gotta 1938). The opposition of intellectuals and anti-Fascist militants in exile was an exception (Procacci 1978). While Pius XI disapproved the Duce's initiative, the Catholic Church did not officially condemn the aggression. Reginaldo Giuliani, a chaplain on a voluntary basis, described the invasion in his writings as a "crusade"; when he died on the battlefield his "martyrdom" was exalted by the regime heralds.

The commanders in chief of the Italian army had a different approach: De ↗Bono was considered a moderate, and Mussolini replaced him with ↗Badoglio, who became the first viceroy of the newly-created ↗Africa Orientale Italiana (A.O.I.) and solicited an almost immediate turnaround. His successor as Governor General in Addis Abäba, Rodolfo ↗Graziani, distinguished himself for the harsh repression after the bomb attack against him in February 1937. Only Amedeo di ↗Savoia Duke of Aosta, appointed in December 1937, tried to establish a *modus vivendi* with Ethiopia's population (the "politica dei capi"). His administration smoothed the transition after the surrender of I.'s colonial and military apparatus.

In the 1920s and 1930s, I. enhanced the communication system – the ↗railway network, the port of Massawa and the roads – both for strategic reasons and in order to improve the conditions for cultivation so as to attract new immigrants. The Touring Club Italiano (later Consociazione turistica Italiana) produced detailed maps and well-researched guidebooks for the colonies, in the same style it did for metropolitan I. (*Guida* 1929, 1938). New exploration ventures included the Centro Studi per l'A.O.I. (1937, directed by Giotto ↗Dainelli; cp. also Vinigi Lorenzo ↗Grottanelli). The better lands were expropriated to facilitate the settlement of Italian families. The feudal structure of ↗land tenure was partially subverted, wherever it was feasible, through the introduction of private ownership and capitalist farming in big estates with Italian masters and African manpower. The rule of law was used to justify and validate land appropriation. The expansion of the cash economy weakened the hold of the traditional chieftains, inaugurating the creation of a Western-oriented middle class. ↗Urbanization in the highlands largely commenced during the Italian colonial period, and native quarters developed around Italian residential and manufacturing areas. The ↗education system was extended, but natives were excluded from government secondary schools and most of the teaching was done by missionaries. The local languages (Təgrəññña, Amharic, Arabic, etc.) were used for teaching in the primary schools of A.O.I (↗Language policy). I. introduced a colonial legal system in A.O.I., where the use of ↗customary law in local context was recognized, being subsidiary to state law (↗Law and Judicary: legal history). The army offered the main job opportunity to Eritrean men until the mass demobilization at the arrival of the British in 1941. I. avoided employing "indigenous soldiers" (↗*askari*) in the wars in Europe, "a crime" committed by other colonial powers as believed by Tritonj (1941:310). Since Martini's government in Eritrea, I. had cherished the Muslims to undermine the alliance between dynasty and the Church that was the backbone of the Empire. Mussolini amplified the pro-↗Islam approach hoping to weaken Ethiopia and to acquire sympathies in countries like Libya.

The ↗press in Italian began in 1891 with *Il* ↗*Corriere Eritreo*, an official weekly, followed a few months later by another weekly, *L'Eritreo*. In the Fascist years *Il Corriere Eritreo* became the daily paper of the Federazione dei Fasci di Combattimento of Asmära (editor Vanni Teodorani). *Il Quotidiano eritreo* included a page in Amharic and one in Arabic.

In the multifaceted society which grew under the Italian administration, gender relations became a controversial issue (Palumbo 2003, Stefani 2007). Above all in Eritrea, unions between Italian men and African women generated a number of *meticci*, whose status was ill-defined by both rules and social perception. The racial legislation adopted in 1939, based upon the theory of a superior race, prohibited mixed relations, whether marriages or concubinage ("madamato").

Even though the Italian colonial power had evaporated already by 1941, I. left a lasting imprint on the region's institutional, social and economic structure. Traces of the Italian presence are still visible, particularly in terms of urban solutions (some buildings in Addis Abäba including the ↗Addis Kätäma and *Pyasa*; s. also ↗Asmära: architecture; ↗Massawa: architecture), ↗food, customs and even, to a certain extent, linguistic and cultural expressions (↗Italian language). Some of the Italian names attributed to geographical sites (e.g., lakes Giulietti, Margherita, Ruspoli, etc.) survive beside the local denominations.

The long-term consequences of colonialism on society, its impact on the mentality of the elites and the collective imagery influenced political life in the Horn throughout the 20th cent. Lacking a former strong colonial power, however, Ethiopia, Somalia and Eritrea got trapped in a milieu of intense and often violent confrontation. Ethiopia became a major actor. It was vital for Ḫaylä Śəllase to find the support of a superpower, that he cleverly identified in the United States, to comply with his country's master role in the region and preserve the territorial integrity, also with regard to the in-

corporation of Eritrea and ↗Ogaden. I. assumed an equidistant stance in the regional disputes, but often shared Eritrean and Somali national causes rather than Ethiopia's claims. Nevertheless, the Italian government did not counter the annexation of Eritrea to the Ethiopian Empire in 1962 (↗Ethiopian–Eritrean Federation) and was ineffective in helping to solve the Eritrean question (Del Boca 1992:225–76; Wrong 2005).

With the return of Ḫaylä Śəllase, Ethiopia recovered full sovereignty. Amnesty was granted to collaborators. A few thousand Italian families remained in Ethiopia and were employed widely as engineers, medical doctors and technicians. Arturo Mezzedimi gave a remarkable contribution to the re-styling of Addis Abäba building public edifices and residential boroughs.

The process of the normalization of diplomatic relations between Ethiopia and I., appeased thanks to the efforts of such envoys as Renato Piacentini and Giuliano Cora, took time. It was necessary to know the outcomes of the UN decisions on former Italian possessions. Some Ethiopian ministers were afraid that I. was going to reinstate a colonial or semi-colonial presence in the Horn, especially after the UN entrusted I. with the administration of Somalia. The boundary between Ethiopia and Somalia was doomed to be a durable bone of contention. The Italian government chose Giuseppe Brusasca, a Christian-democrat with a past of resistance to Fascism, to conduct the final talks with Ethiopia and show the democratic face of new I. Good relations were affected by the predicament of war damages payment and the restitution of art items seized during the occupation, in the application of the peace treaty imposed in 1947 and the bilateral agreement signed in 1956 once the diplomatic relationships were re-established. The ↗Aksum stela was only returned to Ethiopia in 2005. The former settlers created a revanchist lobby in I. However, even associations sympathetic with the colonial venture (e.g., Istituto Italiano per l'Africa, Gruppo Bottego) facilitated the mutual comprehension, arranging visits of Italians to Ethiopia.

In November 1970, Ḫaylä Śəllase was finally able to embark on his long-awaited journey to I. Crowds gathered in railroad stations to hail the Emperor, repaying him for past humiliations. The visit ended with Ethiopia being granted a loan of 50 million dollars. In I., however, the acceptance of a true parity with Ethiopia and the former African colonies was neither immediate nor universal, and for a long time, the national ethos, biased by the stereotype of "Italiani brava gente", did not want to admit the atrocities accomplished against Ethiopia and her people.

Ethiopia and Eritrea have an important part in the Italians' memory. Many were born in Africa or to Italians who were born or lived in the Horn. Photographs and postcards transmit scenes of daily life and family sketches (Goglia 1989; Palma 1999, 2005). The preference lies with Eritrea, so that during the border conflict of 1998-2000, the Italian public opinion leant upon the the "first-born colony's" side. Ethiopia captures rather the benevolence of the left wing culture for the ↗resistance to imperialism and fascism.

Modern Italian scholarship on Ethiopia was founded by Ignazio ↗Guidi of the University of Rome, who trained two outstanding scholars: Francesco ↗Gallina and Carlo ↗Conti Rossini. Gallina, in his turn, taught such prominent Islamicists as Alfonso ↗Nallino, Giorgio Levi della Vida, and such Ethiopianists as Luigi ↗Fusella and, especially, Enrico ↗Cerulli. With his concern for history, literature and languages of Muslim peoples (Oromo, Somali), Cerulli furthered the shift in I.'s care towards the periphery of the Horn. Like many other Orientalists of the period, including Conti Rossini and Martino Mario ↗Moreno, Cerulli held important positions in the AOI administration. This prevented him later from playing any significant role in the post-war reconciliation between I. and Ethiopia. An important legacy for future relations was the ↗International Conference on Ethiopian Studies, which Cerulli inaugurated in Rome in 1959. Whilst only one Ethiopian participated in the first ICES, many more scholars from Addis Abäba took part in the Roman ICES of 1972. In 1973–83 Cerulli promoted yearly seminars of Ethiopian studies at the headquarters of the Accademia dei Lincei in Rome under the direction of Stefan ↗Strelcyn. The Ethio-Eritrean region has kept an unquestionable primacy in the interests of I.'s universities and scholars: Ethiopian studies have been pursued with continuity and competence above all at the ↗Istituto Universitario Orientale of Naples, also through the journal ↗*Rassegna di studi etiopici*, founded in 1941 by Conti Rossini.

Ethiopia (and Somalia) have been among the countries most benefited by I.'s not always transparent aid policy ("cooperazione allo sviluppo") in infrastructure, industry and agriculture projects, and in higher education.

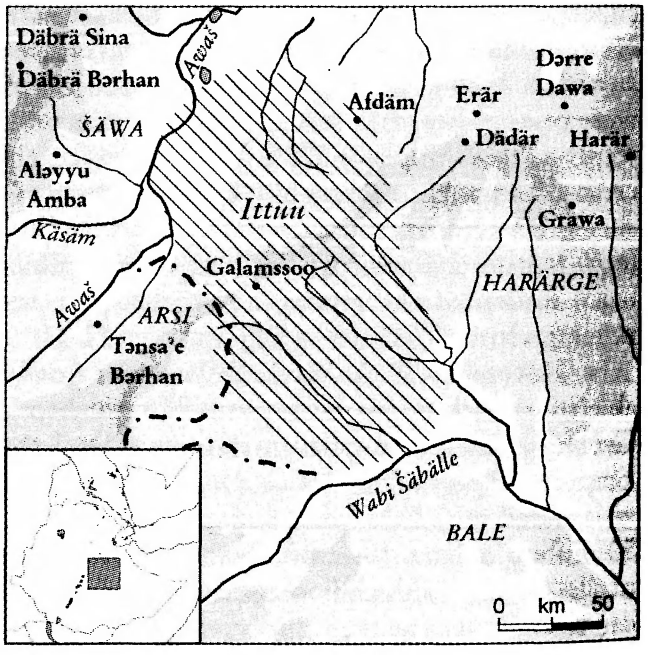
Ittuu

The I. (also written Itu, Etu, Ettu) are part of the ↗Baarentuu section of the Oromo, traditionally regarded as descending from the "fifth son" of the Baarentuu ancestor. They were one of the three major Baarentuu confederacies who migrated from Mormor in the ↗Bale region to ↗Harärge during the first half of the 16th cent., the other two being the Afran Qallu (↗Qottu) and the ↗Anniyya. For all three groups, Mormor was their land of origin and the sacred land of their ↗*abbaa muudaa*. After their migration, the three groups installed a common ↗*čaffee* assembly at Odaa Bultum in ↗Čärčär. At the beginning of the 18th cent. the *čaffee* was replaced by three separate assemblies, but Odaa Bultum remained an important religious centre for all the three. Until 1900 Oromo pilgrims from Harärge on the way to *abbaa muudaa* at Mormor had first to visit Odaa Bultum, which was regarded as the "well-spring of traditional Oromo wisdom" for the three groups (Tasaw Merga 1976:72f.).

The new homeland of the I., with its centre in Čärčär, bordered on the regions of Bale in the south, ↗Arsi in the west, ↗Šäwa in the north, and the ↗ᶜAfar desert in the north-east. The traditional boundary between the I. and Afran



Qallu was the Burqa river, while that between the Afran Qallu and Anniyya was the Moǧo river.

The I. of Č̣ärč̣är developed into two confederacies, Galaan (consisting of six ↗*gosa* or clans: Alga, Baabbo, Elle, Gaamo, Gaadulla and Qallu) and Kura (with four *gosa*: Addayye, Arrooǧǧii, Bayy and Waayyu; s. Demissie Mikael 1974:32; BTafA 771; Badri Kabir Mohammed 1995:11).

By 1600 the I., famous for their equestrian skills, appeared to have been the most powerful Oromo group in Harärge, probably due to their formidable cavalry (Mohammed Hassen 1983:174). This military power may have been the reason for other Oromo to ask the I. to join their attack on the region of ↗Goǧǧam across the Abbay in 1612 (PerChron 139ff.). The I. warriors forced *aṣe* ↗Susənyos to a full mobilization for the protection of this rich province. Through force of arms and diplomacy, he managed to win over I. warriors, settling them in Goǧǧam and Dämbəya, and requiring them to protect these provinces from the attacks of other Oromo groups (BTafA 337).

In Č̣ärč̣är, the I. settled among sedentary ↗Harari and possibly ↗Ḥarla farmers. In the process of assimilation, the two cultures, sedentary agricultural and nomadic pastoralist, became mutually dependent. By the end of the 18th cent., the I. mode of production changed into sedentary agriculture combined with cattle-keeping. Land became a measure of wealth giving rise to a land-owning nobility known as *abbaa burqaa* ('father [or master] of the spring').

After their migration into Č̣ärč̣är, the I. were exposed to Islamic influence radiating from the city of ↗Harär. Muslim traders, preachers, teachers and ↗holy men crossed the land of the I., and ↗mosques and Qurᶜānic schools were established in several places in western Harärge. Yet, before the late 19th cent. few I. had converted to ↗Islam. Following the conquest of the I. by *däǧǧazmač* ↗Wäldä Gäbrəʾel in 1886, however, the I. converted *en masse*, Islamic faith being for them a form of rejection of the ↗*gäbbar* system imposed upon them by *aṣe* ↗Mənilək II (Braukämper 2002:116-20; Mohammed Hassen 1999:101).

The I.'s resistance against central Ethiopian regimes following the conquest is famous amongst the Oromo. Several of the first Oromo nationalists were I. Muḥammad Ǧilo led a famous rebellion in Č̣ärč̣är in 1948. The first Oromo Liberation Front guerrilla army started armed struggle in Č̣ärč̣är in 1974 (Mohammed Hassen 2000:124; ↗Liberation movements).

By using the fertility of their land intelligently, the I. have made their region the breadbasket of Harärge. They grow coffee, *č̣at*, *ṭeff*, maize, sorghum, finger millet, beans and oil seeds, produce honey and breed cattle. The fattened bulls of Č̣ärč̣är are famous throughout Ethiopia.

Mohammed Hassen

Ityopis

I. (**ኢትዮጲስ**, also Aithiops, Ethiops etc.) is a legendary personage mentioned in the **ዘሀገር፡ ወገበዘ፡ አክሱም** (*Zähagär wägäbäzä Aksum*, 'About the Country and the Cathedral of Aksum'), a 15th-cent. text dealing with the historical topography of the city of ↗Aksum, which immediately precedes the first part of the collection known as the *Mäṣḥafa ↗Aksum*. There, as an apocryphal addition to the table of generations of Gen 10:7, I. is the son of Kush and grandson of Ham, and thus the great-grandson of Noah. According to this source, I.'s grave was at Mäzəbər, the original foundation spot of the Gäbäzä Aksum (↗Aksum Ṣəyon) until ↗Makədda moved this temple to "the land of ᶜAsba" (and later, Kings ↗Abrəha and Aṣbəha built it on the church's present place). The text, though in uncertain reading, honors I. as "the father of the Ethiopians" (CRAxum 3, 6).

The archaeological site identified as Mäzəbər was recorded by the ↗Deutsche Aksum-Expedition on the outskirts of Aksum (DAE I, table 27) but remains largely unexplored. The age of the tradition concerning I. cannot be determined with certainty. The name "I." may be a local deriva-

tion from the Greek name ↗Aithiopía or, rather, Aithíops ('Ethiopian', Gr. Αἰθιοψ. fem. Αἰθίοπις).

Included in the 15th-cent. work, the tradition of I. must go back to an earlier (most probably oral) source. However, it cannot be excluded that "I., a son of Kush (Kʷəsa)" emerged thanks to the intensive inquiry into the biblical text by traditional ↗*andəmta* scholars, who might have realized that in other versions of the Bible ↗Kush[ite] stands sometimes for Ethiopia[n] of the Gəᶜəz text, and elaborated upon this (e.g., Num 12:1; cp. Bərhanu Dənqe 1959:10; s. also ↗Gihon).

I. appears to have been a pivotal element of the local traditions of Aksum and the eponymous ancestor, via ↗Aksumawi (the legendary founder of Aksum) and Mäläkya (Mälake) Aksum, of the "six fathers of Aksum". The names of the "six fathers" are supposed to have given rise to the names of the several districts or suburbs of the city.

The story of I. as attested in the *Zähagär wägäbäzä Aksum* refers to the period prior to the most important point in Ethiopian traditional history: the story of the Queen of Sheba's visit to King Solomon and the arrival of ↗Mənilək I and "the first-born sons of Israel". Thus, the story of I. is a reference to the old pre-Christian and even "pre-Semitic" Ethiopia, underlining the Ethiopians' origin from Kush, as opposed to the legacy of Sem, "imported" by Mənilək I (Makəbda being, according to the tradition, a Kushite).

I. is not attested elsewhere in Gəᶜəz ↗historiography. There is a tradition which strives to link I. directly to Makəbda's legend, with I., rather than ↗Angäbo, being the one who killed the serpent ↗Arwe, reigned and was succeeded by Atrayn, Sarayn and Makəbda (Conti Rossini 1917:701f.; cp. DAE I, 40). However, the official Ethiopian annals, including those of Yoḥannəs IV and Mənilək II, (deliberately) ignored I. In the late 19th–early 20th cent. I. was "re-discovered" by a few Ethiopian traditional scholars advancing a new historiography of the expanded Ethiopian empire; they tried to introduce I. into the complex picture of eponymous fathers, origins and relationships of different ethnic groups. An example is the late 19th-cent. historiographic work by ↗Fəśśəha Giyorgis ᶜAbiyä Ǝgziᵓ (1987:1f., 5ff., 9), who, elaborating on a passage from the *Zähagär wägäbäzä Aksum*, considered the people of Təgray descendants of I. (the Israelite origin being reserved only for the royal line). Another example is Aṣmä Giyorgis Gäbrä Mäsiḥ who viewed I. as the father of Soba, Noba (↗Soba Noba), ↗Bäläw and Käläw (BTafA 206f.; cp. Gäbrä Iyäsus Abay 1961:9). The most extravagant elaboration was produced by *aläqa* ↗Täyyä Gäbrä Maryam in his *History of the People of Ethiopia*, by stating that I. was an offspring of Sem via Yoqtan (Täyyä Gäbrä Maryam 1965/66:18ff.), and providing him with an exact chronology. Also, *aläqa* Tayyä introduces another king by the same name (ibid. 10, 58), but elsewhere comes to a genealogical scheme similar to that of Aṣmä Giyorgis (ibid. 48). Since the main source *aläqa* Tayyä refers to in his *History* is his another extensive writing of which the *History* may be an abbreviated version (s. Tayyä Gäbrä Maryam 1987:VI–X), it is not always clear how he reached his conclusions.

I.'s name was given to one of the first journals of Ethiopian studies, ↗*Æthiops*.

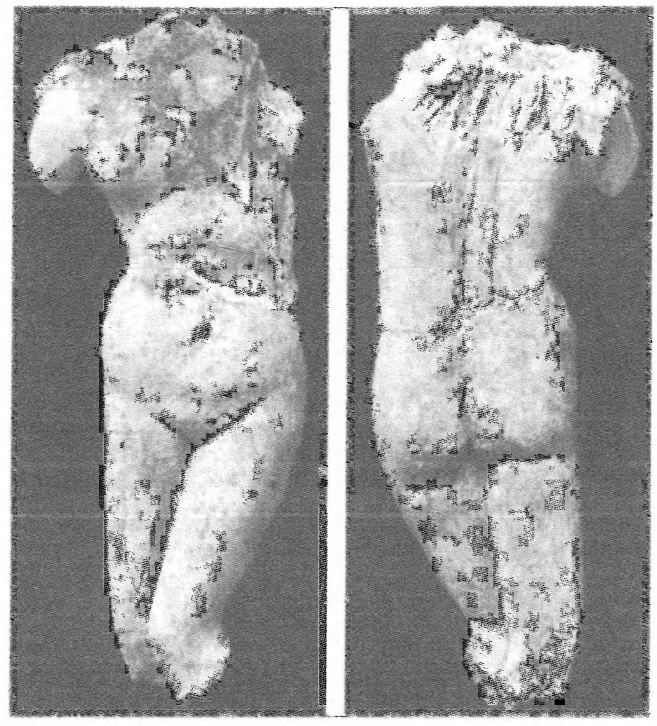
Ivory

I., or, more precisely, the 'elephant tusk' (Gəᶜəz **ቀርኑ፡ ነጌ**, *qärnä näge*, Amh. **የዝሆን፡ ጥርስ**, *yäzəhon ṭərs*, Tgn. **ናይ፡ ሓርማዝ፡ ስኒ**, *nay ḥarmaz sənni*, Orom. *ilka*, Gr. ἐλεφας, Lat. *ebur*, Arab. ᶜāǧ) sometimes, however, meaning also '↗hippopotamus tusk), was the main organic material for both ceremonial and practical objects, as well as for appliqués for furniture and doors. Produced in Africa and ↗India, it played a major role for sev-

eral thousand years in the commercial and cultural history of those regions – esp. of Ethiopia and the Horn of Africa – and the relevant ↗trade with the Mediterranean world. Here, the availability of this exotic and lustrous good varied greatly, but its appeal was quite constant.

Tusks almost certainly originating in the Ethiopian zone were exported in early ancient times from the Land of ↗Punt. This is indicated in Queen Hatshepsut's inscription at Thebes, in Upper Egypt, which describes an expedition despatched by her down the Red Sea around 1495 B.C. (Breasted 1952:274–78; ↗Kush). The Biblical Book of Kings (9:26–8; 10:22) likewise tells of King Solomon (ca. 974–32 B.C.) importing I. from the Land of ↗Ophir (cp. ↗Makəḍḍa). Later, the Ptolemies used to hunt elephants in the zone of "Berenikē" – whether "Berenikē Pánchrysos" or "Berenikē epì Deirês", both on the Red Sea, it is sometimes difficult to ascertain (Desanges 1978:295ff.).

Later still, towards the half of the 1st cent. AD, the ↗*Periplus of the Erythraean Sea* records that I. was exported from the port of ↗Adulis, and, further east, on a smaller scale from the gulf or district of Avalites, i.e. modern ↗Zayla^{c}; three days inland from Adulis the settlement of ↗Coloë is described as "the first market for I.", which "from beyond the Nile", via Kyēneion (i.e. ↗Sinnār[?]), is taken all to Aksum and then down to Adulis (§§ 4 and 7, ed. Frisk 1927:2f.; cp. Huntingford 1980:87–90). The importance of the I. exports of Adulis was confirmed by ↗Pliny (*Nat. hist.* VI, 34, ed. Rakham 1947:466f.), and later, in the early 6th cent. by the Egyptian traveller ↗Cosmas Indicopleustes, who states that large elephant tusks from Ethiopia were sent "even into India, Persia, and the Homerite country [Arabia] and the Roman dominion" (*Top. Christ.* XI, 23, ed. Wolska-Conus 1973:355; and also mentions the export of hippopotamus teeth (*ibid.* XI, 9, ed. Wolska-Conus 1973:333). The Aksumites, according to recent archaeological research, also carved I. "to a very high level of artistry and technical sophistication" (Phillipson 1998:56, 81f.). Material dating from the 4th to the 7th cent. were recovered during excavations in Aksum suggests not only that I. was present in considerable quantities, but also that it was shaped, turned, carved and employed with skill for a variety of purposes, as a part of a long-standing and accomplished tradition: such is the case, e.g., for the furniture (throne?) panels with vine motives and a female



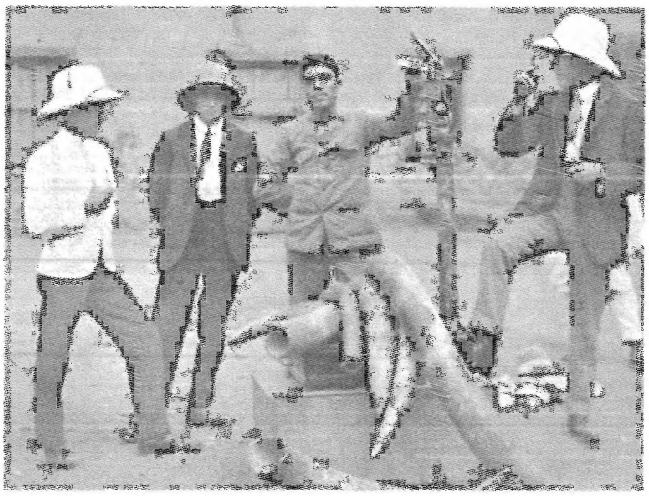
Late antique ivory figurine from the Tomb of the Brick Arches in Aksum; from Phillipson 2000, II, 461, fig. 404

late antique figurine – not a true carving in the round, but two low reliefs conjoined – from the Tomb of the Brick Arches (Phillipson 2000, vol. 1, 113–24 and figs. 97–106, vol. 2, 460–68 and figs. 403–14).

From the beginning of the 4th cent. to the 6th cent., when Egypt and then Syria and Constantinople (where craftsmen kept alive an earlier tradition) became prominent sources of worked I. (as against bone carving), the latter was comparatively cheap: in the age of Diocletian, it cost one fourth less than an equivalent weight of silver. Hence abundant ornaments, statuettes, icons, diptychs, caskets and boxes (esp. pyxides) for medical, liturgical and other uses.

I. trade seems to have been disrupted in the late 6th/early 7th cent., to be only resumed in the 10th cent., when I. became a coveted substance in Europe and the Near East. In the meanwhile, Islamic craftsmen took the lead in I. carving from Spain and Sicily, from Syria to Egypt (where the Copts maintained the older tradition of intarsia decoration, vs. that of incrustation favoured by the Muslims). However, their artefacts – caskets, combs and crosiers with painted and gilded ornaments – show a strong influence of Byzantine techniques (Pinder-Wilson 1960:201ff.).

Little is known for the following centuries, but I. continued to be imported there from East (and West) Africa, hardly replaced by India, as



The ivory customs station of Harär, expedition of the British traveller Bentley; from von Kulmer 1910

it scarcely produced enough for its own needs (ibid., 200; cp. Raschke 1978:656 and n. 1141a [933ff.]). In fact, Arabfaqīh (*Futūḥ al-Ḥabaša*, BassHist 31) and the Armenian merchant Mateus in the 16th cent. (BeckHuntAlvar I, 55), the Jesuit Barradas (1996:35, 114), Lobo (tr. 1984:58, 60, 98) and Ludolf (1684:398), Poncet (tr. Foster 1949:155) and Bruce (BruNile I, 275) in the 18th cent., all indicate considerable I. exports, mainly via Massawa and Ḥərgigo. Trade also took place through Zayla^{c}, Berbera and Mogadishu, as well as along the western route from Ethiopia to Egypt via Sudan (Pank-Econ 348, 358f., 353, 355).

As a result of improved ↗fire-arms, used in elephant ↗hunting, I. exports expanded steadily starting from the early 19th cent. (PankEcon 248–52). Tusks were by then transported along the principal trade routes, via Gondär, Alәyyu Amba, Harär and later Addis Abäba, to the ports of Massawa and Zayla^{c}, and subsequently by rail to Djibouti.

The I. trade of Gondär by the second half of the century was estimated at around 30,000 kg a year, or a value of 12,600 Maria Theresa thalers, and that of Massawa at something between 29,000 and 74,000 kg, or 46,000 to 86,000 Maria Theresa thalers. Harär exports by the year 1899/1900 were valued at 51,000 kg or 40,000 Maria Theresa thalers, and those of Addis Abäba at 35,000 kg, or 600,000 Maria Theresa thalers (PankEcon 351, 364, 400, 412). I. was traded through Djibouti for 1,216,325 Francs in 1908, 2,245,775 Francs in 1909, 1,360,875 Francs in 1910, the yearly average of exports from Ethiopia being 1,25 million Francs. The peak in the year 1909 is due to a large-scale sale by *aṣe* Mənilək II, who considerably increased his government's revenue through that (Zechlin 1913:43f.). In the late Mənilək's times, I. export developed considerably: 25 tons in 1906, 49 in 1907, 60 in 1908 ([Naggiar] 1909:13), 88 in 1909 ([Id.] 1910:6). However, after that it considerably decreased, owing both to the extinction of elephants in many regions and to the selling of the I. stores of the emperor and a few local governors (Zechlin 1913:44).

Throughout this time, I. was an important source of government revenue. In 1913 the export reports of the Ethiopian state have it that an elephant tusk was subject to a tax of 27 Maria Theresa thalers per 16.66 kg (= one frasula), which is supposed to correspond to approximately 10 % of the price of that good (Zechlin 1913:35). The custom by the mid-19th cent. was that a successful hunter yielded the sovereign one every two tusks, and this was soon understood in terms of the first tusk to touch the ground. *Aṣe* ↗Mənilək II, in return, gave the hunter a honorific ring to be placed in the ear as a mark of distinction (PankEcon 509). Thus, according to a commercial report of 1904, the emperor received about 35 to 40 tons of I. per year (Department of Commerce and Labor 1904:31).

The near-extinction of Ethiopian elephants in the early 20th cent., as well as restrictions on hunting, led to a dramatic decline in the I. trade. Exports via Djibouti thus fell from 64,000 kg in 1910 to 26,000 in 1920 and a mere 3,000 in 1930 – and only 300 in the following year (PankEcon 432).

I., though long a major export item, was also used in the country itself (BeckHuntAlvar I, 303; Barradas 1996:60, 62, 65, 114). Some of the walls of Gondär palaces were decorated with it (PankHist I, 26, 131). King ↗Sahlä Śəllase's workers in Šäwa made I. bracelets (↗Jewellery) and chess-pieces (Combes – Tamisier 1838:84); by the early 20th cent., Oromo craftsmen were turning a great number of I. cups, combs, spoons and forks, ear-picks, tatooing points, earrings, and pen-holders, as well as ↗crosses and ↗sword-hilts (Mérab 1929:401, 415; PankEcon 357).

I. also plays a role within the ↗meritorious complex of several ethnic groups: e.g., killer's insignia were often made of I. (VSAe II, table 23:8ff., 12).

Richard Pankhurst – Red.

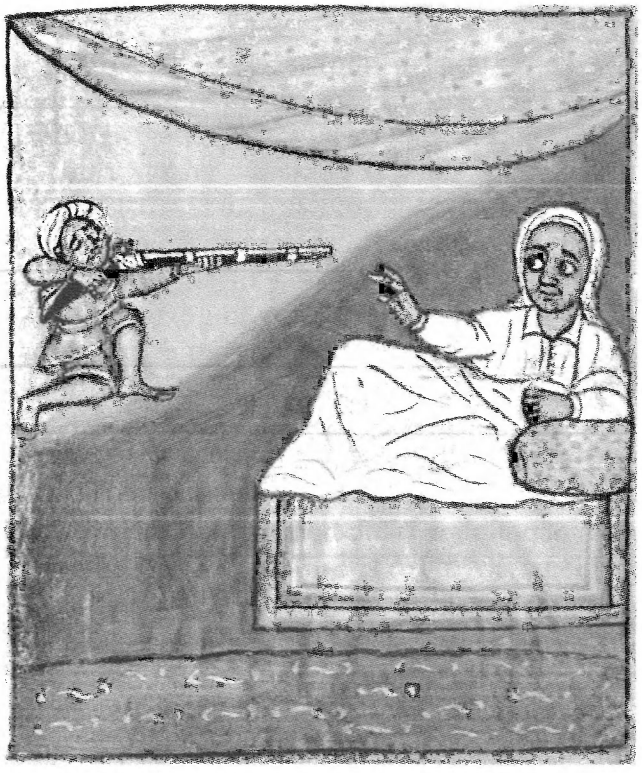
Iyasu I

Aṣe I. (ኢያሱ; also known as "I. the Great", b. ca. 1658/59 [Poncet 1838:613], d. 13 October 1706), considered one of the most significant monarchs of the ↗Solomonic dynasty, ruled the ↗Gondärine kingdom from 1682 till 1706. Son of *aṣe* ↗Yoḥännəs I and *ətege* Säblä Wängel, I. inherited the governorship of Səmen after the death of his brother Yosṭos in 1676 (GuiIohan 18, 59). He rebelled against his father in 1681 and negotiated his own succession, so that the day Yoḥannəs died, 19 July 1682 (GuiIohan 50–55, 59ff.), he finally ascended the throne, taking the name of Adyam Sägäd.

In September 1683, he married Wälättä Ṣəyon of Ḥamasen (d. 1694; GuiIohan 66, 178). His four sons who reigned later were all by his concubines. ↗Täklä Haymanot, the son of ↗Mäläkotawit who encouraged him to seize power from his father, was enthroned in 1706. By ↗Qəddəstä Krəstos, I. had five children (cp. GuiIohan 244, BassÉt 166f.), including ↗Dawit III and ↗Yoḥannəs II. *Aṣe* ↗Bäkaffa was the son of Maryamawit.

I. managed to maintain the royal presence over a large territory. He repeatedly checked Oromo raids in various regions, and several times raided the ↗Kunama ("Šanqəlla") in the area of the Märäb and Bäläsa rivers. In 1692 he obtained homage from Mūsā, the ↗*nāʾīb* of Massawa. I. was the last Gondärine monarch to reach as far as ↗Ǝnnarya in the region of Gibe, in 1704. He built up his power by visiting such symbolical places as the old – and then remote – monastery of Däbrä Libanos in Šäwa (1699) and, above all, ↗Aksum Ṣəyon. *Ṣäḥafe təʾəzaz* ↗Ḥawarya Krəstos, the author of the Chronicle of I., claims that I. saw the ↗Ark of Covenant in 1691 and even talked to it, receiving advice from it on how to govern his kingdom (GuiIohan 158f.).

A great benefactor of the Orthodox Church, I. restored the ↗*gʷəlt* lands, laws and privileges of Aksum Ṣəyon in 1687, and granted land to further churches, such as ↗Märṭula Maryam in Goğğam (GuiIohan 70ff., 78, 158ff.; s. CrumLand 87ff.). In December 1682, he had a church built in honour of St. Täklä Haymanot close to the royal palace (GuiIohan 62, 272f.); the most important ecclesiastical foundation of his reign was the church of ↗Däbrä Bərhan Śəllase in Gondär, consecrated in 1694 (Raineri 1992:222; GuiIohan 176f.; Bosc-Tiessé 2001:156–60).



Death of *aṣe* Iyasu I; miniature in ms. *Mäṣḥafä Śəllase*, fol. 10r, 19th/20th cent., church of the Trinity, Č̣äläqot, Təgray; photo 1993, courtesy of Michael Gervers

In his struggle against regional separatism, in 1698 I. undertook the reform of customs' posts (GuiIohan 206ff.; cp. ↗*Kella*), aiming at stopping the uncontrolled taxation of goods (particularly ↗Salt) on the trade-routes from Ǝndärta to Gondär and, thereby, neutralizing rebellious ↗Lasta. In addition, he established a new hierarchy of titles and ranks at court (GuiIohan 152f.; Berry 1976). Like his father, he sent the Armenian merchant ↗Murād as an ambassador to the Dutch Indies (DonMurad 61–148).

I. gave preference to the religious doctrine of the "Unionists" (↗*Täwaḥədo*) and supported the "house of *abunä* Täklä Haymanot" (the monastic congregation of ↗Däbrä Libanos of Šäwa), mainly relying on the legendary pact (↗*Kidan*) between *aṣe* ↗Yəkunno Amlak and the Saint which was believed to have preserved the Solomonic dynasty throughout centuries (s., e.g., GuiIohan 193, 272). After a number of church councils, Christological discords still raged, and I. had Metropolitan *abunä* ↗Sinoda deposed and *abunä* Marqos IV installed in 1693. At the council summoned in 1698 the "Unctionists" (↗*Qəbat*) were forced to accept the official "Unionist" formula (GuiIohan 214ff.).

I. fell ill in 1699–1700 and was treated by the French apothecary Charles-Jacques ↗Poncet, who travelled to Ethiopia with the French Jesuit Xavier Brevedent. Then, the ↗Franciscans Giuseppe Maria di Gerusalemme and Benedetto and the ↗Jesuits Grenier and Paulet stayed at I.'s court. I. then charged Poncet with an embassy to King Louis XIV and sent at least two letters to Pope Clement XI (BudHist vol. 2, 42ff.; Raineri 2005, no. 52). Bruce saw I.'s inclination towards Catholicism as the reason of his assassination.

The royal Chronicle of I. (GuiIohan) stops in 1704, and the "short chronicles" give different accounts on the events of the years 1705–06 (cp. e.g. BassÉt 167–71; BegCron 82–87; Raineri 1992:231–40; Bosc-Tiessé 2001:215–20). After a campaign to ↗Ǝnnarya in 1705, I. fell ill again and went to ↗Gännätä Giyorgis and to Ǝnṭonəs island, where he had built thermal baths for a cure; thereafter (June – July 1705), he appointed his son Täklä Haymanot ↗*bitwäddäd*.

By that time, the situation of I. had become increasingly precarious (cp. ↗Tullu). On 8 March 1706, the nobles in Gondär enthroned Täklä Haymanot against the will of I., who was still on Lake Ṭana (on ↗Däq). In late July, Täklä Haymanot compelled his father to reside under surveillance in his palace on Č̣əqla Mänzo island. Threatened by the Goğğame troops who intended to restore I. to the throne, Täklä Haymanot sent his maternal uncles, Dərmən and Ṗawlos, who murdered I. when he refused to go into retreat to ↗Wähni Amba. His remains were deposited by the monks of Lake Ṭana on the island of Məṣraḫa, in the royal cemetery I. had established there (Bosc-Tiessé 2001:138–49). With this assassination, unstable times began.

The end of I. found reflection in miniatures (Bosc-Tiessé 2001:211–15). A Vita of I. was written by *azzaž* ↗Sinoda, probably between 1709 and 1711, during the reign of I.'s brother ↗Tewoflos (Conti Rossini 1942:66f., 124). The hagiographic piece was meant to reaffirm the legitimacy of the dynasty; I. was proclaimed a "righteous martyr" on account of his death (↗Martyrdom) and a commemoration (↗*Täzkär*) was introduced for him.

Iyasu II

I. (ኢያሱ, royal name Adyam Sägäd, b. 17 June 1723, d. 26 June 1755), son of *aṣe* ↗Bäkaffa and Məntəwwab (↗Bərhan Mogäsa), reigned in the ↗Gondärine kingdom from 1730 till 1755.

According to Bruce, Bäkaffa met Bərhan Mogäsa by chance in ↗Qʷara, liked her and ordered her be brought to ↗Gondär (BruNile II, 597ff.). On the contrary, I.'s Chronicle reports that Bäkaffa found Məntəwwab, a noble young lady, after a long search and miraculous events (GuiIyas 21). However, both sources agree that, after his birth, I. was mostly held outside the capital and brought up by Bäkaffa's officers.

The end of Bäkaffa's reign was clouded by rivalries among his officers, which was probably the reason why Bäkaffa suddenly summoned his son to Gondär in June 1730. However, he died soon thereafter in September, and Məntəwwab's kinsmen at the court, led by her great uncle, *grazmač* ↗Niqolawos, announced the last will of Bäkaffa to be that I. would be his successor. Niqolawos organized a hasty ↗coronation of the seven year-old boy as emperor and, soon thereafter, Məntəwwab as regent. These acts marked the beginning of the rapid rise of the Qʷara clan at court. Within two years Niqolawos was made ↗*dägğazmač* of Səmen, then ↗*ras*, and, finally, ↗*bitwäddäd*. This turn of events produced strong opposition from the old courtiers of Bäkaffa, such as ↗Tänśe Mammo, former *bitwäddäd* Lafto and former *ras* ↗Elyas. When Niqolawos died on 18 December 1732, they proclaimed as emperor a certain ↗Həzqəyas and besieged the palace compound in Gondär. During fighting in December and January, some buildings were burned, and the rebels persuaded *abunä* ↗Krəstodolu, *əčč̣äge* ↗Täklä Haymanot, and *ᶜaqqabe säᶜat* ↗Wäldä Ḥawaryat to excommunicate I., Məntəwwab, and all their supporters on the pretext that they were harbouring "Franks" (cp. ↗*Färäğ*) in the palace. I. and Məntəwwab were rescued at the last minute by soldiers led by two provincial governors, *dägğazmač* ↗Wäräññä of Damot and *azzaž* Giyorgis of Goğğam. The rebels were defeated, and Tänśe Mammo was hanged.

This unfortunate beginning set the tone for succeeding years, when I. reigned but Məntəwwab, with assistance from her brother, *ras* ↗Wäldä Lᵊul, ruled. It was an era of diminishing royal authority. The court, nonetheless, maintained control over the heartland of the kingdom (s. ↗Dämbəya), even as more remote regions, such as ↗Šäwa, became increasingly independent. Indeed, military power was passing into the hands of powerful provincial governors, whose offices

became hereditary – a tendency detrimental to the central authority. The court resorted to several means to maintain its control, such as reshuffling offices and promotions (↗*Šum šərr*), enlisting the help of powerful members of the Qʷara clan (like *ras* Wäldä Ləᶜul), and arranging conjugal unions. To this end Məntəwwab made her son divorce his wife (of Amhara origin) and marry Wäbi (or Wubit, Christian name Bersabeḥ), a daughter of Amiṭo, an Oromo chief from ↗Yäğğu (BudHist 459). Using these methods, the court still could keep the shaky balance and play the role of the supreme arbitrator.

I.'s insignificance was no secret. He was given the name of his grandfather, *aṣe* ↗Iyasu I, famous for his campaigns, and the same royal name, but the comparison worked against him: James ↗Bruce reported about a satirical parchment circulating in Gondär, entitled *The Expeditions of Iyasu the Little*, which described in the high-flown style of official records his casual moves around the city, as if these were dangerous military expeditions (BruNile II, 635).

At the same time, most of the reign of I. and Məntäwwab was, in fact, the last period of relative peace and both economic and cultural prosperity, for the city of Gondär in particular, before the turbulent ↗*Zämänä mäsafənt*. At great cost impressive buildings were constructed (frequently with the help of Greeks and Armenians), such as the churches of Qəddus Yoḥannəs, Abunä Ewosṭatewos, and ↗Narga Śəllase, as well as the complex of ↗Däbrä Ṣäḥay Qʷəsqʷam, the palaces of I. and Məntəwwab in Gondär, to name but a few. The religious controversies which raged in the 17th and 18th cent. (↗Christology) were to a certain extent put on hold, the party of *Qəbat* having the upper hand. After the death of *abunä* Krəstodolu, there was no metropolitan until 1745, the year when *abunä* Yoḥannəs was brought with great difficulties via Massawa (cp. ↗Giyorgis the Egyptian). In 1747 I. expelled a usurper-metropolitan – a Syrian priest, who acted under the auspices of *ras* ↗Mikaᵓel Səḥul. Three ↗Franciscans, thought to be physicians, were initially welcomed at court, but they were also driven out under pressure from the Orthodox clergy (Remedius ↗Prutky).

For a while, the court managed to check revolts (Wäfa Nabute from Wägära, defeated by *ras* ↗Wädağğe; Aykar, a "messiah" from Lasta; a false "King Bäkaffa"; Wäldä Zäray from Lasta) and reconcile internal rivalries (such as the one between *däğğazmač* Ayo and *ras* Wädağğe). Efforts were undertaken to enhance royal control over outlying regions (e.g., I.'s visit to ↗Aksum, Təgray; campaigns against *märədazmač* ↗Abbəyye of Šäwa; the Lastan ↗Näᵓakkʷəto Läᵓab, and the ↗Balaw-people), but the campaign to ↗Sinnār in 1744 ended in military disaster (↗Bādī; ↗Funğ; ↗*Kʷərᵓatä Rəᵓəsu*).

Towards the end of I.'s reign, there were internal difficulties, aggravated above all by the open struggles between different factions in Gondär (Oromo, Amhara, Goğğamis, Qʷarans etc.). Finally, I. died at the age of 32 during an epidemic and was buried at Däbrä Ṣäḥay Qʷəsqʷam. As usual in Ethiopia, in instances of an emperor's premature death by means other than in battle, there were rumours that he was poisoned (Paris, BN, ms. d'Abbadie 153, fols. 3v–4r), but they were probably wrong and politically motivated. I. was suceeded by ↗Iyoᵓas, his son by Wəbit.

Iyasu III

Aṣe I. III (ኢያሱ, r. 1784–88, royal name Bäᶜalä Ṣäggab) was a puppet king of the early ↗*Zämänä mäsafənt*. His father *abeto* Aṣqu was the son of *aṣe* ↗Iyasu II and grandson of *ətege* ↗Bərhan Mogäsa.

I. was enthroned in February 1784 by the powerful *ras* ↗Ḫaylu Yosedeq of Goğğam, I.'s rela-

tive and principal protector, and the rising *balambaras* (later *däğğazmač* of Bägemdər then *ras*) ↗Ali Gʷangul. Ḫaylu and Ali asked *däğğazmač* ↗Ḫaylä Mikaʾel Ǝšäte for help, which the latter refused (s. Guidi 1902:78f.; BlunChr 96f. [text]; Kropp 1989:19). Ḫaylu and Ali still succeeded in defeating *aṣe* ↗Täklä Giyorgis at Afäräwanat and chasing him off to ↗Ambassäl. The subsequent intrigues of *ras* Ḫaylu prevented *däğğazmač* Ḫaylä Mikaʾel from marrying Ali's niece, and made him withdraw to ↗Maḫdärä Maryam.

Aṣe I.'s enthronement caused the first interruption in the long and sporadic reign of *aṣe* Täklä Giyorgis. Given the brevity of I.'s reign, a surprising number of records remain that detail his involvement in issues related to land. For example, he resolved conflicts over land and granted numerous ↗*gʷəlt* lands to individuals on behalf of the churches of ↗Däbrä Ṣäḥay Qʷəsqʷam and ↗Däbrä Bərhan Śəllase in Gondär; he gave land inhabited by the ↗Betä Ǝsraʾel paying a tax of 30 ↗*amole*, to *balambaras* Rämha.

After a short period, a quarrel arose between *ras* Ḫaylu and *ras* Ali; the latter captured I. in battle and reinstalled Täklä Giyorgis. I. died soon thereafter; Täklä Giyorgis, however, was again deposed, this time by ↗Aligaz.

Iyasu IV

Aṣe I. IV (ኢያሱ, r. 1831) was the son of *aṣe* ↗Sälomon II, who was the son of *aṣe* Täklä Haymanot II (r. 1769–77). I. was typical of the puppet rulers of the late ↗*Zämänä mäsafənt*, reigning for seven months in 1831 in the aftermath of the battle of Däbrä Abbay, which occurred in February of that same year. However, standard lists place his reign in 1830–32 (cf. CrumLand 146).

I. was the protégé of *ras* ↗Dori Gugsa, who, from the time of the battle until his death in June 1831, succeeded his father, *ras* ↗Gugsa, and his great-uncle, *ras* Ali Gʷangul, as ruler of the domains of the Wärräsek (↗Yäğğu), which included much of Bägemdər and Wällo. Dori was succeeded by ↗Ali Alula, and I. was briefly succeeded by *aṣe* ↗Gäbrä Krəstos in 1832. On leaving office, I. retired to the monastery of ↗Waldəbba. I.'s reign was uneventful.

Iyasu

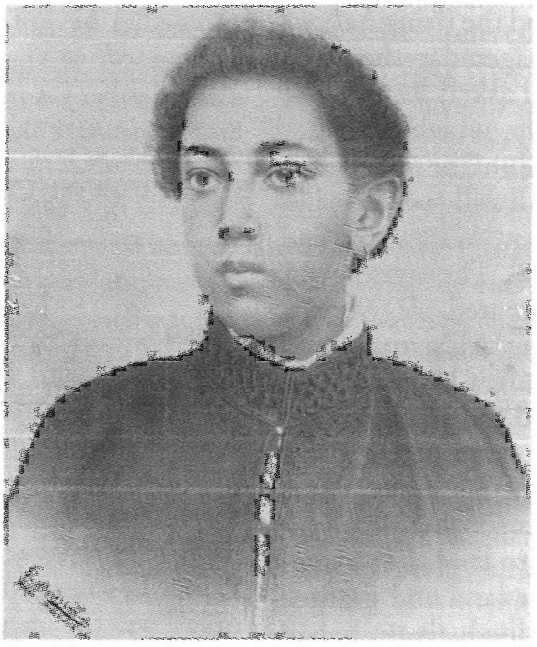
Ləğ, also *abeto* I. (ኢያሱ; b. 3 February 1897, Däse, Wällo, d. November 1935; "horse name" Abba Ṭena አባ፡ ጤና, also known as I. Mikaʾel, I. Mənilək, "Iyasu V", long form: *ləʿul ləğ* [also *alga wärraš*] *Iyasu wäldu lädagmawi Mənilək nəguśä nägäšt zäʾItyoṗya*, 'His Highness [the Crown] Prince I., son of Mənilək II king of kings of Ethiopia') was the uncrowned ruler of Ethiopia, from 1911 (*de facto*) or 1913 (*de jure*) until his deposition in 1916. His reign has been one of the most enigmatic and controversial in Ethiopian history. Maligned as a playboy and an apostate by *aṣe* ↗Ḫaylä Śəllase I, he had effectively been written out of the history books for much of the 20th cent. Only after the latter's deposition in September 1974 have there been some attempts to rehabilitate him. Yet, his true character and historical worth has remained elusive to this day. However, enough data has surfaced in the past few decades to cast serious doubt on the image of religious apostasy and total irresoluteness that his enemies had attributed to him.

I.'s father was the powerful ruler of Wällo, *ras* ↗Mikaʾel (né Muḥammad ʿAli) and his mother was Šäwarägga, daughter of *aṣe* ↗Mənilək II. That is why I. was sometimes referred to as I. Mənilək, after his maternal grandfather. I. was born the day of the Saviour of the World (Mädḫane ʿAläm) in the Ethiopian calendar, the holiday he himself later commemorated by consecrating the Qäḳäne Mädḫane ʿAläm church in the northern part of Addis Abäba.

At the age of seven I. was taken to the court of Mənilək. When the Mənilək II Secondary School was opened in January 1907, I. became one of its first pupils, along with *ləğ* Täfäri Mäkʷännən and other children of the nobility. After the death of *däğğazmač* Wäsän Sägäd Wädiğo Gobäna in 1908, another son of Šäwarägga from an earlier marriage, whom Mənilək had groomed to be his successor, the Emperor set his eyes on I. On 13 May 1909, Mənilək officially designated I. heir to the throne in a moving proclamation that reminded his countrymen of the civil strife

that had followed the deaths of ↗Tewodros II and ↗Yoḥannəs IV and enjoined them to honour his will to avert a recurrence of such tribulations.

As I., aged twelve, was still a minor at the time of the proclamation, *ras* ↗Täsämma Nadäw, a scion of the Šäwan nobility, was appointed his regent, with the elevated title of *ras bitwäddäd*, and I. moved to his compound. The regency, however, was not taken over by Täsämma even after Mənilək fell seriously ill, and was unable to govern starting from the fall of 1909. Soon, I.'s succession was disputed by Mənilək's powerful spouse, *ətege* ↗Ṭaytu, who had her own plans for imperial succession, revolving around Mənilək's daughter, ↗Zäwditu, and her husband, *däğğazmač* ↗Gugsa Wale, Ṭaytu's nephew. Ṭaytu's schemings came to a dramatic end when mass agitation orchestrated by her opponents, led by Täsämma and *fitawrari* ↗Habtä Giyorgis, led to her removal from de-facto-regency in 1910.



First official photo of the new heir-to-the-throne *ləğ* Iyasu, 4 July 1907, given to Emperor Wilhelm II of Germany; photo by P.M. Boyadjian, from Smidt 2005:67

Täsämma, who was the winner of the showdown, died suddenly on 11 April 1911. I., now just over 14 years old, thereby suddenly found himself with untrammelled power and was ready to act as emperor. But first he had to face the challenge from the powerful *ras* ↗Abatä Bʷayalaw, who, reportedly in a bid to inaugurate his own regency, confronted the palace guards. Abatä was thwarted and ended up imprisoned in ↗Mäqdäla. The palace guards equally proved a formidable barrier to I. some two years later, when, apparently encumbered by the slowly dying body of the old Emperor, I. reportedly tried to remove him to ↗Ankobär.

These obstacles did not prevent I. from exercising regal power and introducing some of the reforms that have redeemed him historically, even before he actually assumed the reins of power following the death of Mənilək in December 1913. Some of the reforms attributed to I. include the abolition of the ↗*qʷəräññä* system, whereby plaintiff was chained to defendant and creditor to debtor, pending justice; mitigation of the abuses of the traditional theft detection system known as ↗*leba šay*; alleviation of the inequities attending the collection of tithe (↗*Aśrat*); institution of the city guards known as *ṭərəmbuli* (named after Tripoli in Libya, as most of the recruits were returnees after serving in the Italians' Libyan campaign, s. ↗Police); and guaranteeing property through a ban on its confiscation for such wrongdoings as embezzlement. In addition, he introduced a system of auditing government accounts to check the embezzlement of government funds that had begun to assume serious dimensions.

I.'s reign also marked the first serious attempt to address the issue of the country's religious and ethnic pluralism. While *aṣe* Mənilək had been able to forge modern Ethiopia, he had achieved that largely through blood and iron. True, he had respected the relative autonomy of such regions as Asosa Beni Šangul, Áwsa, Ğimma Abbaa Ğifar and Leeqaa Qallem and Leeqaa Naqamtee, largely because the rulers of those regions had submitted to him peacefully. However, it was during the reign of I. that historically marginalized groups such as Muslims of the Ethiopian highlands and peoples such as the Somali and ᶜAfar were made to feel for the first time that they belonged to Ethiopia.

This is not to say that I. was blameless. Sometimes, he himself invalidated his own well-intentioned measures. Thus, the auditing system that he instituted was used to victimise people he did not like. His nocturnal escapades brought him into armed clashes with the *ṭərəmbuli* who were enforcing the curfew he himself had authorized. His almost compulsive tours of the country might have had the merit of making him accessible to his subjects. Occasionally, too, they resulted in the founding of new towns such as Ṭənaye in northern Šäwa, now known as Sänbäte. However, sometimes they assumed nefarious dimensions, as in his 1912 campaign to the ↗"Gimira" (mainly ↗Benç and ↗Nayi) in south-western Ethiopia which resulted in the enslavement of

tens of thousands of the local population and a deportation of many of them.

The end of I. was not brought about by the suffering of the Benç and Nayi but the deep-seated resentment of the established (mainly Šäwan) nobility and the adjacent colonial powers. To both of them, I. represented a serious threat. The former felt not only shunned but also humiliated, especially when I.'s father was crowned as *nəguś* of Wällo and Təgray in 1914, thereby making him the most powerful prince in the country. It is of interest that, while he arranged a lavish ↗coronation ceremony for his father, I. himself remained uncrowned till the end. He is thus known in history as *ləǧ* or *abeto* I.

To the neighbouring colonial powers, he represented a demonic influence on their colonial subjects, at a time when they were locked in mortal combat with the Germans and the Turks during ↗World War I. It appears that I. saw the war mainly as a godsend that would give Ethiopia respite from the covetous attentions of the surrounding colonial powers. I.'s close contacts with the Ottoman Consul-General, his indirect contact with Istanbul through that channel, and promises made in this process, helped depict I. as Germanophile and Turcophile (cp. ↗Germany; ↗Maẓhar *bey*; ↗Ydlibi; Erlich 1994:83–91). The moral and material support that he rendered the Somali nationalist leader, ↗Muḥammad ʿAbdallāh Ḥasan, who had been fighting the British and Italian colonial rulers for much of the first two decades of the 20th cent., lent some credence to this allegation.

It was the alliance of these two forces – domestic and foreign – that brought about I.'s deposition in September 1916 (s. the proclamation in Morin 1999:260), while he was away on one of his frequent trips to Harärge. At a public gathering in Addis Abäba on 27 September, he was charged with disrespect for the deceased *aṣe* Mənilək and antagonizing the country's powerful neighbours. But the main charge became religious apostasy, with numerous facts adduced and star witnesses produced to drive the point home. It was decided to dethrone him and replace him with Zäwditu as Empress and *däǧǧazmač* Täfäri Mäkʷännən (now elevated to *ras*) as heir to the throne (s. the proclamation, Morin 1999:260). Too late, he rushed back to the capital, only to be intercepted and defeated at Mäʾesso, midway between ↗Awaš and ↗Dərre Dawa. His father's more serious attempt to turn the tide was quashed at the Battle of ↗Sägäle on 27 October.

Ləǧ Iyasu in captivity, probably in Gara Mulläta, Harärge; photo taken (in secret?) by an unknown photographer; from the collection of Täsämma Ǝšäte, courtesy of Tadele Y. Tessema

After unsuccessful attempts to defeat the central government forces in a series of engagements in Wällo, I. became a fugitive for about five years. During most of this period he was the guest of the autonomous *sulṭan* of ↗Awsa, ↗Yāyyó Maḥámmad Ḥanfaḍé. I. was finally captured in a church in Təgray in January 1921. He was imprisoned in ↗Fəčče, fief of *ras* ↗Kaśa Ḫaylu, trusted cousin of *ras* Täfäri. In May 1932, I., assisted by *ras* ↗Ḫaylu Täklä Haymanot of Goǧǧam, escaped from prison. However, he was captured in Goǧǧam and this time confined under much harsher conditions at ↗Gara Mulläta, Täfäri's own stronghold in Harärge. He remained there until his death, the circumstances of which are still far from clear. One version has it that he was killed at Gara Mulläta before Ḫaylä Śəllase marched to the north to face the Italian forces. Another version is that he was moved to Addis Abäba in November 1935 and died or was killed soon after.

With his marriages I. had linked himself politically with very diverse political and economic leaders, like *ras* Ḫaylu of Goǧǧam, the Muslim merchant ↗ʿAbdullāhi ʿAlī Ṣādiq in Harär, the Ōbakartó lineage of ↗Zaylaʿ (mother of his son

↗Mənilək), ↗Ǧimma Abbaa Ǧifaar, ↗Anfillo-Oromo and others. The legacy of I. survived through his offspring, issue of about a dozen marriages. These children included Gərma, who died while in exile in Kenya during the Fascist Italian Occupation; ↗Mälakä Ṣəḥay, *däğğazmač* Yoḥannəs, who assumed leadership of the anti-Fascist patriotic movement in, respectively, Šäwa and Gondär; ↗Mənilək, who lived much of his life in Djibouti; and ᶜAläm Ṣəḥay, the issue of his marriage to Säblä Wängel, daughter of *ras* Ḫaylu of Goğğam.

Bahru Zewde

Iyasu of Ǧär Śəllase

I. (**ኢያሱ**; b. 1468, d. 13 October 1508) was an Ethiopian monk and saint. According to his Acts (Raineri 1990:165–265), he was a native of a place "west from Amhara" and a son of Täklä Maryam and Maryam Kəbra. He was ordained deacon by the metropolitan ↗Yəsḥaq and was one of the ecclesiastics "of the royal church" (*kahənatä däbtära*). He took his monastic habit from abbot ↗Märḥa Krəstos at ↗Däbrä Libanos of Šäwa, where he stayed four years.

After a short stay with his family, I. went to a place called Qʷətərəh, to serve Ləya, a pious woman. There he met the saint ↗Habtä Maryam, who had received a divine order to disclose to I. his secret knowledge. After some hesitation, I. was convinced the truth of Habtä Maryam's accounts, became the latter's disciple and witnessed his visionary experiences. They were ordained priests together. Habtä Maryam also sent I. to *aṣe* ↗Naᶜod with a "book explaining the faith in the Holy Trinity". The Emperor gave I. two crosses, which he accepted, and offered him to stay at the court, a proposal declined by I. Once, he also escaped the harassment of an "adulterous woman", thanks to the help of his disciple Zärᵓa Abrəham.

I. brought Ləya to Däbrä Libanos, where she took the monastic habit, but was not allowed to remain. I. stayed at the monastery with Habtä Maryam, working miracles. By the day of Habtä Maryam's death (on 22 November 1497), I. returned from his native country to Däbrä Libanos, to mourn his teacher. The "spirit" of Habtä Maryam directed I. to a place outside the monastery. There he founded a (rock-)church – most probably the church Mäkanä Ṗäraqliṭos Amlakənä, which was kernel of the monastery ↗Ǧär Śəllase. Later on, I. moved with his community to the vicinity of Däbrä Libanos where, according to his Acts, he composed the Vita of Habtä Maryam. He died of plague at the age of 40 on 16 *Ṭəqəmt* and was buried in the tomb of Habtä Maryam.

Almost nothing is known of his community in the centuries after the death of I.; yet, thanks to its remoteness and inaccessibility, Ğär Śəllase seems to have survived the 16th-cent. Muslim wars and the Oromo expansion much better than Däbrä Libanos, and to have preserved the old Šäwan monastic tradition. The monastery of I. also appears to have been revered by Šäwan rulers; visiting Däbrä Libanos in 1883, *nəguś* ↗Mənilək requested its monks to follow the rules of Ğär Śəllase (GueCopMen 331).

Iyäsus Moʾa

I.M. (**ኢየሱስ ሞአ**, b. 21 May 1214, d. 22 November 1293) is a saint of the ↗Ethiopian Orthodox Täwaḥədo Church. According to the version of his Acts (↗*Gädl*) used by Stanisław Kur for the edition (KurMoa, the source on I.M.'s life most usually quoted), he was born in Daḫna, Bägemdər. In his thirties he went to ↗Däbrä Damo, where, after seven years of novitiate, he received the monastic habit and scapular from *abba* ↗Yoḥanni. Then he left Däbrä Damo and went to the church dedicated to Peter and Paul on the shores of Lake ↗Ḥayq. After six months, I.M. moved to the church of St. Stephen, a supposed "Aksumite" foundation on the island in the middle of the lake, where he established the monastery of ↗Däbrä Ḥayq Ǝsṭifanos. In ca. 1248, he became its first abbot, appointed by one of the kings of the ↗Zagʷe dynasty "who reigned after King Lalibäla", i.e. ↗Näʾakkʷəto Läʾab.

According to the Acts of I.M., it is through the latter's prophecy that ↗Yəkunno Amlak overthrew ↗Yətbaräk, the last Zagʷe ruler, ascended the throne and reinstalled the ↗Solomonic dynasty in ca. 1270. As a sign of his gratitude, he donated the island of Däbrä Ḥayq Ǝsṭifanos to I.M. and concluded with him a number of "pacts" (↗*Kidan*). On establishing the priviliges of Däbrä Ḥayq Ǝsṭifanos, Yəkunno Amlak promised it "one third of the kingdom", ordered the removal of all women and lay people from the island, endowed the monastery with the right of offering ↗asylum and appointed one of I.M.'s disciples, ↗Zäʾiyäsus, ↗*ʿaqqabe säʿat* (a title previously reserved for the abbots of ↗Däbrä Libanos of Šəmäzana). This distinction was retained by the heads of Däbrä Ḥayq at least until the 16th cent.

The Acts of I.M. say that I.M. did not sleep "on his side" but in the sitting position, according to the rule of Pachomius, during his 51 years of monastic life, and that he never left his island (in fact, he was prevented from doing so by Yəkunno Amlak). The Acts claim that among the disciples of I.M. there were such saints as ↗Täklä Haymanot, ↗Aron of Däbrä Daret, ↗Giyorgis of Sägla, ↗Gäbrä Nazrawi, ↗Bäṣalotä Mikaʾel, ↗Bäggəʿu and ↗Ḫirutä Amlak. I.M. died on 26 *Ḫədar* (for the year s. KurMoa 50f.; s. Schneider 1983:105f.; Tedeschi 1994:509f.).

The historicity of I.M. is confirmed by records in the so-called Gospel book of I.M. (EMML 1832), an ancient manuscript dating to 1280/81 A.D., which also contains numerous historical notes of great value (Taddesse Tamrat 1970:90; cp. EMML 1832, fol. 24b; cp. ↗*Wängelä wärq*), some of them later incorporated into the *Gädlä Iyäsus Moʾa* (cp., e.g., Kropp 1998). The same manuscript provides a list of a large collection of manuscripts which I.M. supposedly left to Däbrä Ḥayq upon his death (EMML 1832, fol. 25ab; cp. Sergew Hable Selassie in OrbAethChoj vol. 1).

The hagiographic sources regarding the life of I.M. are complex, multi-layered and at times contradictory; they have been the subject of considerable scholarly interest and debate. At least two versions of the Acts of I.M. exist. The edited version (KurMoa), known for some time (s. Conti Rossini 1922:282–91), has been thoroughly studied (e.g., Kaplan 1986; Kropp 1998, 2003; DerDom 88–96; Kropp, Hirsch in HirKrSaints etc.). Cerulli (KurMoa xv [tr.]) suggests that these Acts should be dated to the second half of the 15th cent., but others have suggested later dates (Kropp in HirKrSaints 195ff.; Nosnitsin 2005:223–35). In fact, the published Acts are a unique composite work constructed from a number of oral and written accounts (Cerulli in KurMoa i–xvi; Kropp in HirKrSaints 197ff.; Nosnitsin 2005). The compilation includes also a Homily (↗*Dərsan*) in honour of I.M. (s. Marrassini 1986), probably the earliest hagiographic account on I.M. indeed dating from the early 15th

Miniature depicting Iyäsus Moʾa, "Gospel book of Iyäsus Moʾa", 1280, Ḥayq, Däbrä Ḥayq Ǝsṭifanos, fol. 5v; photo 2000, courtesy of Michael Gervers

cent. (cp. Kropp in HirKrSaints 194; Nosnitsin 2005). Another version of the Acts has been recently identified (ms. Ṭānāsee 164). This text seems to occupy an intermediate position, dating from after the Homily but before the published Acts, perhaps to the late 17th/early 18th cent. (cp. Nosnitsin 2005:230ff.). In both the Homily and the Acts according to ms. Ṭānāsee 164, the historical details found in the published Acts are missing. There is also a number of Miracles (↗*Täʾammər*) of I.M. (s. Marrassini 1986:182–90). The oldest pictures of I.M. are found in EMML 1832 fol. 5b and in the so-called Gospel book of Krəstos Täsfanä (Pāwlos Ṣādwā 1952:14f.; today Addis Ababa, National Library, ms. 28).

The development of hagiographic traditions concerning Yoḥanni, I.M. and his "spiritual kin" *abunä* ↗Täklä Haymanot was influenced by the rivalry within the Ethiopian monastic movement – in particular by the rise of the "house of Täklä Haymanot" in the ↗Gondärine kingdom. From ca. the late 17th cent., in order to prove "the spiritual superiority" of the saints, traditional scholars addressed also the issue as to which parts of the monastic garb (cp. ↗*Askema*) they bestowed upon each other (a problem also much debated in modern scholary works: Cerulli in KurMoa vi–x; DerDom 105–09; TadTChurch 164–67; Marrassini 1986; Kaplan 1986; Nosnitsin 2005:210–35). This issue was linked to both the alleged roles I.M. and Täklä Haymanot played in the "restoration" of the Solomonic dynasty and the claims of their more recent "spiritual descendants".

Even though I.M. was one of the most prominent heads of Däbrä Ḥayq, his support for Yəkunno Amlak's struggle for the throne is mentioned neither in the records of ms. EMML 1832, nor in the Homily. Quite plausible from the historical point of view, such an account is preserved in full only in one version of the Acts of I.M.; before entering the work's composition, it must have been an oral tradition of Däbrä Ḥayq (cp. Conti Rossini 1922:292f.). Beginning from the late 16th cent., *abunä* Täklä Haymanot (and not I.M.) gradually came to be credited with being Yəkunno Amlak's ally in the latter's rise to power (cp. BassÉt 9f.): an ideological position that had complete expression in the treatise ↗*Bəʿəlä nägäśt*. In this context, the *Gädlä Iyäsus Moʾa* can be considered as a "response" of the monastic circles linked to Däbrä Ḥayq, its effectiveness being reduced by the limitation of I.M.'s cult, not comparable with that of Täklä Haymanot. Still, in discussing the "restoration" of the Solomonic dynasty, some sources conflate the two different traditions, accomodating both I.M. and Täklä Haymanot (DombrChr 152).

Stanisław Kur – Steven Kaplan – Denis Nosnitsin

Iyoʾas I

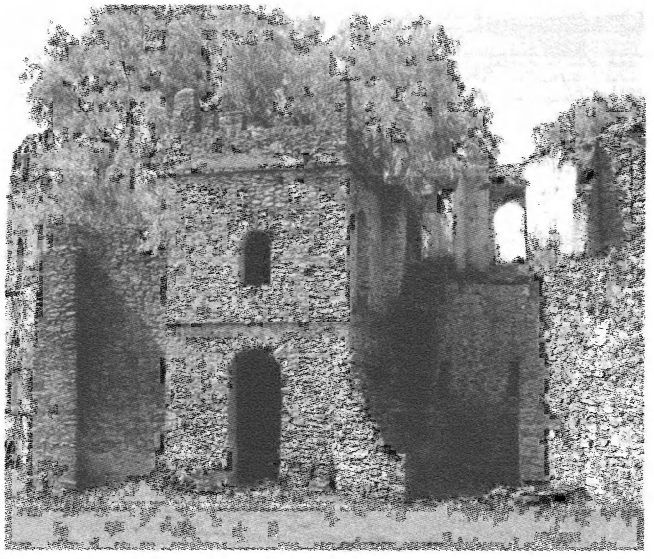
I. (ኢዮአስ; royal name Adyam Sägäd; b. ca. 1749, d. 1769, ↗Gondär) reigned in the ↗Gondärine kingdom 1755–69. He was the son of *aṣe* ↗Iyasu II and Wəbit (Christian name Wälättä Bersäbeḥ), daughter of Amiṭo, an Oromo chief from ↗Yäğğu. The marriage of I.'s parents had been arranged by Iyasu II's mother, ↗Bərhan Mogäsa (Məntəwwab) and was an attempt to reinforce the collapsing Gondärine court and a sign of the acknowledgement of the growing strength of the Oromo in the central highlands.

I. was a minor when he ascended to the throne, his grandmother acting as regent – a situation similar to that at the time of Iyasu II's enthronement. In the 14 years of his reign, he was little more than a figurehead, yielding power to whoever influenced him. Backed by her relatives from ↗Qʷara (the *Qʷaräññа*), his grandmother Bərhan Mogäsa acted as regent. Her relations with I.'s mother Wəbit soon became tense, and the latter engaged the support of the Oromo, many of whom were appointed at court. One of I.'s maternal uncles, *däğğazmač* Lubo, rose to prominent position and held significant power. I. himself was fluent in Oromiffa, the language which became common at the court. Thousands of Oromo troops were also stationed in the capital.

The struggle for power amongst several factions continued till the mid 1760s, the most notable being between I.'s Oromo relatives, the Qʷarans and the Amhara (with such leaders as *ras* ↗Wädağğe). After the death of the powerful *ras* ↗Wäldä Ləʿul, the conflict broke out into full-scale war between the Qʷarans and Oromo by 1768 (GuiIyas 227f. [text]).

This discord was used by *däğğazmač* ↗Mikaʾel Səḥul of Təgray. He had been Bərhan Mogäsa's ally for a number of years; looking at his growing strength, she solidified the alliance in 1755 by the marriage of Mikaʾel's son Wäldä Ḥawaryat to her daughter ↗Alṭaš. In 1763, Mikaʾel naturally intervened in the controversy evolving around the theological doctrine propagated by Yäʾabbo Barya, ∃šäte, *abba* Wärqu and some others (↗*Karra*), having welcomed Yäʾabbo Barya in Təgray and supported his teaching in Gondär (GuiIyas 198ff. [text]; there are diverse reports). Later, at the behest of I. and the dowager Empress, *ras* Mikaʾel was invited to Gondär and was granted the title of ↗*ras*. He entered the capital in January 1768 and intervened in the dispute, acting with cruelty in order to reestablish peace and order (BruNile vol. 2, 683ff.). I. was "recrowned" with the crown brought by Mikaʾel, reportedly the one which Iyasu II lost during his unsuccessful Sinnār campaign. I. and Bərhan Mogäsa removed the office of *bəḥt wäddäd* (↗*bitwäddäd*) from *däğğazmač* Geta, one of the major Qʷarans, and gave it to *ras* Mikaʾel.

In 1769 *ras* Mikaʾel defeated and killed, with the help of *däğğazmač* Lubo, the governor of Bägemdər *däğğazmač* ↗Yämaryam Barya, his greatest enemy. However, fearing that Mikaʾel Səḥul had accumulated too much power, all the other factions united against him and made I. their partisan. The same Lubo was able to rally the support of some of the Amhara nobility, and I. tried to drive Mikaʾel Səḥul out of Gondär, where he was holding court like a king. In Gondär there was an attempt on his life, which, according to the chronicles, was orchestrated by Lubo and the Oromo faction. The attempted assassination combined with I.'s alignment propelled Mikaʾel Səḥul to take direct control of the office of emperor. Mikaʾel might have believed that as long as I. was emperor his position was assailable. In the spring of 1769, Mikaʾel Səḥul defeated Lubo's coalition and had I. deposed; then he enthroned the old and weak ↗Yoḥannəs II, and had I. strangled (GuiIyas 251 [text]; BruNile vol. 2, 706). I. was buried in the church of ↗Däbrä Ṣäḥay Qʷəsqʷam, together with his father and grandmother. Their presumed bodies can still be seen there.



Ruins of *aṣe* Iyoʾas I's palace, Gondär; photo 2004, courtesy of Wolbert Smidt

The reign of I. witnessed the decline of the royal power, which was followed by the division of the Empire into de facto independent regions under the control of local war lords. I.'s death thus marks a historical turning point and ushered in a period of disintegration of central authority and protracted wars, commonly known as ↗*Zämänä mäsafənt* that lasted until the middle of the 19th cent.

Theodore Natsoulas – Denis Nosnitsin

Iyoʾas II

Aṣe I. (ኢዮአስ; d. 3 June 1821, r. 1801–21), son of *aṣe* ↗Həzqəyas and brother of both his predecessor *aṣe* ↗Ǝgʷalä Ṣəyon and his successor *aṣe* ↗Gigar, was made king in 1801 by *ras* ↗Gugsa Märsa, the dominant ruler of the ↗*Zämänä mäsafənt*.

In 1818, when Ǝgʷalä Ṣəyon died and was buried in ↗Gondär at the church of Addäbabay Täklä Haymanot, *ras* Gugsa immediately had the late Emperor's brother enthroned. Thus, I. became the next puppet king of Gondär. With his ascension to the throne nothing was changed in the country. An Ethiopian chronicle said about the reign of his brother and predecessor, "nothing took place in the habitations, since nothing was done good or bad, no appointments and no dismissals; for there was an authority over the Negus in the hands of a Galla, who was called Dajazmach Gugsa" (BlunChr 478). The same could apply to I.'s nominal reign. Gugsa, and not I., was the one who controled politics, both secular and ecclesiastic. When I. died, Gugsa buried him alongside his father and brother, and made another son of *aṣe* Həzqəyas – Gigar – the next Emperor.

J

Jacob Baradaeus

J.B. (Gəᶜəz: Yaᶜəqob Burdᶜana [Bäradaᶜe, ∃lbäradᶜi]; Syr.: Yaᶜqoḇ Bardᶜāyā [Burdeᶜāyā, Burdeᶜānā] 'ragged'; Arab.: Yaᶜqūb al-Bardaᶜānī [al-Baradāᶜī]; Lat.: Baradaeus; Gr.: Βαραδαῖος, Τζάντζαλος; b. ca. 500, Gamāwā, d. 30 July 578) was an anti-Chalcedonian Syrian monk and bishop credited with the establishment of a new hierarchy in what today is the Syrian Orthodox church (called Jacobite after J., s. ↗Jacobites).

J.B. was born in Gamāwā, north of Tellā (dMawzlaṯ = Constantina, in Osrhoene), the son of the presbyter Theophilos bar Maᶜnū. He became a monk and a disciple of Severus at the monastery of Psīltā on Mount Īzlā (southern part of Ṭūr ᶜĀḇdīn), near the village of Gummṯā. Around 527–28, together with the monk Sergios (Syr. Sargis) he was living in Constantinople, where Empress Theodora (r. 497[?]–28 June 548) held him in high esteem. Contrary to her husband Justinian's pro-Chalcedonian policies, she was favourable to the cause of the anti-Chalcedonians. Upon requests of the Ġassānid king al-Ḥāriṯ b. Ǧabala (Gr. Arethas, r. 529–69), who was inclined to the anti-Chalcedonian view, and probably with Theodora's own support, in 542–43 J.B. was consecrated bishop by the Alexandrian Patriarch Theodosios I (r. 535–June 22, 566), himself an enemy of ↗Chalcedon. Holding the bishopric of Bostra, Theodore was responsible for the Christians of Palestina and Arabia, whilst J.B., as the head of the see of ↗Edessa, administered Syria and Asia Minor.

In Syria J.B. acted secretly and with much vigour, consecrating priests and bishops in anti-Chalcedonean parishes that had been long abandoned. In 544 (or 558) he appointed his companion Sergios Patriarch of Antiochia, regarding him as the successor of Severus, who had been dismissed from his see in 518 (r. 512–18, d. 538). It was through these activities, strongly opposed by Justinian, that the anti-Chalcedonian parishes managed to survive and to form a hierarchical and independent Church. Henceforth Christianity in Byzantine Syria split into two denominations: those who adhered to the Council of Chalcedon (later known as the Greek-Orthodox Church) and the anti-Chalcedonians themselves (forming nowadays the Syrian-Orthodox Church).

J.B.'s main concern was the re-establishment of a Severian hierarchy. Under Paul "the Black" (from Bēṯ Ukkāmē, r. 564–77) a schism opened between the Syrian and its sister church of Egypt that lasted until 616. After the death of Paul in 577, J.B. tried to settle the conflict. To this end, he set off to meet the Syrian-born Patriarch of Alexandria, ↗Damian, but he died on his way, at the monastery of Romanos near Mount Kasios, close to the Syro-Egyptian border.

J.B. left very little in writing; some creeds preserved in Arabic are attributed to him, but were most probably composed by the Syriac patriarch Ignatius Nūḥ (r. 1494–1509; s. GrafLit vol. 4, 10). Little more than pure mention of him can be found, via Arabic, in Ethiopic tradition: the Gəᶜəz text of the creed of J.B. (ሃይማኖቱ፡ ለ ... ያዕቆብ፡ ኤልበራድዒ, *haymanotu lä ... Yaᶜəqob ∃lbäradᶜi*), "metropolitan of the Jacobites of Syria, Egypt and Ethiopia" (*paṗpasomu läyaᶜəqobawəyan läsorya wäläqəbṭ wäläʾityopya*), "bishop of Edessa" (*eppisqoppos zähagärä Roḥa*), is transmitted by several mss.; in particular, it is witnessed by such mss. of the large theological collection ↗*Haymanotä abäw* as BritLib Add. 24,988, fols. 191ff. (cf. Cornill 1876; also Schodde 1882; Arabic Vorlage in Kleyn 1882). J.B. is mentioned in a short "chronographical" text added on the last page of a 17th-cent. ↗*Ärägawi mänfäsäwi* (VatLib Aeth. 84, fol. 122v; s. GreTisVat I, 336f.) and relating the story of the division between Diplophysites and Jacobites. He is also quoted in the unedited Ethiopic version of the *Canons* of Cyril III ibn Laqlaq (75th Coptic Patriarch, 1216–43, cf. GrafLit vol. 2, 360ff.), in a ms. of the ↗*Senodos*, BritLib Orient. 793, fols. 77f. One of the documents transmitted in the last section of the *Mäṣḥafä* ↗*Aksum* tells the story of the persecution (*sədät*) inflicted by the Jesuites (*padročč*) to the Christian Ethiopians, here called Jacobites (*yaᶜəqobawəyan*), i.e. Monophysits (↗Monophysitism).

Jürgen Tubach

Jacob of Serug

J. S. (Eth.: ያዕቆብ: ዘሥሩግ, *Yaᶜəqob zäśərug*; also James of Serug; b. ca. 451, Kurtam, d. 521, Serug) was a Syriac writer, born at Kurtam near Baṭnān (Batnae) on the Euphrates, and educated in Edessa. At the age of 22 he became a monk, later a *periodeutes* (itinerant priest) and in 519 bishop of his native Baṭnān (later called Sərugh, today Suruç, Turkey). Although his sympathies were with the monophysite (anti-Chalcedonian) opinions, he tried to keep away from the ↗Christological controversies of the epoch.

Best known for his extensive poetic output that earned him the title of "The Flute of the Holy Spirit", J.S. is reported to have composed 760 *mēmrē* (metrical homilies), of which perhaps ca. 250 have survived (many of them have been published, but few have been translated into European languages). Most of the homilies are on biblical themes, others on liturgical subjects. In addition to these he also left hymns and numerous letters. Some of his compositions were drawn into Syriac liturgical books, though anaphoras ascribed to him are not his work. His poetry was translated into other languages of the Christian Orient: Arabic, Armenian, Georgian.

Several compositions by J.S. are also extant in Ethiopic. According to Guidi (GuiSLett 56) they were translated from Arabic in the time of ↗Zärᵓa Yaᶜəqob, to be read on the newly established feasts for various saints. However, given the age of ms. EMML 1763, dated 1336–40, which was unknown to Guidi, we may date at least some of the translations to a century earlier. J.S.'s compositions are mostly preserved in collections of homilies (cp. ↗*Dərsan*). With one exception (Uhlig 1999), none of his works in an Ethiopic version has been published, which makes identification with the Syriac originals difficult. Following is a list of his actual or attributed works known in Ethiopic, with some suggestions for identification with Syriac originals in square brackets.

1. *Homily on the Annunciation to the Virgin Mary*, e.g., ms. EMML 1763:19 and 20;
2. *Homily on the Annunciation to Zacharias of the birth of John the Baptist*, e.g., mss. BritLib Orient. 774:33, 15th cent.; Dāgā Eṣṭifānos 20:30, 15th cent. (SixTana III, 131) [cp. Bedjan 1890–96, vol. 2, 37];
3. *Homily on the visit of Mary to Elisabeth*, e.g., ms. BritLib Orient. 774:2;
4. *Homily on the vision of Joseph*, e.g., BritLib Orient. 774:3 (WrBriMus 227, no. 340);
5. *Homily on Simeon the Priest who received Jesus in the Temple*, e.g., mss. BritLib Orient. 774:10; Dāgā Eṣṭifānos 20, 15th cent.;
6. *Homily on the Angel and the Thief*, e.g., mss. BritLibOrient. 774:18; Dāgā Eṣṭifānos 20:15 [cp. Bedjan 1890–96, vol. 5, 177];
7. *Homily on the Apostle Thomas*, e.g., mss. BritLib Orient. 774:23; Dāgā Eṣṭifānos 20:20 (Syriac text ed. Strothmann 1976; s. GrafLit I, 450c).
8. *Homily on the observance of Sunday* (*or the Sabbath of the Christians*), i.e. ↗*Dərsanä sänbät* – as shown by Wurmbrandt (1963:362–94), it is built on two christianized ↗Betä Ǝsraᵓel texts, ↗*Təᵓəzazä sänbät* and *Mäṣḥafä* ↗*mäläᵓəkt*; s., e.g., in ms. EMML 1512:5, 18th cent.;
9. Another *Homily on the Sabbath* (= *Sunday*) is contained in Staatsbibliothek Preussischer Kulturbesitz Ms. orient. oct. 1269, of the 18th cent. (HamSixBerl 108). In this ms., these two and other homilies on the same theme are parts of the *Mäṣḥafä* ↗*ṭəbäb*, the ordination concerning Sunday, revealed to ↗Ezra the Prophet, who put it down, whereas later the book was discovered by Jacob the brother of Jesus;
10. *Homily for the Feast of the Cross*, e.g. ms. EMML 1763:4;
11. *Homily for the third Sunday in Lent*, e.g. ms. EMML 1763:45 [cp. Bedjan I:23–25];

12. *Homily on Mary and Joseph*, e.g. in ms. EMML 1763;
13. *Homily on the Nativity*, e.g. ms. EMML 1763:27 [cp. Bedjan 1890–96, vol. 6, 720–808];
14. *Homily on Mary*, "for the fourth Sunday of *Taḫśaś*" e.g. ms. Berlin, Staatsbibliothek Preußischer Kulturbesitz, or. Fol. 117, ca. 1400 (ed. Uhlig 1999);

Some of J.S.'s (or attributed to him) homilies can be found as parts of larger collections also with liturgical functions, such as

15. the *Mäṣḥafä* ↗*gənzät*; most manuscripts contain J.S.'s *Homily on priests and deacons who have fallen asleep* (ድርሳን፡ ... በእንተ፡ እለ፡ ኖሙ፡ ካህናት፡ ወዲያቆናት), e.g. ms. Paris BN, Éth. 26bis (ZotBNat 86, no. 80), copied in 1508, from an earlier unknown ms. [cp. Bedjan 1890–96, vol. 2, 70];
16. in the same collection also the *Homily on the Canaanite woman*; (ድርሳን፡ በእንተ፡ ብእሲት፡ ዘትንብር፡ ውስተ፡ ብሔረ፡ ከንዓን), can sometimes be found, e.g. in ms. EMML 883, 20th cent. [cp. Bedjan 1890–96, vol. 1, 17];
17. in the ↗*Haymanotä abäw* there are four quotations of J.S. although these are taken from two homilies only: the first two from the *Homily on His Nativity and Baptism* (በእንተ፡ ልደቱ፡ ወጥምቀቱ), and the second pair from the *Homily on the salvatory Passion* (*of Christ*, በእንተ፡ ሕማማት፡ ማኅያዊት; = 13?), e.g. ms. EMML 1, 1667–82; some of the mss. of the *Haymanotä Abäw* are illustrated, including miniatures of J.S., e.g. ms. EMML 1, fol. 19r;
18. incorporated into the *Mäṣḥafä* ↗*gəbrä ḫəmamat* one can find such homilies as no. 6 above (as in ms. EMML 2140, 20th cent.) and the *Homily on Abraham*(*'s offer*) *for Good Friday* (በእንተ፡ አቡነ፡ አብርሃም), e.g. in ms. EMML 1765 (15th cent.), translated in the time of *abba* ↗Sälama "the Translator" [cp. Bedjan 1890–96, vol. 4, 109, or vol. 2, 53];

Jacob of Serug; miniature in ms. *Haymanotä abäw*, fol. unknown, 17th cent., church of the Trinity, Ṣäläqot, Təgray; photo 2000, courtesy of Michael Gervers

19. a *Rite of the taking on the habit* (ሥርዐተ፡ ሚመተ፡ ምንኵስና), not to be confused with anonymous *Monastic Rule* (ሥርዐተ፡ ምንኵስና), containing both the ritual for taking the habit, and the rules for monastic life, is attributed to J.S. – it can be found, e.g., in mss. EMML 1012, 1203 (19th cent.), Paris, BN d'Abbadie 71 (CRAbb II, 465, no. 78), but no such text is known in Syriac. According to Conti Rossini (ibid.), it must have been translated from Arabic in the 14th cent. or at the beginning of the 15th, since it is quoted in the *Acts of* ↗*Abäkəräzun* of Gundä Gunde;
20. an ↗*Anaphora* is also attributed to J.S. (Hammerschmidt 1987:31ff.; ed. Euringer 1934).

Max Wurmbrand (1961) discovered that J.S.'s *Homily on the death of Aaron* entered – but without attribution to J.S. – Betä Ǝsraʾel literature (ms. of the Faitlovich collection). Its Christian original has not been identified, although a Christian Arabic translation (from Syriac) is known (GrafLit I, 449).

Jacob, Testament of ↗Yaᶜəqob: Gädlä Yaᶜəqob

Jacobis, Giustino De

J. (properly De J., b. 9 October 1800, San Fele, Potenza, d. 31 July 1860, Aligäde valley near

The only known portrait of Giustino De Jacobis; after a sketch drawn by a student during a meeting in Naples in 1842, from MasMis², vol. 1, 388

↗Ḥalay, Eritrea) was an Italian missionary. Born to a large family (he was the seventh of 14 children), he was educated in Naples and joined the ↗Lazarist order at the age of 18. In 1824, he was ordained as a priest.

After he had served in positions of responsibility in Naples, in 1838, the ↗Sacra Congregatio de Propaganda Fide appointed J. first Prefect Apostolic of "Ethiopia and all the neighbouring territories"; he was to be assisted by the Lazarist Luigi Montuori. In October of the following year, they arrived in ᶜAdwa, meeting Giuseppe ↗Sapeto, their fellow brother. The three decided to implement a strategy of dispersal: Sapeto would thus go to Šäwa and Montuori to Gondär, whilst J. would remain in ᶜAdwa (CrumMis 66).

J.'s career was an eventful one, shaped by a constantly changing political and ecclesiastical scene. He found his main patron in *däğğazmač* ↗Wəbe Ḥaylä Maryam, ruler of Səmen and northern Ethiopia, who saw the presence of the Catholics as an opportunity to improve communications with Europe, primarily ↗France. In 1841, J. participated in the delegation organized by Wəbe to seek a metropolitan in Cairo (↗*Pappas*). There he met the monk ↗Gäbrä Mikaᵓel, whom he later converted to ↗Catholicism. From Cairo, some of the 23 members of the delegation (among whom *abba* Gäbrä Mikaᵓel) headed to Rome in July 1841, to present letters of Wəbe to Pope Gregory XVI. On 17 and 29 August 1841 they were received by the Pope, while J. acted as interpreter. The latter conceived this important endeavour as a key step towards Catholic rooting in Ethiopia (cp. De Jacobis 2000:142, 210ff., 217).

After a journey to Jerusalem, in 1842 J. was back in Ethiopia, working in Akkälä Guzay (↗Aḵrur, ↗Ḥalay) and ᶜAgamä (↗ᶜAddigrat, ↗ᶜAlitena, ↗Gʷalᶜa, where he founded a college and a seminary in 1844), among such groups as the ↗Irob, the Təgrəññña speakers, and the Bogos (↗Bilin). On 8 January 1849, in order to be able to continue his mission and to create priests, he was secretly consecrated as bishop in Massawa by the Capuchin Guglielmo ↗Massaja (OMahPh vol. 1, 78f.). In 1853, Lorenzo ↗Biancheri, who had settled at Gʷalᶜa, was appointed his coadjutor.

J. found his most formidable adversaries in *abunä* ↗Sälama, especially from the late 1840s onwards, and in *däğğazmač* ↗Kaśa Ḫaylu, who since his coming to power in 1855 as *aṣe* ↗Tewodros II began an offensive to reunify the ↗Ethiopian Orthodox (Täwaḥədo) Church. When the news spread about J.'s consecration as bishop, Sälama had immediately ordered him to leave the country. Having refused, J. was imprisoned by *däğğazmač* Kaśa at ↗Gondär, together with his fellows and Gäbrä Mikaᵓel. After four months, he was set free with an order of expulsion, but his guards released him at ↗Mätämma. He then lived hidden between Massawa and Ḥalay. In 1860, accused of having favoured Count Russel's mission to *däğğazmač* ↗Nəguśe Wäldä Mikaᵓel, he was put again in jail at ↗Toḵondaᶜ. Although freed after 22 days, he died shortly after and was buried at ↗Ḥebo.

Known locally as *abunä* Yaᶜəqob or even *qəddus* Yaᶜəqob (lit. 'Saint Jacob': a ↗*mälkəᵓ*-hymn was composed in his honour, s. Raineri 1979), J. laid the foundations of an Ethiopian Catholic Church through the conversion of a small number of Ethiopian faithful and clergymen. Contrary to the pattern enforced by the ↗Capuchins, this Church kept Ethiopian liturgy and traditions; J.'s relationship with his indigenous followers tended to reproduce the Ethiopian model of a ↗*mämhər* and his students. Soon fluent in ↗Amharic, he clearly understood the importance of the knowledge of local languages for the success of a missionary enterprise. To this aim, he was also responsible for the composition of an Amharic catechesis (De Jacobis 1850).

The Ethiopian activities of J. – whose apostolate was continued by Carlo ↗Delmonte – also had a political dimension, the missionary acting as an intermediary with ↗France on behalf of *däğğazmač* Wəbe and, after Tewodros's coronation, on behalf of Wəbe's political heir, *däğğazmač* Nəguśe (CrumMis 68f., 100–05). While J.'s piety, humility and evangelical attitude, as well as his help during an 1858 cholera

epidemic, are remembered, none of his political interventions had a lasting impact.

Following the establishment of Eritrea in 1890, the Church J. had established fell under two separate political jurisdictions; the congregation members who remained under Ethiopian rule eventually received formal recognition from Rome as belonging to the Ethiopian Rite.

J. was beatified on 25 July 1939, and canonized as a saint on 26 October 1975. *Abba* ↗Täklä Haymanot of ᶜAdwa, one of J.'s disciples, became his principal biographer; a few years after his teacher's death, he composed a Vita of J. under the title መጽሐፈ፡ አኅጉሎተ፡ ሐሰት (*Mäṣḥafä aḫgʷəlotä ḥassät*; s. StrANL 205; Černecov – Platonov 2002), one of the early pieces of ↗Amharic literature. Further on, J.'s life has since been the object of quite a number of works, the first (anonymous) published shortly after his death, *L'Abyssinie et son apôtre, ou vie de Justin de Jacobis* ... (Paris 1866). His diaries and correspondence, recently published, are rather poor in style and often marked by a severe judgement on local people and Christian tradition. In spite of these shortcomings, and of a few factual mistakes, this material is an important source for the social and political history of the region, as well as of the churches and monasteries J. visited during his 20-year stay in Ethiopia, when he was able to take notes on their monuments, libraries and artefacts (so, e.g., for ↗Däbrä Bizän, ↗Däbrä Damo, ↗Gundä Gunde).

Donald Crummey – Red.

Jacobite(s)

J. (Eth.: ያዕቆባውያን, *Yaᶜəqobawəyan*) is a traditional, yet non-official term referring to the members of the "J.", i.e. the Syrian Orthodox Church of Antioch, which belongs, just like the ↗Ethiopian Orthodox (Täwaḥədo) Church, to the anti-Chalcedonian (↗Chalcedon, Council of) or Miaphysite (previously called Monophysite, ↗Monophysitism) Church family. The term has often been used in Western literature, as well as by the members of other Oriental churches, but is avoided and opposed to by the Syrian Orthodox Church itself (Palmer 1991: 17f.). It comes from the name of ↗Jacob Baradaeus, who is regarded as the creator of a separate Miaphysite hierarchy. According to a contemporary witness, ↗John of Ephesus (ed. Brooks 1925: 158), Jacob consecrated 27 bishops and "many" priests. Thanks to his activities a new generation (after that of ↗Severus of Antioch) of anti-Chalcedonian clergy came into being, and in this way fundaments were laid down for a separate Miaphysite church, opposed to the Chalcedonian or Melkite (from Syr. *malkā*, 'king, emperor'). Jacob was active not only in the territories of the Antiochene patriarchate (Syria and Cilicia), in Asia Minor and ↗Persia, but also in ↗Egypt, and this is why the faithful of the Coptic Church are sometimes called J. (e.g. in the colophons of medieval Coptic/Arabic manuscripts), too.

Witold Witakowski

Jamaica and the Caribbean

The J.'s first encounter with ↗Ethiopianism – a social and religious movement identifying personages and events in the Bible as "African" and regarding the teachings of established Christian religious sects as distortions effected as tools of dominance over blacks – can be traced back to the arrival in J. of the African American preachers George Liele and Moses Baker, loyalists who evacuated the North American colonies with the British. Liele (1750–1826), an ex-slave, founded the first Baptist church in Jamaica in 1784, calling it the Ethiopian Baptist Church. Ethiopianism was evident in the discourse and ideology of the 19th cent. pan-Africanists (↗Pan-Africanism) such as Edward Wilmot Blyden (1832–1912), born in the Danish West Indies, and Haitian anthropologist-statesman Anténor Firmin (1850–1911). *Aṣe* ↗Mənilək II's inspiring victory over the Italian army at the Battle of ↗ᶜAdwa in 1896 was celebrated in J., connecting the glories of ancient Ethiopia with the modern world. But J. people entered into actual relations with Ethiopians as well. The Haitian pan-Africanist Bénito Sylvain visited Mənilək after his victory at ᶜAdwa, seeking his support for pan-African activities. *Aṣe* Mənilək's personal physician was Joseph Vitalien, from Martinique.

Ethiopia was a prominent theme in early 20th cent. J. ethnic and cultural politics. Most notably in the Universal Negro Improvement Association (UNIA) of Jamaican-born Marcus Garvey (1887–1940). The UNIA, with headquarters in Harlem, boasted nearly 1,000 branches internationally at its height in the 1920s, including a number in the C. Many of the UNIA's catechisms drew upon the best known of the biblical passages that proved Ethiopia's sacred place. The organization's Universal Ethiopian Anthem, which began "Ethiopia, thou land of our fathers, Thou land where the gods loved to be", was written by Barbadian-born *rabbi* Arnold J. Ford (1877–1935) who converted to Judaism in Harlem and emigrated to Addis Abäba with a group of Carribean-born, Harlem-based associates.

The 1930 coronation of *ras* Täfäri Mäkʷännən, who became known as *aṣe* ↗Ḫaylä Śəllase I, was followed with much interest in the Carribean and many regarded it as biblical prophesy realized. The coronation, seen against the backdrop of Ethiopianism and Garvey's black nationalism, led to the creation of the ↗Rastafarian religion in Jamaica. The 1930s were years of labour strikes and anti-colonial nationalist mobilization. The 1935 Italian invasion of Ethiopia occurred in this context (↗Italian war 1935–36). Labour leaders connected local ethnic and class oppression to the Italo–Ethiopian dispute, cultivating themes of black liberation and white oppression using the war as a metaphor. A number of groups sprang up to debate the "racial" connections between Carribean blacks and Ethiopians; still others took a more anti-capitalist, anti-imperialist analysis of the war. In Jamaica, Trinidad, and elsewhere men volunteered to fight for Ethiopia. One who made it was Trinidad-born aviator Hubert F. Julian. Julian fought with African-American aviator John C. Robinson, both of whom had volunteered to

Scene at the airport in Kingston, Jamaica, a "Rastafarian" man in tears upon the arrival of *aṣe* Ḫaylä Śəllase I; photo 1966, courtesy of the IES

fight for Ethiopia against the Italian forces. Julian incurred Ḫaylä Śəllase's displeasure and was relegated to training ground troops before returning to the United States in disgrace.

Money was collected for war material. These groups and activities were mirrored by Carribeans abroad. In London, leading black anti-colonial intellectuals and radicals and their white allies formed the International African Service Bureau and the International Friends of Abyssinia to raise not only consciousness but money in support of Ethiopia.

Branches of the Ethiopian World Federation (cp. ↗Mälaku Amanu'el Bäyyan) were established in J. in 1938. In 1955, Ḫaylä Śəllase granted land for those wishing to "re-patriate" as some Rastafarians and Pan-Africanists conceived of the plan. A few dozen eventually did, settling in ↗Šašämänne. Later, Ḫaylä Śəllase visited Trinidad, Haiti, and Jamaica to tumultuous receptions in 1966, and in 1969, the ↗Ethiopian Orthodox Täwaḥədo Church set up a mission in Kingston, Jamaica. Given the development of the Rastafarian movement and its proliferation beyond the Carribeans it is likely that Ethiopia will continue to hold a crucial place in religious and political ideology of the Carribeans.

Kevin A. Yelvington

Janssen, Francies Johannes

Mgr. J. (b. 20 September 1912, Vogelwaarde, Boschkapelle, d. 19 December 1987, Venlo, Netherlands) was a ↗Lazarist missionary. He joined the Lazarists on 16 September 1932, and was ordained a priest on 23 July 1939. The same year he moved to Fortaleza, Brazil, where he became, in 1953, Vice Provincial Superior.

In 1956, J. was named Superior Missionis of the new Dutch Lazarist Mission in Ethiopia. Shortly after he was appointed Vicar Delegate in the Apostolic Vicariate of ↗Ǧimma by the then acting Apostolic Administrator, the Bishop of Harär, Mgr. Urbain-Marie ↗Person, a Capuchin, and in 1958 he became Administrator himself. He was consecrated bishop by Mgr. Moors, Bishop of Roermond, on 31 July 1959 in the parish-church of Panningen, Limburg.

J. helped organising churches, prayer houses, elementary schools, clinics and dispensaries, in spite of pressing financial problems. In 1970, in a joint effort with the Vicariate of ↗Harär, the minor seminary of Gudär was opened. He also put much effort in the recruitment and formation of the future clergy. In 1971, for health reasons he resigned from his offices and moved to Panningen, where he was appointed superior of the Vincentian Community and became parish-priest of Broekhuizen in 1976.

Lucas W. Bos

Japan, relations with

Despite a number of historical similarities between Ethiopia's and J.'s political structure and history, and the fact that Ethiopia and J. lie at either end of the maritime Silk Route, diplomatic relations between the two countries only began

The Special Envoy Ḫəruy Wäldä Śəllase receives the famous sword *Mikasa* from Vice Admiral Sakonji (in the middle), 21 December 1931, Imperial Hotel, Tokyo; from Heruy Walda Sellase 1933:112/13

in 1923, within the ↗League of Nations. For *aṣe* Ḫaylä Śəllase I's coronation in November 1930, Hirohito (r. 1926–89) dispatched an ambassador extraordinary to represent J. in Addis Abäba. On this occasion, a treaty was signed. Even before the signature, J. was already exporting indirectly to Ethiopia not only 80% of cotton articles but also silks, cotton thread, sugar, chinaware, and pottery for the general public. Ḫaylä Śəllase followed the Meiji model in the modernization of Ethiopia. He promulgated the first constitution in 1931, which had points of similarity with the 1889 Meiji constitution (↗Constitutions). Both constitutions defined the emperor's status as "sacred and inviolable".

In 1931, Ethiopia dispatched a mission to J. to thank Hirohito for his expression of friendship. This mission was successfully led by ↗Ḫəruy Wäldä Śəllase, the Minister for Foreign Affairs. On his return to Ethiopia, Ḫəruy had gathered all his impressions of the journey in one publication, which appeared in 1931/32 under the title ማህደረ: ብርሃን: ሃገረ: ጃፓን (*Mahdärä bərhan, hagärä Ǧapan*, 'Place of Light, the country of J.'). A Japanese translation of the work was published in Tokyo in 1934. The visit to J. is said to have reinforced Ḫəruy's determination to "japanize" Ethiopia in order to modernize it. As his influence over Ḫaylä Śəllase was considerable, he is supposed to have influenced the emperor's political line and thus to have contributed to the flowering of the modernist ideas which had been advocated by Ethiopian intellectuals from the beginning of the 20th cent. These intellectuals were later to be nicknamed the "Japanizers" (cp., among others, *blatta* Gäbrä Ǝgziʾabəher from Eritrea; ↗Täklä Ḥawaryat Täklä Maryam; Adolf ↗Mayer). After the Italian invasion, the Ethiopian "Japanizers" gradually faded from the picture, but, following Ethiopia's liberation, this ideological current was revived by ↗Käbbädä Mikaʾel who in 1954 published ጃፓን: እንደምን: ሰለጠነች (*Ǧapan əndämən säläṭṭänäčč*, 'How did J. become modernized?').

Ləǧ Arʾaya Abbäbä, a distant cousin of Ḫaylä Śəllase, was one of the members of the 1931 mission to J. He later expressed his desire to marry a Japanese woman, and chose "Princess" Kuroda Masako, daughter of Viscount Kuroda Hiroyuki. The Tokyo lawyer Sumioka [Kadooka] Tomoyoshi, a pan-Asian activist and philo-Ethiopian nationalist, managed much of the marriage arrangements starting in 1932. However, following international diplomatic complications, including protest by Mussolini himself, the marriage never took place (s. Clarke 1999). In J., Ethiopia was widely popular during the 1930s. Even an ancient blood relationship with the "West-Asian" Ethiopians was imagined in scientific Japanese discourse (cp. ↗Japanese–Ethiopian Society). In that period Ethiopia installed an Ethiopian consulate at Osaka, led by honorary consul Yukawa Chusaburo, a Japanese (ZerEth 481ff.). The *Nagasaki Echiopia Keizai Chosa-kai Nikkei-Sha* ('Nagasaki Association for Economic Investigation of Ethiopia'), led by Kitagawa Takashi, in 1933 negotiated with Ḫəruy with the aim of acquiring huge lands for the growing of cotton, rice, vegetable, tea, coffee and tobacco as well as for Japanese migration. The government of J., however, did not wish to cause further complications with Italy, and Japanese involvement in Ethiopia was therefore reduced.

On 1 January 1936, in the middle of the Italo–Ethiopian conflict, the Japanese government decided to open a legation in Addis Abäba to protect local Japanese economic interests, which had developed in the period before the Italians invaded Ethiopia. Indeed, in 1935, J. provided 95 % of Ethiopia's consummation of cotton goods. On 3 December 1936, however, after Italy had annexed Ethiopia, the Japanese legation was transformed into a mere consulate-general.

In 1955, Ethiopia and J. re-established diplomatic relations and the two imperial families resumed amicable links. In 1956, *aṣe* Ḫaylä Śəllase made a journey to J. and was thus the first head of state to officially visit the country after World War II. In 1959, Crown-Prince ↗Asfa Wäsän Ḫaylä Śəllase and his wife Mädfäriyaš Wärq Abbäbä went on an official visit to J., and the following year, Prince Akihito and Princess Michiko visited Ethiopia. Japanese companies started to operate in Ethiopia in the 1960s. Due to the rich copper deposits in Eritrea, the Japanese built an important copper mining facility (today called **እንዳ፡ ጃፓን**, *Ǝnda Ǧapan*, locally) near ↗Dəbarwa. Due to the civil war, however, the mine had to be abandoned later in the 1970s.

During the Universal Exhibition in Osaka in 1970, Ḫaylä Śəllase visited J. a second time. During Mängəśtu's régime, relations between the two countries almost ceased to exist, but were re-established, especially in the field of economic aid, after his downfall in 1991. In September 1996, Prime Minister Mälläs Zänawi undertook his first visit to J.

Hideko Faërber-Ishihara

Japanese-Ethiopian Society

The J.E.S. (*Nihon Echiopia Kyokai*) was among the most influential pro-Ethiopian organisations in the Japan of the 1930s, together with the 'Roundtable for Ethiopian Issues' (*Echiopia Mondai Kondan-kai*), founded by Ujiro Oyama, and the Amur River Society [*Kokuryu Kai*, often misnamed the "Black Dragon Society"], headed by Toyama Mitsuru. Sumioka Tomoyoshi and Shoji Yunosuke played important roles in several of the Ethiopian support groups, including the J.E.S.

By 1937, more than 100,000 Japanese had joined one or more hundreds of rightwing, pan-Asiatic and ultranationalist groups. Seeking to replace Western imperialism in Asia with Japanese domination, many of these ultranationalists stretched the concept of "Asia" all the way to East Africa and Ethiopia. Some even believed that the Japanese and Ethiopian peoples had a common ancestry in the area between the Altai Mountains and the Caspian Sea. Under Japanese leadership, these Pan-Asianists sought to unify all "coloured" peoples against "white" hegemony. Newspapers, student groups, and chambers of commerce also drummed up popular support for Ethiopia. The Ethiopian support groups promulgated resolutions and statements, held public lectures and exhibitions, and offered money and medical assistance to Ethiopia in its conflict

with Italy. Despite their members' close ties to governmental bureaucracies, these were private organisations, which the Japanese government co-opted after the ↗Italian war of 1935–36.

Joseph Calvitt Clarke III

Jarosseau, André de

J. (b. 13 April 1858, Saint-Mars-des-Prés, d. 18 January 1941, Toulouse; known in Ethiopia as *abba* ∃ndrəyas) was a ↗Capuchin missionary. Born to Pierre Jarosseau and Magdeleine Purzeau, he joined the Capuchin Province of Toulouse at the age of 18. On 8 September 1876, he began his noviciate at Carcassonne, where, on 21 December 1881, he was ordained priest.

Monseigneur André Jarosseau; photo courtesy of the IES

J. joined the Apostolic Vicariate of the Galla as a missionary in 1882, where he was to serve for 38 years in manifold pastoral and social-welfare activities. On 16 September 1900, he was consecrated bishop by Cardinal Girolamo M. Gotti in the Capuchin church of the Immaculate Conception. J. was also engaged in education. In 1901, he established modern schools in Djibouti and Harär; in 1902, he founded the St. Anthony's Leprosy Centre and the Major Seminary in 1904, both in Harär.

J. enjoyed good relations with *ras* ↗Mäkʷännən Wäldä Mikaʾel and his son, *ras* Täfäri (future *aṣe* ↗Ḫaylä Śəllase I), who was brought up under his protection and from whom he learnt French (HSLife 18). This helped strengthen the relations between the Imperial Court of Ethiopia and the Holy See during Ḫaylä Śəllase's reign (↗Vatican) as well as contributing to the admission of Ethiopia to the ↗League of Nations in 1923.

J. wrote a dictionary and grammar of Oromo, published at the Capuchin printing press (Jarosseau 1939); one of his letters from the mission was also published (Séraphin 1938). He left Ethiopia for good in 1938.

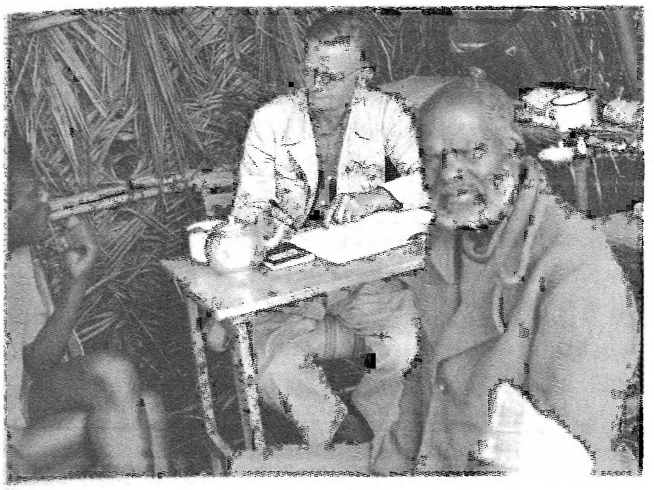
Jensen, Adolf Ellegard

J. (b. 1 January 1899, Kiel, d. 20 May 1965, Mammolshain, Germany) was an anthropologist and cultural historian. He studied at the universities of Kiel and Bonn and received a Ph.D. in philosophy in 1922. In 1923 he joined Leo ↗Frobenius at the Forschungsinstitut für Kulturmorphologie (Research Institute for Cultural Morphology) in Munich and followed him to Frankfurt am Main two years later. In 1938 he was appointed director of the Institute which was renamed ↗Frobenius Institute in 1946.

Jensen as director of that Institute had a major impact on German ethnology on Ethiopia. Apart



Adolf Jensen (in the middle) with his informant *däğğazmač* Gino Biri (Berinas), one of the chiefs of the Hamär, Dukamer Camp near Bakko, Hamär; photo 1950/52, by Elisabeth Pauli, courtesy of the Frobenius-Institut, Frankfurt am Main (23–Pa017–33)

from participating in research expeditions to southern Africa (1928–30), Libya (1932) and Ceram/Indonesia (1937–38) J. headed three important ethnological missions to southern Ethiopia (1934–35, 1950–51, 1954–55) and thus initiated an advanced German scholarly interest in this country. The focuses of J.'s studies were basic ethnographic surveys of undocumented groups, the reconstruction of cultural historical strata, age class systems and religious phenomena.

J. was one of the first researchers who became aware of the enormous complexity and cultural importance of the age class systems (↗*Gadaa*) of north-eastern Africa, particularly among the ↗Gideʾo and ↗Konso, during his first expedition of 1934–35. He also took an advanced interest in discovering archaic centres of cultivation by analysing and evaluating myths and their ritual performances. Another field of J.'s major interest was the ↗meritorious complex expressed by the awarding of titles, prestigious positions, spectacular funeral ceremonies and ↗megalithic monuments, which he compared with respective phenomena in other parts of the world such as southeastern Asia.

Most of the results of the 1950–52 expedition were published in the voluminous book "Altvölker Süd-Äthiopiens" (VSAe I) which was edited by J. in 1959. Valuable parts of his materials about the Konso and the ↗Sidaama remained unpublished. J. also considerably stimulated the works of Eike ↗Haberland and Helmut ↗Straube, although these disciples later abandoned his theories of interconnected cultural strata in north-eastern Africa and other parts of the world.

Ulrich Braukämper

Jensen, Lorenz

J. (**"ሙሴ፡ የንዘን"**, Muse Yänzän, 'Monsieur Jensen', b. 11 September 1883, Becken, d. 21 October 1961, Rendsburg) was among the first German diplomats to take up permanent residence in Ethiopia (↗Germany, relations with).

J. was the first student of Eugen ↗Mittwoch and *aläqa* ↗Tayyä Gäbrä Maryam at Berlin University where he studied Amharic, Arabic, Gəᶜəz and Ethiopian Law. Before his final exams, following a request by the Ethiopian delegation in Germany in 1907 (cp. ↗Mäšäša Wärqe), he helped establish contacts between German arms producers and ↗Mənilək II. In 1909, J. was appointed chancellor and dragoman (translator) at the recently established German legation in Addis Abäba (as such he appears in the novel on the poisoning-affair of Mənilək; s. Zintgraff 1926). In 1910 he acted as the head of the newly founded German vice-consulate in Harär when the Germans took over the representation of the Arabs, Greeks and Armenians. Here he befriended the youthful governor of Harär *däğğazmač* Täfäri (↗Ḫaylä Səllase I) and became his informal advisor. As German Consul he presided at the Mixed Court in cases concerning German citizens (Zahn 1951:97f.). He stayed in Addis Abäba until 1920 when he was made head of the legation as chargé d'affaires (until 1921), because of his good relations with the regent, *ras* Täfäri.

When World War I broke out, the German legation, having all contacts with its government severed, could only persist thanks to the good will of the government under *ləğ* ↗Iyasu. In 1915, J. was decorated with the 'Second Degree of the Honorary Star of the Order of Ethiopia' (**የኢትዮጵያ፡ የክብር፡ ኮከብ፡ ኒሻን፡ ሁለተኛ፡ ማዕረግ**, *Yäʾityopya yäkəbər kokäb nišan hulättäññä maᶜəräg*). Later that year he took up residence in Däse. There he secretly led discussions with the crown prince and his father, *nəguś* ↗Mikaʾel ᶜAli, about Ethiopia's giving up her neutrality, inciting the Ethiopians to attack, together with Turkey, the British and French colonies.

Lorenz Jensen in his office at the German Legation, ca. 1915; photo from the collection of Marlene Bökeler née Jensen, kept at the Ethiopian Studies Research Unit, Asien-Afrika-Institut, Universität Hamburg

His Nachlass, kept by his family, contains some interesting pieces on the years preceding the ↗Coup d'état of 1916, including photographs (s. Smidt 2006). However, his diary, the manuscript of his Amharic Dictionary, and other scholarly works were destroyed during World War II. J. collected Amharic proverbs (ed. by Mittwoch), *zar* and *azmari* songs, and conducted research on Islamic traditions.

In 1922 he became vice-consul and chancellor in Tiflis, Soviet Georgia. Later, he served as consul in Turkey (Trabzon 1927–43), partly owing to the good contacts with Turkey he had established in Ethiopia before and during World War I (↗Maẓhar *bey*).

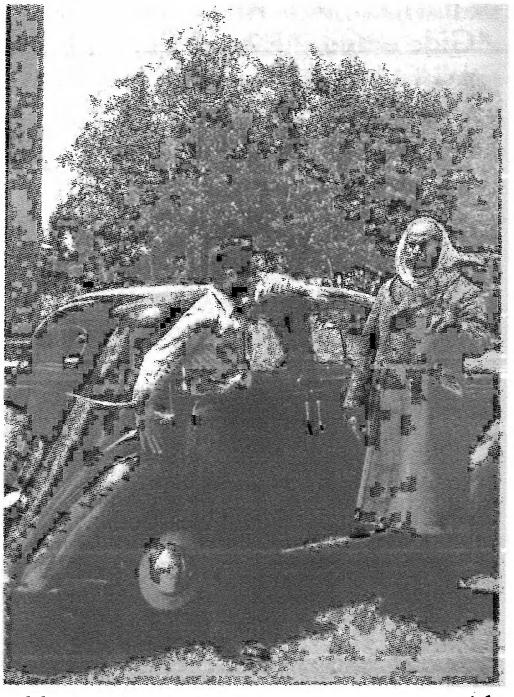
Wolbert Smidt

Jérôme

Abba J. (b. ca. 1881, Ǝgri Mäk̲äl, Säraye, d. 1983, Cannes) was a civil servant and the advisor to a number of foreign scholars. Born Gäbrä Mädḫən Gäbrä Muse (ገብረ፡ መድኅን፡ ገብረ፡ ሙሴ) into a family of minor Catholic notables, he studied in Massawa and in Kärän, in the French Lazarist school, where his name was changed to J. After the expulsion of the ↗Lazarists by the Italians, J. moved to the Capuchin school, also in Kärän, and later in Asmära. His education included the study of several languages (Təgrəññа, Amharic, Latin, Gəʿəz, French, Italian) as well as theology.

Around 1900, J. was ordained Catholic secular priest of the Ethiopian rite. For around ten years he taught in Asmära, while working at the Capuchin printing house. But ca. 1918 he broke off his relations with the ↗Capuchins, renounced priesthood and flew to Ethiopia. There he entered into the service of *ras* Täfäri (later ↗Ḫaylä Śəllase I), for whom he accomplished a number of missions. He was successively member of the municipality of Addis Abäba and of the Ministry of Foreign Affairs and travelled repeatedly to Europe.

J., who possessed an extensive erudition and learning, accorded constant and valuable assistance to all the Ethiopisants he met (among the most notable, Enrico ↗Cerulli, Marcel ↗Cohen, Marcel ↗Griaule, Michel ↗Leiris, Wolf ↗Leslau, Deborah ↗Lifchitz, Roger Schneider, Stefan ↗Strelcyn, Joseph ↗Tubiana), in Ethiopia as well as during his own visits to Europe. Notably he was a delegate of the Ethiopian government for the Dakar–Djibouti mission (1931–33). In 1941, after the occupation of Ethiopia, his clandestine resistance against the occupant was recognized, and he was appointed head of the manuscript section of the ↗National Library of Addis Abäba. After his retirement in 1965, J. followed Tubiana's invitation to teach Amharic and Təgrəññа at the ↗Institut national des Langues et Civilisations orientales (INALCO). After 1977 and until



Abba Jérôme (right) in conversation with Joseph Tubiana, Addis Abäba; photo 1950, courtesy of Marie-José Tubiana

his death, he lived in the Côte d'Azur. He was buried in the religious area in Cannes cemetery.

J. wrote a number of works, the majority of them still unpublished. Only some minor pedagogic works in Təgrəññña and Italian have been published so far.

Lit.: JACQUES MERCIER, *Les traverses ethiopiennes de Michel Leiris: amour, possession, ethnographie*, Montpellier [2003]; MARIE-JOSÉ TUBIANA, "Gabra-Madchen Gabra-Muse", in: JOSEPH TUBIANA (ed.), *Guirlande pour Abba Jérôme*, Paris 1983, 7–45; ALAIN ROUAUD, "Abba Jérôme", in: PIERRE LABROUSSE (ed.), *1795–1995: deux siècles d'histoire de l'École nationale des langues orientales*, Paris 1995, 369; SALVATORE TEDESCHI, "La scomparsa di abba Jérôme", *Africa* [Roma] 39, 1, 1984, 124–26..

Alain Rouaud

Jerusalem

J. (Eth. **ኢየሩሳሌም**, *Iyärusalem*; Hebrew Yerūšālayim; Arab. al-Quds, 'the Holy') is the name of a city lying at 31° 47' N, 35° 13' E on the southern spur of a plateau in the Judean Mountains. J. is traditionally identified with the city of Salem, realm of ↗Melchizedek, priest of God (Gen 14:18; Heb 7:1–2; ca. 1800 B.C.). The city is often (150 times in the Hebrew Bible) identified by the term ↗Zion (*siyyon*), which may refer to all, or part of, the city.

Although it is best known from the Bible, J. was not founded by the people of Israel. In the early 11th cent. B.C., King David conquered this important stronghold on Mount Zion from the Jebusites.

Solomon built the first Israelite temple on the site bought by his father David for that purpose. The sanctuary increasingly became central for biblical ↗Judaism, a place to which all male Jews were expected to perform pilgrimage on the three great annual feasts. In 586 B.C. J. was conquered by Nebuchadnezzar, its Temple destroyed and a large part of its people exiled to Babylon. In 539 B.C., the Persian king Cyrus, assuming power in Babylon, allowed Jews to return home and rebuild their Temple. The conquests of Alexander the Great brought the Jewish kingdom, and with it J., under Greek sovereignty in 332 B.C. Eventually, the city was transformed into a Hellenistic *polis*. The Temple was again cleansed of foreign gods in 165 B.C., after the Jewish revolt under the leadership of the Maccabees. In 139 B.C. emissaries from the Jewish state brought back from Rome a treaty of friendship. Inner-Jewish rivalries brought about a violent Roman conquest of J. by Pompey in 63 B.C. In 70 A.D. the city was conquered by Titus. Emperor Hadrian rebuilt J. under the new Roman name of Aelia Capitolina, and had then to quell the revolt of Bar Kokhba in 135 A.D.

After Emperor Constantine the Great embraced ↗Christianity in 312 A.D., J. came under Christian rule, thousands of pilgrims visited the Holy City where their religion had its origin. The so-called Byzantine period lasted until the first quarter of the 7th cent., when J. was conquered by the Persians, who in 614 A.D. destroyed the Basilica of the Holy Sepulchre built by Constantine and his mother, empress Helena, and seized the Holy Cross taking it to Ctesiphon. Numerous other important Christian sanctuaries suffered the same fate and a large part of the Christian population was put to death. Ca. 630 J. was recovered, along with the Cross, by Emperor ↗Heraclius. In 637, however, J. fell to the Muslim Arabs. J. and Palestine were then ruled by various Muslim dynasties: the Umayyads (637–750) from Damascus, the Abbasids (750–969) from Baghdad, the ↗Fāṭimids (969–1099) and the ↗Mamlūks (1250–1516) from Cairo, and, finally, the Ottoman Turks (1517–1917) from Istanbul (Constantinople). Only the Crusader kingdom of J. (1099–1291) was nominally local, but was strongly dependant upon Western Christian powers.

↗World War I brought Palestine and J. into the hands of the British in 1917, whereafter they were confided to a temporary British mandatory government by the ↗League of Nations. That government came to an end in 1948 with the withdrawal of the British from an increasingly volatile situation, with constant outbreaks of violence between two nationalistic groups: the Arabized Palestinians and the Jews who had been immigrating into the country since the rise of Zionism and the severe Nazi persecution in Europe during ↗World War II. Following a U.N. decision in November 1947, the new Jewish state of ↗Israel was founded in May 1948, provoking an immediate attack by combined Arab forces. The armistice left the West Bank of the Jordan River in the hands of the new state of Jordan, and J., divided between Jordan (the eastern part, including the Old City), and Israel (the western part and the New City). The UN plan was to keep J. under united international rule. Israel agreed, but the UN met with an absolute Arab refusal. In June 1967, during the Six Days' War the Israelis conquered the West Bank and the Old City of J., which both Israeli Jews and Palestinian Muslims

now insist on making their capital. Christians do not demand political sovereignty, but the right to remain in the city, freedom of worship and of a Christian life style.

The city of J. is sacred to three monotheistic world religions. Whilst the details of this sacredness differ, there are also common themes, including ideas of choseness, historical importance, symbolic centrality and proximity to heaven. In ↗Judaism, the creation of the earth and of the first man are said to have begun in J., namely at the site where the Temple eventually stood. Numerous Biblical events including ↗Enoch's translation to heaven and the sacrifice of Isaac, are also said to have taken place in J. In ↗Christianity, while the symbolic aspects may have more importance than the physical and concrete, J. is the historical site of Christ's crucifixion and resurrection. It is also associated with the source of the wood which was used for the Cross and the tomb of Adam (↗*Mäsqäl*: Legend of the Wood of the Cross; ↗Makəddа). For Muslims, ↗Muḥammad's night journey in which he moved form ↗Mecca to J. and from there ascended to heaven legitmizes the sacredness of the city. The Dome of the Rock, which marks the place of the Prophet's ascension. and al-Aqsā mosque are the chief Muslim holy places in J, which is the third holiest city in ↗Islam. J appears prominently in the eschatological visions of all three religions, particularly Judaism and Christianity. The emphasis, however, differs, the former stressing the transformed earthly J., and the latter the perfect Heavenly J. (Heb 12:22).

Ethiopian Christians feel even closer related to J. and the Holy Land than many other Christians. The "Ereṣ Kûš" (↗Kush) – translated as ↗Aithiopía in the Septuagint – is mentioned 48 times in the OT (cp. ↗Gihon). Tradition has it that the ↗Solomonic dynasty of Ethiopia descends from King Solomon and the Queen of Sheba (i.e. Makəddа; 1 Kgs 10:1–10; 1 Chr 9:1–9). According to the ↗*Kəbrä nägäśt* (chs. 39, 48, 84f.), biblical Judaism first won influence in the kingdom of ↗Aksum. In traditional belief, Christianity came to "Aithiopía" through the activity of the eunuch of Queen ↗Candace (Acts 8:26–40), baptized by the hands of deacon Philip in the life time of the Apostles.

This closely perceived relationship, as well as the belief in the "Heavenly J." (s. ↗Zion, ↗Däbrä Ṣəyon) made Ethiopian pilgrims seek historical and geographic J., some of them eventually settling in the city.

In the 380s A.D. we read for the first time in literature about Christian "Ethiopian" pilgrims in J., mentioned in two letters written by the disciples of St. Jerome in Bethlehem, Sts. Paula and Eustochius, to friends in Rome. These pilgrims could potentially be also from Nubia, for it is difficult to distinguish between Ethiopians and Nubians in classical and medieval texts. Both are often defined as "Indians" (s. ↗India as a name of Ethiopia); besides, some time earlier ↗Meroë in Nubia had been destroyed by an Aksumite military expedition.

Early contacts with Ethiopia may be also suggested by the findings of Aksumite coins (↗Coinage) in J. and the greater Palestine area. Whilst to a significant part those are cast copies or tokens, or Egyptian forgeries (s. Arslan 1996 and Hahn 1999), some are real and could have arrived by way of ↗pilgrimage or ↗trade.

Evidence about the Ethiopians in J. is scarce during the Byzantine period, but king ↗Kaleb himself is known to have sent his crown to the Holy Sepulchre after his victory in South Arabia (s. ↗Naǧrān); and his brother, ↗Muse, became monk there with a few fellow countrymen.

Information has been abundant since Crusader times, when other Ethiopian communities formed also in ↗Egypt, on the way to the Holy Land. In 1237 an Ethiopian monk in J., *abba* Ṭomas, tried to profit from a dispute between the patriarchs of ↗Alexandria and Antioch to have himself consecrated bishop for Ethiopia. From the 14th cent. on, a variety of sources report of the Ethiopian community: dedications in books sent as gifts to the community from Ethiopian rulers; letters from Ethiopian kings and nobles; marginal notes in manuscripts; descriptions by foreign historiographers and in numerous itineraria of foreign pilgrims; documents from legal processes; letters from foreign missionaries in J.; two historiographic manuscripts in Amharic written by members of the community in the late 19th cent.; books published by members in the late 20th cent.

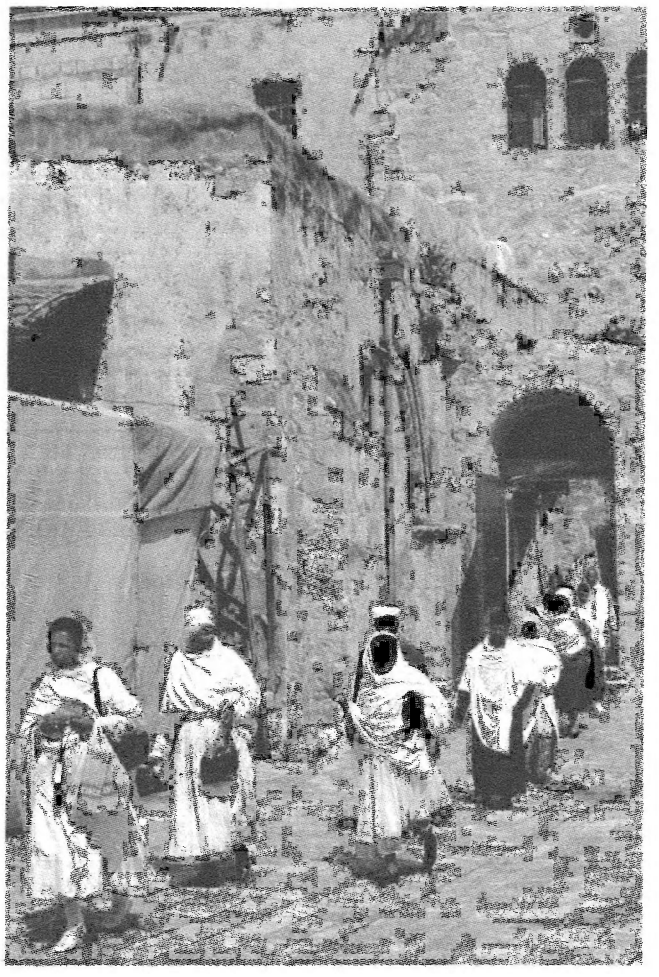
From these writings it becomes clear that the community flourished in the 14th– late 15th cent. It possessed four chapels within the Church of the Holy Sepulchre and a monastery on Mount Zion. However, we do not know exactly where the Ethiopians lived until the late 1470s, when European pilgrims began to write about their monastery in connection with the so-called cave of David on Mount Zion. The oldest testimony about their presence in ↗Dayr as-Sulṭān on the

roof of the Church of the Holy Sepulchre comes from a French pilgrim, maître Denis Possot, in 1530. Several other witnesses assert that towards the end of the 14th cent. the Ethiopians possessed two chapels at least, including that of Golgotha, within the Church of the Holy Sepulchre, and that two Ethiopian monks lived locked up by the Muslim rulers in the church together with monks from several other Christian communities. They also testify that the Ethiopians were the leaders of the famous light ceremony on Holy Saturday at the Holy Sepulchre (↗*Rədätä bərhan*), and during the ↗Mamlūk period Ethiopian pilgrims enjoyed partial or complete exemption from the heavy taxes demanded by the Muslim authorities from other pilgrims. This seems to have been because of Egyptian fears that the Ethiopians would hinder the ↗Nile waters from reaching Egypt.

Like many other Christian nations, Ethiopia since the 12th cent. had its own local "J.", in this case built or rather carved into the mountain at Roḥa by the Zagʷe emperor ↗Lalibäla (a contemporary and, possibly, a correspondent of the Ayyubid *sulṭān* Ṣalāḥaddīn, then ruling the Holy Places) whose name the site bears today. The toponyms (Däbrä Zäyt, i.e. Mount of Olives, Betä Golgota, i.e. Golgotha, the stream Yordanos, i.e. Jordan) recall J., so do the symbolic references to the sites of Adam's and Christ's tombs. The ↗Aksum Ṣəyon cathedral, too, traditionally believed to be the dwelling place of the ↗Ark of the Covenant, was seen as a replica of the Solomonic Temple of J.

The rise of Ottoman Turkey and the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī caused a swift impoverishment and decline of Ethiopian community in J. Several learned monks emigrated from J. to Europe at that time. In particular, the well-known *abba* Ṭomas or Wäldä Samuʾel Bahtawi and *abba* Ṗeṭros "Aethiops" or ↗Täsfä Ṣəyon went to ↗Rome became valuable informants for European scholars.

From descriptions of the Ethiopian community in J. in foreign sources from the 16th till the end of the 19th cent. it is clear that it lost its privileges in the holy places and was finally confined to the dilapidated Dayr as-Sulṭān, claimed by the Copts since the 18th cent. From both Coptic and Ethiopian sources we hear of the arrival in 1774 of a certain Egyptian by the name of Ibrāhīm Ǧawharī and his eight slaves at Dayr as-Sulṭān, and of the disturbances he caused there.



The Holy Sepulchre, Jerusalem; from Amakkälä Gäbäyyähu Gərmaye 2000:15

During his pilgrimage of 1793–94, a Russian pilgrim hieromonk Meletij of Sarov witnessed a violent dispute between Coptic and Ethiopian monks, whereby the latter used sticks to chase the former away.

Things began to improve for the Ethiopian community in J. in the 19th cent. *Aṣe* ↗Tewodros II, ↗Yoḥannəs IV, ↗Mənilək II and ↗Ḫaylä Śəllase I, as well as *ətege* ↗Ṭaytu Bəṭul, ↗Zäwditu, ↗Mänän Asfaw, and various Ethiopian nobles took great interest in the community, buying land and erecting buildings in the Holy Land. From the end of the 19th cent, the J. monastery was considered an imperial one.

The quarrels and disputes with the Copts continued, however, throughout the 19th and 20th cent., neither of the two communities having been hitherto able to prove indisputably their right of possession in the monastery. As a result, neither can make repairs to the dilapidated buildings where the Ethiopians live. It was as late as 1966 that running water, electricity and bathrooms with modern toilet facilities were

Ethiopians ("Indians") in Jerusalem in a 15th cent.-illustration, a priest (left) and a layman (right); from von Breydenbach 1486

for the first time installed in Dayr as-Sulṭān by the Jordanian governor of J. As a reaction, the Copts stoned the Ethiopian Easter procession from surrounding roofs. In 1970 the Ethiopians broke into the chapels that had been locked by the Copts since 1890; it is still debated whether the break-in was legitimate.

Ḫaylä Śəllase appointed the head of Dayr as-Sulṭān who until 1951 had the title of *mäggabi* or *raʾəs*, from then of bishop, and since 1972 archbishop. Since the fall of the emperor in 1974, the archbishop is appointed like all other bishops by the patriarch. The *wanna mäggabi* is the assistant of the archbishop, and each of the seven houses of the monastery has its own responsible *mäggabi*. The *dänb* (rule) given in 1924 by empress Zäwditu and the co-regent Täfäri Mäkʷännən to the monastery prescribes that the monastic counsel should consist of twelve members chosen and presented to the superior by the monks. The nuns chose their *əmmä mənet* ('prioress') who, however, has to be accepted by the archbishop.

In the year 2000 the community was headed by an archbishop and owned, apart from Dayr as-Sulṭān, six more monasteries in the country: the Ethiopian Archbishop's residence near the eighth station of the *Via dolorosa* in East J. (since 1876), Däbrä Gännät in West J. (since 1884), the Ethiopian monastery in Jericho (since the 1920s), Holy Trinity Monastery at the site of the Baptism of Christ (since 1933), Məskabä Qəddusan Monastery at Bethany (since the 1950s) and Däbrä Sälam Monastery at Bethlehem (since 1990).

Məskabä Qəddusan, lit. 'Resting place of the Qəddusan', is called so because it is connected with the cemetery of the community, and those Ethiopian Orthodox Täwaḥədo Christians who settled in the Holy Land are traditionally known as *qəddusan*, 'the holy ones' – in fact, the (permanent) members of the community.

Däbrä Gännät monastery has the largest Ethiopian church in the Holy Land and the only circular one (↗Church buildings). Built by Emperors Yoḥannəs IV and Mənilək II between 1884–93, it is dedicated to the Kidanä Məḥrät. Since it is the only Marian sanctuary, all the ↗feasts of the Virgin ↗Mary are celebrated there. A small nunnery also belongs to the monastery. From 1948 till 1967 it was the only Ethiopian monastery situated in Israeli territory, but like the others it was under the authority of the *mämhər* (sine 1951 bishop and since 1972 archbishop) of the Old City of J.

While the Ethiopian community in J. has historically been dominated by the monastic community, there is also a small lay community. Prior to the arrival of Ethiopian immigrants, these were estimated at ca. 300 (Stoffregen Pedersen 1983:155). In the past two decades this has certainly grown. Moreover, since the restoration of diplomatic relations between Ethiopia and Israel in 1990 (broken off in 1973), the number of pilgrims who arrive at Easter through the J. Memorial Society of Ethiopian Believers has also grown.

Despite the fact that ↗Beta Ǝsraʾel routinely spoke of their desire to reach J., only a small percentage of the more than 100,000 Beta Ǝsraʾel living in Israel have settled in the city. The lack of employment opportunities, high cost of housing and comparatively cold climate are all factors in this situation. However, J. remains religiously important to Ethiopian Israelis. In particular, the annual fall pilgrimage festival of ↗*Səgd* and the newly created memorial day (late May-early June) for Ethiopian Jews who died on their way to Israel are both celebrated in J.

Jesuits

Jesuits in the 16th and 17th cent.

The J. Order (also Society of Jesus, Lat. *Societas Jesu*) was founded in 1534 by ↗Ignatius of Loyola and six other companions, and approved in 1540 by Pope Paul III. The mission to Ethiopia was one of its first projects, combining the interests of the King of ↗Portugal Dom ↗João III to convert the ↗Prester John and of Ignatius to place the new Catholic order in the new-found lands of Asia. Its main purpose was the "reduction" of Ethiopia, meaning thereby the subjection of her church to Rome, the adoption of Tridentine Catholicism and the enforcement of political and cultural changes in the country.

I. History

First period: 1555–1603

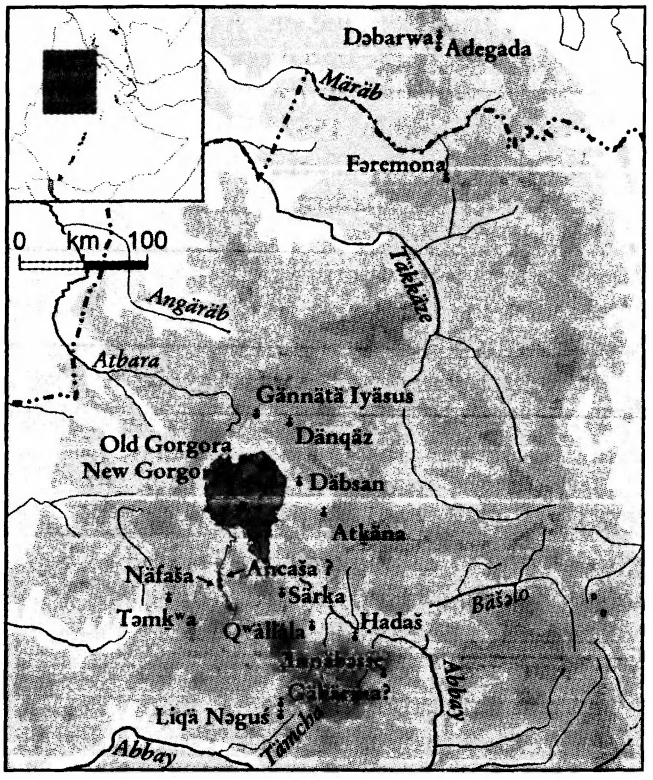
The mission began in 1555 with *mestre* ↗Rodrigues and Fulgencio Freire being sent to reconnoitre. They travelled with a veteran of Christovão da ↗Gama's expedition, Diogo Dias, who also acted as unofficial ambassador of Portugal. Rodrigues met *aṣe* ↗Gälawdewos at his palace in ↗Wäğ (ConzGal ch. 47) and informed the Jesuits in Goa of the unwillingness of the ruler to convert to ↗Catholicism. As a result, the J. decided to reduce the initial expedition of twelve missionaries (including Patriarch João Nunes ↗Barreto) to six. In 1557, Bishop Andrés de ↗Oviedo, António ↗Fernandes [1], Francisco Lopes, Gonçalo ↗Cardoso, Manuel ↗Fernandes and Andrés Gualdames reached the Ethiopian coast – the latter promptly left the mission and was killed in ↗Massawa by the Turks in 1562 whilst trying to leave for ↗India.

The missionaries met Gälawdewos in 1557–58, who openly refused to submit to Catholicism (ConzGal chs. 54–55). Nonetheless, he tolerated the J. and let them settle in ↗Təgray. There they counted on the support of the Portuguese living in Ethiopia since 1541 and of *baḥər nägaš* ↗Yəsḥaq. They moved around for a few years, settled briefly in ↗Dəbarwa, and then ca. 1566 founded a residence in the ᶜAdwa plateau (↗Fəremona). From there they made frequent visits to the surrounding areas (including ↗Aksum), befriended local monastic leaders (such as the *mämhər* of ↗Ǝnda Abba Gärima; BecRASO XI, 109), and ministered to a small Catholic community formed mostly by Ethio–Portuguese. In this way the mission remained separate from royal power; under *aṣe* ↗Minas it suffered open hostility but under *aṣe* ↗Śärṣä Dəngəl relations were friendly though never resulting in any partnership. Between ca. 1575–85, Francisco Lopes also preached in ↗Dämbəya, where a group of Ethio–Portuguese had recently been settled by the emperor.

In 1597, the last of the missionaries, Lopes, died, and thus the first period of mission came to an end without any substantial achievements. Yet, the archbishop of Goa, Dom Frei Aleixo de Meneses, managed to send two more J., the Syrian Abraham de Georgiis and the brahman Belchior de Sylva, in 1595 and 1598 respectively. The former was killed in Massawa on landing but the latter was able to reach Fəremona and stay with the Catholics until the opening of the second missionary phase.

Second period: 1603–32

The arrival in 1603 of Father Pedro ↗Paez revived the missionary project. He worked with success first with *aṣe* ↗Zädəngəl and then with *aṣe* ↗Susənyos. Under Paez's guidance and with the assistance of four other companions (Luis de ↗Azevedo, Lorenzo Romano, António ↗Fernandes [2] and Francesco Antonio de Angelis), the mission made significant progress.



The J. assumed influential positions with the nobility and at the Emperor's court. Amongst the friends they made, besides the Emperor, were his half-brother ↗Səᶜəlä Krəstos, his cousin *abetohun* ↗Bəᶜəlä Krəstos (d. 1615), *abetohun* Zädəngəl, the governors of Təgray ↗Kəflä Wähid and Kaᵓəbä Krəstos, Buko, governor of ↗Damot, and a number of priests (BecRASO VI, 277). With their patronage, the mission expanded. In 1607, after a failed attempt to settle in Maraba, ↗Səmen, a residence in ↗Gorgora was founded (cf. Pennec 2003:139ff.). Around 1611, thanks to Səᶜəlä Krəstos's patronage, they opened a house in ↗Qʷälläla (Goğğam) and then, towards the end of the decade, another in Ancaša (Agäw).

The missionaries also faced strong hostility. Court intrigues and religious discussions prevailed throughout the 1610s. However, in a battle fought in May 1617 Susənyos dealt a mortal blow to his principal opponents. *Abunä* ↗Səmᶜon, ↗Yolyos and ↗Kəflo were killed, and the powerful *ras* ↗Atnatewos was exiled to Amhara (BecRASO XI, 384f., 426; PerChron 129ff.); Yämanä Krəstos, half-brother of the ruler and one of the rebels, was however pardoned (ibid. 386).

After this episode the allegiance to Catholicism of Susənyos and part of his court was complete and public. On 1 November 1621, he made an open profession of Catholicism and rejection of Orthodoxy. As a result, he asked the J. to establish a new settlement at ↗Azäzo (↗Gännätä Iyäsus). These events initiated the most active decade of the mission, and between 1620–24, twelve more men joined. In 1625, after years of discussions, negotiation and intelligence gathering, Patriarch Afonso ↗Mendes arrived, together with six other companions and a train of 13 servants (BecRASO VI, 455; Lobo 1971:255).

Under Mendes's Patriarchate the mission established a number of new residences: Tanqha (Təmḳʷa, Tumha, 1624–25), Depeçan (1628-29) and Näfaša (1630–31) in ↗Agäw Mədər; Gäbärma (Gabrama, 1624–25) and Ləğ Nəguś (Liqä Nəguś, 1626) in ↗Damot; Ḥadaša (Adaxa, 1625–26), Särka (1625–26) and Ǝnnäbəsse (1626), in Goğğam; Atḳäna (Accana, 1624–25), ↗Dänqäz (1626–27) and Däbsan (↗Däbrä San, Däbsan, ↗Ǝnfraz, 1626–27), in Bägemdər; New Gorgora (1626); Dəbarwa (1625–26) and Adegada (1626–27), in Təgray. In 1628 and 1630, a further eight men joined the mission, including the Bishop with rights of succession Apollinar de ↗Almeida whilst conversions progressed, especially in the southern areas of the ↗Agäw and Damot.

During this time, significant religious and cultural reforms were accomplished: the ordination of Catholic priests, the translation of the Latin liturgy and rebaptism *sub conditione* of non-Catholics. However, together with Susənyos's administrative policies, these changes aroused the opposition of monks, ecclesiastics, the population at large, and some of the ruler's relatives – among whom were *ətege* Səlṭan Mogäsa ↗Wäld Säᶜala (BecRASO I, 481) and ↗Ḥamälmal Wärq (s. vol. 5), respectively wife and mother of Susənyos. Discontent grew and rebellions followed led by regional governors and rulers: in 1620 by Yonaᵓel, governor of Bägemdər (PerChron 200ff.); in ca. 1622, by "Korisseno", who was defeated; in 1624, by Yoḥannəs who led an uprising in Amhara; the same year, "Arao" (Arᵓayo?) rebelled in Təgray (ARSI, Goa 39 I, 220v, 236r; BecRASO XI, 481, 503). By 1630, *aṣe* Susənyos, exhausted and surrounded by enemies, was compelled to abolish many of the measures taken in favour of Catholicism. On 24 June 1632 he proclaimed the freedom of faith and shortly after, on 16 September, he died.

Persecution and exile

Susənyos was succeeded by his son *aṣe* ↗Fasilädäs, who, although once held by the J. as the perfect heir of his pro-Catholic father (cfr. ARSI, Goa 39 I, 236v), had no choice but to restore Ortho-

doxy and follow popular anti-Portuguese and anti-Catholic sentment, which saw the Jesuits as enemies of the faith and often referred to them with such negative epithets as "Chalcedonians", "wolves" and "Turks". He abolished pro-Catholic decrees, forbade the practice of Catholicism and ordered the expulsion of the J. This last move was motivated by the fears Fasilädäs had the J. might summon a military expedition from Portuguese India to come to their rescue.

There then ensued fierce persecution of the J. Among the anti-Catholic leaders were one Askadom from Təgray (cfr. BecRASO VII, 462–65) and the saint ↗Wälättä Ṗeṭros. In 1633 most of the J. took refuge in Fəremona, the year in which a large contingent (including Manoel de ↗Almeida, Manoel ↗Barradas, Mendes, Jerónimo ↗Lobo) went to ↗Sawākin en route to India. At least eight (Luis de Azevedo, Luis Cardeira, Jacinto Francisco, Gaspar Paes, Bruno Bruni, Francico Rodrigues, João Pereira and Apollinar de Almeida), however, decided to stay and went into hiding, mostly in Dämbəya and Təgray. Local Catholics helped them: Bruni and Cardeira took refuge at ↗ƎnḍaAbba Sälama and the governor of ↗Tämben, Zämaryam, protected Cardeira; Almeida enjoyed the help of one Kəflä Maryam. During the remaining years of the decade all died, most at the hands of the Orthodox: Paes and Pereira in 1635, Almeida, Francisco and Rodrigues in 1638, Bruni and Cardeira in 1640. In 1665, *aṣe* Fasilädäs ordered the burning of Catholic books, probably the remains of the important library gathered by the missionaries at Gorgora (BegChron 53).

Following this, the ↗Sacra Congregatio de Propaganda Fide entrusted the battered Ethiopian mission to other orders (↗Franciscans and ↗Capuchins) and de facto closed the doors to any renewal of the mission by J. priests.

In the course of time, the Ethiopian Catholic community died out. Some might have joined Orthodoxy while others went into exile, like *abba* ↗Gorgoryos. The Ethio–Portuguese were definitively expulsed in 1669 under ↗Yoḥannəs I (GuiIohan 10f.).

II. Political aspects and missionary methods

Seeking collaboration with local governors and the nobility was an important element of the J. missionary strategy. However, this was also determined by the serious political crisis that affected Ethiopia in the early 17th cent., when power accumulated by local governors challenged the monarchy. Hence, rulers like Zädəngəl and Susənyos found it useful to collaborate with the missionaries, for J. political ideas promised to strengthen their position (Chernetsov in PICES 10). Another aspect was adaptation to the local milieu, the missionaries for example learning local languages and traditions and using them in their preaching.

Still, as a new force in the Ethiopian arena, Catholicism played more than a mere political role. The J. tried to develop an Ethiopian Catholic culture. They used their rhetorical as well as painting, music and drama skills in order to reach their Ethiopian audience.

The J. also believed it was necessary to develop consistent arguments in order to grapple with the Christological and theological dogmas of Ethiopian Christianity. Theological debates were held in both oral and written forms The missionaries translated several theological works into Gəᶜəz, some with the active encouragement of Susənyos and his brother Səᶜälä Krəstos (BecRASO XI, 282, 318, 375). They translated liturgical and theological treatises written by the great Catholic reformers, as well as simpler texts for children and adults to learn about the "truths of Catholicism". In addition, they composed their own texts to refute the theological tenets of Ethiopian Christianity (Cohen 2005). In all of this, they were helped by Ethio–Portuguese and Catholic Ethiopians (among those mentioned are Akalä Krəstos, *azzaž* Ṭinno [↗Täklä Śəllase] and Fəqrä Ǝgziᵓə, a savant from Goğğam; BecRASO XI, 307, 420ff.; ARSI, Goa 39 I bis, 108v).

III. Religious debates

Some of the religious controversies between J. and Ethiopians were focused on Christological issues (↗Christology) and ritual and religious practices. Catholics advocated the doctrine of the two natures of Christ after incarnation, which was translated into Gəᶜəz as አሐዱ፡ አካል፡ ወክልኤቱ፡ ጠባይ (*Aḥadu akal wäkəlᵓetu ṭäbay*, 'One person and two natures'; Fernandes 1642:103). In opposition, the Ethiopian Church refuted Dyophysism and the doctrine of the Council of ↗Chalcedon, and supported a formula that expressed "a strong concern for the unity of person as a principle of divine-human action in Jesus Christ who is the Son of man, "One and the Same" (↗Monophysitism).

Another point of conflict was the *Filioque*. Since the schism with the Eastern Churches in 1054, Latin Catholicism maintained that the Holy Ghost came from the Father and the Son

while Eastern Churches opposed this position and held instead that the Holy Ghost descended from the Father alone.

The J. condemned the Ethiopian position on the creation of the souls – commonly known as "Traducianism" – which maintained that all souls come from the soul of Adam and were transmitted from father to son. They suggested that whilst on the seventh day God stopped creating new things, there was no inconsistency in the continuing creation of souls, since they were not new things, neither had they been created in the way God created the first one.

Both traditions used the Scriptures and the writings of the Church fathers, in particular St. Paul, to support their Christological positions. Thus, theological contrasts were in many cases the result of different interpretation of the O.T. and N.T. J. ideas were expounded in treatises like the ↗*Mäqśäftä ḥassätat*.

The Orthodox, in their turn, translated Coptic Christian texts from Arabic into Gəᶜəz, over a period from the mid-16th to the second half of the 17th cent. These were complemented by a series of original essays that provided a response to J. attacks against Ethiopian Christianity (ed. Cerulli 1960).

Questions regarding the sacraments and ritual practices became central in the debates between the two parties. The J. objected that in Ethiopia instead of a single uniform formula several different formulas were used during ↗baptism and complained, referring to the *Ṭəmqät*, that it was "repeated" every year. They criticized the use of raisins with water instead of wine in the ↗Eucharist and persistently undermined the authority of Ethiopian priests to celebrate mass. Practices such as ↗circumcision and observance of the ↗Sabbath were prohibited. The J. attributed them a Jewish origin and relentlessly spoke against them in their preachings, refusing to accept them in either a religious or a cultural sense.

IV. Culture, art and architecture

Amongst the most interesting aspects of the mission were cultural and artistic developments. Throughout the whole missionary period, but especially during the 1620s, the J. imported a number of artistic and cultural objects and forms. The goal was the creation in Ethiopia of a missionary culture, where conversion to Catholicism went hand in hand with the adoption of cultural forms from Portuguese India and Europe. In addition, their aim was to provide Susənyos's court with exclusive luxury goods to increase his symbolic prestige.

Among the most renowned examples of this are the architectural works at Fəremona and in the residences around Lake Ṭana (↗Gorgora, ↗Dänqäz, ↗Ǝnfraz, ↗Gännätä Iyäsus, ↗Märṭulä Maryam, Qʷälläla). In the first residence, the J. built an imposing fortress, probably with the help of masons from the Ethio–Portuguese community and some of the Italian missionaries. Missionaries with a specificly architectural training worked in the Lake Ṭana area: Brother João Martins, who had been involved in the church of St. Paul at ↗Diu and designed the church at Gorgora, Father Bruno Bruni (both arrived in 1625) who led the remarkable restoration of Märṭulä Maryam, and Brother Francisco Rodriguez (arrived 1625), mason at Dänqäz.

Music and theatre also acquired prominence during the second mission. At the schools of Fəremona and Gorgora Father Luis Cardeira (arrived 1624) taught singing and playing instruments to the children and he also performed at the royal court (ARSI 246r; 222v). Dramas and tragedies were also staged, the first in 1625 at Gännätä Iyäsus, Fəremona and Dänqäz, on the occasion of the celebrations for the canonization of Ignatius of Loyola and Francis Xavier (ARSI, Goa 39 I, 250v–52r). In the plastic arts, the J. imported a number of images, in the form of both prints (images of St. Francis Xavier, St. Ignatius, the Fathers of the Church) and icons. Sculpture seems to have also been practised, though to a lesser extent. Father Gaspar Paes produced a figure of Francisco de Borgia to celebrate his beatification from 1624 (ARSI, Goa 39 II, 422r).

The missionaries imported large numbers of objects for domestic use, above all into the court of Susənyos (BecRASO XI, 331) and into their own residences. These included furniture (beds) and clothes from India (also used to dress the newly converted, cf. BecRASO XI, 408f.), Chinese porcelain and liturgical objects (chalices, processional crosses, vestments for the Patriarch and his aides), probably of Iberian and Italian origin.

Finally, the J. played a role in ↗education. At the seminaries in Gorgora and Fəremona, children were taught to write in Portuguese and local languages (↗Amharic and ↗Təgrəñña). They probably followed a similar curriculum to that of the college of S. Paulo in Goa, being trained in rhetoric, humanities, philosophy and theology.

V. Reactions and impact

The J. presence brought lasting changes to the Empire. The foundation of a fixed capital in ↗Gondär was the logical consequence of the developments which started during the long collaboration between Susənyos and Paez. In addition, under the influence of the mission, vernacular languages (Amharic and, reportedly, Təgrəñña) achieved literary status (Böll 2000) and translation of works into Gəᶜəz was also given a stimulus (↗Historical books, biblical; ↗Hymns).

Some objects imported by the J. had a widespread impact. The icon of the Virgin of "St. Luke" from Sta. Maria Maggiore (Rome) became from the 17th cent. onwards the principal source for indigenous iconology on Mary in the Lake Ṭana region, Dämbəya and elsewhere (ChojPaint). The import of a number of plants from India and Europe (in 1618 an annual letter mentions as "new plants" vine arbors, peach, orange and papaya trees; BecRASO XI, 415) may also be the origin of their subsequent cultivation in Ethiopia. The J. also shared an admiration for Ethiopian Christian culture. Using their fine historiographic and ethnographic skills they thus provided valuable descriptions of its traditions and diversity (↗Historiography: Portuguese). Thanks to their writings they also increased the awareness of Ethiopia in Europe (↗Ludolf) and inspired subsequent travels by Europeans to the kingdom (↗Heyling; ↗Wansleben).

In the religious sphere, discussions between J. and Orthodox clergy stimulated Christological thought amongst Ethiopian monks. The most prominent among the new Christological formulations from this period was the Unctionist doctrine (↗*Qəbat*), which gathered momentum in Təgray. Its position was mid-way between the doctrines of Unionism (↗*Täwaḥədo*) and Catholic Dyophysism. Unlike the former, the Unctionist view accepted the separation between the divinity and humanity of Christ as postulated by the Catholics. If the Unionist doctrine maintained that "for humanity, the union of the divinity (with it) replaces unction for it", the Unctionists were closer to the Catholics in stating that "the Father is the anointer, the Son the anointed, and the Holy Spirit the ointment". It also maintained that the Holy Ghost was the ointment through which Christ had become the Son of God. This unction, besides making Christ king and supreme priest, made Him the natural Son of God, even in His humanity. Still, both *Qəbat* and *Täwaḥədo* followed the tradition of the Eastern Orthodox Churches.

Jesuits in Ethiopia after 1945

The J., with a worldwide experience in education, returned to Ethiopia in response to a request made by ↗Ḫaylä Śəllase I to reorganize, run and develop the Täfäri Mäkʷännən School (TMS), an elementary school founded by the regent in ↗Addis Abäba in 1924. This venture was to be educational but not missionary, at the behest of the Ethiopian partners. The Emperor further requested that the J. be from Canada, and neither wear clerical clothes nor become involved in religious proselytism.

Starting from August 1945, and for the next 30 years, the J. presence in Ethiopia was closely associated with their work at the TMS (which later developed into the University College of Addis Ababa [UCAA], then Ḫaylä Śəllase I University, later ↗Addis Ababa University). They helped in organising and managing it, as well as being involved in teaching arts, languages, sciences and handicrafts. In addition, they published textbooks and produced educational programmes that had an impact on the Ethiopian educational system.

The first group of J. to arrive in the country in 1945 was headed by Fr. Dr. Lucien ↗Matte and

included Frs. Léon Zipfel, Louis-Joseph Prévost and Guillaume Béland. In January 1947, Mgr. Theodore Monnens (d. 1956, Addis Abäba), a Belgian J., was sent as unofficial Delegate of the Holy See with the mission of supporting the Catholic Church in the country, still suffering from the consequences of war and subsequent deportations.

The UCAA began activities on 11 December 1950, under the direction of Matte and a team of J. and other colleagues. Among them there was the art historian Stanisław Chojnacki, who set up the College's Library, which he directed until 1963, and Museum. Soon after that, the Faculties of Arts and Science and an evening school of Law were opened. In August 1954, for the first time in the history of the country, Ethiopian students received university degrees from an Ethiopian institution.

In 1957, the J. Dr. Pierre Gouin founded the Geophysical Observatory at the Science Faculty of the UCAA, which he directed until 1978. The Observatory produced important seismological observations and Gouin himself wrote the reference work *Earthquake History of Ethiopia and the Horn of Africa* (1979).

In response to the need for adult education, in 1948, the J. started the Bərhane Zare Näw ('Today is my Light') Institute, which in the beginning catered to the educational needs of the members of the ↗Imperial Bodyguard, the ↗Air Force and civil servants. In 1954, this Institute became the Extension Department of the UCAA.

With the creation of the University in 1961, the J. were no longer in charge of the educational facilities they helped to develop. However, due to their expertise, they continued to lecture and hold for some years various administrative positions in the University. The last Canadian J. to leave the University was Claude Sumner, who devoted over 45 years to research and lecturing in the field of philosophy.

Since 1976, the J. have diversified their activities. They continue to be present in the educational field with the teaching of modern languages and science in Catholic schools and also lecturing on philosophy and theology in Catholic institutions of higher education for the training of the clergy. In 1977, they started what later developed into the Galilee Centre near ↗Däbrä Zäyt, an institution that serves the educational needs, mainly of Ethiopian Catholic Church personnel, and offers a wide range of courses (Ministry, Peace and Reconciliation, Development). Being engaged for the last 30 years in development work, the J. have managed since 1982 a Refugee Service working especially among the displaced and refugees. Since their arrival in 1945, nearly 100 J. have spent at least a year serving in different capacities in the country.

Jewellery

J. with its ethnic, social and religious reference plays a significant role in Ethiopia. Different local or imported materials enter into its composition (glass beads, semi-precious stones, amber, brass, iron, ivory, shells and other organic materials). Precious metals, however, are exclusive to Christians and Muslims for economic and cultural reasons. Thus, the metal ornaments of the southern populations are worked by ↗blacksmiths, whereas the Christians and the Muslims of northern and eastern regions, require the services of ↗goldsmiths. Silver, obtained by the melting down from ↗Maria Theresia thalers, is the most favoured metal for J. Besides some ↗Beğa ornaments, gold J. is the exception. Formerly reserved for emperors and the nobility, gold was also the prerogative of Muslim Oromo kings although, gold is prohibited by Qurʾānic tradition.

Pieces of J. are often part of the dowry of a girl and are passed from mother to daughter. Precious metal J. constitutes an asset to be used when necessary. A damaged item is brought to the jeweller who melts it down and transforms it into a new piece. It is thus rare to find old J. except as the objects of excavations and the ones purchased by European travellers from the beginning of the 19th cent. The oldest recorded piece in the collections of the Musée du quai Branly dates from 1840 and the British Museum has J. given by *nəgus* Śahlä Śəllase to the French traveller Théophile Lefebvre and the British ambassador William C. Harris.

Classification by technique, form and decoration makes it possible to identify nine main goldsmithing centres which are also city-markets located on the important trade routes. The filigree J. of ↗Aksum, which is characterized by its fineness, was very much appreciated by the

emperor and his court. Therefore, many Təgrayan goldsmiths followed the imperial court to its final location in Addis Abäba where Təgrayans command almost all of the J. market.

↗Harär is an important Muslim centre frequented by the Somali, the Oromo and the Harari. The presence of Jewish Yemenite silversmiths determined a style of filigree decoration with medium-gauge wire, a craft industry itself inherited from the Hellenistic world. The production is characterized by an overload of ornaments applied to a silver sheet backing following a decorative register of rosettes, lozenges, bands of twisted and beaded wires, S-scrolls, domes and granulated motifs.

In the highlands of Bägemdər, Wällo and Šäwa, the antique technique of lost wax casting survived for small pieces of J., e.g., crosses, rings and ear-picks suspended from the ↗*mätäb*. Ornaments of greater dimension seem to reproduce ancient models. Therefore, bracelets, earstuds and necklaces with pendants, decorated by repoussé and stamping, show close relations with the objects of archeological excavations discovered in Ethiopia and in Egypt.

↗Gondär has the most conservative production of J., such that most specimens described by Quartin-Dillion in 1840 are still current. Cultural links with Egypt can be seen in some types of J., e.g., with the Ethiopian Orthodox cross and the *ammästəyyo* braclet (KaneDic 1126), a similar model to which decorated the wrist of Pharaoh Psousennes' mummy (Leclant 1987:254).

The goldsmiths of ↗Ankobär were renowned for the production of heavy pour cast honorific J. (e.g., *aqʷədama*, an ornament worn on the forehead), or earstuds, bracelets, diadems and necklaces of large size, the vegetal type of decoration of which (rosettes, flowers, spirals, palmettes) is produced by repoussé work and stamping techniques. The appearance, at the end of the 19th cent., of a very well worked kind of J. in free filigree decorated with settings of coloured glass, is undoubtedly related to the arrival of Armenian goldsmiths at Mənilək's court (GueCopMen 269, 275f.) The ↗Armenians, with the Təgrayan goldsmiths based near Arada, played a significant role in Addis Abäba by creating fine bracelets, necklaces, crowns, earstuds, medals for the emperor and the nobility, whilst a second centre of workshops, located around Addis Kätäma, is in the hands of Amhara, Yemenite and Indian craftsmen. They produce some types of the more usual J. (neck crosses, *ṭälsäm*-talismans, ear-picks) characterized by the use of a less fine silver and the simplification of patterns and forms.

↗Däse, an important meeting place for highland and lowland peoples, has since the beginning of the 20th cent. produced silver J. that reflects the influence of both Muslim and Christian cultures. This is exemplified in some models inspired by the Təgrayan *ʾanṭälṭälä*, in the use of conical or spherical bell pendants and in the mixed techniques of filigree and gravity pour casting (s. BassDic 538).

The ↗Argobba craftsmen of ↗Aləyyu Amba, a significant caravan halt until the beginning of 20th cent., are famous for their heavy silver cast J. Of high titre, it takes simple geometric forms decorated with domes and large granules and massive twisted wire bracelets.

↗Ǧimma, the capital of the old sultanate of Ǧimma Abbaa Ǧifaar, was a very prosperous city-market during the last century. Ǧimma's silver J. in applied filigree and looped chains is very fine and has an excellent purity. The decorative register and shapes testify to the stylistic influence of the nearby Christian and Muslim states. A very well worked kind of production in free filigree, appeared at the end of the 19th cent. in Ankobär, and is undoubtedly related to the arrival of Armenian goldsmiths (↗Armenians), who played a significant role at court, in particular in the production of medals and imperial crowns.

Apart from these gold and silver workshops, it is possible to find on the Red Sea coast imported examples of J., in particular from Oman, and metal pieces with simple forms forged by blacksmiths. When ornaments do not require the assistance of a metal craftsman, women may make their own personal J. While respecting a precise social and ethnic code, women create their own ornaments of copal or glass beads, of cowries, seeds and bone pendants. It is noteworthy that ↗ivory carved into bracelets or labrets is the privilege of hunters, and there exists among the ↗Daasänäč people of the Omo valley a language of colours in J. making associated with age groups and families.

Important collections of Ethiopian J. are to be found e.g., in the Musée du quai Branly (formerly Musée de l'Homme), the Museo Nazionale di Antropologia e Etnologia in Florence, the Museo Preistorico ed Etnografico "L.Pigorini" in Rome, the Völkerkundemuseum der Universität Zürich, the British Museum in London, Lindenmuseum in Stuttgart, the Museum für Völker-

kunde in Munich, the Smithsonian Institution and the Mingei International Museum in San Diego, California.

Bracelets

Bracelets and anklets, worn in pairs, decorate the wrists and the ankles of girls and women. Silver and more rarely gold are the materials employed by Christians and Muslims. The bracelets called by the generic term of *ambar* have shapes and designs specific to each area. The most widespread type is a bivalve cylinder, closed by a pin which slides through three hinges, a model dating back to Egyptian antiquity. It is a characteristic of Muslim women of the Harärge peoples, i.e. Somali, Harari and Oromo, to wear an armlet made of horn (Harari *šānḫēt*) or twisted silver (Harari *ṭumṭum*) on their upper arm.

Hamär women wearing iron bracelets and armlets, Turmi, Gamo Gofa; photo 2005, courtesy of Cheryl Chanter

The rich Amhara or Təgrayans wear a group of four pairs of silver anklets: a plain ring with polyhedric terminals (Tgn. *əgri ambar*, Amh. *yä'əgər ambar*) surmounts a filigree cylinder decorated with a fringe of conical small bells, while the instep is covered with two flexible anklets, the *albo*, comprising threads of small lenticular beads, and the *əgri kətab*, a series of long pendants which jingle while walking. In Muslim Harärge, the pubescent girl receives her first pair of anklets (*ḫiğl*, pl. *ḫuğul*) from her father. The ringing of small spheric bells attached around these hollow rings has a mainly prophylactic function.

Men do not wear bracelets except for *šaläqa* badges offered by the emperor to warriors to reward them for their bravery in combat. These consist, in addition to the heavy frontal ornament of the ቆጻማ (*qʷədamma*), of two honorific bracelets worn on the right arm: the ቢተዋ (*bitäwa*) is a conical cuff decorated with repoussé or filigree; the ጩፋ (*čufa*), a hollow ring of square section, engraved with crosses, is worn above the elbow. These silver or gold ornaments, worn during two or three months after the victorious battle, according to Cecchi (CecZeila vol. 1, 335) disappeared around 1930, at the moment when the expansionist wars against the non-Christian populations were ending.

Honorific head ornaments

Worn by kings, provincial and state leaders, high officers and brave warriors of the Ethiopian highlands, honorific head ornaments made of precious metal consist of ↗crowns (አክሊል, *aklil*), gold diadems (ራስ፡ ወርቅ, *ras wärq*), lion's mane headdresses (አንፋሮ, *anfarro*), massive silver forehead ornaments fringed with long chains (አቆጻማ, *aqʷədama*) and silver diadems with

three peaks (↗*Kallaččа*). Every item of headgear had its particular significance according to the rank of the noble or the bravery shown by the warrior during battle (↗Meritorious complex). Status was indicated by the amount of gold, precious stones and the fineness of the silver-work. Honorific head ornaments are part of a warrior's regalia including a shield embossed with silver (*ğafa gašša*), a damascened sabre (**ጎራዴ**, *gorade*), a cape of silk velvet or lion skin called ↗*lämd* and a large bracelet **ቢተዋ** (*bitäwa*). These were given by the emperor to successful military leaders and warriors at the triumphal return from battle, or on the occasion of the great annual review at *Mäsqäl*.

Crowns were the prerogative of kings although two Emperor's consorts, *ətege* Ṭaytu and *ətege* Mänän received their own crown, of smaller dimensions, during the ↗coronation ceremonies of 1889 and 1930. As a consequence of the emergence of several kingdoms by the early 19th cent., there was a notable difference between the crown of the *nəguś* and the one of the Emperor. The *nəguś* wore a conical embossed silver tiara that could be surmounted by a plume of white egret feathers, like the one of King Śahlä Śəllase described by Harris (HarAeth vol. 3, 18) or by a cross (s. the crown of Mənilək II as king of Šäwa designed by Cecchi, CecZeila vol. 2, 588). The imperial cylindrical-shaped gold crowns, produced by Təgrayan and Armenian goldsmiths ever since the reign of *aṣe* Yoḥannəs IV, show a profusion of filigree decoration, settings of precious stones and four rows of conical bells.

Among the most precious headornaments, the *ras wärq* is a gold diadem marking the rank of a provincial governor or ↗*ras* who was appointed by virtue of hard work and services rendered. Worn on ceremonial occasions as a sign of their high rank, this diadem often incrusted with precious stones and surmounted by an arc and three crosses, bore the effigy of the Emperor in a medallion.

The **አንፋሮ** (*anfarro*) consists of a thick lion's mane (↗Lion[s])) mounted on a narrow silver or gilded silver diadem with numerous tiny bells covering the forehead and fastened with yellow and green silk ribbons. *Aṣe* Tewodros was the first to allow his successful warriors to wear this impressive headdress, once the privilege of lion hunters, as part of their military uniform. Until the reformation of the army by *aṣe* Ḫaylä Śəllase I in the 1930s, the *anfarro* headdress was

Ləğ Iyasu wearing a honorific head ornament, during his time as the ruler of Ethiopia; from GueCopMen 624, pl. LXI

worn by high ranking officers (*ras* and ↗*azmač*) and by the emperor on the field of battle and during military parades or official receptions.

From the 1840s, European travellers in Ethiopia recorded the presence at the court of Šäwa of a curious headornament called *aqʷədama*. This heavy frontlet of silver, about 40 cm long, with many chains each ending in a rhombus and crescent shaped pendant, is surmounted by a cross, sometimes placed between two curved horns. This particular badge of honour, worn by *nəguś* Śahlä Śəllase, as well as by *ləğ* Iyasu in 1916, was awarded to cavalrymen who had slain ᶜAfar enemies. Two *aqʷədama* that were given as a royal gift to the Swiss engineer Alfred Ilg and French President Poincaré are kept in the collections of the Völkerkundemuseum der Universität Zürich and the Musée du Quai Branly in Paris.

In the Amhara highlands, the name **ካላቻ** (*kallaččа*) is given to a simple silver or gilded silver diadem lined with violet velvet with three triangle-shaped peaks. The decoration of vegetal type is produced by stamping, repoussé work and chasing; the upper edge is indented with a fringe of conical bells and two circular pendants covering the forehead and ears of the wearer.

This diadem was awarded to the officers who distinguished themselves during battle. *Kallaččа* diadems were usually worn over a silk or leather headband decorated with gold embroidery and a lion's mane (**አንበሳ ጋማ**, *anbässa gamma*), thus resembling the *anfarro*. This honorific headornament, abandoned at the time of Ḫaylä Śəllase I's reign, seems to be the stylised variation of the Oromo phallic headgear called *kallaččа* still used nowadays in Southern Ethiopia. This looks like a pointed phallus in cast zinc fixed on a large white conus shell, tied to the forehead of Boorana chiefs and Konso priests. The phallic *kallaččа*, a symbol of male potency and aggression, is closely associated with the horn of the rhinoceros, of a very similar shape, during rituals intended to destroy evil influences. The appearance of the *kallaččа* as an item of honorific headgear at the Gondärine court is probably connected with the marriage of *aṣe* Iyasu II to Wəbit, an Oromo noblewoman, in the middle of the 18th cent.

Engravings and drawings based on James Bruces's use of the camera obscura show that the "horn of victory", so named by the Scottish traveller, was worn by an Oromo chief (Pankhurst – Gérard 1996:19), and also by Kəflä Iyasus, commander of the army of *ras* Mikaʾel Səḥul of Təgray (Russel 1833:144) in the late 18th cent. George Annesley travelling in Təgray in 1805 describes horsemen with a horn of gold either perpendicular above their foreheads or projecting forwards. The phallic symbol as a single or a triple horn projecting from the forehead (CecZeila vol. 2, 497) is also to be seen on the conical gold crown of the king of Käfa (collection of the Institute of Ethiopian Studies in Addis Abäba).

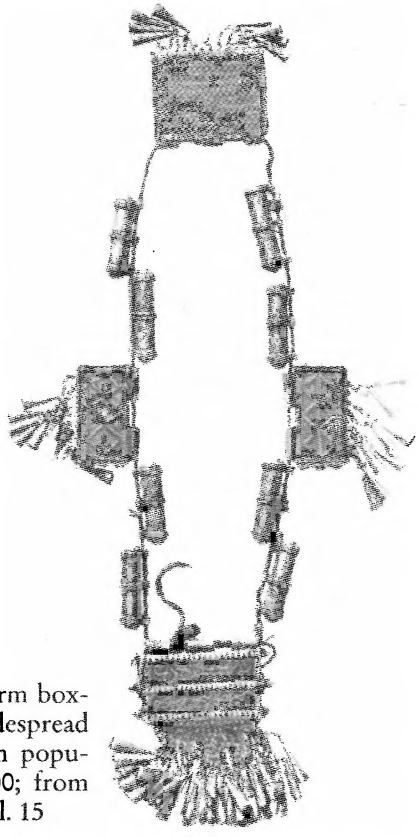
Necklaces

The necklaces worn by women are mostly made up of amulets, intending to protect one of the most vulnerable parts of the body. The nomenclatura and morphology of these necklaces evoke, in their very great diversity, leather talismans. Even though magic scrolls (**ክታብ**, *kətab*) and dried medicinal plants were enclosed inside these amulets, most of the metal ones are now empty and have become more of a decorative item.

A filigree silver case in the shape of crescent or cylinder with domed ends (Arab. *ḥirzī*) is used as the main component of the necklaces worn by Muslim women. The addition of amber or red glass beads has an extra symbolic value, the yellow supporting lactation, the red stopping haemorrhage. In the Christian highlands, one of



Necklace with charm boxes, particularly widespread among the Muslim population, around 1900; from Hough 1911:276, pl. 15

the most popular silver or gold necklaces is the ↗*ṭälsäm* or *ašän kətab* (አሸን፡ ክታብ), a composition of triangular, semicircular and rectangular elements strung on a black silk cord.

Two types of ornament, the design of which evokes fertility, seem to be of very ancient origin: firstly, the *marda* (Oromiffa), necklaces of silver convex pendants, which decorate the necks of divinities of pre-Aksumite times as on the sphinx of ↗ᶜAddi Kramatən (Anfray 1990:42–44). The same form of pendant, an emblem of the Egyptian goddess Neith, was an amulet associated with renewal (Wilkinson 1971:26; Posener n.d., 259). The second type was found in a hiding place at ↗Mäṭära which delivered a gold specimen of an *ʾanṭälṭäla* (BassDic 538), a composition of elements in the shape of a clove or a pomegranate. This ornament is still very widespread in the north of Ethiopia.

The use of the dorsal counterweight as a component of the necklaces of Argobba, Amhara or Oromo of Ǧimma's women, also seems to go back to antiquity. The *sanqa dəri* formed of a multitude of fine chains connecting two or four pendentives filled with odoriferous resin, is very similar to the necklaces discovered in the tomb of the Tanite Pharaoh Pinedjem (11th cent. B.C.; Ziegler 1987:96).

Necklaces can also be simply decorative, even useful. The threads of Venetian glass beads or spherical silver beads (*muriya*), much appreciated by Somali and Muslim Oromo women, are inspired by Yemenite models. The *waqri* is a large cylinder-shaped gilded silver case with a side lid, similar to a hive (Harari *waqri*), suspended by two long chains decorated with inserted pieces of coloured glass. This necklace, specific to the Adäre, is offered by a fiancé to his future wife. The cylinder is indeed used to house lucky coins presented three days before the wedding. This same cylinder had already been used to collect money that the fiancé had received as a child when he was able to recite the Qurʾān by heart.

Jewish influences ↗Judaism; ↗Betä Ǝsraʾel

João II

J. (b. 3 May 1455, Lisboa, d. 25 October 1495, Alvor), King of ↗Portugal (r. 1481–95), named "the Tyrant" and, by Nicolò Machiavelli, "the Perfect Prince", reinforced the overseas expansionist project initiated by his father, Afonso V, and inaugurated the long engagement of his country with Christian Ethiopia.

In the late 15th cent., one of the purposes of the Portuguese crown was to reach the Indian spice market. Portugal was aware of the strong Islamic presence in this region but at the same time confident in the existence of a highly powerful Christian "monarch-priest", the ↗Prester John. J.'s policies aimed at the systematization of navigation towards southern Africa and the quest for such a prestigious Christian potentate.

In 1487, J. sent Afonso de Payva and Pêro da ↗Covilhã to the east, via Cairo, with the mission to gather information about the spice markets, Indian harbours and the Indian Ocean sea routes, and to establish direct and formal communication between Ethiopia and Portugal. The envoys were provided with a navigation chart prepared by the theologian and cosmographer Diogo Ortiz de Vilhegas "Calzadilla", and the Jews mestre Rodrigo and José Vizinho. In 1488, the King received an Ethiopian monk, a certain "Lucas Marcos", who was sent back home with two letters proposing the establishment of regular contacts between Portugal and Ethiopia; allegedly, Lucas Marcos could not accomplish the mission. Later on, the King sent to Cairo new instructions for Payva (who had already died in the meantime) and Covilhã, emphasizing his desire for an alliance with Ethiopia. In 1494, Covilhã was able to reach the camp of *aṣe* ↗Ǝskəndər, but J. never learned about it as he died in the subsequent year. J. was succeeded by his brother-in-law, Dom ↗Manoel I.

WINIUS, "The Enterprise Focused on India: the Work of D. João II", in: ID., *Portugal, the Pathfinder: Journeys from the Medieval toward the Modern World, 1300–ca.1600*, Madison 1995, 89–120.

Isabel Boavida

João III

Dom J. (b. 6 June 1502, Lisboa, d. 11 June 1557, Lisboa), named "the Pious", was king of ↗Portugal (r. 1521–57). He succeeded his father Dom ↗Manoel I. Under his rule, Portugal reached its widest expansion to the Far East and the Atlantic, with the definitive acquisition of ↗Diu in 1546.

Dom J. was a reformer monarch and committed to the propagation of Catholicism – he established the tribunal of the Inquisition and expelled most of the Portuguese Jews. Under him, and with the help of the ↗Jesuit order – present at the court since 1540 – Portuguese overseas policy took a decisively religious drift. This was reflected in the policy towards Ethiopia. Thus, when the envoy ↗Ṣägga Zäʾab reached Lisbon in 1527, he received a cool welcome. Likewise, the letters Dom Rodrigo da ↗Lima brought from *aṣe* ↗Ləbnä Dəngəl (BeckHuntAlvar 494–506) led to divergent interpretations: whilst the Emperor aimed at an alliance with a western state and requested craftsmen and officials with various skills, J. concluded that his Ethiopian peer was interested in receiving a Latin patriarch – an idea that might have been given a further boost by the affair of João ↗Bermudez.

Shortly afterwards, the idea of a religious mission to the "Preste" began to take shape. In 1539, a brother of J., cardinal infante Dom Affonso sent a letter, via Bermudez, to Ləbnä Dəngəl censuring the religious customs held in Ethiopia (BecRASO X); in 1540, Damião de ↗Góis's treatise was censored in Portugal by the inquisidor mor infante Dom Henrique, another brother of the king. The next year, began the expedition led by Christovão da ↗Gama. Subsequently, J. and ↗Gälawdewos exchanged a second round of letters, in one of which J. declared his intention to send a patriarch to Ethiopia (Whiteway 1967:109–21, sp. 111).

In 1546, J. wrote his first request to ↗Ignatius of Loyola to organise a mission to Ethiopia. The idea, however, did not take concrete form until 1553, when J. asked for a dozen Jesuits for the mission, including one for the patriarchate. Ignatius then proposed a list of five Jesuits for this later position. Following his preference for a Portuguese national, J. chose João Nuñes ↗Barreto as patriarch, and two coadjutors, Andrés de ↗Oviedo and Melchior Carneiro. After they had been ordained, J. instructed the viceroy of India Pedro Mascarenhas to send men to Ethiopia to find out if *aṣe* ↗Gälawdewos was ready to receive a new patriarch and obey the Catholic Church. On 7 May 1555, three Jesuit envoys arrived in Ethiopia with letters from the Viceroy of ↗Goa and J. The Emperor did not give satisfactory answers to the messengers' questions and the religious project came to a halt.

J. died of apoplexy and was succeeded, as regents, by his wife Catarina de Austria (1557–62) and his brother Dom Henrique (1562–68), until the heir, Dom Sebastião, reached majority.

Leonardo Cohen

John the Baptist

John the Baptist in Ethiopian literature

J.B. (ዮሐንስ መጥምቅ, Yoḥannəs Mäṭməq), a prophet, saint, and martyr of the universal Church, is a frequent character in ↗Gəʿəz literature. Despite the considerable number of texts devoted to him (in this respect J.B. immediately follows Jesus and ↗Mary, well ahead of the ↗Apostles), no specific work or standard collection exists for J.B. (unlike, e.g., for ↗angels and

archangels, such as Michael, Gabriel, Uriel etc.); and few are the manuscripts containing writings on him alone; e.g., BritLib Orient. 717, EMML 4166 and 4346. Yet, standard entries devoted to J.B. are found in both liturgical and hagiographic works such as the ↗*Sənkəssar*, to which ↗*malkəʾ* and ↗*sälam* in hymnographic collections should be added. Other relevant texts are chiefly homilies, either attributed – rightly or not – to Church Fathers or written by anonymous or unidentified authors: e.g., ↗Rətuᶜa Haymanot, the 'Orthodox'. Most, if not all, of the longer, homiletic texts are translations from Arabic. Some of these are transmitted within early collections (cp. the texts in ms. EMML 1763), but no positive evidence of translations from Greek in the Aksumite period has emerged so far.

Homilies concerning John the Baptist

Numerous homilies devoted to J.B. exist that can be roughly classified in four groups according to their authorship.

I. Among the most popular texts are the homilies attributed to ↗John Chrysostom, the Greek texts of which have not yet been correctly identified except for (2) below (Greek homilies of John Chrysostom, relevant to J.B.: CPG nos. 4518, 4521, 4570, 4656, 4736, 4859, 4862, 4867, 4913f., 4929, 4935, 5023, 5150, 5175 [Georgian version]; ProvRec 90).

(1) The first one, 'On the Life and Decollation of J.B.', is to be read on 1 and 2 *Mäskäräm*.

(a) This text opens many mss. of the hagiographic collection ↗*Gädlä sämaᶜətat* (the oldest mss. dating from the end of the 14th cent.): mss. BritLib Orient. 686, fols. 1ra–5rb; 687–88, fols. 4ra–8v; 689, fols. 1ra–7va; EMML 1479, fols. 2ra–7vb; 1766, fols. 3ra–13rb; 2514, fols. 38ra–43rb; 6244, fols. 16va–21vc; 6694, fols. 91ra–98rb; 6903, fols. 1ra–10vb; 6965, fols. 2ra–7vb; Ṭānāsee 121 = Dāgā Esṭifānos 10, fols. 1ra–9rb; one fragment in Ṭānāsee 110 = Rēmā 21, fols. 1r–v, 3r–v;

(b) It can be also found outside the hagiographic collection: mss. ANLin Conti Rossini 105, fols. 41ra–59ra; BritLib Orient. 717, fols. 2r–14v; BN d'Abb. 45, fols. 2–9; 54, fols. 96r–110r; EMML 1344, fols. 1r–35r; 2733, fols. 3r–19v; 4002, fols. 12r–25r; 4166, fols. 47v–65r; 4346, fols. 4r–16r; 4569, fols. 41v–48v; Vat. Aeth. 32, fols. 10v–24; Windsor, Royal Library, Eth. II, fols. 56v–104r;

(2) A second homily of the Chrysostom, 'On the Glory of J.B.', commenting upon Mt 11:7 (CPG no. 5150; Suppl. no. 5153.3; Coptic text in Budge 1913; Till 1958:322–32; for Arabic mss., cp. Boud'hors 1997:1558; Proverbio – Fiaccadori 2004:675f.), is richly documented, in some cases following or preceding the previous one in the same mss.: ANLin Conti Rossini 105, fols. 59ra–72ra; BritLib Orient. 687–88, fols. 1ra–4r; 717, fols. 14v–24; BN d'Abb. 45, fols. 9–21v; 103, fols. 2–11; EMML 1960, fols. 82v–101v; 2733, fols. ff. 20r–32r; 4002, fols. 3r–11v; 4166, fols. 68r–78r; 4346, fols. 16–24v; 4569, fols. 37v–41v; 4979, fols. 118–125v; 6694, fols. 86va–91ra; Vat. Aeth. 32, fols. 1–10v; Windsor, Royal Library, Eth. II, fols. 3r–33r; Vat. Cerulli Etiop. 322, fols. 2–16; one fragment in Veroli, Monumento Nazionale di Casamari, Ms. 121, fol. 147ra–vb (cp. Proverbio – Fiaccadori 2004:675ff., also for the correct identification of the previous ms.);

(3) A third, or even a fourth homily of the Chrysostom might be further identified, but the catalogue descriptions are not clear enough: mss. ANLin Conti Rossini 105, fols. 37ra–39vb and 39vb–41ra; Vat. Cerulli Etiop. 322, fols. 16rb–37ra;

(4) A short homily in ms. Vat. Cerulli Etiop. 149, fols. 15v–16r, is attributed to ↗Cyril of Alexandria; comparison with the unpublished Coptic homily attributed to the same Cyril (cp. Orlandi 1970:88, 1971:181, n. 32; Lucchesi 1999:324) is still a desideratum.

II. A second group of homilies is attributed to unidentified Ethiopian authors:

(5) to Rətuᶜa Haymanot, a homily 'For the Day of the Feast of John the Baptist', i.e., 1 *Mäskäräm*: mss. BN d'Abb. 54, fols. 110r–17r; EMML 1117, pp. 3–11; 1763, fols. 3r–9r; Windsor, Royal Library, Eth. II, fols. 33r–51v;

(6) to the "blessed Tewoflos" (his identification with a bishop of Aksum has not been ascertained; there probably exists a Coptic homily attributed to Theophilus of Alexandria, cp. Lucchesi 1999:324), a homily 'On the beheading of John the Baptist': mss. BritLib Orient. 8192, fols. 143va–49va; EMML 1763 (from 1336/37 or 1339/40), fols. 273r–74v; 4569, fols. 36r–37v.

III. A third group is composed of anonymous homilies, part of which can be attributed to "the Orthodox" as well:

(7) 'For the Prayer of John the Baptist': mss. BN d'Abb. 54, fols. 117r–118v; EMML 1763, fols. 9r–10r; Windsor, Royal Library, Eth. II, fols. 51v–56v;

(8) 'For the Commemoration of John the Baptist and the consecration of his church', to be read on 21 *Ḫədar*: ms. EMML 1763, fols. 60r–63r;

(9) 'On the Nativity of John the Baptist': mss. EMML 4166, fols. 7r–34r; 4346, fols. 24v–45v;

(10) 'On the baptism of Our Lord by John the Baptist': ms. EMML 4166, fols. 34r–43v; s. also Pereira 1911a (CPG no. 4522), 1911b (CPG no. 7385).

(11) 'On the Circumcision of John the Baptist', to be read on 6 *Ḫamle*: mss. EMML 4166, fols. 44r–47r; 4346, fols. 56v–59r;

(12) 'On the Dormition of John the Baptist', for 1 *Päg*^{w}*ə-men* and 15 *Miyazya*: mss. EMML 4166, fols. 78v–92v; 4346, fols. 45v–56v;

(13) a no further identified homily on John the Baptist, called *Mäṣḥafä baḥrəy* ('Book of the Pearl'), to be read on the 1st day of *Sebteros*, i.e. ↗New Year day: ms. EMML 4979, fols. 94v–117v.

IV. A fourth group consists of homilies included in standard works:

(14) in the ↗*Dərsanä Gäbrəʾel*, homily 'On how Gabriel announced to Mary and on the birth of John the Baptist', sometimes attributed to John Chrysostom, to be read

on 1 *Mäskäräm*: mss. EMML 2958, fols. 69v–75r; 3442, fols. 8v–16v; 4864, fols. 109r–115v; 4869, fols. 69v–74v; 4937, fols. 54v–57v; Vat. Aeth. 149, fols. 21r–25r;

(15) in the ↗*Täʾammərä Maryam*, a homily on the visit of Mary and her Son to John the Baptist, also attributed to John Chrysostom: mss. EMML 2058, fols. 75r–75v; 2952, fols. 69r–70v.

Other texts are less identifiable, such as:

(16) one miracle of John the Baptist in the ms. EMML 3172, fols. 38r–40r and 77r;

(17) a fragment in the ms. Berlin, Ms. orient. fol. 3067, fols. 1ra–2vb; or

(18) a fragment of a liturgical text, s. ms. München, Bayerische Staatsbibliothek, Cod. aeth. 136, fol. 2v.

Commemoration texts on John the Baptist

In the Church ↗calendar the Ethiopian year begins on 1 *Mäskäräm*, which is also the commemoration day of J.B. Yet, the *Sənkəssar* has no entry on him for that day, and so the Copto-Arabic Synaxarium for 1 *Tūt*. He is instead commemorated on 2 *Mäskäräm*, the feast of his decollation (cp. SimDillmChr 310, n. 2). This may well explain why in several mss. of the *Gädlä sämaᶜətat* it is indicated that the same homily must be read on both 1 or 2 *Mäskäräm*. However, J.B. is also mentioned in the *Sənkəssar* on other days. A few entries have been excerpted, then circulating on their own, e.g.:

(19) 2 *Mäskäräm*, decollation of John the Baptist: mss. ANLin Conti Rossini 105, fols. 34vb–37ra; EMML 4166, fols. 65v–67v;

(20) 8 *Mäskäräm*, martyrdom of Zacharias, father of John the Baptist: ms. ANLin Conti Rossini 105, fols. 26ra–28ra;

(21) 26 *Mäskäräm*, annunciation to Zacharias: mss. ANLin Conti Rossini 105, fols. 32rb–34rb; EMML 4166, fols. 3r–4v; Vat. Aeth. 149, fols. 59–60v;

(22) 3 *Ṭərr*, conception of John the Baptist: ms. ANLin Conti Rossini 105, fols. 29va–30ra;

(23) 16 *Yäkkatit*, death of Elisabeth, John the Baptist's mother: ms. ANLin Conti Rossini 105, fols. 30ra–32ra;

(24) 30 *Yäkkatit*, beheading of John the Baptist, including the version by John Chrysostom: ms. EMML 4166, fols. 92v bis–95r;

(25) 15 *Miyazya*, departure of the soul of J.B.: ms. EMML 4166, fol. 95v;

(26) 2 *Säne*, appearance of the body of J.B.: ms. EMML 4166, fols. 96r–98v;

(27) 30 *Säne*, nativity of J.B.: ms. EMML 4166, fols. 4v–6r: the feast is known as the day of 'Yoḥannes Awit' or 'Awet' (e.g., in the ↗*Senodos*, cp. BauSen 182, l. 12 [text] = 73 [tr.]; in other texts, cp. Cerulli 1950:440 [text], 445 [tr., where *baᶜalä Yoḥannəs Aweto*, scil. Awet, is translated as 'festa della Natività di S. Giovanni'], for the text of which cp. also Monneret de Villard 1950), an obscure term (DillmLex c. 790; LesCDic 49) used with reference to the feast of the 'nativity' of John the Baptist;

(28) 1 *Paᵍᵂəmen*, imprisonment of John the Baptist: mss. ANL in Conti Rossini 105, fol. 34rb–vb; EMML 4166, fol. 43v.

Hymnological compositions

There is a considerable number of *mälkəʾ* and hymns devoted to J.B., only the first three of the following being listed by Chaîne (ChRep) as nos. 70, 227 and 279:

(29) mss. Berlin, Ms. orient. oct. 1304, fol. 4ra–va; the same in mss. EMML 4002, fol. 25v; Ṭānāsee 57 = Kebrān 57, fol. 86rb–c;

(30) mss. Berlin, Ms. orient. oct. 1000, fols. 41v–53r; 1278, fols. 50va–54rb; Ṭānāsee 57 = Kebrān 57, fols. 85va–86rb;

(31) mss. Berlin, Ms. orient. quart. 1013, Hs. or. 1614, fols. 1ra–2vb and 131va–132rb; EMML 1344, fols. 35r–40v; München, Bayerische Staatsbibliothek, Cod. aeth. 33, fols. 10va–12rb; Ṭānāsee 88 = Dabra Māryām 30; Vat. Cerulli Etiop. 322, fols. 37–41;

(32) for other *mälkəʾ* cp. mss. EMML 4346, fols. 59v–61v; BN d'Abb. 110, fols. 6rc–7v; Vat. Cerulli Etiop. 249, fol. 1r.

Other hymns are:

(33) ms. Vat. Cerulli Etiop. 269, fol. 1r;

(34) a hymn to the archangel Michael for the nativity of J.B., ms. EMML 4346, fol. 61v–63v;

(35) various hymns in the ↗*Mäwaśəʾt*, cp. ms. BN Éth. 369 [= Griaule 65], fols. 1ra–vb, 38rb–vb, 48va–49rc; edited in *Zəmmare wämäwaśəᶜt* 1993/94: I part (↗*Zəmmare*), 1–4, and II part (*Mäwaśəᶜt*), 1f.; tr. by Grébaut 1931:1f., from one of the oldest (14th cent.) ms. of the *Mäwaśəᶜt*, Vat. Aeth. 4, fol. 111v; also text and tr. in GréTisVat I, 610f., from ms. Vat. Aeth. 162;

(36) finally, hymns in the ↗*Dəggᵂa*: these are among the few texts devoted to J.B. which have been published (cp. DillmChr 150–58; Euringer 1942; cp. SimDillmChr 310f.).

Textual traditions

Since the vast majority of the listed writings have neither been published nor studied it is almost impossible, with a few exceptions, to make any reliable comparison with the Greek and/or Oriental traditions. For a first evaluation of the latter cp. GrafLit I, 348, 506ff. and II, 492; Till 1958; Meinardus 1979, 1980; Lucchesi 1999. The enumeration of Arabic mss. with texts on J.B. can be easily implemented, cp., e.g.:

ProvRec 82f.; and BN Ar. 143, two homilies: fols. 128–33 on the decollation, and fols. 133–38 on the translation of his head; Cairo, Church of Saints Sergius and Bacchus, ms. no. 41, fols. 184v–197v, life of J.B. (cp. Khater – Burmester 1977:14f.); Cairo, Church of St. Menas, ms. Theol. 12, fols. 2v–148r, three homilies: on the life of J.B. and the archangel Michael by Theodore the archbishop of Alexandria, on the martyrdom of J.B. by James the apostle, on the decollation by John Chrysostom (cp. Iid. 1967:52, no. 65); ms. Theol. 10, fols. 60v–91r, two homilies on J.B.: on the beheading, and in his honour by John Chrysostom (cp. Iid. 1977:49ff., no. 103); ms. Hag. 16, fols. 1r–18v, a homily on the invention of J.B.'s head (cp. *ibid.* 69, no. 158); ms. Theol. 15, fols. 90v–96r, a homily on the annunciation of Mary

and on the birth of J.B. (*ibid.* 53ff., no. 69); Cairo, Coptic Patriarchate, Hist. 55, nos. 18 and 19, two homilies: on the martyrdom of J.B., and on the glory of J.B., commenting upon Mt 11:7 (cp. Simaika – ʿAbd al Masiḥ 1942:287, no. 634); Cairo, Muski no. 57, fols. 34r–37v, a homily in J.B.'s honour by John Chrysostom (cp. Macomber 1984:13).

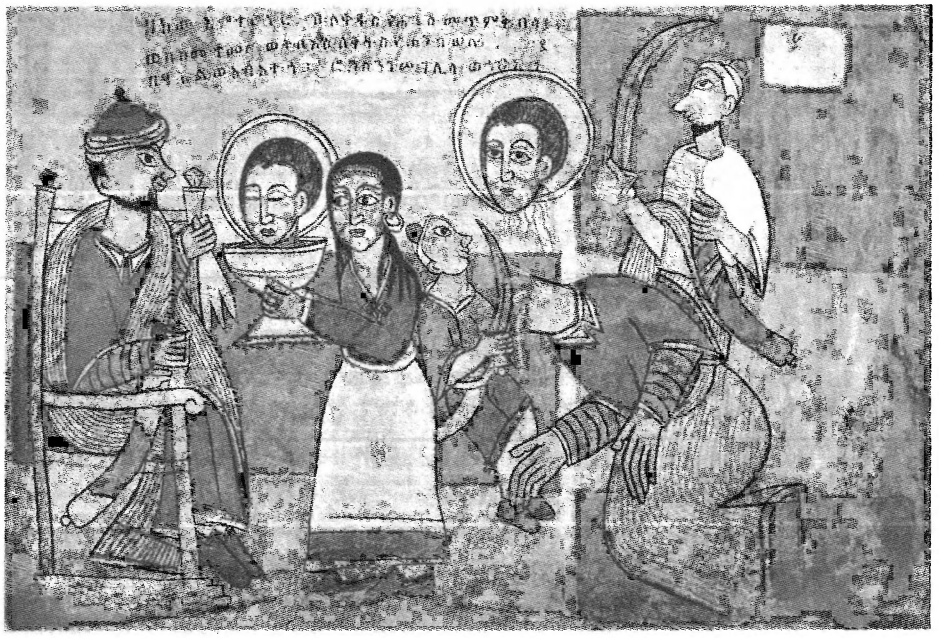
Alessandro Bausi

John the Baptist in art

J.B. (**ዮሐንስ መጥምቅ**, Yoḥannəs Mäṭməq) is commemorated in the *Sənkəssar* on 2 *Mäskäräm* [12 September 12] (on other dates of commemoration s. sub-article on J.B. in literature). One of the earliest extant representations of J.B. in Ethiopian art appears in the mural of the Baptism of Christ (s. Mt 3:1–17; Mk 1:2–11; Lk 3:21–22; Jn 1:32–34) in the late 13th-cent. church of ↗Gännätä Maryam (Lepage 1975, fig. 12). Because his baptism is one of the major events in the life of Christ and is commemorated as a major ↗feast of the liturgical year (VelMe II, 23f.; ↗*Ṭəmqät*), the Baptism of Christ with the figure of J.B. is ever-present in Ethiopian ↗painting. Far less common, however, are images in which J.B. himself is the primary focus.

Iconic portraits of J.B. are found in a few illuminated 14th- and 15th-cent. mss. of the ↗*Gädlä Sämaʿətat*. A portrait of J.B. with his parents, Elizabeth and Zacharias (all together commemorated in *Sənkəssar* on 30 *Säne* [24 June]), introduces the story of his martyrdom in the large and impressive manuscript of the *Gädlä Sämaʿətat* produced at Däbrä Hamlo in the district of Aksum ca. 1382–88 (EMML ms. 2514; AfrZion no. 66). In two 15th-cent. illuminated mss. of the *Gädlä Sämaʿətat*, one at the monastery of ↗Däbrä Maryam Qʷäḥayn in Eritrea dated 1453 (Bausi 1994:45f.; Heldman in PICEA 1, 7f., fig. 8) and the other at ↗Däbrä Libanos in Šəmäzana, also in Eritrea (Bausi 1997:23–9, fig. 4), a portrait miniature introduces each individual text section, and similarly a full-page miniature of J.B. with his parents introduces the account of his life.

A full-page miniature of the martyrdom of J.B., the iconography of which appears to be unique, is found in a large 15th-cent. ms. of the *Gädlä Sämaʿətat* at Məṣəle Fasilädäs, on Lake Ṭana (UNESCO, pl. 22). The upper register depicts events that followed the beheading of the Saint. His head is seen flying in the air, an extra-Biblical episode described in the *Sənkəssar* reading of 2 *Mäskäräm*, "and when the holy head of Saint



Beheading of John the Baptist and presentation of the head of the saint to King Herod, 17th cent. wall-painting in Däbrä Sina near Gorgora, Lake Ṭana; photo 1993, courtesy of Michael Gervers

John was cut off, it flew up into the air out of the hands of the soldiers ..." (BudSaint I, 9f.; ColSyn VI, 338–41). The lower register shows the head of J.B. on a silver platter and the gruesome punishment of Herodias. The inscription reads "Arms of Herodias after being cut off, when the earth opened and swallowed her up". The story of the punishment of Herodias may derive from an unidentified apocryphal or hagiographic writing since neither the Gospel accounts of J.B.'s beheading (Mt 14:3–12; Mk 6:17–29) nor the *Sənkəssar* reading of 2 *Mäskäräm* includes reference to this event. The head of J.B. upon a plate as it was presented to the daughter of Herodias appears among portraits of saints and martyrs painted upon the two lateral panels of a devotional image in the form of a triptych, the central panel of which is missing. The lateral panels are attributed to the 15th-cent. painter ↗Fəre Ṣəyon (AfrZion no. 81). A 18th-cent. ms. of Hymns, Prayers, Miracles, and Images (↗*Mälkəʾ*) with numerous miniatures (EMML ms. 1487) includes a miniature of the Beheading of J.B. placed beside the text of the *Mälkəʾa Yoḥannəs* ('Image of J.B.'). Because this manuscript evidently was created for private devotion we may conclude that the miniature of J.B.'s martyrdom functioned as a visual image to be contemplated after the reading of the prayer.

The increased popularity of narrative painting in the 17th cent. inspired by the introduction of Western European prints is reflected in the decoration of churches with more extensive narrative picture cycles. The story of the beheading of J.B. is often painted on the north wall of the sanctuary (↗*Mäqdäs*) among other representations of saints and martyrs, as in the churches of ↗Däbrä Sina Maryam on Lake Ṭana (Wion 2001: 306; Hein 1999: fig. 208), ↗Qoma Fasilädäs, located south of Gondär (Wion 2001: 302, 306), and ↗Ǝnṭonəs of Gondär (Staude 1959: 209f., pl. 76). This subject continues to be included in schemes of mural decoration. A narrative cycle of the story of the beheading of J.B. painted in the second half of the 20th cent. decorates the church of Maryam Ṣəyon at ᶜAdwa.

The story of the infancy of J.B. also lends itself to narrative imagery. A ↗Psalter dated 1839/40 with many additional prayers and over 135 miniatures was presented by *nəguś* Śahlä Śəllase of Šäwa to the monastery of ↗Däbrä Ḥayq Ǝsṭifanos (EMML ms. 1762). It provides a rare, if not unique, example of miniatures accompanying the Biblical Canticles. Two miniatures of J.B. accompany the Canticle of Zacharias (Lk 1:68–79). The first miniature shows two scenes, both illustrating the Gospel narrative of Lk (1:5–25, 57–66). One shows Zacharias praying in the Temple, and the other Elizabeth holding their new-born child as Zacharias writes the name of his son on a tablet. The miniature of the following page shows Elizabeth holding the infant J.B. as Zacharias prepares to circumcise him.

A Homiliary for the Archangels copied for *aṣe* Mənilək II (r. 1889–1913), property of the church of ↗Ǝnṭoṭṭo Raguʾel (EMML ms. 41), is decorated with numerous miniatures. A miniature with the Birth of J.B. (fol. 111v) is placed within the text of the ↗*Dərsanä Gabrəʾel*. The upper register shows Zacharias offering incense in the Temple; the register below, St. Elizabeth and J.B.

John Chrysostom

J.C. (Eth. ዮሐንስ፡ አፈ፡ ወርቅ, Yoḥannəs Afä Wärq; b. ca. 347/350, Antioch, d. 407) was the Bishop of Constantinople, Doctor of the Church, and is regarded the greatest preacher of the Greek Church.

J.C. lived and studied rhetoric (with Libanios), philosophy and theology (with Diodor of Tarsus) in Antioch. In the years 371–77 he lived as a hermit in the vicinity of that city, but had to return to the community because of health problems. Ordained priest in 386, for 12 years he preached in the churches of Antioch, which brought him both fame (his nickname, Chrysostomos – 'Goldenmouthed', was coined, however, in the 5th cent.) and, in 397, the patriarchate of Constantinople. His episcopate in the capital was characterized by the ascetic norms of episcopal life, by strict allegiance to the canon rules, both for the monks and the clergy, as well as by high moral standards. These qualities soon brought him into conflict with many people within the Church and at the court, including Empress Eudoxia. This resulted in his temporary deposition by the Synod of the Oak (403); and after his return, when he again attacked the Empress, in his ultimate deposition and banishment (404). He died while being transferred from one place of exile to another.

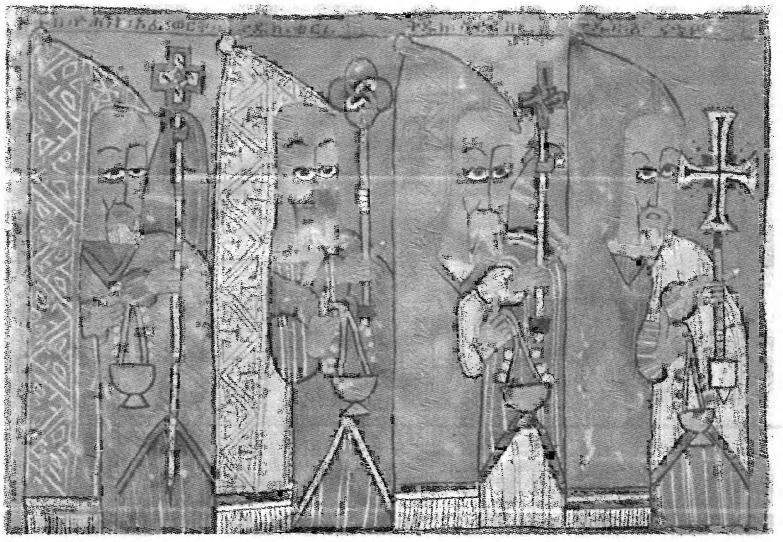
J.C. was an extraordinary and prolific preacher. Theologically and literarily outstanding, his numerous homilies were highly appreciated throughout the Middle Ages, and nearly all have survived (the list in the CPG II, including some spurious ones, covers 182 pages). They are on various themes: exegetical, e.g., on Gen, Ps, Is, Mt, Lk, Jn, on many of the Pauline Epistles, Acts; concerning moral and ascetic issues; for liturgical feasts including commemoration of saints, and other occasions, also in the form of panegyrics. In addition, he left treatises, mostly on moral subjects (suffering, virginity, upbringing, monastic life), as well as letters.

J.C.'s fame as a preacher also resulted in a large number (over 1,000) of apocryphal works (in particular, homilies) being attributed to him, one of them being the Eucharistic liturgy of the Orthodox Churches (*Liturgy of St. Chrysostom*, with Church-specific contents). Many of his works were translated into other languages, including those of the Christian Orient, in which the non-authentic ones are also numerous.

In Ethiopic (↗Gəᶜəz) literature, an extraordinary large number of works is attributed to J.C., most of which, however, are apocryphal. Homilies are often to be found in homiliaries, such as ms. BritLib Orient. 774, of the 15th cent., or other collections. Only a small fraction has been published, which makes identifying them with the originals and with each other difficult (the homilies are termed differently by various cataloguers). The following list of J.C.'s works in Ethiopic (authentic or not) does not claim to be complete (CPG identifications are after ProvRec 59–85; his numbers are provided if the text is not listed in CPG and Lusini 1988).

The homilies ascribed to J.C. include:

1. *On the Annunciation to Mary by Gabriel*, to be read on three successive Sundays of *Taḫśaś*, e.g., ms. BritLib Orient. 616; part of ↗*Dərsanä Gäbrəʾel* (CPG II, no. 4519);
2. *On the Nativity of Jesus*, e.g., in ms. BritLib Orient. 774, 15th cent., ed. Petraeus (CPG II, no. 4560);
3. *The First Homily on the Baptism of Jesus*, to be read on the first day of Epiphany, *ibid.*, ed. Pereira (CPG II, no. 4522);
4. *The Second Homily on the Baptism of Jesus*, to be read on the second day of Epiphany, *ibid.*, ed. Pereira (CPG II, no. 7385, apocryphal);
5. *On the Wedding Feast at Cana*, *ibid.*, ed. Pereira (CPG II, no. 4522);
6. *On the Sinful Woman who Anointed Jesus' Feet*, *ibid.* (ProvRec no. 14);
7. *On the of Samaritan Woman*, *ibid.* (CPG II, no. 5198.8);
8. *On the Pharisee and the Publican*, *ibid.* (CPG II, no. 5198.6);
9. *On the Resurrection of Lazarus*, *ibid.* (CPG II, no. 4681);
10. *For the 12th of Gənbot*, *ibid.*;



John Chrysostom (Yoḥannəs Afäwärq), Qərəllos, Sawiros and A[t]natewos; miniature (detail) from a Gospel Book, fol. 97r, 15th/16th cent., church of Ṣäwne Maryam, near ᶜƎdäga Ḥamus, Təgray; photo 2004, courtesy of Michael Gervers

11. *On Passion of our Lord, ibid.* (ProvRec 25);
12. *On Easter Sunday, ibid.* (ProvRec 24);
13. *On St. Thomas; ibid.* (CPG II, 5832);
14. *On the Four Beasts,* to be read on the 8th of *Ḫədar*; e.g., in ms. BritLib Orient. 619, 18th cent. (ProvRec 20);
15. *On St. John the Baptist*; in the ↗*Gädlä sämaᶜətat*, e.g., in ms. BritLib Orient. 689, 15th cent. (ProvRec 29);
16. *On the Glory of the Church* (an excerpt), e.g., in ms. BritLib Orient. 550, early 18th cent.;
17. *On the Cross and the Thief* (ድርሳነ፡ ፈያታይ, *Dərsanä fäyatay*) e.g., in Berlin, ms. orient. oct. 1308, 19th/20th cent.;
18. *For the Fourth Sunday in Lent*, e.g., in ms. BritLib Orient. 8192, 14th cent. (?);
19. *On Silence*, in a collection of monastic writings, e.g., in ms. EMML 4447, 18th cent.;
20. *On the Visit of Mary to John the Baptist*, in the ↗*Täᵓammərä Maryam*, e.g., in ms. EMML 2058–2 (d-85);
21. *On Fasting*, for the first, fourth and fifth Saturdays of Lent, e.g., in ms. EMML 1763 (39, 46, 51), 14th cent.
22. *On Herodias* (or: *On the Decapitation of John the Baptist*), e.g., in ms. EMML 1763 (CPG II, 4570);
23. *On the Venerable Cross, for the Fast, ibid.* (CPG 4525);
24. *On the Lord's Prayer*, e.g., ms. ZotBNat 157, of the 17th cent. (ProvRec 22).

Many of J.C.'s homilies are parts of special collections for liturgical or other use. In the ↗*Gəbrä ḫəmamat*, e.g., in mss. EMML 1765 and BritLib Orient. 597, both of the 15th cent., there are homilies of J.C. practically on every day of Passion Week:

25. *Against the Love of Possessions*, for Palm Sunday (CPG II, no. 4602);
26. *On the Fig Tree* (Mk 11:12–26) (CPG II, no. 4588);
27. *On the Ten Virgins*, for Wednesday (CPG II, no. 4580; ProvRec 27);
28. *Against Jealousy*;
29. *On Penitence*, for Good Friday (ProvRec 28);
30. *On the Holy Communion*;
31. *On Those who Receive Holy Communion*;
32. *On Adam's Disobedience*;
33. *On the Saying of Christ "If it be Possible, Let this Cup Pass from Me"* (Mt 26:39; CPG II, no. 4654);
34. *On Judas Iscariot* (CPG II, no. 4336);
35. *On the Appearance of God in the Old Testament and of Christ in the New.*

The *Homiliary for Lent*, e.g., ms. EMML 1956, of ca. 1400 A.D., contains 13 excerpts from J.C.'s compositions.

At least two are included in the *Mäṣḥafä* ↗*gənzät*, e.g., in ms. EMML 661, 20th cent.:

36. Exhortation for Funerals;
37. Homily for Burials.

Two homilies can be found in the ↗*Dərsanä Maryam*, e.g., in ms. EMML 2461, 1841 A.D.:

38. For Feasts of Mary;
39. *On the Flight of the Holy Family to Egypt* (ProvRec 21).

There are several composition attributed to J.C., devoted to Mary and termed hymns, encomia, panegyrics or homilies, such as

40. *Homily on the Glory of Our Lady Mary*, e.g., in ms. EMML 1810–13; 20th cent. (ProvRec 23);
41. Hymn *"Rejoice, my Lady Mary ..."*, e.g., in ms. EMML 392, 15th cent.;
42. Hymn *"I Worship Thee ..."*, e.g., in ms. EMML 543(79), 20th C.;
43. *Encomium of Mary*, e.g., in ms. BritLib Orient. 578, 1640 A.D.

Some are devoted to archangels (cp. ↗Angels):

44. For (the feast of) St. Michael, in ↗*Dərsanä Mikaᵓel*, e.g., in ms. EMML 569, ca. 1770;
45. For (the feast of) Raphael, in ↗*Dərsanä Rufaᵓel*, e.g., in ms. EMML 308, 20th cent. (ProvRec 31)

In the ↗*Haymanotä abäw* there are 28 extracts from the writings of J.C. (among them: CPG II, 4342, 4560, 4334 (=ProvRec no. 8, 11, 12),

Most of the homilies found in such collections as the *Gəbrä ḫəmamat* can also occur in other collections or separately.

Although a few of the homilies in Ethiopic that bear the name of "Yoḥannəs Afä Wärq" can be identified as authentic, it seems that most of them are falsely attributed to him.

A few of J.C.'s homilies reached Ethiopia, where they were translated, as early as the 14th cent., but several others did not appear there before the 15th cent. following the liturgical reforms of *aṣe* ↗Zär'a Ya'əqob. Introducing new feasts for various archangels, for Mary and other saints provided an opportunity either to compose or translate homilies that could be read during these feasts (GuiSLett 56). Many of J.C.'s homilies, authentic or not, already extant in Arabic, were also needed in Ethiopia, and thus many of them found their way into Ethiopic, sometimes as parts of larger homiliaries, such as ms. BritLib Orient. 774 (Lusini 1988:474–78). Local writers would use J.C.'s fame and attribute their compositions to him in order to have them used in the liturgy of many feasts.

J.C.'s exegetical works in Ethiopic include:

46. *Commentary on the Epistle to the Hebrews*, with an introduction, e.g., BritLib Orient. 737, 18th cent. (CPG II, 4440); The *Commentary* was translated from Arabic into Ethiopic in 1523 by ↗'ƎInbaqom and one Abba Mika'el Gəbṣawi ('the Egyptian'). An Amharic version is extant, e.g., in ms. BritLib Orient. 742, 19th cent.;
47. In a *Commentary on the Gospel*, ↗*Tərgʷame Wängel*, e.g., in mss. EMML 368 and 630, both 18th cent., J.C. is the main author quoted.
48. *Exposition* [↗*Tərgʷame*] *of the Ten Commandments*, in ↗*Senodos*, e.g., in ms. BritLib Orient. 794, 15th cent. (Lusini 1988:490f.).
49. J.C. is also quoted in many other compositions, such as the *Commentary on the Law of the Church and her institutions*, ms. EMML 695, 20th cent.

As far as J.C.'s letters are concerned only one item seems to be extant in Ethiopic:

50. *Two Epistles to the Monk Theodore* (the future bishop of Mopsuestia), *who Left Monastic Life*, in ms. BritLib Orient. 768, 18th cent. (CPG II, no. 4305).
51. One of the ↗anaphoras of the Ethiopian Orthodox Church is attributed to J.C.

J.C. was regarded in Ethiopia as an important figure such that not only many works were attributed to him, but also his vita (*zena*) was composed, based on data from historiographic literature (↗John of Nikiu, ↗Giyorgis Wäldä 'Amid), and usually preceding his *Commentary on the Epistle to the Hebrews*. In the *Tä'ammərä Maryam*, there is a *Story about How he was Called Mouth of Gold* (in ms. EMML 3872 [168], 16th cent.), whilst Yoḥannəs, metropolitan of Ethiopia (15th cent.?), composed a *Homily about the Banishment of J.C.*, extant in the *Dərsanä Mika'el*, e.g., in ms. EMML 4169, 18th cent.

There is also an anonymous *Commentary* on J.C.'s Homilies, in Amharic, in ms. EMML 4639, 1924 A.D. The entry on J.C. in the ↗*Sənkəssar* is for 12 *Gənbot* (17 May).

John of Damascus

St. J. (ዮሐንስ፡ ዘደማስቆ, Yoḥannəs Zädämasqo, before monastic tonsure: Manṣūr, b. mid-7th cent., d. shortly after 730; s. for date s. Garitte 1959:332–35, 340) was a Chalcedonian priest and monk in the Laura of St. Sabas in Palestine. He was renowned for his opposition to iconoclasm, in addition to his theological and hymnographic works. He is commemorated in the ↗*Sənkəssar* under 8 *Taḫśaś* (4 December, the date of his commemoration in the Melkite Churches) where he is venerated as a defender of the holy icons. The famous episode with his hand – it was allegedly cut off by a Caliph of Damascus and miraculously restored by the Virgin Mary (cf. Detorakis 1986) – is also mentioned, but nothing is said concerning his anti-monophysite polemical works. Although J.'s memory is preserved in

a 15th-cent. Ethiopian manuscript of the *Sənkəssar*, he is never mentioned in the Coptic Synaxarium. The Eth. notice ultimately derives from a Melkite Arabic source based on the complete Life of J. (cf. Flusin 1989).

Basil Lourié

John of Ephesus

J. (also known as J. of Asia; b. ca. 507, near Amid (today Dıyarbakır), Mesopotamia, d. 586 or 588 ↗Chalcedon) was a leader of the Monophysite Syriac-speaking Church in the 6th cent. (↗Monophysitism), and one of the earliest and most important Syriac historians and theologians.

He entered a monastery in Amid at the age of four, became a monk there, and was ordained deacon in 529. Some five years later, when Emperor Justinian I decided to enforce his strongly pro-Chalcedonian policy by launching a severe persecution of anti-Chalcedonian monks, J. had to flee. By 535 he settled in Constantinople, where, in spite of his religious views, he enjoyed good relation with the emperor, whose notice he seems to have won quite soon. In 542, Justinian entrusted him with a Christianizing mission to Asia Minor, still pagan at the time. Around 558 he was consecrated bishop of Ephesus by ↗Jacob Baradaeus, but never held office there, living most of the time in the Byzantine capital. After the death of patriarch Theodosius of Alexandria (566), J. became the informal head of the Monophysites in Constantinople. Because of his anti-Chalcedonian bias, he was even temporarily imprisoned. He died in exile away from the capital.

J. is the author of an *Ecclesiastical History* and of a collection of *Lives of the Eastern Saints*, both in Syriac. The *History* was composed in three parts, the first of which, roughly covering the scope of the *Ecclesiastical History* by ↗Eusebios of Caesarea, is lost. Excerpts of the second part, dealing with the years 450–571, survived in the *Chronicle* of ↗Pseudo-Dionysius of Tel Maḥrê, a.k.a *Chronicle of Zuqnin*, and – to a lesser extent – in the *Chronicle* of ↗Michael the Elder (Chabot 1933; Witakowski 1996). Only the third part, for the years 571–88, has been preserved as such (yet with lacunae) in a separate manuscript (Brooks 1936; Payne Smith 1860). The work is extremely valuable as a historical source for the period from last years of Justinian (527–65) to the beginning of the reign of Maurice (582–602). The second part of the *History* contains an account of the war between the Ḥimyarites and Aksumites, as is also found in the *Chronicle* by ↗John Malalas, that is used by J. to introduce the famous (*First*) *Letter* of ↗Simeon bishop of Beth Arsham (written in 524 to his colleague Simeon bishop of Gabbula, whom J. befriended in Constantinople), one of the main sources for the persecution and martyrdom of the Christians at ↗Naǧrān (cp. Bausi – Gori 2006:6f. and n. 12). In the same part, J. also mentions the peculiar situation of the Christian countries of the Ethiopians, Ḥimyarites and "Indians", i.e., here, Nubians (↗India, ↗Nubia), owing to the lack of clergy: for 25 years they had been asking Emperor Justinian to send them a bishop, but since they urged him for a Monophysite the Emperor refused, whereas they would not accept a Chalcedonian – which, according to J., led to the rooting out of all sorts of heresies, including ↗Julianism, in those countries (ed. Brooks 1936:111; on this whole episode, s. Fiaccadori 2006:74f. and n. 163, with reference to ↗Gregentius's historical personality).

In the third part of the *History*, J. provides otherwise unknown information on the Christian Monophysite mission sent by Empress Theodora to the kingdom of Nobadia (northern Nubia) in 542–43, led by the priest Julian and the bishop Theodore of Philae (Brooks 1935:183-86; Payne Smith 1860:251-56). From J. we also learn the name of another Monophysite missionary, Longinus, who went to the kingdom of Alodia (southern Nubia) in 579/80, meeting there Aksumites (*ʾksymyṭwn*) affected by ↗Julianism (Brooks 1936:239, n. 21; Payne Smith 1860:323). J. also quotes a letter of the king of the Nobadians who, referring to Alodians, says that they are "of Ethiopia (*d-ʾtywpyʾ*)" (Brooks 1935:241, n. 3; Payne Smith 1860:325; s. Fiaccadori 1992:13 n. 33).

Witold Witakowski

John Malalas

J.M. (from Syr. *mallālā*, 'talkative; a rhetor'; b. Antioch ca. 491, d. ca. 577) was a Byzantine chronicler. As his Syriac sobriquet suggests, he probably was a rhetorician, perhaps working in the provincial administration at Antioch. He spent most of his life in that city, but later, ca. 535, moved to Constantinople, where he must have died.

His *Chronography* (*Χρονογραφία*) is a universal chronicle in 18 books (I-XVIII) covering history from the Creation to, in its fullest manuscript (Oxford, 11th/12th cent.), the year 563. Most probably, it originally ended with the death of Justinian in 565, if not later. The historiographic narrative is concentrated on Antioch (the first edition 532; s. Croke 1990:20f.), except for the last book (XVIII), dealing with the reign of Justinian (527–65). It was added when J.M. had already left Antioch, and its focus is on Constantinople. It was the first Greek chronicle written in a style and language (popular) fitting for the less educated groups of Byzantine society, including monks.

On a few occasions, J.M. mentions "Ethiopia" (↗Aithiopía), although his terminology reflects the usual confusion of classical sources, and he often calls the country ↗"India", a coextensive term also including South ↗Arabia, besides India itself (↗Greek literature on Ethiopia, ↗Historiography).

J.M. includes mythological information on Kepheus, the emperor of "Ethiopia" and the father of Andromeda (II, 15.21), and mentions "Ethiopians" in the Trojan war (V, 57). He also knows that "Ethiopians" (here, Nubians) waged war against Darius, the king of Persia (VI, 14). According to him, Alexander the Great visited "Ethiopia", and married ↗Candace, the queen of "the Indians of the interior" (VIII, 3).

The non-mythological data on "Ethiopia" concerns ↗Aksum (all in XVIII). We learn of "seven empires of Indians and Ethiopians – three of the Indians and four of the Ethiopians, the latter being close to the Ocean in the areas further east" (tr. Jeffreys et al. 1986:251). Again, "in that year" (no date is provided, but the context suggests the year 528) Dimnos (= ↗Dū Nuwās?), the king of the "Homerite Indians", i.e. the Ḥimyarites (↗Ḥimyar), killed some Christian merchants from "Rome", i.e. Byzantium, as a revenge for the killing of Jews in the Roman territory; and in this way trade between Rome and Aksum was broken (XVIII, 15). Andas, the king of the "Axoumite Indians", whose interests thus suffered, decided to fight Dimnos, promising in case of success to accept ↗Christianity, since the war was on behalf of the merchants who were Christians. Upon victory, Andas, to fulfil his promise, sent ambassadors to Alexandria asking for a bishop and clergy to come to his country. The bishop chosen was John the Paramonarios, i.e. "Janitor" (an administrator) of the church of St. John in Alexandria.

Later on (XVIII, 56) J.M. reports about another war in which the Aksumites defeated the "Homerite" or "Amerite Indians", and set a governor there, Anganes (Ἀγγάνης), a relative of the king of Aksum Elesboas (Ἐλεσβόας), i.e. ƎllƎ Aṣbəḥa or ↗Kaleb. The war originated, at least partly, in the strategic interests of the ↗Byzantine empire. An envoy, Rufinus, was in fact sent

to Aksum to convince Elesboas to attack the king of Persia Koades (Kawād I), so as to involve the Persians in Arabia, too, during the Persian–Byzantine war of 527–31.

These two accounts of J.M. are believed to actually refer to the same events (↗Nağrān), but to draw on different sources. Yet, the reports seem also to be chronologically misplaced (Book XVIII dealing with the time of Justinian), since the Byzantine–Aksumite alliance was agreed upon during Emperor ↗Justin I's reign (518–27). Thus, it is not to be excluded that two different historical events are recounted here – the first narrative rather hinting at the conversion of king Andas, i.e. ↗ʾIllä Amida (II), to Monophysite Christianity, then introduced into Aksum by such missionary groups as the ↗Nine Saints (Fiaccadori 2006:59f., n. 74).

J.M.'s *Chronicle* was translated into Slavonic and Georgian. It was a source, either direct or indirect, of many other historiographic works, both Greek (↗Evagrius, *Chronicon Paschale*, Theophanes, Kedrenos) and Syriac, into which also his information on Ethiopia found its way (↗John of Ephesus, ↗Michael the Syrian).

Witold Witakowski

John of Nikiu

J. was a 7th cent. bishop of Nikiu in the southwest Nile Delta and the author of a universal Chronicle, i.e. a world history from Adam down to his own times (↗Historiography). Sources on his life are very rare. It is known that for some time he was general overseer (Ar. *mudabbir*) of the monasteries, hence his Ethiopic name Yoḥannəs Mädäbbär (ዮሐንስ፡ መደበር); and that he died shortly after 700.

Most of his historical work largely relies upon earlier Byzantine chronicles. This is precisely the part that, in principle, is less valuable as a historical source (but s. Fiaccadori 2006). His treatment of Egyptian history shows similarities with the Coptic *Cambyses Romance* (Cruz-Uribe 1986). More interesting are J.'s last chapters, where he describes the final decades of Byzantine rule over Egypt, the latter's conquest by the Arabs and the first decades of their dominion (Kaegi 1998). As the Arabic historiography gives conflicting accounts on this period, J.'s independent testimony is most welcome.

Zotenberg (1879) supposed that the no longer extant original text was a mixture of Greek and Coptic passages. Nöldeke (1883:1367) and Crum (1917:207) adduced arguments for a purely Coptic original, while Orlandi (1970:109) thought of a Greek original, later translated into Coptic. An allegedly found Sahidic fragment of J.'s chronicle (Charles 1916:ivf.) is however unknown (Orlandi 1970). Perhaps, it was confused with a fragment of the Cambyses romance (Möller–Schäfer 1901). From the (presumably) Coptic text an Arabic translation was made at an unknown date. In 1601 a Gəʿəz version was made of this by an anonymous Ethiopian translator working together with a certain Gäbrəʾel the Egyptian, son of John of Qalyūb.

The Ethiopic text is preserved in four manuscripts (late 17th to 20th cent.): London, BritLib Orient. 818; Paris, BN éth. 123, fols. 62–138; BN Abb 31 (= 209 CR), fols. 104–65; Rome, ANLin fonds Conti Rossini 27, fol. 1–120, slightly incomplete. The latter two, at the time unavailable, were not used in Zotenberg's edition (for a sample of their collation with ch. XC of the Chronicle s. Fiaccadori 2006:118f.). The extant text is full of omissions and displaced passages. Whether such deficiencies are due to the original, or to one of the stages of its translation and transmission, can be but partly ascertained.

J.'s Chronicle became a source of the Ethiopian hagiographies of ↗John Chrysostom and ↗Cyril of Alexandria (cf. mss. Ṭānāsee 37, fols. 5rc–7ra; München, Bayerische Staatsbibliothek cod. aeth. 38, fols. 3ra–6rb; EMML 46, fols. 1r–4r; 345, fols. 6v–10r; 513, fols. 1r–15r; 948, fols. 2r–3v on Chrysostom and mss. München, Bayerische Staatsbibliothek cod. Aeth. 53, fol. 4ra–vb; EMML 688, fols. 1r–4v; 747, fols. 1r–4v on Cyril).

John Saba ↗Arägawi Mänfäsawi

Johnson, Samuel

J. (b. 1709, Litchfield, d. 1784, London) was a British author and lexicographer. Born to Michael Johnson, an impoverished bookseller, he attended the local grammar school and Pembroke College, Oxford, but left it in 1729 without completing his studies, and for several years failed to find regular employment. As one of the most distinguished men of letters of English history, he is buried in Westminster Abbey.

In 1732 he began translating into English Joachim Le Grand's French version (1728) of Jeronimo ↗Lobo's account on ↗Ethiopia, completing his work in 1735 for the lump sum of five guineas (interestingly, he removed Le Grand's own additions on the ↗Jesuit missions). This gave him a long-standing interest in Ethiopia, leading him to write a short morality tale set in the country about "Seged, emperour of Ethiopia", i.e. *aṣe* ↗Susənyos (Səlṭan Sägäd). It appeared in 1752 in *The Rambler*, a periodical publication then edited by J.

J. was subsequently employed by a group of London booksellers to produce the work for which he is most renowned: his two-volume *Dictionary of the English Language*, which took eight years to write, and appeared in 1755. Thereafter, he became increasingly involved in writing and editing.

In 1758, he wrote his famous novel *Rasselas*, also known as the *Prince of Abyssinia*, issued on 20 April 1759, which is an adaptation of the French *conte philosophique* grafted on to the Oriental tale (a genre brought about by the popularity of *The Arabian Nights*, translated into English from a French version in 1705–08). The first European example of creative literature specifically on Ethiopia, it tells the story of Rasselas, a Prince of Abyssinia (on the choice of this term vs. Ethiopia, s. Auf der Maur in PICES 15:528), who leaves the "happy valley" of his birth with his mentor Imlac, his sister Nekayah, and her servant Pekuah. The plot is an educative grand tour – with biblical overtones – undertaken by the characters into an imaginary Africa, in search of the happiest way of life. Travelling through Egypt (the ancient seat of wisdom), they are subsequently faced with occurrences that show the delusive nature of most quests for human happiness. Against their Old English "demonic" stereotype (s. Kilburn-Smith 2004:75, 85), J.'s Ethiopians, a model of perfect behaviour, are indeed Homer's "blameless Ethiopians", leading their happy life at the extreme boundaries of the world (↗Greek literature), but the name "Rasselas" is clearly inspired by that of Susənyos's brother *ras* ↗Səʿəlä Krəstos; and so can "Imlac" be traced to Eth. *amlak* ("God"), occurring in composite names, the best known of which is ↗Yəkunno Amlak.

Rasselas was reportedly written within a week, J. being inspired by Lobo's account as well as by other texts that circulated in published form, such as Balthasar ↗Tellez's and Hiob ↗Ludolf's,

whose *Historia Aethiopica* – including "Sultan Sagedus" (lb. 3, ch. 11, §19), "Sɛɛla-Christus" or "Sɛɛlaxós", i.e. "Sɛɛla(christ)ós" (lb. 4, ch. 3, §4), and "Icon-amlacus" (lb. 2, ch. 6, §1) – he had certainly at hand. *Rasselas* earned its author 100 guineas, and gained immediate popularity: indeed the best mid-18th cent. example of Orientalism in British Romantic literature, it compares with Voltaire's virtually contemporary *Candide*, another celebrated "philosophical romance" of the Enlightenment. It has been translated into many languages (Amh. by Sirak Ḫəruy in 1946/47), and countless editions have earned its author a worldwide fame not only as a novelist but also as a moral philosopher – and contributed towards fostering an intellectual interest in Ethiopia and the Ethiopians. The ethical imprint of J.'s work and its melancholy bias were acknowledged, among others, by William Hazlitt, George Saintsbury and Hilaire Belloc, who thought of *Rasselas* as "of a Book unrivalled in Excellency of Intention, in Elegance of Diction: in minute knowledge of human life – and sublime Expression of Oriental Imagery".

J.'s influence appears in the works of Charlotte (Ramsey, afterwords) Lennox such as *The Female Quixote* (1752) and in Ellis Cornelia Knight's *Dinarbas*, presented as a continuation of *Rasselas* (1790). Another continuation to J.'s story, also prompted by its "open end", was written by Elizabeth (Pope) Whately in 1834.

Since the late 19th cent., it has been assumed that ch. 22 ("The happiness of a life led according to nature") of *Rasselas* is a satirical appreciation, especially in its second part, of Jean-Jacques Rousseau's *Discours sur l'origine de l'inégalité* (1755), and that Rousseau himself is typified by the "philosopher" Imlac. Yet, serious doubts have been cast on this interpretation, previously unknown to such authoritative commentators of *Rasselas* as J.'s friend and biographer James Boswell. "To live according to nature" is there, instead, an exact rendering of the formula *secundum naturam vivere* by the Flemish humanist Justus Lipsius (1547–1606), who had so Latinized one of the main issues (and a book title) of the Greek philosopher Zeno of Citium, the founder of ancient Stoicism (Kolb 1976). That chapter is rather a satiric *pastiche* alluding to various authors of the late 17th and early 18th cent.: from the Neo-Stoic Anthony Le Grand to the deist Matthew Tindal, with hints at Samuel Clarke and those speculating on the "law of nature". Other names have been put forward in this connection: Lord Shaftesbury, Richard Cumberland, Gottfried Wilhelm Leibniz and Alexander Pope. In fact, the "philosopher" introduced by J. is the portrait of more than one sitter – but in no way of Rousseau (cp. Sertoli 2005:329 n. 74).

Journal of Ethiopian Studies

The J.E.S (**የኢትዮጵያ፡ ጥናትና፡ ምርምር፡ መጽሔት**, *Yäʾityopya ṭənatənna mərəmmər mäṣḥet*) is the principal publication of the ↗Institute of Ethiopian Studies (IES), of ↗Addis Ababa University. The first issue, however, dated January 1963, went to press prior to the establishment of the Institute. It was regarded as a sequel to the *University College Review*, only one issue of which had been published (in spring 1961).

The first J.E.S. issue was edited by Monica Kehoe, a lecturer in the Faculty of Arts, with four assistant editors from the same faculty: Haydn George, Nigel Hudson, Richard Pankhurst, and Claude Sumner. Articles published covered Ethiopian education, economic history, religion and law.

The first issue of J.E.S. published by the IES (vol. 1, no. 2) appeared in July 1963. Much expanded, it was followed, twice yearly, by 24 further issues, edited by the Institute's director, Richard Pankhurst, and librarian-curator Stanisław Chojnacki, assisted by a succession of English specialists: Nigel Hudson, Innes Marshall, and Hazel Relton. Articles covered a wide range of subjects, notably history; Amharic, Oromo, Gəʿəz, Gurage, ʿAfar, Hadiyya, Ingassana, Kunfäl, and "Nilotic" linguistics and literature; religion, traditional customs, and art. There was also a section on "Source Material".

Authors included many leading international scholars: Charles ↗Beckingham, Enrico ↗Cerulli, Hubert Deschamps, Ernst ↗Hammerschmidt, George Wynn Brereton ↗Huntingford, Jules ↗Leroy, Wolf ↗Leslau, Otto Meinardus, Roger and Madeleine Schneider, Stefan ↗Strelcyn, Edward Ullendorff and Ewald Wagner. There were also numerous articles by IES members: Richard Pankhurst, Stanisław Chojnacki, Bayru Tafla, Salome Gäbrä Ǝgziʾabəḥer, Aläme Ǝšäte, Ṣähay Bərhanä Śəllase, Bərhanu Abbäbä, Stephen ↗Wright, Kənfä Rəgəb Zälläqä, Tärräfä Wäldä Ṣadəq, Elisabeth-Dorothea Hecht, *aläqa* Yəkunno Amlak, and, much later, Taddäsä Bärisso, Getaččäw Kaśa, Aklilu Yəlma and Zäläʾaläm Täfärra, as well as by visiting scholars, including Lambert Bartels, Gideon Goldenberg, Christopher Hallpike, Jacques Mercier, Diana Spencer, and Volker ↗Stitz.

University staff contributors included historians Mordechai Abir, Richard ↗Caulk, Donald Crummey, Harold ↗Marcus, Märəd Wäldä Arägay, Sven Rubenson, ↗Ṣərgəw Hablä Śəllase, Taddäsä Tammərat and Alessandro Triulzi; linguists and literature specialists Amsalu Aklilu, Lionel Bender, Getaččäw Ḫayle, Habtä Maryam Marqos, Ḫaylu Fulass, ↗Mängəśtu Lämma, Säyfu Mätafäriya, and Taddäsä Bäyyänä; educationalists Aklilu Habte, Gərma Amarä, Ḫaylä Gäbrəʾel Dañña, and Sälomon ʿƎnqʷay; social anthropologists Asmärom Läggäśä, Georges Savard and William ↗Shack; lawyers George Krzeczunowicz, and Jacques Vanderlinden; economists Taye Gullillat and Maurice de Young; geographer Akalu Wäldä Mikaʾel, political scientist Nəguśe Ayyälä, and philosopher Claude Sumner. Other contributors included Francis Anfray of the Ethiopian Archaeology Institute, Salvatore ↗Tedeschi of the Italian Embassy; Canon A.F. Matthew of the English Church; and Giuseppe Tringali, an archeologist in Asmära; as well as such missionaries as Loren Bleise, Roger Wenman ↗Cowley, Peter Cotterell, Klaus Wedekind, Francis Swinburne Lister, J. Lister, and Enid Parker.

The proceedings of an Ethiopian Historical Society conference appeared in vol. 10, 1. Two indices to these volumes appeared: an Institute monograph, index to vols. 1–14, 1963–79, in 1980; and one by Chris Prouty Rosenfeld (1980).

The first J.E.S. series ended, after the ↗Revolution, with vol. 13, 2, for July 1975, but publication was resumed by the Institute's second director Taddäsä Tammərat. He published vol. 14, for 1976–79, co-edited with Taddäsä Bäyyänä, in January 1980.

The second J.E.S. series began as an annual, with vol. 15, under the editorship of Baḥru Zäwde,

Taddäsä Bäyyänä and Taddäsä Tammərat, in August 1982. Their editorship continued for nine years, until November 1991, when an editorial board, of Baḥru Zäwde, Bərhanä Asfaw, Bälay Tägäññä, ↗ƎšätuČole, Taddäsä Bäyyänä, and Taddäsä Tammərat was established. Twice annual publication was resumed with vol. 25, 1, in June 1993. A new board, consisting of Abdussämäd H. Aḥmäd, Bayyä Yəmam, Märəd Wäldä Arägay, Taddäsä Bärisso, Taddäsä Tammərat, and Zärihun Asfaw later came into existence, with vol. 30, 1, in June 1997. The journal's managing editor became Bərhanu Täfärra.

The journal's subject emphasis remained largely unchanged. Many earlier authors continued to contribute, but a new generation of scholars was appearing. They included Ethiopian historians Abdussämäd H. Aḥmäd, Aḥmäd Zäkarya, Baḥru Zäwde, Ḥusäyn Aḥmäd, and Šəfärraw Bäqqälä; linguists and literature specialists Alämayyähu Ḫayle, Bayyä Yəmam, Fäqadä Azzäzä, and Tayyä Assäfa; and many in the social sciences, among them Bälay Tägäññä, Dässaläñ Rahmato, ƎšätuČole, Getaččäw Kaśa, Mäkkätä Bälaččäw, and Säbsəbe Däməssäw. Other new contributors included Rodolfo Fattovich and Paolo Marrassini from Italy, David Phillipson and Stuart ↗Munro-Hay from Britain, Jon Abbink from Holland, and Eisei Kurimoto from Japan.

The journal also published abstracts of Addis Ababa University Master and Doctorate dissertations, as well as papers of an Aksum Seminar in vol. 23, a Conference on Environment and Development in vol. 26, 1, Proceedings of the Twelfth ↗International Conference of Ethiopian Studies in vol. 27, 1, and the Second National Conference of Ethiopian Studies in vol. 28, 2. A cumulative J.E.S. index, covering 207 articles in the first series and 103 published up to then in the second, appeared in vol. 27, 1 (Sushma Gupta 1994).

In 1970 the journal was awarded the Ḫaylä Śəllase I Award for Ethiopian Studies (s. Pankhurst 2001:237f.).

Juba ↗Ganaalee

Jubilee palace

The J.p. is a cream-coloured building across Mənilək II Avenue from the Africa Hall (the building where the ↗Organization of African Unity was founded, now the Headquarters of the United Nations Economic Commission for Africa), and just across the narrow ↗Finfinnee river from Mäsqäl Square and Ǝsṭifanos Church in Addis Abäba. The palace has three grand pillared porticoes on its front that rise the height of the building. The gates are topped by large carved lions.

The building was completed in 1955 to mark *aṣe* ↗Ḫaylä Śəllase I's Silver Jubilee, close to the Emperor's small private villa next to the Fəlwəha hot springs (the villa was later added to the Gəyon Hotel complex adjoining the palace).

On its western side, there was a pre-war Adventist maternity hospital, the first of its kind and for many years the only. The hospital continued to give service even after the J.p. was built even though they shared a wall; later a new bigger building was constructed for the hospital nearby, the old building being merged with the palace.

The palace became the Emperor's primary residence after the attempted ↗Coup d'état of 1961 (at the ↗Gännätä Lᵊul Palace) and stayed such till the ↗Revolution of 1974. In 1966–67, a new wing was added to the palace on the occasion of Queen Elisabeth II's visit to Ethiopia. The room she inhabited in the J.p. during her stay is still called the "Queen's room".

The *Därg* renamed the Palace the "National Palace" and continued to use it for state ceremonies. The *Därg* added a swimming pool and a tennis court to the grounds, and a huge Lenin statue was erected between the J.p. and Africa Hall (dismantled in 1991). With the fall of the *Därg*, the Transitional Government used it for state functions and ceremonies until 1994. After the proclamation of the Federal Republic, in 1994, the J.p. became the official residence of the President of the Federal Republic of Ethiopia, who uses the palace for official functions.

The J.p. houses a small museum stocked with artefacts from the reign of Ḫaylä Śəllase, such as his Imperial crown, coronation robes, various military uniforms, medals, orders and decorations, including his robes and decorations as Knight of the Garter (Great Britain) which were never returned upon his death to Windsor as was customary.

The palace park houses the Zoological Natural History Museum, the only such museum in Ethiopia.

Evgenia Sokolinskaia

Jubilees, Book of

J. (Gəᶜəz: መጽሐፈ: ኩፋሌ, *Mäṣḥafä kufale*) is a prime example of the genre of "Rewritten Scriptures", offering a contextualized and updated version of the stories told from Gen 1 to Ex 24. The first chapter pictures ↗Moses on Mount Sinai where God commands an angel to dictate the contents of the Books of Genesis and Exodus to Moses from heavenly tablets. It is pseudepigraphic in that, while it was written long after his time, the human authorship of the book is attributed to Moses. In retelling the stories, the writer solves exegetical problems and also establishes that the patriarchs obeyed some laws which in the Pentateuch were not revealed until Moses's time (e.g. those for the festival of weeks). The book received the name Jubilees from the author's practice of dating events within chronological units of 49 years; another name for it is "The Book of the Divisions of the Times".

J. was written in the mid-2nd cent. B.C. in Hebrew. Fragments of it have been identified in some fourteen copies from Qumran (1Q17–18; 2Q19–20; 3Q5; 4Q176 fragments 19–21; 4Q216 [217?]–24; 11Q12). They are all written in Hebrew and the oldest dates from ca. 125–100 B.C. (4Q216). It was regarded as an authoritative work by the community (see CD 16:2–4; 4Q228).

J. was translated from Hebrew into Greek and possibly Syriac; only a few citations from both versions are extant. From Greek it was rendered with great care into Latin (there is one palimpsest copy of which only one-third of the text is legible) and into Gəᶜəz. The book has survived in its entirety only through the Gəᶜəz translation. For the latest critical edition of *Mäṣḥafä kufale* (Vanderkam 1989), 27 mss. were employed (for a complete list s. Vanderkam 1989:XV [text]).

The *Mäṣḥafä kufale* is included in canonical lists and is often grouped in manuscripts with the ↗Octateuch. It became the subject of commentary and some of its teachings proved influential. For instance, its 364-day calendar, shared with the Astronomical Book of ↗Enoch (1 Enoch 72–82), left its mark on calendrical treatises, while its Sabbath laws are reflected in the ↗*Təʾəzazä sänbät*. *Təʾəzazä sänbät* also cites several other sections from the J., such as parts of its creation account and the story about the entry of Adam and Eve into the Garden (thus justifying the laws of Leviticus 12). There is an extended quotation from J. 1 in the Ethiopian ↗Ezra Apocalypse, while homiletic works such as *Mäṣḥafä* ↗*Milad* draw material from several places in the book. The angel of the presence who reveals the book to Moses was understood as the Son and the angel of sanctification as the Holy Spirit in Trinitarian discussions. Jubilees is also used as a source in ↗*Andəmta* commentary.

James C. Vanderkam

Judaism

J., one of the oldest of the world religions, has a particular importance for the political and cultural history of Ethiopia and Eritrea.

The sources of Ethiopian Judaism

The origins of traditional Ethiopian J. have long been a controversial subject of discussion (Gamst 1995a). There are three possibilities: migration of ancient Jews to Ethiopia, diffusion of ancient Hebraic cultural patterns to Ethiopia, and native Ethiopian developments of J.

Traditions collected by visitors and scholars (from BruNile vol. 1, 484f. to Gamst 1969 etc.) have the ↗Betä Ǝsraʾel alleging an origin in ancient Israel and a connection with King ↗Solomon and the Queen of Sheba (↗Makədda). The ↗Solomonic dynasty of the Ethiopian emperors, terminated with ↗Ḫaylä Śəllase I in 1974, also embraced the Solomon and Sheba myth (↗*Kəbrä nägäśt*), which provided a cultural charter for their legitimacy. This proto-myth constitutes one of the several romantic origins of Ethiopian J. cultivated by some European scholars. In the myth, Solomon of Israel and Sheba, mythically a Queen of Ethiopia, have a son, ↗Mənilək I. He begins the Solomonic dynasty and is the embodiment of God's transfer of His Covenant from the Hebrews to the Abyssinians (e.g., ↗Amhara, ↗Təgray, and ↗Agäw). Mənilək and Aaronite priests accompanying him from Israel stole the emblematic ↗Ark of the Covenant from Jerusalem and hid it in ↗Aksum. The Betä Ǝsraʾel claim to have travelled with the Mənilək party.

Thus, Aksum replaced ↗Jerusalem as ↗Zion. The Ethiopian emperors called themselves *əsraʾelawi* ('Israelites') and "the Conquering Lion of the Tribe of Judah". The ↗lion served as the national emblem. Solomon ruled in the 10th cent. B.C., however, a half millennium or more before any possible entry of Hebraic elements into Ethiopia. The historical Solomonic dynasty dates to 1270 A.D. All Christian Ethiopians, however, have faith that the True Cross (↗*Mäsqäl*) and the Ark are hidden in their country. Thus God cloaks with legitimacy His new chosen people, who sometimes refer to themselves as *däqiqä Ǝsraʾel*, 'children of Israel'. The Solomonic myth pervades Christian and "Judaic" Ethiopian cultures.

Another suggestion of some European scholars is the Egyptian connection. During the 7th through 5th cent. B.C., and thereafter, Hellenistic Jews lived in ↗Egypt, including Elephantine on the Nile. The ↗Nile and the ↗Abbay are not a channel of migration into the heart of Abyssinia, however. The rugged watercourses form a tortuously long and physically formidable barrier to migration. Beyond the geographic barriers, hellenized Egyptian J. cannot be culturally ancestral to Ethiopian J. In a curious letter to Jews in Spain, written in 883 A.D., ↗Eldad Ha-Dani ('the Danite') developed another enduring myth, the Betä Ǝsraʾel were the lost tribe of Dan. His travels and account, and other "lost tribe" allegations, remain unverifiable.

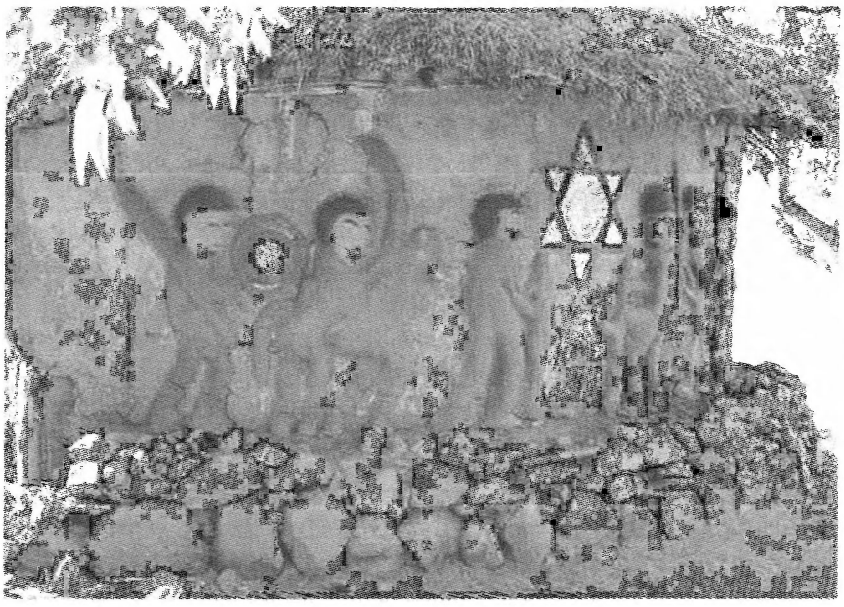
Southern ↗Arabia had a Jewish population during the early centuries of the Common Era (Robin 1980; Beeston 1984). The allegation, however, that some Ethiopians, in particular the Betä Ǝsraʾel, are descendants of these Arabian (or also Palestinian or Egyptian) Jews cannot be generally supported. A more culturally plausible hypothesis following cultural diffusion theory is that Hebraic cultural patterns diffused to Ethiopia, particularly from Arabia to Aksumite Ethiopia (Rathjens 1923:92ff.; Leslau 1951:xlii–xliii; UllBibl 17–24; Ullendorff 1988:150). No genuine documented sources exist, however, for this diffusion. Moreover, the South Arabian Jews used Hebrew and the Talmud, inexistent in traditional Ethiopian J.

Ullendorff (1987) and Polotsky (1964) discuss credible evidences for Hebrew–Aramaic words in Christian Aksumite writing. Kaplan (1992:31f.), Gamst (1969:12f.), and others have concluded from such linguistic and other evidences that a few carriers of Hebraism reached Aksum in the early centuries of the Common Era (prior to Emperor ↗ᶜEzana's conversion to ↗Christianity during the 4th cent.). In Aksum, these carriers had considerable influence. Their Judaic cultural patterns diffused into Ethiopia at a formative time, and provided a substratum to later religious developments (Kaplan 1992:19f.; Gamst 1969:12ff.).

Under the light of intensive scholarship, this general "traditionalist" view, of a few highly consequential carriers of Judaic cultural patterns influencing Ethiopian religion, is no longer tenable. With extensive documentation, Brakmann (in BrakKirche) summarizes that an Aksumite J. of late antiquity is unprovable: as a prerequisite for the Christianization of Aksum; as a rival of the Christians in a struggle for domination of the kingdom; or as a determining factor in the early history of the Aksumite Church. More specifically, regarding various presentations on pre-Christian Judaic influences, on methodological grounds alone, these do not account for the "Solomonid" ideology of the monarchial state, but originate largely in religious innovation in the time of the 15th cent. *aṣe* ↗Zärʾa Yaᶜəqob, influenced by contemporary translations of old Christian texts. They are part of the generally far-reaching Ethiopian Christian relearning and, thereby, continuing of early Judaic practices of the OT. Regarding frequently alleged "evidences" from Aksumite J., male ↗circumcision remains widespread in Africa and early Christians in Egypt (and elsewhere) observed the ↗Sabbath (Saturday) as the

day of rest and worship. In all, the various "Judaic" customs and beliefs found in Ethiopian Christianity originate after its introduction (BrakKirche 172–85).

Ethiopian J. is indeed heavily patterned by Christianity. Leslau (1951:XXXVII) claims: "the influence of Christianity upon Abyssinian J. was considerable". Most of the corpus of Betä Ǝsraʾel writing comes from the Ethiopian Christians (Leslau 1951:XXXVIII; Pankhurst 1990:44–47). All Betä Ǝsraʾel writings that I have seen or any of my informants recalled were in Gəʿəz. Christian scribes sometimes write Betä Ǝsraʾel texts. Traditions exist of Christian and Betä Ǝsraʾel *däbtära*s and scribes being trained together by Christian priests and monks in Church schools. Martin ↗Flad (1869:32) reports this during his stay among the Betä Ǝsraʾel.



Modern Betä Ǝsraʾel house in Wäläqa near Gondär, showing the Exodus (?) and the star of David, as a symbol for Judaism; photo 1996, courtesy of Galen R. Frysinger

Judaism and group identity

The possibility exists that some native Abyssinian peoples (including the Ethio–Semitic-speaking Amhara and Təgrayans and the Agäw-speaking Betä Ǝsraʾel and ↗Kəmant) have similar varieties of collective group-identifications. These identifications stem from a local Christian heritage having a J. derived reference-group. Such an explanation negates the customary, often Eurocentric, arguments for a special, independent introduction of Judaism into Ethiopia, through migration or diffusion.

In ↗ethnicity, one kind of development of group-identifying ideas is a conformity involving a reference group. This is a social collectivity that a people choose as a point of reference for answering the questions of their cultural charter, how they came to be as a people and what they are. A people sometimes look to a reference group to get criteria and standards for affirming their genesis and nature and how they should relate to other peoples. Generally, a collective reference group theory attempts to account for the determinants and consequences of the processes of a people's group-evaluation and group-appraisal. Here the people take norms, values, and role prescriptions from another group as a comparative frame of reference. In the Durkheimian sense, a collective consciousness develops, explaining in partially mythic terms who the people are and, accordingly, who the individual is.

For Ethiopians, the Eurocentric opposing of Judaic versus Christian is marginal to answering the two questions. Across two millennia, now deeply rooted cultural patterns developed indigenously among Ethiopians, to emulate the reference O.T. and its milieu. This emulation of reference continuously reinforced adherence to "Jewish" cultural patterns. Ranges of purported Ethiopian J., then, would be reflections of the traditions of a unique, insular Ethiopian church emphasizing the O.T.

Rodinson (1964a, 1964b) and others believe that "Judaic" influences in Ethiopia developed after the advent of Christianity, from local imitations of elements of the O.T. and identification with ancient Israel. Comparable developments occurred among Christians elsewhere. Similarly, Dillmann (DillmZarY 68) wrote that much of Ethiopia's Judaic elements resulted from the 15th-cent. religious reforms of Emperor Zärʾa Yaʿəqob, which emphasized such elements. Kromrei (1895) also reasoned that the Judaic patterns in various Ethiopian religions originate in the Ethiopian Church. Because of what he saw as earlier evidences of J. in Ethiopia, Rathjens (1921:42–47) opposed the post-Christianity and 15th-cent. hypotheses. Other early, emerging Christian churches, e.g., the Coptic and Syriac (necessarily?) had strong Judaic patterns.

Also, documentation exists of conversions from Ethiopian Christianity to Ethiopian "J." and vice

versa. During the reign of *aṣe* ↗ʿAmdä Ṣəyon I, in the 14th cent., a sizeable part of his subjects became rebels and changed from Christianity to a form of "J.", whereby they "denied Christ just as did the Jews who crucified Him" (KrAmdS 11 [text] = 15 [tr.]). Similar revolts occurred against imperial authority and church orthodoxy in the reigns of the 15th-cent. ↗Dawit II and Zärʾa Yaʿəqob (Wajnberg 1936:51–60; PerrZarY 97–100).

Judaism and the Ethiopian Orthodox Church

The ↗Ethiopian Orthodox (Täwaḥədo) Church has long been described as oriented to the O.T. and its Hebraic patterns of culture (cf., e.g., UllBibl 73f.). As Lobo concluded after his travels in Abyssinia during the early 1600s, "it would not be easy to determine whether the Abyssins are more Jews or Christians" (1735:310). Amhara, Təgray, and Christian Agäw have a Christianity markedly *bäʾorit* ('by O.T.'). The three peoples generally follow Mosaic dietary laws. From dusk on Friday through Saturday, the Sabbath day of worship and rest from work, travel, and use of fire is observed by Betä Ǝsraʾel and Kəmant and, a century ago, by most Christians (s. HarAeth 150). Scholars sketch a number of counterparts between Ethiopian Christian and world Jewish religious ↗feasts (UllBibl 113ff.).

No altar with a consecrated host, but a replica of the Ark of the Covenant of Moses (Gəʿəz *tabotä Muse*, ↗*tabot*) is the focal point of an Ethiopian church and its parish. In the mythic past, a parish "founding father" first "planted" a particular *tabot* (dedicated to, say, Birth-of-Mary [*Lədätä lämaryam*], John the Baptist, St. George, or Saviour-of-the-World [*Mädḫane ʿAläm*]) in the ground of a central place, usually amongst a grove of trees sacred to the traditional Agäw folk religion. The parishioners built a circular church consisting of three concentric rings around the Ark (↗Church buildings). It, then, reposes in the innermost *sancta sanctorum*, which only clerics and the emperor may enter. Perhaps, the three-ring church replicates the design of the tripartite temple of the Hebrews. Parish priests bring the Ark out of its sanctuary in ritual procession on particular Christian holidays, e.g., the feast of St. George for the parish church named after him. Priests sing and dance, around the Ark and in other ceremonies, as did King David and his people (2 Sam 6:5, 14–16).

Amhara, Təgrayans, several Christian Agäw peoples, and Betä Ǝsraʾel have personal priest-confessors (↗*Näfs abbat*). All these peoples have the same Gəʿəz labels for each of five kinds of religious practitioners. They separate priests (↗*Kəhnät*) from cantors (↗*Däbtära*) and have deacons (↗*Diyaqon*) and both monks (Gəʿəz.: *mänäkos, Amh.: mänäkʷəse*) and nuns (*mänäkʷəsit*; ↗Monasticism). All their clerics wear white turbans and native togas (↗Clothing); speak and read in Gəʿəz for rites; use prayer sticks (↗*Mäqqʷamiya*), sistra (↗*Ṣänaṣəl*) and drums (↗*Käbäro*) for making music; carry large, colourful umbrellas (↗*Dəbab*) in religious events; and separate men and women during services. All these peoples believe in a paradise of the good, a hell of the damned, angelic spirits (↗Angels), Satan (↗Devil), demonic ↗spirits, various kinds of local and personal spirits, a Resurrection, and a Last Judgement. They have a taboo against eating pork and other Mosaic dietary prohibitions, abide by two meatless days weekly, and observe the ritual polluting of sexual intercourse, semen, and menstrual and childbirth blood. With proper ceremony and consequent behaviour, any of these peoples can convert to the non-alien religion of one of the others. Ethnographically considered, when a common language is shared and given the common cultural underpinnings of all of these cultures, each can be largely interchangeable with one of the others.

Except for certain religious acts and particular craft tasks (↗Handicrafts), the activities of the men, women, and children of all the peoples are largely the same. ↗Marriage is highly ceremonial, arranged, and a social contract between families. Divorce has no ceremony. For the deceased, all practice a first and second funeral and annual commemoration. All do not allow a suicide to be interred in hallowed, burial ground. ↗Graves are covered with rocks.

Judaism and the Betä Ǝsraʾel

For deeper insight into Ethiopian J., we focus on the enigmatic Betä Ǝsraʾel. For over a century Jewish and Christian organizations have been ethnocentrically interested in establishing a Jewish identity of the Betä Ǝsraʾel, including for proselytizing activities. Both Ullendorff and Leslau note an unscholarly, missionary tendency, even zeal, of most Christian and Jewish writers on the Betä Ǝsraʾel. In a political definition, the Israeli parliament recognized the Betä Ǝsraʾel as a people covered by Israel's Law of Return. Just under 40,000 have immigrated to Israel, as returning Jews.

Starting in 1830 with Samuel ↗Gobat, a number of Protestant missionaries from Europe attempted to convert the Betä Ǝsraʾel, and Kəmant. Launching a Jewish missionizing, Joseph ↗Halévy visited several Betä Ǝsraʾel communities, beginning in 1867. He noted the nonstandard nature of their J., and advocated Jewish missionary work to "reform" them. Halévy's student, Jacques ↗Faitlovitch, began this "reform", in 1904. He began to standardize Betä Ǝsraʾel religion according to world J. and to educate local leaders to follow the standards. Thus were the Betä Ǝsraʾel gradually brought into the fold of a J. that they had never occupied. Betä Ǝsraʾel group-identification with outside J. begins in their culture contact with European Jews in the middle of the 19th cent. Until that time, Betä Ǝsraʾel did not call themselves Jews. After that time, they were increasingly proselytized to acculturate to a model of world J. and forsake their Ethiopian nature.

Since the time of Faitlovitch, all manner of Jewish missionaries have acculturated the Betä Ǝsraʾel toward standard J., including Talmudic beliefs and use of Hebrew by clerics. As Gamst observed during his fieldwork among the Betä Ǝsraʾel in 1964-65 that religious questions were answered after consulting a book published in ↗Israel. During this fieldwork, many Betä Ǝsraʾel knew almost nothing about practices and beliefs that could be called Hebraic. Practises of the Agäw folk religion, however, abounded, such as, sacrifices to locational *qole* spirits, relations with ↗*zar* spirits (↗Possession cults), local beliefs in ↗magic and witchcraft, and strict observance of local taboos regarding ritual pollution from menstrual and childbirth blood.

Krempel (1972), Kaufman Shelemay (1986), Kaplan (1992), and Quirin (1992) provide us with modern, empirical studies demythologizing the Betä Ǝsraʾel and, hence, Ethiopian "J.". Krempel concludes: "There is no original observable history of the Fälasha population separated or isolated from a general Abyssinian–Ethiopian context; [and] ... to a large degree, all areas of life of the Fälasha including religion are similar to that of the Amhara" (1972:8f.).

After intensive study of Betä Ǝsraʾel liturgy, traditions, and music, Kaufman Shelemay (1986:215) finds that, during the 14th and 15th cent., Ethiopian Christian monks were "the sources of the beliefs, traditions, and rituals that survive among the Betä Ǝsraʾel". Moreover, "these materials provide little evidence that the Betä Ǝsraʾel preserve an archaic Jewish tradition obtained directly from an as yet unidentified Jewish source." Originally, Betä Ǝsraʾel had Agäw traditions and worshipped Agäw spirits.

Without European prejudicial preconceptions imposed upon Ethiopian ethnohistory including interpretations from external European Jewish history, Kaplan and Quirin view the Betä Ǝsraʾel from an internal Ethiopian perspective. They counter most diffusionistic, parochial conjecture by Christian and Jewish Europeans and further document Betä Ǝsraʾel culture as entirely Ethiopian.

Kaplan posits several early native societies slowly merging, with the cultural development of "Fälaša" arising in the 15th cent. Kaplan and Quirin demonstrate that Betä Ǝsraʾel J. developed relatively recently and derived much of its content from Ethiopian Christianity. Displaced some three centuries ago, for reasons of political economy, from their native land holdings, the Betä Ǝsraʾel became increasingly endogamous and craft specialized (caste-like, Quirin and Krempel explain). By the 20th cent., many began to lose their Agäw language and spoke Amharic or Təgrəññña.

Most Betä Ǝsraʾel once were or are Agäw. Some, however, may descend, as chronicled in the 14th cent., from Christian Amhara or from Amharizing Agäw Christians, espousing considerable Old Testament elements in their religion. Many groups described in 14th- and 15th-cent. chronicles of Ethiopia as enemies of the crown were pejoratively called ↗*Ayhud* (often, non-believers and idolaters). But, given their beliefs and territories, only some of them could have been early Betä Ǝsraʾel.

Although many Agäw embraced Ethiopian Christianity with its "Judaic" underpinnings, some emphasized a more Hebraic religion. The various Agäw groups most likely formed a continuum of blendings of Hebraic, Christian, and ancestral patterns of autochtonous religion(Gamst 1969:3f., 30f.; Kaplan 1992:40, 159f., 178). Especially from the 15th cent. onward, the native Ethiopian Betä Ǝsraʾel continued development into a somewhat – mainly socially and occupationally – distinct group. They shared much of the culture, including syncretized religious patterns, of their neighbours. Those persisting in conjuring the Betä Ǝsraʾel as a part of world Jewry are anti-Ethiopian ethnocentrists, insisting on assessing J. in Ethiopia by their outsiders' normative standards.

Judaism in Ethiopia today

By the end of the 1990s, most Betä Ǝsraʾel had emigrated to Israel. Today, in addition to the remaining traditional Ethiopian "Jewry", three kinds of representatives of world Jewry reside in Ethiopia and Eritrea. These include European Jews, some fleeing the Nazis. Temporary Jewish residents comprise diplomatic, commercial, research, missionary, and other personnel from various Western countries. In addition, some refugees have arrived from the Jews formerly living in ↗Yemen.

Frederick C. Gamst

Judiciary, Judicial System ↗Law and Judiciary

Julianism

One of the most pervasive streams of anti-Chalcedonian theology (↗Monophysitism), J. was so designated after its founder, Bishop Julian of Halicarnassus (d. Egypt soon after 527), who broke communion with ↗Severos of Antioch, his friend and ally until 518; in Egypt, it took the name of Gaianism, after the priest Gaian, a disciple of Julian and a rival patriarch of Alexandria from 537.

As far as can be judged from the scant original sources (collected and discussed by Draguet 1924, 1931 and 1941; cp. Hespel 1964–71), both Julian and Severus shared the Cyrillian and Chalcedonian teaching about Jesus as "consubstantial to us according to manhood" (cp. ↗Eutychius), but they disagreed on its interpretation. Severos emphasized the "difference" (διαφορά) between divinity and humanity in Christ. In order to avoid such a "division" of the unique nature of the Logos (↗Chalcedon), Julian enforced a limited concept of "consubstantiality to us", declaring Christ's humanity to be exempted from any passibility and corruptibility. So, his teaching was nicknamed by his adversaries "aphthartodocetism" (from Gr. ἄφθαρτος, 'incorruptible', and δοκεῖν, here in sense 'to believe'), along with more familiar heresiological labels, such as "docetism", "phantasiasm", "manichaism". The peculiar point of the authentic J. of Julian consists in the opinion that Christ assumed the body of Adam in its "pre-Fall" state, i.e. without sin, while the rest of humanity is born inheriting sin and corruptibility from "post-Fall" Adam. This kind of J. was well-known throughout the 6th cent., but is practically untraceable from the 7th cent. onward, when the sophisticated speculations of Julian concerning the legacy of Adam (as being at odds with the whole spectrum of the Oriental patristic traditions) were completely forgotten, and the only understanding of the in-

corruptibility of Christ remained "union (with divinity)" itself.

The history of J. thereafter becomes particularly complicated, owing to both internal and external factors (for alleged support by emperor Justinian after 565 s. esp.: van Esbroeck 1996; for another interpretation of Justinian's attitude as having nothing to do with J., s. Grillmeier – Hainthaler 2004:489–95; Lourié 1997, 2006:267ff.).

Julian's theology soon elicited attempts to bring it to its logical conclusion: already in the 540s, a group of his Syrian followers maintained that, "by union", Christ's flesh became not only incorruptible, but also uncreated and indescribable (Draguet 1941). Called "actist(it)es" (Gr. ἀκτῖσται, ἀκτιστῖται, '[those] who deny the creation') by their opponents, they totally avoided the Severian doctrine of the "difference". By the 7th cent., they become the leading sect within J. Between 555 and ca. 633, a few official church leaders, also in Armenia, took this stance (cf. van Esbroeck 1987; cp. Frivold 1981:223 n. 88 and passim), whilst moderate Julianists were often inclined to union with the Severianists – which was achieved in 581, under patriarch ↗Damian of Alexandria. An actistite hierarchy was established already in the 6th cent. (Draguet 1941; van Esbroeck 1987).

According to the sources, J. spread from al-Ḥīra, at the edge of the Arabian steppe, to the south, to Yemen (the name "Najranites" for Julianists, found, e.g., in Anastasius of Sinai, *Viae dux*, 23, 1, s. Uthemann 1981:305f., probably refers, at first, to ↗Nağrān in South Arabia and only later to Nağrān al-Kūfa in ʿIrāq; for the association of Nağrān in Arabia with a Julianist milieu as early as in the 520s s. van Esbroeck 1987). J., according to some scholars, may have played a certain role in the shaping of the Christology of the ↗Qurʾān's (Grégoire 1930; cp. Fiaccadori 2006:78 and n. 191). From Egypt and/or Arabia, J. reached ↗Aksum some time before 579, when the missionary work of Longinus in the kingdoms of Nobadia and Alodia (resp., northern and southern ↗Nubia) took place. ↗John of Ephesus reports that in Alodia (later ʿAlwa), which bordered upon the Aksumite kingdom, Longinus met a few Aksumites (*ʾksymyṭwn*) who professed J., but was able to bring them over to his own faith, i.e to orthodox Monophysitism (↗John of Ephesus, *Historia ecclesiasitica* III, 4, 53, s. Brooks 1935:239). The same information is later provided by ↗Michael the Syrian (*Chronicle* IX, 30, s. Chabot 1910:313; s. Fiaccadori 1992:13 n. 33).

For these reasons, J.'s contribution to Christological doctrines in Ethiopia is difficult to assess. With respect to external difficulties, J. was adopted by suppressed minorities during almost all of its history: in Armenia, e.g., up the 13th cent. (Ter-Minassiantz 1904). This might also have been true for Ethiopia: in contemporary Eastern Armenia, where J. was well established, Julian was seldom mentioned as an authority and never quoted. Moreover, some Julianists even referred to him as a heretic (Lourié 1999:325). In the 14th–15th cent. J. was urging its followers to seek for close union with the church in ↗Armenia, which may also account for part of the biography of ↗Ewosṭatewos, who eagerly moved to that country and died there (cp. ibid., 354–57).

As for *abba* ↗Giyorgis of Sägla's Christological teaching, it is clear now that he had access to lost Aksumite sources (cp. *Mäṣḥafä* ↗*məśtir*; ↗Nestorius), and his silence over Julian is quite natural for the 15th cent. Nevertheless, he did anathematize the teaching of the Severianists-Theodosians in the persons of Theodosius of Alexandria and Severus of Antioch. In the *Mäṣḥafä* ↗*məśtir* (s. YaqMist I, 267–75), the latter appears as Severos "of ↗India", **ዘህንድ[ን]ክያ**, *zähəndə[n]kəya*, corrupted from **ዘአንጾክያ**, *zäʾanṣokəya*, 'of Antioch' (Lourié 1999:320–23), hence the assumption about Giyorgis as a possible defender of J. (ibid., 323–29). Given his influence on the further theological history of Ethiopia, one should also look for subsequent developments of J. in such later Ethiopian doctrines as ↗*Karra* (cp. Yaqob Beyene 1989:84).

Likewise, in a Vita of Severus of unknown origin, preserved only in an Ethiopic translation from Arabic made between 1682 and 1706, Julian is portrayed as a renegade adopting the teaching of Chalcedon (Goodspeed 1907:608f. [40f.]). Such a strange substitution for the alleged "docetism" of Julian would have made little sense outside a milieu to which true J. was still familiar.

In spite of our present knowledge of actistite J. (Lourié 1999:328), the hypothesis put forward by Ugo ↗Monneret de Villard (1939:12) with reference to the Gospels of princess ↗Zir Ganela, holding J. responsible for the Ethiopian iconography of the Crucifixion with no depiction of Christ's body, must be revisited, taking into account, however, the fact that such iconography – diffused also across Armenia – harks back to

Palestinian prototypes of the early Byzantine or pre-iconoclastic period (Balicka-Witakowska 1997:23–30; ↗Byzantine Empire).

Basil Lourié

Jumilhac, Estelle de

Estelle (Ethel) comtesse de J., née Barbey (b. 1873, of Swiss descent [Romandie], d. 1959), was a French traveller, who published on Ethiopia in the 1930s. She was married to Armand Chapelle, Marquis de J., descendant of an ancient noble family related to the du Plessis de Richelieu and based in the castle of J. in the Haut Périgord. After her divorce she kept the title of Comtesse, as Barbey, comtesse de J.

J. frequented the literary circles of Paris, Roland Dorgelès dedicating a 1928 reedition of his famous novel *Les croix de bois* to her. She travelled to the Middle East, India, Egypt etc. In December 1930 she went to Ethiopia on the occasion of *aṣe* Ḫaylä Śəllase I's coronation. Her travel notes were the basis for a book (de Jumilhac 1933), with 40 photographs and a foreword by professor Robert Chauvelot, which she dedicated to the maréchal Franchet d'Espérey, the official French representative during the coronation. This book is only interesting as a typical example for "exotic" travel literature of that time, characterised by clichés and superficial voyeurism. Under the veneer of modernity she discovers biblical customs (ibid. 75), she describes battles in which blood is shed as in the times of the crusades (ibid. 91), Addis Abäba appears to her as ancient Byzantium, and the coronation resembles the one of Charles the Great (ibid. 152). Her ethnological notes are based on long conversations with Henry de ↗Monfreid and Europeans living in Ethiopia. She spent much time hunting, but did not see any slaves (ibid. 161) and remarks that ↗Rimbaud had "failed" in his literary carrier (ibid. 44), which says a lot about her restricted capacities of observation.

K

Käbäl

K. is a ↗Harari term which denotes a pair of handheld wooden blocks that are clapped together to accompany religious and secular singing in Harari wedding ceremonies and *zikri* (↗*Ḏikr*) rituals. Leslau (1963:90) suggests that the name derives from their shape, recalling the palm of a hand (*käbäl*, also 'handful'). These percussion instruments, however, may have different forms and dimensions (the longest side measuring 10–20 cm). The refinement of their manufacture varies; today it is possible to observe roughly cut rectangles of wood, as well as smooth oval shapes with a central concave notch on one side to improve the sound quality. The materials used may differ, but locals say that the best wood to be used is *wagär*, a species of olive tree, which is very strong and resistant.

Harari women playing the *käbäl*; photo 2005, courtesy of the author

K. is played together with the Harari drums ↗*käräbu*, usually stressing the strong beat of the binary rhythmic accompaniment that regularly characterizes Harari performances, although freely added syncopated variations are very common. These pairs of wooden idiophones are provided in large numbers to groups of participants in performance occasions, and may be played by both men and women.

Käbäro

K. (ከበሮ) is a Gəᶜəz term that is currently used, with some variations, in Amharic and several other Ethiopian languages, to refer to a large, two-headed, cylindrical drum that is played along with the ↗*ṣänaṣəl* (and usually with other K.) to accompany liturgical chants and dances (↗*Aqʷaqʷam*; ↗Hymns). The drum is beaten in a series of named rhythmic patterns, culminating in a faster pace near the climax of the dance.

The best K. are reportedly made in the ↗Sälale region, Šäwa. K. vary in size, usually being around 40–60 cm in height, the diameter of the head being around 25–30 cm (s. Powne 1968:16). They are made of a hollowed out tree trunk of *wanza* wood (*Cordia abyssinica* or *Cordia africana*) and generally reflect the shape and circumference of the tree from which they are made, the drum usually tapering towards one end. Ox hide, secured by laces, is used to cover the two heads of the drum; heads can be round or oval. Typically, K. are decorated with brightly coloured, flowered cloth under the lacing; in the past, some drums (in particular, those donated to churches) were covered with copper-, silver- or goldwork.

There are two positions of playing the K.: sitting, with the K. on the floor; or standing, with the K. suspended from a strap around the neck. In both positions, the larger head (called *ᶜabiy*, lit. 'large') can be played with the right hand, while the smaller head (*nəʾus*, lit. 'small') is assigned to the left. The larger head of the K. has a deeper, more penetrating sound than the smaller one, which lacks resonance. The heads, which are struck by the hands, are not tuned in any way.

Ecclesiastics may start to learn to play the K. by looking at professional church musicians

Deacon playing the *käbäro* at the celebration of the feast of St. Michael before the church of Michael and Gabriel in Säqota; photo 1993, courtesy of Michael Gervers

(*mäzämmərän*) and assisting them as *däqqä mäzamurt* ('disciples') at times playing the drums. Proficiency in playing the K. can be reached only at an advanced stage of traditional church ↗education, in the ↗*zema bet*, where liturgical dance and instrumental practices are taught. In the *zema bet*, the student learns with the help of substitution movements, by beating his knees (whereas the instruments remain in the church).

Generally, two K. are used for rituals, positioned at opposite ends of the lines of ↗*däbtäras* within the *qəne maḫlet*, the outermost of the three concentric circles common to many Ethiopian churches (↗Church buildings) or at the opposite ends of the dancing *mäzämmərän* in the church yard. The large K. is mostly used within the church, but also in paraliturgical occasions out of church. Smaller drums also referred to generically as K. are used throughout much of Ethiopia by peoples of many religious backgrounds to accompany secular music and dance.

Traditionally, K. is interpreted as a symbol for Christ (s. Griaule 1932:4; cp. also Schneider 1988:76, 79, 81, 83).

Käbäsa

Käbäsa geography

In Eritrea, the ↗Təgrəñña term K. (ክበሳ) traditionally refers to the Təgrəñña-speaking Christian and Muslim highland populations of Eritrea (also *däqqi käbäsa*). More recently, the term has been in common use chiefly with reference to the Təgrəñña-speaking populations of the highland areas of *zoba* Maʾkäl and *zoba* Däbub – roughly representing ↗Akkälä Guzay, ↗Säraye and ↗Ḥamasen – and stands in contrast to *mätaḥət*, the lowland region roughly corresponding at present to *zoba* Gaš Barka. In this sense there is also an opposition between K. in Eritrea and the ↗*däga* (*däg^{wᶜ}a*) highlands of Təgray as the two homes of Təgrəñña speakers.

In its wider sense, K. is the Təgrəñña term for the entire highland agro-climatic zone (↗Geography; ↗Climate). According to the traditional classification system, which considers only temperature and altitude, the Eritrean landmass can be classified into three physiographic categories: the highlands, or K., the lowlands, or *qolla* (↗*qʷälla*), and the zone of escarpment and slopes (*aṣadəf* or *ḥawsi qolla*). Occupying the central part of the country with a north-south axis, the K. highlands have an elevation between 1,000 and 3,500 m A.S.L.; in this sense, the K. separates the Western and Eastern Lowlands by gently slopping westward in the central part and gradually rising

eastward, and attains its maximum height on the eastern edge, from where it suddenly drops to the east. It is a major watershed between eastward and westward flowing streams and it is therefore in the K. highlands that most water courses of Eritrea have their source. The K. has a moderate, relatively humid climate, suited for rain-fed agriculture and has therefore a capacity for a higher density of population. In the sense of a geographical zone, the K. is further subdivided into six physiographic regions: northern highlands (consisting of the ↗Saḥəl and the ↗Ḥalḥal highlands; this is the lowest K., 1,000–2,000 m A.S.L.), upper ↗ʿAnsäba highlands (from ↗ʿAd Täkälezan and Zagər in the south to the ↗Käränarea in the north), central plateau (from ʿAd Täkälezan and Zagər in the north to the ↗Däqqämḥarä/Täraʾəmni divide in the south; ca. 2,200 m A.S.L.), southern plateau (bounded by the ↗Märäb River in the north and by the ʿArräza slopes in the west), eastern highlands (from the Däqqämḥarä area in the north to the Ethiopian border in the south; over 2,500 m A.S.L.), and Märäb Trough (between the eastern highlands and the Southern Plateau). The central and the southern plateaus are mostly conductive for agriculture, whereas the Eastern Highlands have the largest historical significance as a traditional trade route from the ↗Red Sea and the route of foreign penetration.

In sum, even if all these physiogeographic divisions form part of the K. in its wider sense, it is only the highlands of the historical Akkälä Guzay, Säraye and Ḥamasen provinces that are among the Təgrəñña speakers traditionally and thus culturally categorised as K.

The term appears as toponym in the name of such district as Käbäsa Č̣əwa. Today it has eleven villages: ʿAddi Gʷaʾdad, Sälaʿ Daʿro, ʿAddi Gombällo, ʿAddi Raʾsi, Məsgʷag, ʿAddi Boḵoḵʷay, Kätəmowələ, ∃bardaʿ, ʿAddäbnägär, ʿAddi Ḥammuštä, and ʿAddi Lagʷän. It is inhabited by the members of the ↗Däqqi Minab lineage who trace their descent to the apical ancestor Faluq, a great grandson of "Minab" (in fact, [the tribe of] Benjamin).

Abbebe Kifleyesus

Käbäsa history

In Təgrəñña, the word K. was originally the geographical designation for the upper level of the highlands – in fact, the coldest and most inhospitable climatic belt of the ↗*däga* (*däg$^{w^c}$a*, s. Täkkaʾä Täsfay 1999:613). By ↗Təgre speakers, K. is used as a place-name for their home Eritrean highlands, whereas Ḥabäš stands for the whole Ethio-Eritrean highland region, peopled mainly by Təgrəñña speakers. Therefore, the suggested connection between the words *käbäsa* and *ḥabäša* is phonetically and semantically untenable. The term K. derives from the South-Semitic root *kbs* 'to embrace, to encompass', and its original meaning could be 'surrounding land' in both Təgrəñña and Təgre (Lusini 2005:245f.).

The term K. was used by the people of lowland ↗Sämḥar with the meaning 'plunderer', obviously because of the frequent incursions of the highlanders against the lowland Muslims (Fisseha Giyorgis 1987: 10).

A place called ምድረ ከበሳ (*mədrä käbäsa*), 'land of K.' is mentioned among the lands *aṣe* ↗Susənyos granted ↗Śəʿəlä Krəstos in 1627 (PerChron vol. 1, 287; HuntLand no. 61); in this case it is a region somewhere in ↗Goğğam.

In the colophon of a Gospel book dating to 1457/58 and originating from ↗Däbrä Bizän (now kept in the monastery of ↗Kodadu), a decree of *aṣe* ↗Zärʾa Yaʿəqob is transmitted, allowing the people of ↗Ḥamasen to go out to K. and to cultivate land there (fol. 165r, s. BauEr iii, 37). Here, K. is a place-name referring to the territories south-west of ↗Asmära, still forming the district called Käbäsa Č̣əwa.

As in the case of the neighbouring ↗Loggo Č̣əwa, the second element of this district name reveals the military origins of the settlements (cp. ↗*Č̣äwa*). Both communities belonged to a series of outposts possibly established under Zärʾa Yaʿəqob as a part of his strategic strengthening of the northern boundaries of the Christian Ethiopian State in a period of military confrontation with the ↗Dahlak sultanate, culminating in 1464/65 in the pillage of ↗Massawa.

Käbbädä Bəzunäš

Däğğazmač K.B. (**ከበደ፡ ብዙነሽ**; b. 1908, Meta Robi, Šäwa, d. 28 December 1977, Männagäša *awraǧǧa*, Šäwa) was a prominent military and political figure of the ↗Ḫaylä Śəllase I era. A Šäwan Oromo, he grew up under the strong influence of his mother, *wäyzäro* Bəzunäš Gärəsu Biratu, and even adopted her name as his second name in an apparent contravention of patrilineal Oromo tradition.

On completion of the first level of traditional church education, K.B. served as a butler in Empress ↗Zäwditu's palace. On the eve of the ↗Italian war of 1935, K.B. became one of the first recruits to the ↗Imperial Bodyguard trained by the Belgians at ↗Holäta Military Academy; he later graduated from there as Second Lieutenant. He fought at ↗May Čäw and, later, joined the ↗*Ṭəqur Anbäsa* resistance. K.B. was badly wounded at the battle of ↗Bonga, and on recovery he continued his struggle. When the head of the *Ṭəqur Anbäsa ras* Ǝmməru was captured at Gore, K.B. with a group of patriots returned to Meta Robi where he organized a successful guerrilla force.

In 1936, he gained his first victory against the Italian forces at the battle of Wälmära. Later the same year, K.B. beat the Italians at Meta Robi. In 1937, he was victorious again at Meta Robi Đalota, where he was wounded in the leg. In 1938 he won a battle against a significant Italian force at Guro Mako Libas Täklä Haymanot and Ginda^{c} Barat. In the same year, his army penetrated an Italian camp at Robi Šano and captured machine guns and rifles, in addition to millions of rounds of ammunition. K.B.'s final victory against the Italians was at Meta Robi Gätära.

After the Liberation, K.B. served as a Battalion Commander of the Imperial Guard, and administrated the ↗Holäta *wäräda*, until in 1944 Ḫaylä Śəllase bestowed upon him the title of *fitawrari* and appointed him governor of ↗Ğämğäm *awraǧǧa*, as well as Chief Trustee of the gold mine there. In 1948, he was raised to the rank of *däğğazmač*. In 1953, he was appointed governor of his home region, ↗Männagäša *awraǧǧa*. Soon after, he was transferred to ↗Yärär and Karrayyu *awraǧǧa* with the same administrative rank. He was also given the title of Deputy President of the Imperial Medals and Honours Board. K.B.'s last major appointment was to the position of senator in the Imperial parliament (↗Government). He was awarded five prestigious Imperial medals.

Though a supporter of Ethiopian unity and an Ethiopian nationalist, K.B. strongly believed that the plight of the ↗Oromo ethnic group had to be addressed. He was one of the key figures of the ↗Mäčča and Tulama association. When the ↗Provisional Military Administrative Council came to power and tried to crush all nationalist movements, K.B., already an old man, waged a guerrilla war. In 1977, after his tiny force had been surrounded by *Därg* forces, K.B. preferred shooting himself to surrendering. In 1992 his body was transferred to the Qəddəst Śəllase Cathedral in Addis Abäba.

Paulos Milkias

Käbbädä Mängäša Atikäm

Ras K.M. (**ከበደ፡ መንገሻ**, "horse name" Abba Näwet; b. ca. 1878, d. 1939, Addis Abäba) was a military and political leader of the early 20th cent. K.M. was the son of *ras bitwäddäd* ↗Mängäša

Atikäm of Goǧǧam. His mother was the daughter of a *balabbat* of Šäwa. At the beginning of his career, K.M. governed several *awraǧǧas* in Wällo and Agäw Mədər with the title of *däǧǧazmač*. In 1909, he went to Addis Abäba with 10,000 soldiers and gifts of slaves, gold and ivory to offer to *ətege* ↗Ṭaytu Bəṭul. The Empress wanted to evict him from his province, but when he arrived in the capital, she had already been deposed (Annaratone 1914:177f.). The sources do not say if he was able to maintain his posts afterwards. Ca. 1910 he succeeded his father as the governor of Agäw Mədər and the western lowlands. However, ca. 1911 these territories were restored by *ləǧ* Iyasu to *ras* ↗Ḫaylu Täklä Haymanot of Goǧǧam (Bairu Tafla 1973:45).

K.M. was already a *ras* when he attended the ↗coronation of Empress Zäwditu in 1916. Shortly thereafter, after the death of *ras* ↗Abatä Bʷayaläw in 1917, he was appointed governor of Wällo.

By 1935, K.M. was governing the provinces of Ǧamma and Gədəm in the northern part of Šäwa (ZerEth 25). During the ↗Italian war 1935-36, he held ↗Ambalage with his troops and participated in the battle of ↗May Čäw in March 1936.

Information on his post-war life varies from one source to another. Some argue that he was captured and deported to Italy (MahHorse 256). According to others (Mockler 1984:152f., 393), he submitted to the Italians after the defeat and, on 24 June 1936, along with ↗Abbaa Ǧoobir II of Ǧimma, swore an oath to ↗Graziani – either under the influence of *ras* Ḫaylu, or in exchange for a significant amount of money, as the rumour said. Owing to his former close connection to Ḫaylä Śəllase, the Italians remained suspicious and kept him in his palace in Addis Abäba in mild house-arrest. He died of natural causes a few years later.

Käbbädä Mikaʾel

K.M. (ከበደ፡ ሚካኤል; b. October/November 1914 or 2 November 1915, Ankobär, d. 12 November 1998, Addis Abäba) was one of the most prominent Ethiopian authors of the 20th cent. Soon after K.M. was born, his father, Aytaggäd, left his mother, Aṣädä Mikaʾel. From the age of four K.M. attended the church school of Gärb Gäbrəʾel living with his grandmother at Ṭarawd; at the age of nine he was sent to the Cathedral Catholic Mission School in Addis Abäba. He studied French at the Alliance Française School. The talanted and diligent student was soon noticed by the school authorities; when two teachers from France came to educate Prince ↗Mäkʷännən Ḫaylä Śəllase, K.M. was attached to them as third tutor. Another person who helped K.M. to educate himself was *aläqa* ↗Wäldä Ṣadəq, Prince Mäkʷännən's Gəᶜəz teacher (MolLit 78f.; traces of K.M.'s affection to Mäkʷännən can be noticed in a few of his books). The Italian war and occupation (1936–41) prevented K.M. from persuing further education, but he kept reading voraciously, and learned Italian. The Italians hired him to work at the radio.

After the Liberation, K.M. began his public career. In ca. 1945–57 he was employed at the Ministry of Foreign Affairs and the Ministry of Education, and received the high level positions of Director of the ↗National Library of Ethiopia, General Director of the Ministry of Education, and Vice Minister of Posts. In 1954, one of the most succesful years of ↗Ḫaylä Śəllase I, K.M. accompanied the Emperor on official tour to the USA, and published the account about the journey. He was a member and the head of the Antiquities Department of the Government, took an active part in establishing the Archaeological Museum, and was a member of the editorial board of the ↗*Annales d'Éthiopie*. K.M. was Ethiopia's ambassador extraordinary to the ↗Vatican at the opening of the Second Ecumenical Council (1962). Regarded as an outstanding representative of Ethiopia's political and intellectual elite, he was awarded with Ḫaylä Śəllase I Prize for literature in 1964, and received some other prestigious nominations. After the ↗Revolution of 1974 K.M. had to leave public service. His houses were confiscated, and he lived in hotels in Addis Abäba in misery till his death. He was married but had no children.

K.M. became interested in creative writing while still at school. His first book was the collection of poems *Bərhanä ḫəllina*, published upon the Liberation (1941); another early work was designed for school use and included didactic stories and poems (*Tarikənna məssale* 1942/43). When Ḫaylä Śəllase I personally asked the young

author to translate the American novel *Beyond Pardon* by Bertha M. Clay, K.M. transformed the original into an Amharic poem (*Käyəqərta bälay* 1951/52), which became very popular.

The crucial moment in K.M.'s literary career came when he turned to play writing. One of his first plays was the religious drama *Yätənbit qäṭäro* (1946/47), in which K.M. appears as an apologist of ↗Christianity, contraposing religious faith against atheism. In *Ato Bälaynäh wäym yäqəṭat maᶜbäl* (1958/59), which elaborates the main theme of Goethe's *Faust*, materialism and atheism are also considered as the source of individual and social evil in the world. In addition, K.M. translated (or rather adapted) into Amharic Shakespeare's *Romeo and Juliet* (*Romewonna Žulyät* 1953/54).

K.M. is sometimes considered the founder of Ethiopian "classical" drama – drama for limited circles of the educated public. He created a number of historical tragedies within the tradition of French classicism. His *Anibal* (1963/64) describes the events of the Second Punic War as an allegory of the history of Ethiopia with its long periods of strife and internal wars. *ᶜAśe Kaleb* (1965/66) deals with the 6th-cent. history of ↗Aksum (cf. ↗Kaleb). *Akəᶜab* (1967/68) has as its central character Ahab, the biblical King of Israel (1 Kgs).

K.M. authored many non-fictional works. He presented to the broad Ethiopian public biographies of Homer, Demosthenes, and Shakespeare in his treatise *Talallaq säwočč* (1954/55) and of ↗Alexander the Great in *Təlləqu Ǝskəndər* (1954/55). In *Yäᶜaläm tarik* (1955/56), K.M. gave an overview of world history up to the 18th cent. (including episodes from the history of Ethiopia), trying to analyse positive and negative aspects of Western civilization and modernisation. K.M. explored the latter problem in many other works, e.g. taking the example of ↗Japan (*Ǧapan əndä mən šälāṭṭänäčč*? 1953/54), and trying to identify a way of development and modernisation acceptable for Ethiopia. K.M. saw the Christian faith as the essential condition for further development and called for the preservation of Christian spirituality and patriotism, the ethical religious aspect being central in his philosophy of progress.

The pivotal role of K.M. in the development of 20th-cent. Amharic literature and language is widely recognized, as is the great influence his works have had on more than one generation of Ethiopians. (He was given, posthumously, a honorary doctorate degree in literature by the ↗Addis Ababa University). Recently, a book of interviews with K.M. was published; a complete edition of his writings and their thorough study remains a desideratum.

Käbbädä Täfäri

K.T. (ከበደ፡ ተፈሪ) was ↗*wag šum* in late 19th-early 20th cent. He was the son of *wag šum* Täfäri Wäsän (1842, 1872–74), and succeeded his father at a young age in 1874, but was removed from office in 1876 because his regent had not accompanied *aṣe* ↗Yoḥannəs IV in his wars against ↗Egypt during the 1870s. K.T. lived in Mäqälä for some time and then moved to Šäwa where he formed a good relationship with *aṣe* ↗Mənilək II and later *aṣe* ↗Ḫaylä Śəllase I.

In 1905 K.T. was reappointed, but removed a year later due to a quarrel with the local people who lodged an appeal against him at Mənilək's court for maladministration and harsh treatment. He was reappointed for the third time in 1917, and continued to administer ↗Wag until the Italian invasion in 1935.

His administration was characterized by rivalries among different family members who aspired to the office of *wag šum*. His appointments, and the appointments of others from the different branches of the *wag šum* family at different times, are characteristic of the intense power struggles in the region at that time.

Käbbädä Täsämma

Däğğazmač K.T. (ከበደ፡ ተሰማ; b. 1902, Efrata, North Šäwa, d. 19 April 1985, Addis Abäba) was a courtier of Emperor ↗Ḫaylä Śəllase I. His father was *qäññazmač* Mängäša Ayyänäh; his mother was Dästa Täsämma (K.T.'s second name is after his maternal grandfather Täsämma Anbässe). His father wanted to bring his son up as a farmer, but Täsämma Anbäse, an *azzaž* at the court of *aṣe* ↗Mənilək II in Addis Abäba, wanted an ambitious future for his grandson and had the boy brought to him at the age of two. However, K.T. showed no inclination for his schooling and was soon sent back home.

At about the age of 14, K.T. was back at his grandfather's and groomed as a page of Empress ↗Zäwditu. His very first assignment was at the Ministry of the Pen as a scribe. After nine years of service, he was promoted to head of the pages in the Imperial Court with the title *azzaž*.

During the Italian occupation (1936–41), K.T. was in exile in ↗Jerusalem, where he served, *inter alia*, as the president of the association of Ethiopian exiles, as well as a trusted link between Ḫaylä Śəllase in exile and the major Ethiopian patriots at home during the expulsion, with British assistance, of the Italian occupying forces in 1940–41. After the Liberation, K.T. served in a series of important government posts, among them, Mayor of Addis Abäba (1941/42), *əndärase* of Goğğam with the title of *däğğazmač* (1946), deputy president of the Chamber of Deputies of the Parliament (1951), *əndärase* of Šäwa (1954), Minister of State in the Prime Minister's Office (1955), Member of the Senate of the Ethiopian Parliament (1958), Commander and Chief of Staff of the *Bəḥerawi Ṭor* ('Territorial Army') (1967), Member of the ↗Crown Council, and finally, Minister of the Imperial Court in ↗Ǝndalkačč̣äw Mäkʷännən's cabinet (April–August 1974).

During the 1974 Revolution, K.T. was one of the very few senior officials of the Emperor to escape both detention and execution. This was probably due to his alleged blood ties to Mängəśtu Ḫaylä Maryam, whose father, *ḥamsa aläqa* Ḫaylä

Grave of *däğğazmač* Käbbädä Täsämma in the graveyard of the Qəddəst Śəllase Cathedral, Addis Abäba; photo 2005, courtesy of Wolbert Smidt

Maryam, was a servant in K.T.'s house and had married an illegitimate daughter of K.T. (Ṭəlahun Bərhanä Śəllase Betä 2003/04:349). K.T.'s son, Kaśa Käbbädä, was an eminent minister in the ↗Provisional Military Administrative Council.

K.T. is also known for his book **የታሪክ፡ ማስታወሻ** (*Yätarik mastawäša*, 1970 [= KTMast]), in which the conflicts between *ras* Täfäri (later Ḫaylä Śəllase I) and the supporters of Empress Zäwditu (*däğğazmač* Bäyyänä, ↗Abba Wəqaw Bərru, ↗Balča Śafo and others), as well as the conflict between Täfäri (then governor of ↗Harärge) and *ləğ* Iyasu, Mənilək's heir, were fairly dispassionately presented. It had such a public reception that it was reprinted within 12 months. K.T. was buried in ↗Qəddəst Śəllase Cathedral in Addis Abäba at the burial site for patriots and exiles of the Italian war.

K.T. should not be confused with several personages in Ethiopian history of the early 20th cent.: *däğğazmač* K.T., son of *ras* ↗Täsämma Nadäw (GebMolIyas 385); *däğğazmač* K.T., a relative of ↗Śahlä Śəllase king of Šäwa (ibid. 364).

Asfaw Damte

Käbbädäčč Śəyyum Mängäša

Wäyzäro K. (**ከበደች፡ ሥዩም፡ መንገሻ**; b. 1911, Mäqälä, d. January 1984, Addis Abäba) played a significant role in the political, military and social history of Ethiopia. Her father was *ras* ↗Śəyyum Mängäša and her mother, Ğämbäre Bärhe. She was thus a great-grand-daughter of *aṣe* ↗Yoḥannəs IV.

In May 1922 K. married *däğğazmač* Abärra Kaśa Ḫaylu (s. EAE vol. V), son of *ras* ↗Kaśa Ḫaylu, a close relation of the Šäwan ruling family and the local ruler of ↗Sälale, Šäwa. She had three sons, Ammәḫa, ʿAmdä Ṣəyon, Tariku, and a daughter who died at an early age.

K. gained prominence during the ↗Italian war 1935–36 and the subsequent occupation. When in 1935 Abärra Kaśa made a call for war among the Sälale forces, to march to the northern war front, K. organized women to prepare provisions for Abärra's soldiers. Following the defeat, K. sheltered war returnees in ↗Fəčče (Sälale), amongst whom were *aṣe* ↗Ḫaylä Śəllase I himself and his followers. Facing the collapse of the Ethiopian army, Abärra initiated ↗resistance in Sälale, making Italian movement between Šäwa and Goğğam difficult. Heavy air and ground bombardment forced K. and her children to hide in the forest. Though Abärra submitted on the condition that his life would be spared, he was shot on 21 December 1936 and his body displayed in Fəčče. Subsequently, K., wishing revenge and continuity of hereditary rulership on the one hand and liberation on the other, emerged as a resistance leader.

K. raised arms and, acting as the guardian for her children, gave courage to the patriots. She was actively engaged in several skirmishes in Märhabete, Gəndäbärät, Wälläga and Goğğam, sometimes narrowly escaping death or capture. She acted as an armed patriot chief, dressed in khaki uniform like a man and commanding an army of her own. In June 1938 she crossed the border to the Sudan, accompanied by Šäwan patriots led by Täkkälä Wäldä Ḫawaryat, ↗Mäsfən Śəläši and others. From Roseires, K. moved on via Cairo to ↗Jerusalem where she stayed in exile with her children.

In 1943 K. returned home and played an active role in social affairs. *Aṣe* Ḫaylä Śəllase I awarded her several medals, the Patriots' Medal, the Exiles' Medal and the Victory Medal. She received a state pension until the ↗Revolution in 1974, when her son ʿAmdä Ṣəyon was executed and

Ammaḫa imprisoned for eight years and then exiled to Great Britain. Though the ↗Provisional Military Administrative Council confiscated much of her property, K. engaged in welfare activities. K.'s funeral at the cemetery of Qəddəst Śəllase Cathedral was attended by numerous distinguished patriots. K. remains in the memory of the people as an example for women freedom fighters.

Seltene Seyoum

Kabīr

K. is a ↗Harari word referring to a 'religious teacher' or a 'native doctor who heals through amulets' (Leslau 1963:90; cp. Abdurahman Maḥammad Qorram 1984 A.M.:149). The term is also attested in ↗Səlṭi as a 'reference form or title used of an important follower of Sheikh Hussein' (Gutt – Hussein Mohammed 1997:628). ↗Amharic ከቢራ (*käbira*) may denote a 'learned Arab, one who has studied many books in Arabic, one who knows the Qurʾān' (KaneDic 1418). ↗Somali recognizes the word *kabiir* as 'head-boy' (Agostini 1985:354). All these forms are loanwords from Arabic, most likely from the adjective *kabīr* 'big' (contrary to Leslau 1956:18, who prefers tracing them back to Arab. *ḫabīr* 'experienced', perhaps more precisely 'expert'; the latter origin, with *ḫ* > *k*, is unlikely for Harari but cannot be excluded for Amharic, cf. Leslau 1957:117).

In the town of ↗Harär, the term K. currently refers to a teacher in traditional Islamic schools (*Qurʾān gēy*, *K. gār* and *masgīd gālē*, s. ↗Education). Abdurahman Garad – Wagner (1998:71) qualify K. as a *ʿālim* (Arab. loanword, 'learned man'), someone who teaches little children the *Qurʾān* in the courtyard of his house.

In the *Qurʾān gēy*, a *gidīr* K., 'principal teacher', is distinguished from an assistant teacher, called *ṭīt* K. (lit. 'small teacher', Leslau 1963:69, 90, 156; also Abdurahman Maḥammad Qorram 1984 A.M.:199) or K. *ṭiqqaššo* (the Oromo adjective *ṭiqqaššo* ['small'] being added to the name, s. Abdurahman Garad – Wagner 1988:74f., 466; Abdurahman Maḥammad Qorram 1984 A.M.:149). The assistant K. is an advanced student who has completed the first stage of learning in the *Qurʾān gēy*, having mastered the *Qurʾān* text up to *sūra "Kaḥfaya"* (identified with *sūra* "Maryam", i.e. *sūra* 19, by Leslau 1963:152 and Abdurahman Garad – Wagner 1998:466; or with *sūra "Kahf"* [i.e. *sūra* 18] by Leslau 1965:257). The pupil celebrates this achievement and then returns to school resuming his studies with the rank of assistant K. He thus continues his studies, but at the same time starts teaching absolute beginners (*alēfāčč*), who address him by the title K. (Leslau 1965:174), and supervises beginners during afternoon lessons. As a student, the assistant K. rehearses with the *gidīr* K. the sections of the holy book he has learnt (Leslau 1965:179; Abdurahman Garad – Wagner 1998:74). The *ṭīt* K. may become a fully fledged K., only if he continues his studies up to the complete knowledge by heart of the sacred text.

Fundamentally, the K. teaches for free, performing a religious duty (*alla fit-le yilu-ma*, Leslau 1965:189; this Harari expression is an exact calque on the Arab. *li-waǧh allāh*). However, on Thursdays (the last school day of the week), the K. receives a small sum of money from each pupil ("two Lira", called *ḫamīs rira* ['Lira of Thursday'], according to Abdurahman Garad – Wagner [1998:75]; five cents according to Leslau; this fee, called *ḫamīs kärābi* ['myrrh of Thursday'], originally consisted not of money, but of myrrh, from which ink was made [Leslau 1965:180]). Some food (*kabīr subāṭ*, 'K. meal') is also periodically offered to the master. Once in a while, the parents send gifts to their children's K. When a pupil passes one of the stages of his instruction, his family often give the K. small sums of money and gifts.

Āw Sofī Yaḥyā is traditionally considered the first K. in the history of Harär. He arrived with *šayḫ* ↗Abādir ʿUmar ar-Riḍā in 1216 and founded the first *Qurʾān gēy* 10 km south of Harär (Abdulnasir Edris 1992:6). Since the begining of the last century, the role and functions of the K.

have been challenged by the spread of modern educational systems and methods but certain K., such as K. *ḥāǧǧ* ᶜAlī, his son K. Muḥammad ᶜAlī and K. ᶜAbdalǧawād, were prominent in preserving traditional Islamic education in the town (Abdulnasir Edris 1992:22, 45).

From the time of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), some hints may be found as to the use of K. in a more general sense as an honorific title for Muslims not directly involved in teaching: e.g., K. Abūn b. Aḥmad al-Ġanāsirī (the pious man in charge of keeping the loot of the Islamic troops; BassHist 77, 239 [text] = 147, 338 [tr.]), K. Ibrāhīm (the *muʾaḏḏin* of *gärad* Abūn; ibid. 64 [text] = 130 [tr.]), K. Nūr and K. Muḥammad (the *muʾaḏḏins* of Grañ; ibid. 109, 152, 191, 193, 195ff., 258 = 184, 239, 286, 289ff., 356) and K. Muḥammad (servant of *wazīr* ᶜAddole; ibid. 332f. = 442f.).

Kädawərd

K. (ከዳውርድ, fl. 1588/89–93/94) is the name given by some Ethiopian sources to the Turkish governor of ↗*Habeş eyaleti*, the Ottoman province on both sides of the Red Sea, who fought against *aṣe* ↗Śärṣä Dəngəl ca. 1590. K. is probably a corruption of the Turkish name Hüdā Verdi *paša*, the 12th governor (*beylerbeyi*) of the province since ↗Özdemir *paša*. Hüdā Verdi *paša* is reported to have been appointed governor in 997 H. [1588 A.D.] (a document from the same year, however, bears his seal with the year 996 H.; Orhonlu 1974:67f.) and to have been succeeded in July 1593 or March 1594 by ᶜAlī *paša*. The last traceable *paša* of the 16th cent. was Ibrāhīm, but he had no contacts with Ethiopian rulers any more (ibid. 68).

An Ethiopian "short chronicle" relates that Śärṣä Dəngəl, in the 27th year of his reign (1590), marched against Däḥono (↗Ḥərgigo) and waged war with the "*tərkʷ bašša* K." (BassÉt [II] 112). The text of the chronicle goes on to say that the *paša* was killed with a dagger by *abeto* ↗Yonaʾel, son of *əte* Mən Yəčale (d. 1593). A similar account is given by Bruce, only in his version the Ethiopian officer's name is Robel (ibid. 167). An Amharic song, written by the priests "in the signs of the Dəggʷa" to commemorate the feat, accompanies the chronicle narrative, and Bruce remarks that the memory of this event was written "in golden letters in the chronicles of the Empire" (ibid. 112, 169).

Neither the Ottoman sources, nor, in fact, the official royal Chronicle of Śärṣä Dəngəl, confirm that K. was killed. Indeed, the last chapter of the chronicle describes in details the war during the 27th year of the Emperor's reign (CRHist 129–37), which took place in a Muslim region north of the *beylerbeyi*'s territory, starting with the brief Turkish occupation of ↗Dəbarwa and a surprise attack by the Turks from Däḥono on *baḥər nägaš* ↗Däragot.

The Ottomans were beaten in the first skirmishes, whereas the bravery of the future *baḥər nägaš* ᶜAqbä Mikaʾel, who killed two Turkish commanders, was prominent. The *paša*, whose name remains unmentioned, left the battlefield; part of his troops retreated to the fortress of Däḥono, but the fortress was unable to resist Śärṣä Dəngəl's attack; the *paša* was wounded in the assault. The remaining Turks sailed off to ↗Massawa.

The Emperor punished those who collaborated with the Turks. Among them was the local Muslim *amīr* who, probably supported by Turkish auxiliary troops under a *sanǧakbey*, instigated the conflict. Though a subject of the Emperor, *šayḫ* Ali Gärad, did not assist Śärṣä Dəngəl and sided

with the Turks. The victorious Śärṣä Dəngəl interrogated him in Därfo, a village near ↗Asmära, and had him executed (BudHist II, 370f.). The area, along with ↗Ḥamasen, was plundered by Ethiopian troops. ↗Yəsḥaq Wäldä Ǝzum (or Wadd Ǝzum), a villager from Ḥamasen who was appointed *baḥər nägaš* and provided with military support and weapons by the Turks, was also captured and killed by Śärṣä Dəngəl.

According to the chronicle, the defeated *paša* sent the Emperor a letter of submission along with numerous gifts (CRHist 133).

The Ottoman sources state, however, that it was Śärṣä Dəngəl who was defeated, part of his soldiers being killed and another part taken prisoner. The Emperor is even said to have received a sword, a kaftan and a laudatory decree (*hüküm*) from the Ottoman sultan for his services to Hüdā Verdi *paša*.

Kaddāfo

K. (ᶜAfar: *kaḍḍ āfó*, lit. 'big mouth') is a personal name, which also occurs as a nickname. It is used among the Aydāḥissó, the lineage of the *sulṭāns* of ↗Awsa and main branch of the powerful ↗Mōdaytó tribe.

According to Abir (quoting the vizier of the last Awsa *sulṭān* ᶜAli-Miráḥ Yāyyó b. Hámmadu [AbPrince 23]), K. was the chief of the Mōdaytó, who became the first *sulṭān* of the ᶜAfar dynasty of Awsa, probably after the first unification of the Mōdaytó and Awsa people. According to a secondary source (HarAeth 179f.), Awsa was the Mōdaytó capital for "less than a century", i.e. Awsa would have been in the hands of the Mōdaytó after the second half of the 18th cent.

New data (s. MorDicAfar 67) shed some light on the situation. If it is true that, some time at the beginning of the 18th cent., the Mōdaytó tribe overran the fertile valley of Awsa, they may have achieved their domination only in 1834, after the battle of Darma. They would have encamped in the area of Dōbi, north-east of Awsa. The first confrontations would have begun with Aydāḥis, nicknamed Data Kaḍḍāfó (1753–68), but the Mōdaytó would not have settled in Awsa.

Šayḫ Ǧīlānī's chronicle (MorDicAfar 68) indicates that the Mōdaytó were defeated at the end of 1779 and again in 1784 under Data Kaḍḍāfó's son, Maḥammad (1768–98). The name of Awsandábba (*Awsi andabba*, 'withdrawal from Awsa'), at the northern edge of Awsa, recall a battle between the sedentary tribes of Awsa and the troops of Aydāḥis "Data Kaḍḍāfó".

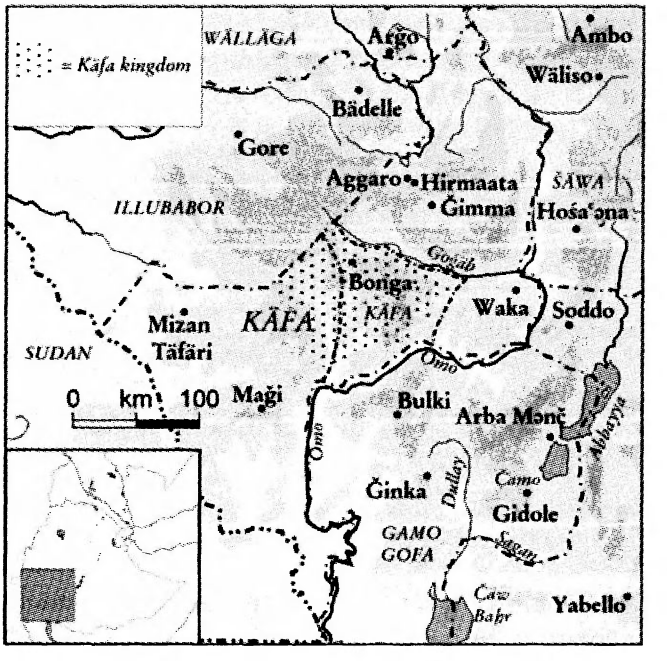
Käfa

Käfa geography

The region of K. (ከፋ) is a wet and densely populated highland area (1,700–3,000 m A.S.L.) on the right bank of the ↗Omo river. It is delimited to the north by the right bank of the ↗Goğäb river. South of the Goğäb, high volcanic mountains rise, the peaks being Mount Dulla (3,130 m A.S.L.) in the east, Mount Ağğo (3,300 m A.S.L.) in the middle and Mount Šaradda (2,682 m A.S.L.), overlooking ↗Bonga, in the west. The average rainfall ranges between 1,800 mm and 2,000 mm; there are nine rainy months and the dry season is short from December to February. The altitudes between 1,800 and 2,000 m A.S.L.



are particularly densely populated by agriculturists producing ↗*ənsät*, ↗coffee and cereals (*ṭef*, maize, barley). They also keep some cattle, sheep and goats. In the south, the Dinša river flows into the Omo.

K. first emerged as one of the ↗Gonga states, bordered by ↗Ǧimma Abbaa Ǧifaar in the north, ↗Gimira in the south-west and ↗Limmu in the south-east. The kingdom was inhabited by the K. people speaking the K. language and was ruled together with the Maǧi and Gimira states from the capital in ↗Andaračа.

At the end of the 19th cent., K. was incorporated into the Ethiopian state. Until 1987 it had the status of ↗*awraǧǧa*, and its boundaries were virtually the same as those of the K. kingdom. The capital of the *awraǧǧa* was in Bonga.

From 1944 to 1987, the K. *awraǧǧa* (which covered an area of 7,100 km², as shown on the map) was part of a larger K. region, with the capital at ↗Ǧimma. It consisted of ten *wäräda*-subdistricts: Mängiwa (with the capital in Qaqa), Gimbo (Gimbo), Hawäta (Kobaç), Təlləqu Giše (Dika), Tənnəšu Giše (Biṭa Gännät), Ç̣ana (Waççа), Šäwa Gimira (Šäwa Gimira), Ç̣ari (Deççа), Adä Sälam (Ç̣ata), and Fälägä Sälam (Čälo).

From 1987 to 1991 K. zone (with an area of 12,739 km²), Maǧi and Benç zones formed the K. region (from 1991 to 1994, the K. *kəlləl*).

Since the 1994 administrative division, the Käfiççо-Šekačo zone has been one of the subdivisions of the Southern Nations, Nationalities and Peoples *kəlləl*.

The K. *awraǧǧa* had a population of 221,000 inhabitants (density 31.2) in 1970 and 521,234 (density 73.4) in 1984. This remarkable increase has continued, and the population of the Käfiççо-Šekačo zone reached 725,086 inhabitants in 1994 and 1,014,935 inhabitants (density 79.7) in 2005. The historical capital of Bonga, which had 3,000 inhabitants in 1938, had 5,579 inhabitants in 1970, 6,216 in 1984, 10,851 in 1994, and 18,771 in 2005.

Coffee remains among the most important cash crops and sources of income, and it is transported by road to Ǧimma and to ↗Addis Abäba from where a large part is exported.

A dense network of roads, both all-year and seasonal, cross the region. The all-weather road from Ǧimma to Bonga was completed around 1962. The road from Bonga to ↗Mizan Täfäri and ↗Tepi, which has been in existence since the Italian occupation, was improved in 1966 by the Highway Authority. The Ǧimma-Soddo road crossing the Omo gorge and reaching Waka and Bonga and thus establishing a connection to the Rift Valley (Šašämänne) was inaugurated in 2000.

Käfa history

K. is the name of a former kingdom in southern Ethiopia and nowadays of an administrative zone. The term is now also frequently used for the inhabitants of the region. K. was the largest of the ↗Gonga kingdoms. The earliest mention of the name in European sources dates back to 1632 (Almeida, as "Cafâ", s. Beck-HuntAlm 151). Clan histories (Orent 1970:271f.) show that K.'s population was of various origins,

but assimilated into the Kafiĉĉo mainstream as the kingdom took shape. In fact, the social and clan history of K. is extremely complex, and its relation to the old Gonga kingdom and people is still not exactly clear. "Gongičo" is the name of a prestigious clan in K.

The K. kingdom (*Kafi Ageto*) emerged in the late 14th cent. During its formative period (15th-16th cent.) K. was at first subservient to the ↗Ǝnnarya kingdom, from which it took several symbols of royalty. Beginning in the early 18th cent. a strong, centralized and authoritarian state was built, headed by the ↗*tato*, who came to be seen as a "divine king" (↗Kingship, divine). It was a regional power dominating neighbouring groups on the basis of military might, slavery, a solid agricultural base, and long-distance trade (in ivory, skins, gold, and slaves), for instance with the northern Ethiopian state and its sea outlets. The kingdom had a system of defensive trenches and gates near its borders.

In the mid-16th cent. K. fought pitched battles with the expanding ↗Oromo and lost most of its territories north of the Goğäb River to them. However, K. withstood the pressure of the Oromo, defeating them at the battle of Agallo in ca. 1540 (Bieber 1920:31, 80) after which the latter turned west and northward. The related Šeka kingdom was conquered by the Oromo in the late 17th cent. K. also fought frequently with the ↗Benç, Mer and Še (↗Gimira) chiefdoms and with the kingdom of ↗Wälaytta.

After their battles with the Oromo, the K. kings intensified contact with the Ethiopian Christian state under *aṣe* ↗Śärṣä Dəngəl, who probably convinced the then K. king to adopt ↗Christianity. The Betä Giyorgis of Baha in K. also dates from this period (s. Ullendorff 1959). The church, located some 3.5 hours walk from ↗Bonga, at 2,200 m A.S.L., is believed to have been established by the king of Ǝnnarya ↗Säpänhi in the 1500s. According to local tradition its *tabot* had been brought from ↗Jerusalem. It bears an important Gəᶜəz ↗inscription. In the 1930s the outer and inner doors of the round ↗church building were richly decorated with coins, crosses and other silver ornaments (*Guida* 539).

Christianity appears to have become the ideology of ruling elite, as is evident, e.g., in the K. king celebrating certain festivals such as *Maškaro* (cf. ↗*Mäsqäl*) with a display of royal symbols and the Orthodox cross (Orent 1970:272). The spread of the Christian faith among the wider population, however, was slow and precarious, only gaining pace after the mid-19th cent. ↗Islam was introduced into K. by traders, protected by the king, but did not find mass adherence, perhaps due to the permanently competitive relations of K. with the Muslim state of ↗Ğimma Abbaa Ğifaar.

K. was the most important power in southern Ethiopia in the centuries before the northern conquest. In the late 17th cent. under king Galli Ginoč (d. 1710) it significantly expanded its territory and solidified the internal political unity of the kingdom. Indications are that in this era K. became a full partner in the wider Ethiopian slave trade. In its heyday under the reign of king Hoti Šeroči or H. Ginoč (1800–21) K. had numerous vassal states and chiefdoms, such as Šeka, ↗Boša, Nayi (↗Nao), Še, ↗Yäm, ↗Konta, and ↗Dawro. The K. king often sent out his political representatives (*rašo*) to rule or control these areas. Internally, K. was divided into 18 regions (*worafo*), 134 districts (*worbo*), and then the smaller localities (*gudo*) and villages (*gafo*).

The K. kingdom and its complex social organization, institutions, customs and material culture were well described by ↗Bieber (1920–23), who based his study on observations and interviews made a few years after the demise of the kingdom in 1897. K. was a highly stratified society, with the Bušašo elite at the top, followed by nobles, commoners (peasant "serfs"), craftsmen groups such as the Addo or "Mangǒ" (hunters), Manne (tanners/ leatherworkers), Šammano (weavers) and Qemmo (blacksmiths), as well as slaves on the lowest social rung. There were also the *šatto*, singers or bards (Lange 1979), whose songs described historical events, deeds of the kings, social conflicts, and relations with other groups. The Addo provided the ritual assistants for the K. kings and officiated as sacrificers, executioners, and military and palace guards. The K. kings were advised by powerful councillors, the *ogge mikirečo* (cf. Noĉĉo Wädebušo 1993; Orent 1970:288f.). The king also had a special relationship with the ↗Nayi people, an earlier population in the area, who provided him with members for his *mikirečo* council while the Nao (Nayi) king was himself consecrated at the K. court. A less attractive aspect of this relationship was the reported sacrifice of the first-born son of the Nayi king at the funeral rites of the K. king (Lange 1982:282).

The K. king was the supreme political and religious authority and had various official

ritual functions for the entire community. For example, together with elders or local chiefs, he inaugurated annual agricultural rites (Lange 1976:21f.). In practice, however, the seven-member *ogge mikirečo* was the governing body and took most of the administrative functions. Its two most important members were the *katama rašo* (main councillor and *de facto* war leader) and the *guče rašo* (overseeing the king's slaves and work force).

Next to the king, religious authority was vested in two functionaries: the *gumbaččino*, who as supreme sacrificer to the king and "keeper" of his symbolic powers of fertility and sacrum (referred to as "the living gold") had the highest religious office – perhaps even held as more important than that of the king. The second was that of the *Ibede Gudo*, originally a hereditary medium (*allamo*) of the *Detato* or *Deoči* spirit within the Dugo clan and a chief councellor to the K. court (photograph of one of the last incumbents in Lange 1982, pl. 34).

In the 1880s, K.'s wealth and strategic location was coveted by kings ↗Mənilək of Šäwa and ↗Täklä Haymanot of Goğğam and it became an issue of armed conflict in 1882 and later years. In 1889 most of K.'s vassal regions had already been conquered by the imperial troops, weakening the kingdom's political and economic position. In the late 1880s, after rinderpest had decimated nearly all of northern Ethiopia's cattle, the K. king supplied Mənilək's court with a meat supply of thousands of unaffected animals. Despite this and K.'s tenacious resistance in successful battles of 1890 and 1893, the kingdom was defeated in 1897 by the combined Ethiopian imperial troops under *ras* ↗Wäldä Giyorgis Aboyye, *däğğazmač* Däməssäw Nasibu, *däğğazmač* ↗Täsämma Nadäw and their ally king ↗Abbaa Ğifaar II of Ğimma. The last K. king was ↗Gaki Šeročo, who was captured and led into captivity to Addis Abäba where he died in 1919. K. was the last big southern kingdom to be conquered, after Wälaytta had fallen in 1894.

Jon Abbink

Käfa dynasties (14th to end of 19th cent.)

Scholars generally agree that the kingdom of K. emerged towards the end of the 14th cent. The period between the late 14th and the late 15th cent. is shrouded in mystery due to lack of sources. From its emergence, however, K. became a strong dynastic state in southern Ethiopia. Oral traditions insist that it were kings drawn from the Matto clan who founded and ruled K. in these formative years (Bäqqälä Wäldä Maryam Addəlo 2003:77–81; Lange 1982:184–87). But there is confusion about this period and not all scholars agree on the dating. Lange's identification of three kings of this dynasty is not very secure. He places the tenure of office of the Matto dynasty from the late 14th to the middle of the 16th cent. (Lange 1982:181–87), while Bäqqälä Wäldä Maryam Addəlo insists that Matto rule came to an end in the late 14th cent. (Bäqqälä Wäldä Maryam Addəlo 2003:77–81).

Whatever the position of the Matto clan in those early centuries, the clan occupied a key position in the politico-religious hierarchy of K. society throughout its history. This can be taken as "indicative of Matto's earlier high status" in the kingdom (Lange 1982:249). This high religious position was also a high political position. The Matto resurface in oral tradition in the succession crisis of the late 17th cent. that brought to power one of the strongest kings of the kingdom, Galli Gafoči (1690–1720). Galli's accession to the throne apparently signified the advent of a new subclan to the centre of power: the Bušašo. He was said to have eliminated many Matto and gave their positions to members of his own subclan (Lange 1982:198). However, the Matto clan continued to be of importance in the politics of the kingdom.

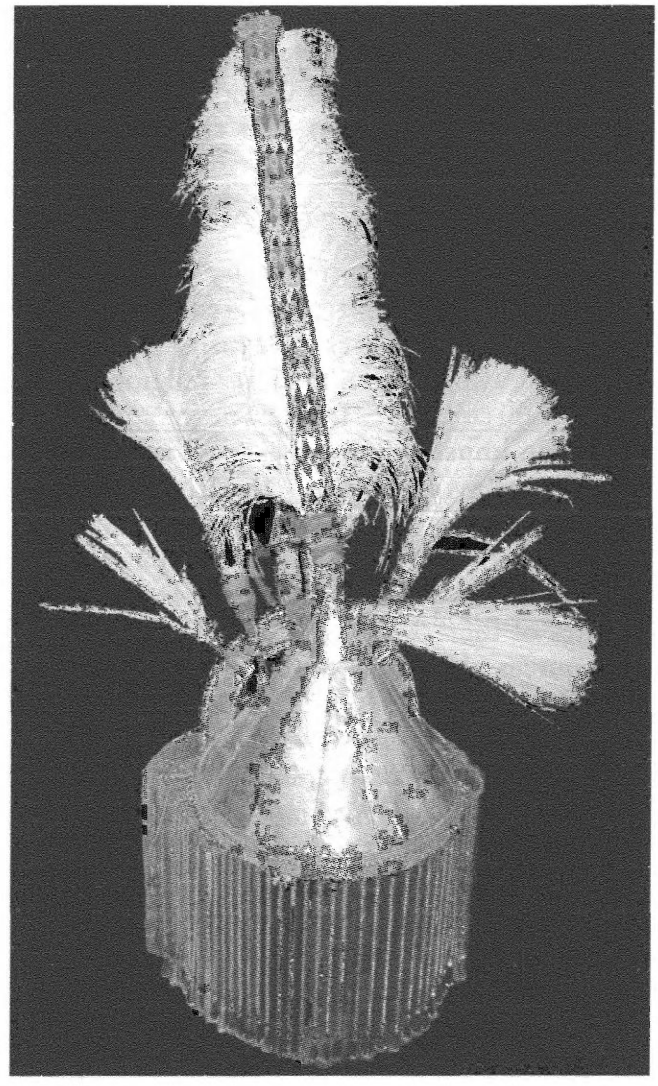
In the late 16th cent. the *Dentu* segment of the ↗Miŋo clan took over power, under the leadership of their first king, Miŋiločči. Tradition insists that this dynastic transition was smooth and peaceful. Lange contends that Miŋiločči

ruled the kingdom from circa 1570 to 1620 (Lange 1982:187). The Minǧo clan was apparently a large social group with many subclans apart from Minǧiločči's Dentu. Apparently, from this family three kings sat on the throne, called in the historical literature the Minǧo-Dentu dynasty. It ruled the kingdom from around 1570 to the end of the 17th cent.

In the last decade of the 17th cent. the Dentu clan yielded power to the Bušašo subclan of the Minǧo clan, led by their strong man Galli Gafoči (s. above). Installed by the formidable Galli, the ↗Minǧo-Bušašo dynasty reigned over K. for two centuries until its removal by Šäwan imperial forces in the fateful year of 1897.

The Bušašo were an intriguing group. Their identity is still a major question in the history of not only K. but also of the other ↗Gonga kingdoms – i.e. ↗Anfillo, ↗Boša, Hinnaryo (↗Ǝnnarya), Šeka and others. "The Bušašo provided the royalty of each of the Gonga peoples presented (...), i.e., Boša (Təgre Busase), Hinnaryo (Hinnare Bušašo), Käfa (Minǧo Bušašo) and even the Anfillo (Busasi). The Na'o kings were also members of the Na'o Busaso", writes Lange, drawing upon the available sources (Lange 1982:154, n. 28). In like manner, the Šay were also ruled by the Bušašo. Apparently, the Bušašo constituted a group claiming descent from some prestigious family in the north (most of them allegedly from Təgray migrants; only the Bušašo of K. claimed descent from Amhara from what later came to be called Wällo). They seem to have appeared on the scene sometime in the 16th cent., perhaps first in the kingdom of Boša, then possibly spreading out to the other four Gonga kingdoms. But this hypothesis does not answer all questions. Thus, it remains unclear how the Bušašo could impose their rule on all the five Gonga kingdoms and on the two chiefdoms mentioned above.

King Galli Gafoči seems to have been the strongest leader. He expanded the kingdom and strengthened its central institutions. During his reign, K. became a powerful and extensive polity. It continued to expand during the reigns of Galli's successors up to the early decades of the 19th cent. In this period, the Minǧo-Bušašo dynasty produced some very remarkable rulers. The kingdom saw its apogee during the reign of ↗Hoti Šeroči or Hoti Ginoč (1780–1805, or 1798–1821, according to Bäqqälä Wäldä Maryam Addəlo 2003). Hoti was regarded by his people as a great



The Käfa crown, main item of the regalia of the last Käfa dynasty; photo by Wolbert Smidt, 2004, courtesy of the Ethnographic Museum of the IES

warrior king. He reduced to vassalage the important kingdoms and chiefdoms of south western Ethiopia such as Šeka, Boša, Na'o, Šay, Yäm, Konta, and Dawro. He is also remembered in K. oral traditions as a king who accepted Christianity (Bäqqälä Wäldä Maryam Addəlo 2003:96), an indication that between the 16th and the 19th cent. kings were still following traditional religion. He encouraged long distance trade that was reviving at the time. His persecution of the followers of the traditional religion brought him many enemies and it was apparently for this reason that he was overthrown by his brother, Bodi. Bodi assumed the regnal name of Gaha Nečočči and ruled from ca. 1805 to 1841 (Lange 1982:186) or from ca. 1821 to 1841 (Bäqqälä Wäldä Maryam Addəlo 2003:96). Gaha restored the traditional religion to its position of supremacy.

His successor was the important king Kaye Šeročo or Taten Kami (r. 1854-1870). He was an

astute ruler who marshalled K. traditional religion (the *doče* spirit cult) for political purposes. In 1855 he allowed Italian Catholic missionaries into his realm (↗Massaja), thus creating competition for the Orthodox Christians. He expelled them again in the 1860s when he thought they made too many converts.

This policy was continued by his son, king ↗Galli Šeročo, who also hindered if not persecuted Christians as well as Muslims, prohibiting people's conversion to either religion. In the 1880s, Galli conducted fruitless negotiations with Ethiopian imperial emissaries (e.g., *ras* Gobäna) on tribute-paying of K. to the Šäwan imperial court.

All in all, the Miŋǧo-Bušašo dynasty comprised ten kings, who ruled the kingdom from the last decades of the 17th cent. to 1897. Even if scanty, the sources show that some of them were remarkable personalities. The last king was ↗Gaki Šeročo. Gaki had to face the invasion of his kingdom by the generals of Mənilək – *ras* ↗Wäldä Giyorgis Aboyye, *däǧǧazmač* Däməssäw Nasibu, *däǧǧazmač* ↗Täsämma Nadäw and king ↗Abbaa Ǧifaar II of Ǧimma. They overwhelmed him and he was captured and imprisoned in Šäwa where he died in 1919.

The Miŋǧo-Bušašo dynasty was famous for its well-organized though authoritarian political system, and the rulers of the Šäwan kingdom were much impressed by its solidity. Gäbrä Śəllase, the chronicler of Mənilək, enthused about the vast powers of the kings of K. He said that K. was a well-governed polity because it had supposedly excellent laws and traditions (GSMen 277). Like all royal houses, the dynasty intermarried widely with the other royal lines of the region. They took wives and concubines from the Gibe kingdoms as well as from Šeka and the other Gonga states and also went to Wälaytta, across the Omo river, for the same purpose. The motives for this intermarriage were predictable – to obtain enduring political alliances and a more far reaching regional influence.

Käfa language

K. (self-name: *Kafi noonoo*, lit. 'the mouth of Käfa'; in linguistic research also identified as Kafiččo, Keffa, Kafa, Kefa, Kaffa, or Caffino) is an ↗Afro–Asiatic language of the ↗Gonga subgroup of the North-↗Omotic family. According to the 1994 population census, K. is spoken by ca. 570,000 people (Hudson 1999: 91).

Most of the linguistic research on K. has been limited to lists of words and phonological and morphological sketches. Major works are Reinisch (1888) and Cerulli (CerStud IV).

Until recently K. has been an unwritten language. Today, using Latin script, K. serves as a medium of instruction at the elementary education level. Efforts are also being made to promote K. as a language of administration.

According to Fleming (in BendNonSLang 366f.), K. has 22 consonant phonemes: *p, b, p̣, f, m, w, t, d, ṭ, n, l, r, š, č, ǯ, ç, y, k, g, q, h, ʾ*, and five vowel phonemes: *a, e, i, o, u*.

Consonant gemination, vowel length, and tone are phonemic. Pitch is largely independent of vowel length, and words with the same pitch patterns can have different vowel lengths: *gàròó* (LR) 'thorn' vs. *gààròó* (LR) 'raw', *kòtò* (L) 'sit' vs. *kòòtò* (L) 'untrue'. In K. rising tone (R) appears only on long vowels.

Consonant gemination is common but never occurs word-initially, nor can every consonant phoneme geminate: consonants such as *ʾ*, *r*, and *w* resist gemination. Others such as *č*, *ǯ*, *p̣* and *l* are underlyingly geminates. Still others (*f*, *š*, *h* and *y*) are realized as either a stop or an affricate when they geminate.

Tone has a semantic and a grammatical function. K. is basically a register tone language in which a high tone (H) and a low tone (L) are realized on relatively level pitches. E.g.:

(1) *kášó* (H)	'ripe'	*kàšò* (L)	'soul'
kášò (HL)	'farm tool'	*kàšó* (LH)	'breathe'
(2) *kémò* (HL)	'buy'	*kémó* (H)	'sell'

Rising and falling contour tones also occur in the language. The falling contour has a very limited distribution, being restricted to some morphologically complex forms.

The unmarked default ending of nouns, adjectives and verbs is *-o(o)*, which is replaced with a thematic vowel when a suffix is added. In addi-

tion, these lexical items are grouped into three conventional morphological classes. Class I: ending *-ó* (H); thematic vowels *-e-* and *-i-*. Class II: ending *-ò* (L); thematic vowel *-e-*. Class III: ending *-òó* (R); thematic vowel *-i-*.

K. nominals are inflected for gender, number, and case. Gender distinction is sex-based; only inherently fem. nouns are marked by *-e*. The plural marker is *-naʾo*, e.g., 'bird' *kafo* (sg.) – *kafe-naʾo* (pl.); 'porcupine' *čaayo* (sg.) – *čaayi-naʾo* (pl.).

Independent pronouns include *ta*, 'I'; *no*, 'we'; *ne*, 'you (sg.)'; *ittoši*, 'you (pl.)'; *bi / aroo*, 'he'; *bi / aree*, 'she'; *boonoši / areenaʾo*, 'they'. The difference between *bi* and *aroo*, *bi* and *aree*, and *boonoši* and *areenaʾo* is that of proximity: the former are proximal pronouns, the latter are distal. The reflexive pronouns are formed with the reflexive form *qellona* (< *qello*, 'head') and the corresponding independent pronoun: *ta qellona*, 'myself'; *no qellona*, 'ourselves', etc.

In K. accusative is marked by the ending *-n*: *bii-n danet*, 'I met him'; *aro košo-n maate*, 'He ate food'. Dative and locative are marked by *-č*: *menin taa-č imb(e)*, 'Give that to me'; *ta meče gaʾo-č*, 'near my wife'. Genitive is marked by *-či*: *buše-či kooriço*, 'the girl's book'. Instrumental is marked by *-na*: *ginoo-na*, 'with a spear'; *gumboona*, 'with a stick'. Allative is marked by *-waan*: *Bongi-waan hammite*, 'He went toward Bonga'.

Attributive adjectives precede the head noun. When adjectives are used attributively, the ending vowel is either *-e* or *-i*. When they function predicatively, a copula *ne* is cliticized to them: *Bušoo gendzoo-ne*, 'The boy is tall'.

The verb is inflected for person, gender, and tense. There are five tenses: perfect, simple present, present perfect, present progressive, and future.

Like in other Omotic languages, the canonical word order in K. is Subject–Object–Verb: *bušoo*$_1$ *košon*$_2$ *maahe*$_3$, 'The boy$_1$ eats$_3$ food$_2$'. Adverbs tend to appear between an object and a verb, although they occur in many different positions in questions. In negative constructions, the negation markers *-aač-*, *-aan-*, *-aay-* (*-aah-*), *-toon-* or *-aall-* (used in different tenses) are attached to the verb: *bušoo košon maat-aač-e*, 'The boy does not eat the food'.

K. ten-word list is: 'one' *ikko*, 'two' *guttoo*, 'three' *keemo*, 'fire' *qaaqo*, 'water' *aaço*, 'blood' *damo*, 'sun' *aabo*, 'moon' *ageno*, 'tooth' *gašo*, 'tongue' *eçiyo*.

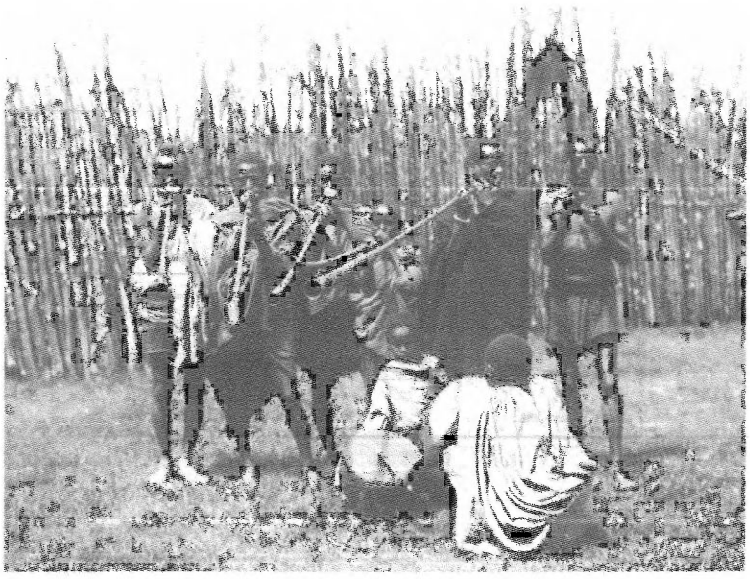
Käfa ethnography

The K. (Käfiččo) are an ethno-linguistic group or people in southern Ethiopia, formerly belonging to the ↗Käfa kingdom. In the census of 1994 they, together with the related Šekačo ["Moča"], numbered ca. 654,000 (s. CSO 1998:66), and are probably today more than 700,000. The people are of diverse ethnic origins, as various pre-existing and conquered groups were incorporated over time (Orent 1970). Many trans-ethnic clans are present among the K. The oldest royal clan was Matto, which was later replaced by the Miŋgo. Their language belongs to the ↗Omotic family.

K. are predominantly farmers and small-scale traders. Some 90 % of the people live in rural areas, the rest in small towns. Craft workers also live among them. Young people increasingly move out to gain employment and education elsewhere, notably in towns in central Ethiopia. As with other groups in Ethiopia, there is also a growing K. "diaspora" outside Ethiopia.



Käfa court-musicians of the Migero, early 20th cent.; photo courtesy of Peter the Great Museum of Anthropology and Ethnography of the Russian Academy of Sciences, St. Petersburg

The economy of the K. today is based on the cultivation of barley, *ṭef*, maize, wheat, sorghum, spices, roots, tubers (taro, sweet potato, yam), lentils and vegetables. The country is also one of the core areas of the "↗*ənsät* complex" in southern Ethiopia. The K. grow ↗coffee, cotton, and ginger as cash crops. Tea is cultivated predominantly on commercial plantations, mostly owned by outsiders. K. also produce and trade ↗honey and several forest products. In the 19th and early 20th cent. K. was also noted for its civet musk oil production (↗Zibeth), and had substantial numbers of livestock. The country is fertile and always produced a food surplus. Women are the mainstay of the rural economy in terms of labour hours and tending to household chores. While originally the agricultural economy was based on the hoe, in the 20th cent. the plough was gradually adopted (Orent 1979). K. is still one of the most forested places in Ethiopia, and the forest still plays an important role in securing livelihoods (gathering of wild food plants and medicinal plants). But since the mid-1980s the forest cover has been declining rapidly due to population explosion and poverty, causing a reduction in livelihood opportunities (Yihenew Zewdie 2002). Until the 1975 Agrarian Reform the governors of K. kept their farmers as ↗*gäbbar* tenants.

K. social organization is characterized by clans (*tibbo*) and patrilinear descent reckoning (Orent 1968). There was a prestige hierarchy of clans, with the royal and noble (formerly land-owning) clans at the top. The total number of clans is estimated at well over a hundred. People from occupational castes (blacksmiths, weavers, tanners, potters, hunters) are still at the lower end of the social scale, although such categories of the past are shifting as people find new occupations and move across social groups. Polygamous marriages are frequent, and the custom of bride wealth transfer exists (in cattle or money). People live in scattered homesteads or hamlets across the land. In the course of the past century, many economic, social and cultural similarities have evolved between K. and neighbouring groups like the Oromo, Benç, Dawro and Wälaytta, although K. historical consciousness differs, contributing to a distinct ethnic identity. K. bards recorded much of K. oral traditions in their epics and songs (cf. Lange 1979). In the 1930s the K. actively resisted the Italian occupation of Ethiopia.

Traditional K. religion recognized a supreme god, Yero, paramount clan spirits (↗*Eqo*) with their own shrines, and several other spiritual forces. Spirit mediums (*allamō*) were always very influential among the K., as evidenced by the very powerful and widespread ↗*gäramanǧo* cult and *detateno* cult. There were also diviners (*maraččo*) and folk healers with special powers. While the traditional religion never died out, Christianity gained a foothold in K. from the 16th cent., although it never developed a mass following. A Catholic mission, led by ↗Massaja, was established in K. in the 1850s, well before the northern imperial conquest. In the second part of the 19th cent. Christianity re-emerged, but spirit mediums also gained in influence. Despite repression by the K. king ↗Galli Šeročo, Orthodox Christianity has grown slowly since the 1870s and today predominates (ca. 72 %). But Evangelical Christianity (ca. 12 %) is nowadays on the increase. Muslims constitute some 6 % of the population, and traditional believers constitute the remaining 10 % (extrapolated from 1996 CSA figures).

It appears that the historical K., although an authoritarian state not free from internal conflict (Lange 1979) or socio-economic oppression and inequality, was quite prosperous and sustained a much larger population than today. Economic and social decline in K. set in after 1897, accompanied by a substantial drop in population numbers. Low fertility figures, a sign of the more general socio-cultural crisis and perhaps due to certain practices that heighten health risks (cf.

Orent 1975:83), have only slowly recovered, and fertility rates are presently comparable to those of other rural areas in Ethiopia.

Social and historical research on the K. region since the 1970s has been quite limited, with most recent studies concerned with environmental and development matters. In the *Därg* period (↗Provisional Military Administrative Council) K. suffered another period of stagnation. In the 1990s, as part of ethno-regional decentralization, a K.-Šeka Zone and in 2000 a K. Zone was instituted in the Southern Ethiopian Regional State, which gave local people some autonomy in deciding on certain community affairs relating to land and forest use and dispute mediation. But customary forest holdings and use rights of farmers are under threat from not properly regulated state encroachment.

Kagnew Station ↗Qañňäw

Kahən(at) ↗Kəhnät

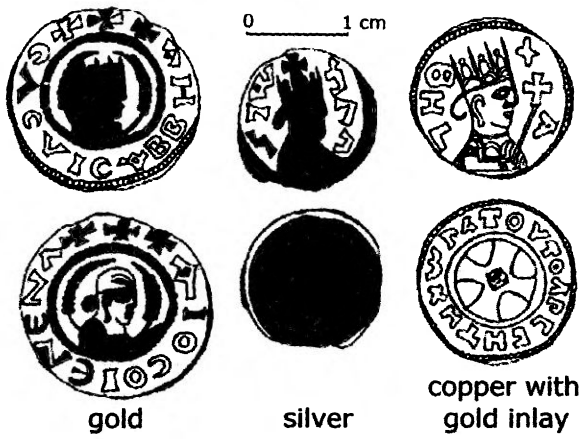
Kaleb

K. (ካሌብ, 'Caleb', Syr. Kāleḇ) was a king of ↗Aksum in the first half of the 6th cent. A.D. who is known by both this name, indeed a biblical one (Num 13:6, etc.; s. Hahn 2001:126 and figs. 3–5, cp. Lusini in AfrHorn 97 and n. 23), and his throne name, ∃llä Aṣbəḥa (እለ፡ አጽብሐ, also ∃llä Aṣbäḥa, 'The one who brought about the morning' or, rather, 'collected tribute', Epigraphic South Arabian *ʾl ʾṣbḥ, Arab. *aṣ-Ṣabaḥ*, *Al[l]asbās*, Gr. Ἐλεσβόας, Ελεσβοάμ, Ἐλεσβαάν, Ἐλλατζβάας Ἐλλεσθεαῖος, i.e. -σβεαῖος, and vars.; s. Fiaccadori 2006b:59f. and n. 74, 64 and n. 97, 68), or just Aṣbəḥa in later hagiography and traditions (↗Abrəha and Aṣbəḥa). K. is also a saint of the ↗Ethiopian Orthodox (Tawaḥədo) Church: a brief ↗*dərsan* in his honour – possibly derived from an older Vita, and drawing (thereby?) on Greek materials – is transmitted in the 14th-cent. ms. EMML 1763, fols. 34v–35v. (ed. Getatchew Hayle 1981); and he is inscribed in the ↗*Sənkəssar* on 20 *Gənbot* (ColSyn XIII, 298–303). Since the late 16th cent., by influence of the ↗Jesuits and their mission to ↗Ethiopia, "Saint Elesbaas" is also venerated, on 27 October (together with "Saint Frumentius", i.e. ↗Sälama Käśate Bərhan), in the Catholic Church ([Carpentier] 1884).

The son and successor of ↗Tazena (cp. ↗∃llä ʿAmida [II]), K. is attested in a variety of epigraphic, numismatic and literary sources, the latter in Greek, Syriac and Ethiopic (not, however, in Chinese: against MHAksum 92f., and K.'s implied kinship with a *nəguś* "Saifu", actually the Yemenite king ↗Sayf b. Ḏī Yazan, s. Hahn 2000a:299 and nn. 66–77, and Fiaccadori 2006a:130–38 and 2006b:67f.). They refer mostly to his intercourses with ↗Ḥimyar, esp. to his military intervention(s) at the request of the Roman emperor Justin I after the persecutions launched there, at ↗Naǧrān, by the local ruler Ḏū Nuwās (↗Yūsuf Asʾar Yaṯʾar) in ca. 517 or 522 (Bausi – Gori 2006:3f. and n. 4). This was part of the long-standing struggle between Rome, then the ↗Byzantine empire, and the Sasanians (↗Iran) for the exclusive control of the trade route to India – indeed, "a specific meeting-point of the 'world history' of late antiquity and early Middle Ages" (Harmatta in PICES 4, vol. 1, 95).

Against such an epochal background, involving economic and political relationships, as well as diplomatic and military confrontations, the eschatology of the ↗*Kəbrä nägäśt* should also be viewed, which stages the encounter of the two emperors – K. and Justin I – in Jerusalem at the end of the times (BezKebr 170a [ch. 117]; cp. Fiaccadori 1992:74, 80, 91; Lusini 1999:236ff.).

Whatever the much disputed chronology of the events in South Arabia may be, thanks to the support of the Roman fleet, the Aksumites, led by K., crossed the ↗Red Sea and landed in Yemen (South ↗Arabia). Ḏū Nuwās was vanquished and executed, his country Christianized and definitely brought into the sphere of influ-



Coins of Kaleb: silver, copper and copper with gold; drawing, courtesy of Wolfgang Hahn

ence of the Byzantine empire; Ethiopian control was thus reasserted on South Arabia (seemingly, the zenith of Aksumite hegemony) and a local ruler, ↗Sum(u)yafa^{c} Ašwa, made king (Fiaccadori 2006b:61ff.). He is the possible author of a South Arabian inscription mentioning *ʾl ʾ<ṣ>bḥ*, i.e. ∃llä Aṣbəḥa (Ist. 7608bis = RÉS no. 3904).

While staying in Yemen, for about seven months or three years (Fiaccadori 2006b:63), K. (re)built and consecrated churches in the most important cities of Ḥimyar (ibid. 52–58). After that, he returned to his own land and, according to the *Martyrdom of Arethas* (IX, 39, ed. Carpentier 1869:758F), the Vita of ↗Gregentius (ch. 9, ed. Berger 2006:400) and the *Kəbrä nägäśt* (ch. 117, BezKebr 170b–71a), abdicated in order to end his life as a hermit next to his monastic mentor, *abba* Zōnainos in the Greek *Martyrdom* (VII [31] and IX [39], ed. Carpentier 748DE and 758F–59A), who may well be one and the same as *abba* ↗Ṗänṭälewon of Ethiopic hagiography (cp. ↗Nine Saints), living in a cell on a "high mountain" (actually, a small hill) to the northeast of Aksum (Fiaccadori 2006b:64f.). This cell was the kernel of the monastery of ∃nda Abba Ṗänṭälewon, in which, according to local traditions collected by Manoel ↗Barradas, K. would have been buried with his son ↗Gäbrä Mäsqäl (BecRASO IV, 235; Barradas 1996:125).

Some 2 km to the north of Ṗänṭälewon's monastery, not far from ∃nda Abba ↗Liqanos, lies a monumental complex with two underground tombs attributed to K. and Gäbrä Mäsqäl (↗∃nda Kaleb), and linked by local tradition to the former's triumphal expedition to Ḥimyar, as a secret passage through which he and his army would have left Aksum and come out at ↗Mäṭära (DAE I, 23, 53; II, 60). In such earlier sources as the Acts of ↗Zämika^{ʾ}el Arägawi (Guidi 1896:19f.) and the *Gädlä ↗ṣadəqan* (Conti Rossini 1903:13, 15ff.; Schneider 1963:167f.), or Barradas' writings (BecRASO IV, 235; Barradas 1996:125), all aware of the events in Naǧrān, the same episode is instead traced to K. successfully rebuking the "people of Bur" (called "of Gämora" in the *Sənkəssar* of Däbrä Bizän, 12 Gənbot, as made known in Sapeto 1857:422, cp. Fiaccadori 2006b, 64 n. 100) who had revolted against him.

K.'s abdication was to trigger a succession struggle, echoed in the *Kəbrä nägäśt* and other Ethiopic sources, between his two sons ↗∃sra^{ʾ}el/↗∃llä Gäbäz and W^{c}ZB/Gäbrä Mäsqäl; and already could have taken place by 523/24, when he is said to have sent his crown to Patriarch John III of Jerusalem to suspend on the Holy Sepulchre as a thanksgiving for his victory (*Martyr. Arethae*, IX [39], ed. Carpentier 1869:758F; cp. the Arab. and Gə^{c}əz versions, ed. Bausi – Gori 2006:88, 302), or within 529/30, i.e. the year of Zōnainos/Ṗänṭälewon's death according to the figures in the published manuscript of his Vita (ch. XII, ed. Conti Rossini 1904:59f.; s. Fiaccadori 2003:184f., 232f. and 2006b:65f. and n. 108). Here, a brother of K., ↗Muse, who left for Jerusalem as a monk, is also mentioned (ed. Conti Rossini 1904:60).

Around 535, if not already by the end of 531, ↗Abraha, a former slave of a Roman citizen based in ↗Adulis, then a soldier, or better an officer, in the Ethiopian army occupying Ḥimyar, deposed Sum(u)yafa^{c} Ašwa, and became himself king, repelling two subsequent expeditions organized against him by K. (who would have briefly emerged from retirement for that purpose), but eventually paying tribute to the latter's successor (Procopius, *Hist.* I, 20, 3–8, ed. Haury 1905:106ff.).

The wealth and variety of surviving gold, silver and copper coins issued in K.'s name, mostly found in Yemen (at ^{c}Aden and the nearby al-Maḍariba), suggests that he had rather a long reign. Should the Nine Saints really have come to Aksum as a part of the monastic reaction that followed the issuing of the Henotikon, i.e. the "Edict of Unity" (aimed at reconciling Chalcedonians and monophysites), by Emperor Zeno in 482 (Fiaccadori 2006b:65 and nn. 104f.), this would agree with the somehow loose information in the *Gädl* of Ṗänṭälewon about *abba* Liqanos dying "in the 21st year" of his seclusion, "after K. ascended the throne, (but) before he waged war to Saba" (ed. Conti Rossini 1904:45).

K. minted a larger number of gold issues than any other Aksumite ruler, owing perhaps to the need to pay for the Ḥimyarite wars. His coins (Types 91–110 in Munro-Hay – Juel-Jensen 1995:198–207) bear the King's image on both sides, half-length profile bust rightwards, robed in the "humped style" (limited, though, by restricted space) and wearing a tiara or head cloth on the obverse and reverse, respectively; the tiara is of triple-element style, with a curved ribbon hanging always behind; the king's arm falls free of draperies and is adorned with a bracelet; his hand holds a short stick and/or, sometimes (Type 109), the stem of one of the two small wheat stalks (emerging at about shoulder level) flanking his figure, encircled by a beaded inner border further framed by a Greek legend and an outer border. The obv., with Gəᶜəz monogram ħΛΠ, *KLB*, 'Kaleb', at top, is inscribed: XA(Λ)HB BACIΛEYC, i.e. *Cha(l)ēb basiléus*, 'King Caleb' (minor vars. in Types 98–110). On the rev., more often with the same monogram: YIOC ΘEZENA(C), i.e. *Hyiòs Thezena(s)*, 'Son of Thezena' (Types 91–96), or ΘEOY EYXAPICTIA, i.e. *Theoû eucharistía*, 'By God's grace' (Type 97).

Only one silver type is known (no. 111, *ibid.*, 208f.), also with the King's image on both sides, in a border, more often beaded or ribbed on the the obv., profile bust rightwards descending to the base of the coin; clad in the "double-fold style", he wears a round collar/necklace and an arcaded triple-element tiara or a head cloth respectively, with a curled ribbon hanging behind. A flared-arm cross at the top divides the Gəᶜəz legends into two parts. On the obv.: *ngś Klb*, 'King Kaleb'. On the rev.: *zydl lhgr*, 'May this please the country'.

Copper types (nos. 111i–114, ibid., 209ff.) are repeats of either the silver one (nos. 111i and 113–14, *ibid.*, 209, 211) or older anonymous issues (Hahn 2000:66), presenting on the obv. the bust of the king, with no cross behind head, and the Greek legend XAΛHB, i.e. *Chalēb*, 'Caleb'; on the rev., a Greek cross with central punch-hole inlaid with gold in a beaded or ribbed outer border, the arms of the cross touching upon or merging into a plain inner circle inscribed TOYTO APECH TH XωPA, i.e. *Toûto arésē tê chōra*, 'May this please the country' (no. 112, ibid. 210).

In spite of the Greek legends on coins, K.'s reign seems to have witnessed a certain decline of Aksumite Hellenism: it may well be symptomatic that the copy of the ↗Monumentum Adulitanum he requested on preparing his first South Arabian expedition, in order to claim previous rights over the other side of the Red Sea, was made by ↗Cosmas Indicopleustes with the aid of his fellow merchant Minas, both happening to be then in Adulis. As a matter of fact, K.'s surviving inscriptions, none of them dated, are in Gəᶜəz: RIE 195, from Mārib, attributable to him, commemorating his victory and the conquest of Saba's ancient capital, with a detailed account of the foregoing military occurrencies; RIE 263–64, from Ẓafār, and 265–66, from South Arabia, also traceable to him, as they refer to the presence of Ethiopians in Yemen at that time or in the immediate aftermath; RIE 191, from Aksum, actually in "pseudo-Sabaic", which attests to an Ethiopian overseas expedition and the setting of "a sanctuary [*mqds*] in Ḥimyar [...] in the name of God's Son", as well as, of the building (or repairing) and consecrating of "his ↗Gäbäz [*gbzh*]", i.e., possibly, Aksum cathedral (↗Aksum Ṣəyon; s. Fiaccadori 2003:204). In this text, the King's full name (followed by his titlary) is also given: *klb/ʾl/ʾṣbḥ/wld/tzn/bʾs/lzn*, 'Kaleb ∃llä Aṣbəḥa, son of Tazena, man of LZN', which include his "gentilicium" or "clan-name", likely to be vocalized **La-/Läzen(ə)*, and compared with the (↗Saho?) *Laziné* of the Monumentum Adulitanum (Fiaccadori 2004:122).

Cosmas' work, however, includes interesting eyewitness hints at Aksum's architecture and art in the age of K., drawing attention to "the four-towered palace of the king", decorated with stuffed rhinoceroses and bronze unicorns (*Top. Christ.*, XI, 2 and 7, ed. Wolska-Conus 1973:317, 327), as well as to the tamed giraffes kept inside it for his amusement (XI, 4, ibid., 321). Cosmas also tells of the trading expeditions to the far remote land of ↗Sasou ("towards the sources of the [Blue] ↗Nile") that were organized every two years by the King "through the governor [*árchōn*] of Agaw [↗Agäw]", so as to take there salt, iron and meat, i.e. cattle driven on the hoof, and exchange them for ↗gold (II, 51ff., ed. Wolska-Conus 1968:361ff.; cp. Fiaccadori 2004:120f.).

Further colour to the impression conveyed by this narrative is added by the description of the King himself in the vivid accounts of Procopius and ↗John Malalas (s. ↗Historiography) on the embassy of Julian, who was sent to K. (and Sum[u]yafaᶜ Ašwa) by the Byzantine emperor Justinian I in 530/31 – a date compatible with the above chronology of K.'s life – to propose

diverting the ↗silk route from Persia to Aksum and Alexandria (↗Egypt).

News about K.'s success in Yemen fostered the legend of him bringing Christianity to Ethiopia – already evangelized, though, by Frumentius under King ↗ʿEzana. The deeds of this sovereign and his brother Śəʿezana (↗ŚʿZN) were in fact confused with, and then dimmed by, those of K. and his "lieutenant" in South Arabia, giving birth to the popular legend of the "God-fearing" brothers Abrəha and Aṣbəḥa (s. Fiaccadori 2006a:128 and n. 24; 2006b:64 and nn.98f.). Their names, resp. understood as 'He made light' and 'He brought about the morning', paved the way for them to be the perfect companions of Frumentius, also called *Käśate Bərhan* ('Revealer of the Light'). As many witness to the enduring fortunes of that legend, several churches in Ethiopia claim their foundation from K. or from Abrəha and Aṣbəḥa (e.g., ↗Däbrä Wärq), the latter two being, likewise, prestigious ancestors in local ↗genealogies (e.g., of the Arbaʿatä Zufan of ↗ʿAgamä, where they are also called "Tazänay and Azänay").

K. appears, too, with 50 years of reign, in the traditional "king lists" (CRList 286: list C, no. 6; 300: list F, no. 2; cp. 299: list E, no. 3, with no regnal years).

Gianfranco Fiaccadori

Kalef

K. (ካሌፍ; fl. 1579–80) was a Fälaša (↗Betä Ǝsraʾel) chief (probably the same person as the Kaləb of the "short chronicle", DombrChr 185). Between October 1579 and March 1580, together with his brother ↗Rädaʾi, he commanded the Betä Ǝsraʾel resistence in ↗Səmen against *aṣe* ↗Śärṣä Dəngəl. Between 1579 and 1588, the latter carried out a series of campaigns against the Betä Ǝsraʾel, which have variously been interpreted as simply slave raids, or as part of his northern foreign policy needed to secure the territory between Lake

↗Ṭana and the port of ↗Massawa (Merid Wolde Aregay 1971: 284–87; Quirin 1992:77–81).

In an early effort to resist the Emperor's attacks, K. employed scorched earth tactics aimed at preventing the Emperor's troops from obtaining provisions. The royal forces bombarded the Betä Ǝsraʾel mountain-top stronghold with cannons (this having produced a marked effect on K.'s forces) and K.'s forces rolled stones down the hill in response. Although offering fierce resistence, K.'s soldiers were defeated. Many people were captured and killed, not willing to submit quietly. The Chronicle and Betä Ǝsraʾel oral traditions state that in one incident a Fälaša woman, who had been tied to her captor, leaped off a cliff, shouting, "Adonai, help me", taking both of them to their deaths (CRHist 101; Quirin 1992:79). The royal chronicler praised Fälaša bravery, comparing it to the efforts of the ancient Israelites to resist conquest by the Roman empire.

K. was not killed in this battle, but is said to have lost his courage and gone mad, no longer knowing where he was. The Emperor's troops stayed two weeks in the region and left in November 1579 in order to carry out additional attacks against Rädaʾi in the next few months.

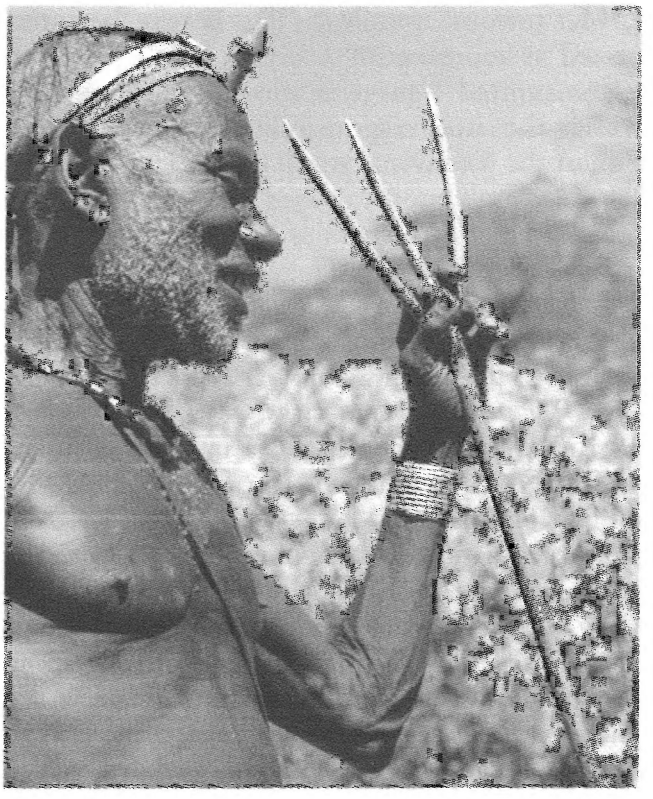
Kallačča

The K. (also *kallaačča*; Amh. *käläčča*) is an attribute of dignity and rank in many ethnic groups of Southern Ethiopia, especially among the ↗Oromo. On an arched white plate (shell or ivory) a metal cylinder is fixed, which ends in a tapering head. To this head often four small metal balls are fixed. The K. is worn on the forehead, held by a strap made of leather or snake-skin. The strap hangs down the back to hold the K. in a nearly upright position. The K. is worn in combination with a hairstyle, which leaves bald the forehead where the K. is placed (VSAe II, 51).



Balko priest of the Ṣamay with a *kallačča* on his forehead and carrying a trident, by which he magically protects the community against locusts; photo 1950/52, by Elisabeth Pauli, courtesy of the Frobenius-Institut, Frankfurt am Main

By some researchers (e.g., Bieber 1920, 1923), the K. has been interpreted as a phallic symbol. Yet within the respective cultures this interpretation is largely rejected. Dittmer (1964:70–74) disproves Bieber's hypothesis, and for him the K. is an insignia of divine ↗kingship which diffused down to lower-rank office holders. He proposes another speculative hypothesis, and suggests that the K. is derived from the "Meroitic crown". Through analysis of formal elements he relates the K. to earlier headgears in late-Pharaonic and Coptic Egypt and identifies stylistic elements from India. A similar influence, mediated by Nubia, is assumed by Dittmer for the headgear of the Yoruba "bronze heads" (Dittmer 1964:75–88).

In ↗Boorana oral tradition the origin of the K. is located in heaven from where it fell to earth together with the first ↗*qaalluu* priest and the *laka*-armring; according to some legends the first cattle came down together with the K. In ↗Arsi oral tradition it is said that the K. was created together with the ↗*gadaa* (VSAe II, 159, 302, 476ff.).

In general, the wearing of a K. indicates full manhood, reproductive ability and merit

(↗Meritorious complex). The K. can be interpreted as representing a mystical power which is transmitted transgenerationally and gives its wearer the ritual responsibility for the perpetuation of the traditional social order. The power of the K. is ambiguous, if used properly it has the power to bless; for enemies or people in a ritually impure state, it can be dangerous.

The right to wear a K. varies from group to group. Formerly, among the Boorana a man was permitted to wear a K. only after he had reached the ↗*gadaamoği gaada*-class. During the feast of transition to *garša*-status of a man of advanced age, it was to be handed over to the eldest son, while younger sons had to buy their K. from smiths from outside the community (in the case of the Boorana from Konso). With the exception of the *gadaamoği*, who could wear the K. every day, it was used only during feasts. In other Oromo groups only the *qaalluu* and the ↗*abbaa gadaa* and ↗*hayyuu* were permitted to wear the K.

The K. can also be found in societies which have no *gadaa*-system, e.g., as worn by ↗Amarro dignitaries as well as by ↗Hadiyya high-priests (pl. *anǧaama*).

Three K. were applied to the metal crown-like headgear of the kings of ↗Käfa. The king of Ǧanǧäro's crown is said to have been furnished with four K. pointing in four directions. K. were also parts of the royal insignia of Amarro and in the kingdom of ↗Limmu Ǝnnarya.

Dirk Bustorf

Kambaata

Kambaata language

K. (self-name: Kambaatissáta), together with ↗Allaaba, ↗Qabeena and ↗Ṭimbaaro, belongs to the Kambaata language group which is a subgroup of the ↗Highland East Cushitic family. The closest relative of K. is Ṭimbaaro with 95 % lexical similarity. According to the 1998 population census, the number of K. speakers is 606,241, among them 345,797 are monolingual (Gordon 2005: 116).

The consonant phonemes of K. are:

	Labial	Alveolar	Palatal	Velar	Glottal
Plosive	*b*	*t* *d*	*č* *ǧ*	*k* *g*	*ʾ*
Fricative	*f*	*s* *z*	*š* (*ž*)		*h*
Ejective	*p*	*ṭ*	*ç*	*q*	
Nasal	*m*	*n*			
Approximant	*w*	*l*, *r*	*y*		
Glottalized approximant		*l̰*, *r̰*			

Consonant gemination is phonologically distinctive. The vowel system consists of five phonemically short and long vowels (*i*, *e*, *a*, *o* and *u*). Accentuation (marked here with ´) is of grammatical importance, especially for case marking.

K. has an elaborate case system (nominative, accusative, genitive, dative, locative, instrumental/comitative, ablative, vocative). K. is a marked-nominative language, i.e. accusative is the citation form of nouns. In the same way as Allaaba and Qabeena, K. grammaticalized demonstratives into overt markers of gender on common nouns: feminine nouns have a *-ta*-suffix in the accusative (*hiz-óo-ta* 'sister', *sulum-ú-ṭa* 'heifer', *gar-í-ta* 'truth'). Some masculine nouns have an optional *-ha*-suffix (*hiz-óo*(*-ha*) 'brother'); however, most of the masculine nouns are not overtly marked for gender (*worǧaam-ú* 'young bull', *qoppan-á* 'lie'). With respect to number, basic, singulative, and plurative nouns are distinguished. *-(č)č-ú* is the singulative morpheme (*meent-ú* 'women', *meent-iččˇ-ú-ta* 'woman'). Plurality on nouns is indicated (i) by a geminate last stem consonant and the case-gender morpheme *-á-ta* (*boor-á* 'bull', *boorr-á-ta* 'bulls') or (ii) by the morpheme *-aakk-á-ta* (*ʾam-á-ta* 'mother', *ʾam-aakk-á-ta* 'mothers').

Due to a recent innovation in the plural, K. makes a distinction between pl. and honorific (hon.) personal pronouns in the 2nd and 3rd pers. and has thus two pronouns more than Allaaba and Qabeena. The nominative/accusative pronouns of K. are: 1st pers. sg. *ʾáni/ʾéesi*, 1st pers. pl. *naʾóoti/naʾóota*, 2nd pers. sg. *ʾáti/kéesi*, 2nd pers. hon. *ʾáʾnu/kiʾnéta*, 2nd pers. pl. *ʾaʾnoʾóoti/kiʾneʾéeta*, 3rd pers. masc. *ʾísi/ʾisú*, 3rd pers. fem. *ʾíse/ʾiséta*, 3rd pers. hon. *ʾíssa/ʾissáta*, 3rd pers. pl. *ʾissoʾóoti / ʾissoʾóota*.

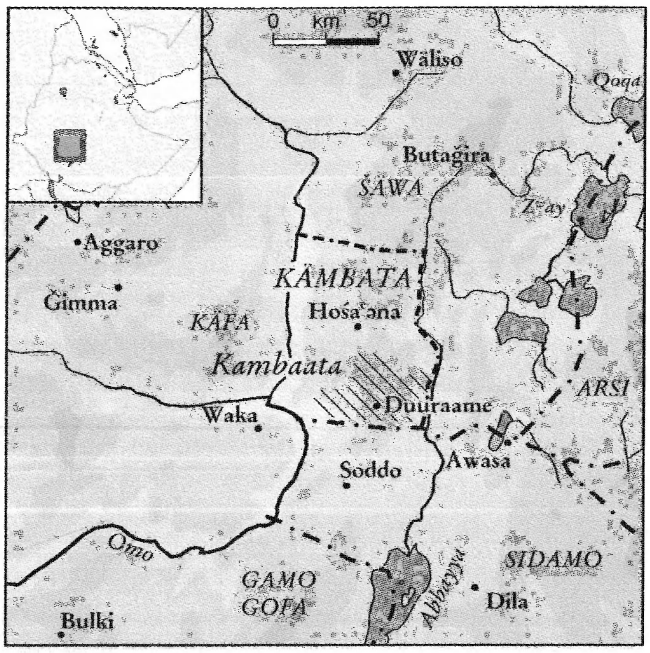
Verbs are inflected for aspect (imperfective *ʾaanš-áno* 'he washes, he will wash' vs. perfective *ʾaanš-éeʾu* 'he washed' vs. progressive *ʾaanš-áyyooʾu* 'he is washing'), mood (indicative vs. jussive/imperative *ʾáanš-uni* 'he should wash' / *ʾáanš-i* 'wash!' vs. preventive *ʾaanš-ókkooʾu* 'he must not wash, he should not dare to wash'), subordination (main verb vs. perfective converb/imperfective converb *ʾaanš-í* '(he) having washed' / *ʾaanš-áni* '(he) washing') as well as person, gender, number, and social status of the subject. The subject agreement markers are 1st pers. sg. *-Ø-*, 1st pers. pl. *-n-*, 2nd pers. sg. *-t-*, 2nd pers. pl. *-teen-*, 3rd pers. masc. *-Ø-*, 3rd pers. fem./3rd pers. pl. *-t-*, 3rd pers. hon. *-een-*. The infinitive is marked by *-ú* in the accusative (*ʾaanš-ú* 'to wash'). K. has the following negation morphemes: *-baʾa* for indicative main verbs (*ʾaanš-áno-baʾa* 'he does not, won't wash', *ʾaanš-im-báʾa* 'he did not wash, he is not washing'), *-ooti* for imperatives (*ʾaanš-itóoti* 'do not wash!'), *-ka* for jussive verbs (*ʾaanšún-ka* 'he should not wash') and *-úʾna* for converbs (*ʾaanš-úʾna* 'without (he) having washed, without (he) washing').

Tense may be superimposed on aspect marking. The invariant enclitic *ʾíkke* situates an event or situation in the past: progressive 3rd pers. pl. *čanč-itáyyooʾu* 'they are chattering' > *čanč-itáyyooʾu ʾíkke* 'they were chattering'; imperfective 3rd pers. masc. *heʾ-áno* 'he lives' > *heʾáno ʾíkke* 'he used to live'; perfective 3rd pers. masc. *ʾafuuʾl-éeʾu* 'he has sat down' > *ʾafuuʾl-éeʾu ʾíkke* 'he had sat down'.

The following derivational morphemes are found on verbs: middle *-ʾ-/-aqq-* (*min-* 'build' > *miʾn-* 'build for one's own benefit'; *ṭaʾm-* 'ask' > *ṭaʾm-aqq-* 'ask for one's own benefit'), simple causative *-(i)s-* (*ros-* 'learn' > *ros-is-* 'teach'), double causative *-(i)siis-* (*gob-* 'sew' > *gob-(i)siis-* 'make someone sew'), and passive (*it-* 'eat' > *it-am-* 'be eaten').

K. is a strictly head-final language with a complex sentence structure. Each sentence has usually only one main verb form. Special verb forms (converbs) are used for non-final clauses. Besides, K. makes abundant use of relative clauses (i) as modifiers of nouns, (ii) as base of adverbial and complement clauses, and (iii) in cleft sentences. The latter are frequently in use for focus marking.

Since 1993 K. has been the medium of instruction in primary schools. The official orthography is Latin-based and follows the Oromo orthography. Some married K. women still use a special avoidance vocabulary (*balliššáta*) as a sign of respect for their parents-in-law.



The Herman Bell ten-word list: 'one' *matú*, 'two' *lamú*, 'three' *sasú*, 'fire' *giiráta*, 'water' *woʾá*, 'sun' *ʾarriiccúta*, 'moon' *ʾagančú*, 'blood' *qegú / qegí*, 'tongue' *ʾarrabíta*, 'tooth' *inqúta*.

Kambaata ethnography

The K. inhabit a highland area of ca. 1,200 km² of central-southern Ethiopia between the Omo (Gibe) and the middle Bilate rivers. Linguistically they belong to the Highland East Cushitic cluster and are closely related to the ↗Ṭimbaaro and ↗Allaaba, with whom they, until recently, shared a common zone, to the ↗Dubamo and Looka in

Typical Kambaata farms, the houses surrounded by *ənsät* groves, the fields being situated mostly below each house and trees above; photo 2005, courtesy of Wolbert Smidt

↗Hadiyya zone and to the ↗Qabeena in Gurage zone. The K. proper who amount to ca. 413,000 (1994) in the three *wärädas* of Angača, Qädida Gamila and Qača Bira are mainly Protestants, Roman Catholics and Orthodox Christians.

The first reference to K. as a political unit is found in praise songs of *aṣe* ↗Yəsḥaq (r. 1414–29) who annexed it as a province to the Christian empire. From the 15th to the 18th cent. Orthodox Christianity was the dominant religion of the K., as documented by numerous remains of churches and sacred objects. However, after the area had increasingly been cut off from the centres of Christianity in the north, a syncretic religion (↗Syncretism) evolved which was influenced, e.g., by the ↗*fandaanano* faith of the Hadiyya. In particular, the cult of possession spirits, rooted in Christianity and in Islam as well as in Cushitic folk religion, became very powerful (cf. BrKam 256ff.).

According to oral tradition the ethnogenesis of the K. occurred after the wars of Aḥmad b. Ibrāhīm al-Ġāzī from a federation (*kokaata*) of seven "original clans" on Mount ↗Ambäriččo, the Oyyata, Gulba, Hinnira, Taza, Effegenna, Ebbeğenna and Fuga'a. A new dynasty was established at the beginning of the 17th cent. by ↗Ḥamälmal, the nominal governor of the Christian empire in K., but it was named after his wife Oyyata (Oyeta), a daughter of the Muslim ruler *ḥāğğī* ʿAli[ye] Umär, the alleged apical ancestor of the ↗Səlṭi. The subsequent kings (*woma*) of the Oyyata dynasty enlarged their kingdom by military and diplomatic actions against the neighbouring Hadiyya. The list of the kings of the Oyyata dynasty, as reported by oral tradition (BrKam 45), is as follows: (1) Ḥamälmal, (2) Zigančo, (3) Gerečo, (4) Hammo, (5) Dammo, (6) Anno, (7) Kätäma, (8) Dilaapa, (9) Haadallo, (10) Goğobbo, (11) Waaqo (r. ca. 1790–1810), (12) Dagoiye (r. ca. 1810–45), (13) Dilbatto (r. ca. 1845–92; last *woma*), (14) Agaago (r. ca. 1893–96; d. 1916; first *balabbat*), (15) Molisso (r. ca. 1896–1920), (16) Barganno (r. ca. 1920–47), (17) Anniyo (r. 1947–?).

From the 17th until the end of the 18th cent. the K. peasants were dominated by surrounding Hadiyya nomads and had to pay tribute to them. Under King Dagoiye a "formative" period started from ca. 1810 onwards during which the state of K. became politically well organized and started expanding at the expense of the Hadiyya. A "classical" period followed under the rule of his successor Dilbatto when K. reached the apogee of its power. The King took advantage of the deep-rooted rivalries between the Hadiyya subgroups, the Leemo and the Sooro in particular, in order to enlarge the territory of K. by diplomatic and military means. The boundaries of the state were largely demarcated and fortified by earth walls (cf. BrKam ch. 2.6 and 2.7). K. was conquered by Mənilək's army between 1891 and 1893.

From then on, a process of re-Christianization started. In particular, members of the family of the former king and the "noble" clans joined the Orthodox church. From the 1930s onwards Roman-Catholic and Protestant missions became active in K. and henceforth converted the majority of the population.

The K. are highland peasants practising an intensive cultivation with *Ensete ventricosum* as

their staple food and growing wheat and barley as well as coffee as an important cash crop. Cattle have obviously never been numerous in the densely populated highland areas, but the K. were well-known for their horse-breeding. Until the end of the 20th cent. the society of the K. was highly stratified in clans of noblemen (Oyyata and, as the second in hierarchy, the Gulba), commoners (generally labelled *kontoma*) and craftsmen (tanners-potters *fuga'a* [↗*Fuga*] and blacksmith or *tumaano*). Because of the extraordinary population density (sometimes reaching up to more than 500 people/km²) of K. its inhabitants have increasingly been involved in voluntary and enforced resettlement programmes.

Kämbata

After the kingdom of ↗Kambaata in central-southern Ethiopia had been conquered by Mənilək's army in 1893, its name (in its Amh. version ከምባታ, K., also Känbata, for location s. Kambaata) was converted into an administrative area of the empire. The province of K. included Kambaata-speaking peoples, the Kambaata proper, the ↗Ṭimbaaro, ↗Dubamo and ↗Allaaba, as well as most of the ↗Hadiyya, some Səlṭi-speakers (before the establishment of the ↗Hayqočč-Butağira *awraǧǧa*) and the western ↗Arsi.

The first capital was Angaǧa (Hangaǧa) in central K., but in ca. 1904 the governor *ras* ↗Abatä Bʷayaläw moved the headquarters of the province to ↗Hossäyna (Waaččamo) in Hadiyya land. Although the Kambaata were a minority, the whole territory was called after them, because their (former) king emerged as the most prominent ↗*balabbat* under the Ethiopian administration. After the Italian occupation, during which K. was called "Residenza del Cambátta", the province of K. was reduced to the status of an *awraǧǧa* of Šäwa province which comprised the territories of the Kambaata proper, the Ṭimbaaro and most of the Hadiyya. The K. *awraǧǧa* consisted of five *wärädas* each with two sub-districts (administrative centres in brackets): Leemo (Hossäyna), Kontäb (Morsito), Ṭimbaaro (Gimbiiču), Angaǧa (Angaǧa) and Qädida Gamila (Durame) [CSA 1964:198; CSA 1970:15].

Following protests from the Hadiyya majority the name of the *awraǧǧa* was changed to Kambaata-Hadiyya (Kämbata-Hadiyya) in 1977. In the course of the new territorial division of the 1990s a zone called Kambaata-Allaaba-Ṭimbaaro was established within the "Southern Nations, Nationalities and Peoples' Regional State" with Duraame as its capital in western K. It comprised the *wärädas* Omo Šäläko (mainly inhabited by Ṭimbaaro), Angaǧa, Qädida Gamila, Qača Bira and Allaaba (mainly inhabited by the ↗Allaaba ethnic group). The population of this zone amounted to ca. 727,340 (1994). Allaaba recently gained the status of a "special *wäräda*" with a population of 187,034 (1994).

Kämkäm ↗Libo

Kane, Thomas Leiper

K. (b. 21 November 1926, Kane, Pennsylvania, d. 24 September 2000, Annapolis, Maryland), born in a town named after his ancestor, Thomas Leiper Kane (1822–83, a general in the United States Army and mediator between the early Mormon Church and the United States government), was a prominent lexicographer and scholar of Amharic and Təgrəññа literature.

K. began his studies focusing primarily on Germanic languages, and received an M.A. from the University of Pennsylvania in 1954. Switching focus, he went on to study Semitic languages with Wolf Leslau at the University of California at Los Angeles, and whilst there received an M.A. in 1963 and a Ph.D. in 1971. His doctoral thesis, published in 1975 in an expanded version under the title *Ethiopian Literature in Amharic* (KaneLit), served as the foundation for his future work in lexicography.

During the 44 years he worked for the United States Department of Defence, K. continued to read, edit and translate both Amharic and Təgrəññа texts. His dedication to studying these languages culminated in the dictionaries that defined his career: *Amharic–English Dictionary* (KaneDic publ. in 1990), and *Tigrinya–English Dictionary* (KaneTDic, 2000), the latter appear-

ing only two weeks before his death. Both works are the product of intense and lengthy textual studies. A collection of texts with translations and notes edited by K. and Wolf Leslau, *Amharic Cultural Reader*, was published posthumously.

Käntiba

The term K. (ክንቲባ, Amh. pl. *käntäbt*, Tgn. pl. *känättəb*, also *käntäbti*, *käntibatat*) has been used mainly in two different ways, depending on the region and time. It meant either a city governor, as the representative of the monarch, or, in the north, a quite autonomous regional governor, mostly in possession of a ↗*nägarit*. K., thus, was basically an appellation for an officeholder, but was also used as a title (even after having left the office the former office holder could keep it as a title). The etymological origin of the title is unknown, it is probably ancient (a connection with the Semitic root *ktb* for 'book/writing' is possible, but also an Agäw root is not excluded). The term was first mentioned in chronicles and other historical records as the office of the ruler of ↗Ḥamasen and that of the ruler of ↗Dämbiya.

According to *aṣe* ↗Zärʾa Yaʿəqob's chronicle (PerrZarY 47f., 96), Ḥamasen was governed at that time by two K., who were placed under the ↗*baḥər nägaš*; the chronicle relates that they often rebelled against the rule of the "king of kings". In the 17th cent. "the two K." still belonged to that half of the dual province of ↗Təgray ruled by the *baḥər nägaš* (Barradas 1912:2). Later, also governors in ↗Akkälä Guzay carried that title; it was not known in Təgray proper. The title, allegedly being that of an autonomous local leader originally, might have originated in Təgrəñña-speaking areas before the establishment of the Solomonic dynasty, as oral traditions of ↗Ḥamasen and Təgray suggest. It can be presumed that governors in the north were either called K. (i.e., a ruler originally not appointed by the monarch?) or ↗*šum* (*śəyyum*, 'appointed [by the monarch]', e.g. the *wag šum*, *śəyyumä əggäla* or *śəyyumä bur*). Similar to the *śəyyum*, a K. was normally in possession of a *nägarit*. This meant that he could call his people to war and had full jurisdiction over them.

The unit governed by a K. became considerably smaller with time. In the late 17th cent. there were already numerous K. governing different smaller territories in Ḥamasen and Akkälä Guzay. The group inhabiting the territory lead by a K. was often defined through descent, and the title was often transmitted within local leading families, a son being chosen as K. if he was fit for the office (for numerous genealogies of K. families s. KolTrad II, index; the ʿAd Däggiyazmati or Ǝnda Däggäzmati, i.e. the petty dynasty of ↗Ṣəʿazzäga of Ḥamasen, counted a K. among their ancestors, KolTrad II, 42; also the *šum ʿagamä* dynasty of ↗Säbagadis Wäldu claims descent from a K. called Dəfuʿ in the area of ʿAddi Qäyyəḥ in Akkälä Guzay). Most of these K. office holders are not recorded, except in genealogies.

With time, the title also became used for heads of smaller, but historically important, settlements in Eritrea (e.g., *käntiba* Gila Mikaʾel, an influential 19th-cent. head of the Godayf area close to Asmära, s. Bairu Tafla 2007). K. can be the title of a Təgrəñña village chief (Tgn. *käntiba ʿaddi*) to this day.

The title K. also appeared in non-Təgrəñña areas. The most ancient holder of the title in Agäw/Amhara areas seems to have been the provincial governor of Dämbiya in north-western Ethiopia, the title being inherited within a local dynasty (as de Almeida asserts; BeckHuntAlm 72). According to the *Gädlä ↗Yafqəränna Ǝgzi*ʾ, the K. of Dämbiya was defeated in the late 14th cent. by the rebellious "↗*ʿayhud*" and forced to join them (Kaplan 2002:86; Conti Rossini 1920:571ff.). 17th-cent. Portuguese sources and maps mention a province called "Ambiancantiva", which is a corruption of *dämbiya käntiba* (cp. LudHist L.I. c. 4, 7; Ludolf 1691), i.e. the governor of Dämbiya (following a particularity of the colloquial language, which sometimes calls a land after the governor).

The ↗Təgre title *käntebay* (variants *käntibay*, *käntay*, pl. *känäčəb*, cp. Littmann – Höfner 1962:417) is a derivation of K. In the early 18th cent., following a local power struggle and conflict with Ḥamasen, a Christian Təgre leader was nominated K. of the ↗Ḥabab by the Ethiopian "king of kings" (d'Avray 1996:45). This implied that he received his own *nägarit*, which confirmed his position as an autonomous governor. His successors inherited the office, together with the *nägarit*, independently from the Ethiopian ruler. They kept it even after the Ḥabab had lost all their ties to the Ethiopian centre due to their Islamiza-

tion and the colonization of Eritrea (cp. d'Avray 1996:96ff.). Today, the title *käntebay* is still in use for the local Ḥabab leader, even if he does not have any officially recognized political function. Also, ↗Mänsa^{c} (cp. ↗Aftay *käntibay* Bula) and Bet Asgäde (s. TrIslam, index) leaders were called K. It was reported that still in the mid-19th cent., the *käntebay* of the two Mänsa^{c} groups Bet Abrəhe and Bet ƎšḥaqänReceived their investiture from the ruler of Ethiopia, paying a little tribute to him (Lejean 1869:748f.), even if later they became completely independent from him.

There might also be an etymological relation to the *kontäm* (variant *kontäb*), a title of a historical local leader in Səlṭi, who is said to have been a "northerner" (Dirk Bustorf: field notes). If there is such a relation, this would support the idea that the title is ancient. In addition, there was also a class of nobles among the Hadiyya, called *kontäm* (BeckHuntAlm LXIV).

At least starting from the Gondärine period, the title K. was also bestowed upon the city governor of Gondär ('mayor'), which reflected Gondär's status as an autonomous political centre (e.g., Ṣäḥayä Ləda in the mid-18th cent., s. CrumLand 110; *käntiba* Kaśay, s. Gobat 1834:111f.; *käntiba* Gäbru [↗Gäbrä Ɜgziʾabəher Dästa]; s. Solomon Getahun 2004). In rank, the K. of Gondär corresponded to the military title of *fitawrari* (MahZekr 648). 30 years after Addis Abäba was founded, the Ethiopian government called the city administrator K. (before this the title had been ↗*näggadras*), following the example of Gondär. His rank was elevated and corresponded to the military title of *däğğazmač*. He was the chief of administration, justice and of the city guards (MahZekr 646).

Today, by extension all mayors of modern capital cities in Ethiopia are called K. (KaneDic 1441; different from mayors of ordinary cities, Amh. **የማዘጋጃ፡ ቤት፡ ሹም** (*yämazzägağa bet šum*), MahZekr 646; Leslau 1973:777). Post-1974 terminology introduced new official denominations (Təgray–Tgn. [**ናይ**] **ማዘጋጃ፡ ቤት፡ ሓላፊ** ([*nay*] *mazzägağa bet ḥalafi*); Eritrea–Tgn. **ናይ፡ ምምሕዳር፡ ከተማ፡ ሓላፊ፡ ኣማሓዳሪ** (*nay məmməḥədar kätäma ḥalafi* or *ammaḥädari*), 'administrator' [of a *zoba*]'). However, the term K. continues to be used in spoken language in Ethiopia and Eritrea for "mayor" (of a major city). In the capital city of Təgray, Mäqälä, K. is the official denomination of the mayor.

In derivation, 'municipality' is called **ክንተባ** (*kəntäba*) in Təgrəññaa (officially: *məmməḥədar kätäma* in Eritrea, *mazzägağa bet* in Təgray); the function of a K. is called the *kəntəbənna* (KaneTDic 1650). *Kəntəbənnät* in Tgr. means 'chieftainship'; 'to appoint as a chieftain' in Tgr. is *känätäbä* (Littmann – Höfner 1962:417).

Several Təgrəññaa descent groups are called after a K. (e.g., the ʿAddi K̲äntiba Zärʾay, a lineage from the political centre ↗Hazzäga in Ḥamasen, s. KolTrad, ch. V). The *Mäṣḥafä* ↗*Aksum* mentions a place name called ʿAd Käntiba Səḥay in 1519 (i.e., a group claiming descent from a K.; s. CRAxum II, 34 [no. 27]). Also place and other localities' names are derived from title-holders, like the Gäza Käntiba ('House of the K.') in Kärän, Eritrea. In their territory, a mountain situated above the valley of ʿAylät was called Käntiba (Lejean 1869:750).

Wolbert Smidt

Kapuściński, Ryszard

K. (b. 4 March 1932, Pińsk, Poland, today Belarus, d. 23 January 2007, Warsaw) was an inter-

nationally prominent Polish journalist. He set a new standard for reporting and created a new literary form, which emerged from journalism and developed well beyond it, towards a more artistic and fictional genre.

K. witnessed 27 revolutions and *coups d'état* all around the world. He also met and made friends with the leading politicians of the second half of the 20th cent. from Africa, Asia, South and Central America. His reports and books presented many parts of the outside world to thousands, and as such he closely participated in creating the picture of the cultures which he described. K.'s books were translated into 30 languages. According to K.'s own words, he felt that his duty was to serve as an interpreter; not, however, from one language to another, but from one culture to another. He visited and wrote about different parts of Africa (a collection of essays from his African trips, *The Shadow of the Sun*, being the most complete presentation of the author's vision of the continent), South and Central America, India, Iran, Soviet Union, etc.

His connection with Ethiopia was marked by probably the most popular of his works, *The Emperor: Downfall of an Autocrat*. K. wrote the book after his two visits to Ethiopia, soon after the ↗Revolution of 1974 and ↗Ḫaylä Śəllase I's death in 1975. The book presented the Emperor and his court, and strongly influenced the way in which the Ethiopian ruler and his entourage were perceived by the outside world. It was received negatively by the scholarly world, since its presentation was ethnocentric and at times inadequately superficial. In spite of this controversy, *The Emperor* was translated into many languages and brought K. international fame.

Towards the end of his life, K. abandoned the reporter's style completely and published books which contained his thoughts on basic questions dealing not just with the contemporary world.

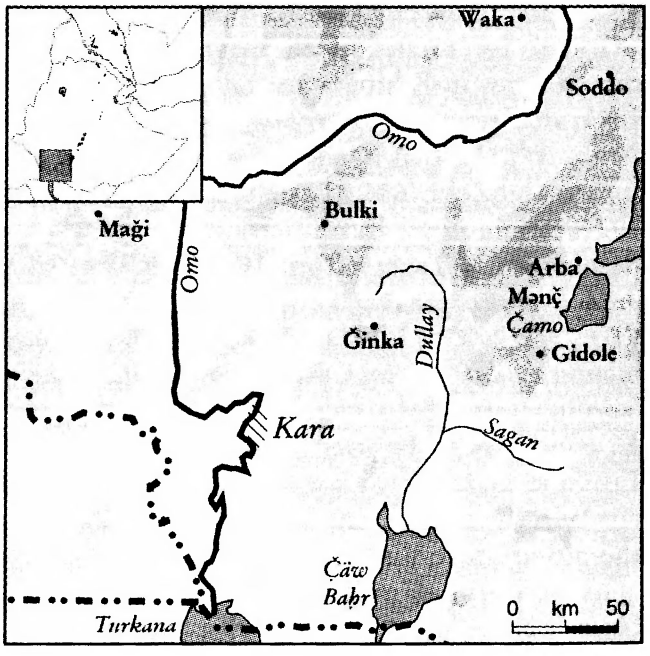
Hanna Rubinkowska

Kara

The K. is the self-denomination of a people inhabiting the central part of the lower Omo valley, Hamär *wäräda*, South Omo Zone of the Southern Nations, Nationalities and Peoples Regional State. They currently number ca. 800. The designation used by outsiders is Karo, and both "Kere" and "Kerre" can be found in 19th-cent. reports. The term "Karo" was used as an ethnic designation encompassing two groups, the K. and the Koegu (↗Kwegu-Muguği) until 1990, when they separated after a conflict. Other ethnic groups, called Gomba and Bogudo, were also included amongst the K., but of these, neither cultural identities nor languages remain. The K. language (*Kara apo*) is a dialect of the ↗Hamär cluster belonging to the South Omotic family. The K. inhabit the villages of Dus and Labuk which are also the names of their two *kabare* (smallest political units).

K. oral history recounts that the people came from three directions – somewhere in southern Sudan, the ↗Ðáasanač area and the ↗Arbore (Marle) area – and that they then settled in the Hamär highlands. One day, according to the legend, an ox escaped and reached the area of the Omo river to drink water. The people led the ox back to the herd and realized that the lowlands were fertile, and consequently all of them moved there. Another version says that they came from southern Sudan to the Omo delta and formed the Ðáasanač, then some of them moved and formed the Marle, and again some of them moved through Bodiland (↗Me'en) to the present Karo area. In either event, the period of the migration is assumed to be the early 19th cent.

K. subsistence economy today mainly depends on sorghum cultivation along the banks and in



Kara women threshing sorghum; photo 1986, courtesy of the author

the flood plain of the Omo River. Maize and cowpeas are also planted as secondary crops. Some goats and sheep are kept in the camps at the foot of the Hamär mountains, but the herds are small. According to oral history, cattle herding was the main activity when the K. came to their present area. However, all the cattle were lost through epizootic disease and attacks by neighbouring groups. They have neither donkeys nor camels. Bee-keeping and honey collection is an important source of income for adult men. Some honey is taken to market and sold to highland merchants. Honey is also used as a gift to the bond-partners of neighbouring groups. Fishing was taboo previously; but for women, children and unmarried men fish is now an important addition to the diet outside the crop season. Eating the meat of wild animals is said to have been taboo in former times. Ivory and leopard skins were the main items used for paying tribute or selling to merchants until the middle of the 20th cent. Hunting is still a prestigious activity among the K.

The K. have ten named exogamous patrilineal clans: the Kalaza, Garšima, Dangar, Kogo, Ešeppa, Gorosbolo, Ongosula, Dirtta, Dingolo, and Bitolo. In the mid-1990s, the age groups included: *ñikatakori*, *ñapuan*, *ñyikarakat*, *ñamprus*, *ñakomo*, *ñičekapus*, *ñiserikori*, and *ñiremalai*, all of these names having been adopted from the ↗Ñaŋatom (↗Age group systems). The K. have been strongly influenced by the Eastern Nilotic-speaking Ñaŋatom in some aspects, for example in matters of social structure and pastoralism. They have not been fully "Ethiopianized", but it is unique that they incorporate cultural elements of both Nilotic- and Cushitic- (or Omotic-) speaking peoples.

The main village, Dus, has been involved in tourism since the 1970s, and K. territory overlaps Mago National Park today. There is one primary school but no clinic or police station. How to recreate a new identity is an urgent issue for this group.

Kärabu

K. (the ↗Harari linguistic equivalent of ↗*käbäro*) refers to a family of kettledrums made from a bowl of wood that is covered at the top with cow or goat hide. It is played by hand or with two wooden sticks, usually wrapped at the top with a piece of fabric.

According to oral tradition, the first K. were given to Harari by the ↗*ğinn*. Every important Muslim shrine in Harär keeps at least two drums for the ceremonies. Some of the wooden bases are said to be centuries old; some locals claim they may date back to the time of *šayḫ* ↗Abādir ʿUmar ar-Riḍā, while their membranes are renewed every few years.

Dimensions of K. may vary considerably. The larger drums (50–100 cm diameter, 30–60 cm height), played with sticks, are used to accompany the chanting during local Islamic religious rituals, *zikri* (↗*Ḏikr*). They are usually played by men, but also women occasionally sing *zikri* and play K.

There are several differentiating names given to the drums, most of which use the root *zär* (in Harari, 'river'): *dīnzär*, usually the largest drum of the set, means 'river of religion' (although Leslau 1963:167 proposes the meaning 'sulphur' for *dīn*); *ḫayzär*, usually the smallest one, means 'river of milk'; less common are the terms *dūssär* ('river of honey'), *mīzär* ('river of water'), and *sirağo* ('illuminator'). A very small version of K. (named *qandīl*, 'lamp') appears only in the rituals of the *Nabi gār* (a devotional place, lit. 'House of the Prophet', s. Tarsitani in PICES 15, 483) such as the closing of the *Nabi gār* weekly gatherings, or at the climax of the rituals performed during ↗*Ramaḍān*.

Kärabu drums in the *Nabi gār* of *āw* Basor *näggadras*, Harär; photo 2003, courtesy of the author

The rhythmic patterns played on the K. are usually based on the alternation of a higher pitched and a lower pitched sound, the two sounds being generated by the specific pitches of the selected drums, or by hitting alternatively the centre or the periphery of the membrane of a single drum. The most common layout is that of a pair of drums of different sizes, even if it is not unusual to have only one drum or more than two.

K. are tuned by heating the skin with sunlight or fire. During the performance, they are commonly placed on stones or tires that keep them stable with the membrane at a more than 45 degrees angle to the floor, while players sit in front of them.

A type of smaller and flatter K. (40–50 cm diameter, 20–30 cm height), named *āyāč kärabu* ('drum of the mothers'), is played by women when they perform secular and religious songs during wedding celebrations. The number of drums used in these ritual occasions may vary from one upwards, each being held on the player's lap. There developed a form of professionalism among the women playing *āyāč kärabu*: the best singers and K. players are regularly invited to the wedding celebrations with remuneration.

The K. family of kettledrums presents similarities with several other membranophones. The shape of the instruments and the softheaded wooden sticks used for playing show similarities to the ↗*nägarit*; use in religious rites and performance features may reveal connections with *käbäro* and other drums used in secular and religious performances all over the Horn of Africa.

Kärän

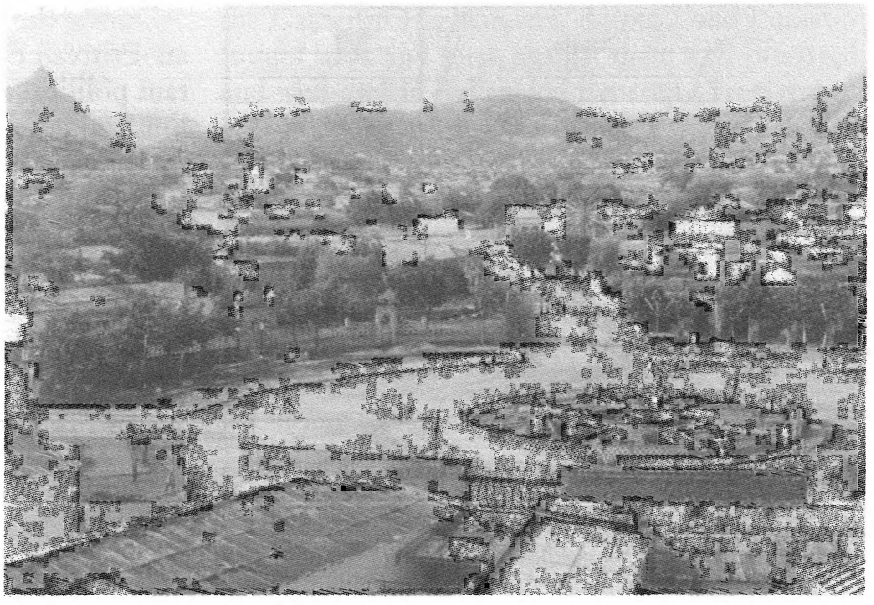
K. (ክረን, Ital. Cheren, 1392 m A.S.L., 15° 46' 40" N, 38° 27' 29" E) is the second largest city in Eritrea. The town witnessed rapid economic development especially during the 1930s under Italian rule. Main routes and the Italian-built railway (now dismantled) connect K. with ↗Asmära, ↗Naqfa and ↗Aqordät. Today the city has approximately 75,000 inhabitants.

K. lies in a plain surrounded by a range of mountains. Situated on an old trade route connecting the Red Sea port of ↗Massawa with the northern extension of the Eritrean highlands and the Sudanese hinterland, it was originally a caravan post and settlement of the sedentary ↗Bilin people, and was visited by nomads and traders of different origins (e.g., Təgre, Beğa, Sudanese Arabs). In the mid-19th cent. it had around 2,000 inhabitants, most of them Bilin.

K. was administered by local notables, who paid tribute to the governor of Ḥamasen, at the same time jealously protecting their autonomy. This was only shattered during the raids of *däğğazmač* ↗Wəbe Ḥaylä Maryam from Təgray in the 1840s. A few years later, Təgre groups from the Egyptian-dominated lowlands raided K. and kidnapped a number of inhabitants to sell them as slaves in the Sudan. British and French protests in Egypt led to their liberation, and K., together with all of ↗Bogos, was subsequently declared a French "protectorate" by the French vice-consul of ↗Massawa. This, however, did not change the tributary relationship of K. to Ḥamasen.

Beginning in the early 1850s, European researchers and travellers visited K. Situated in a border area and having a warm, but temperate climate, the town attracted foreign interest. Werner ↗Munzinger settled there starting from 1854. The K. caravan post and missionary station then served as a base for all the important ↗expeditions in the Eritrean region (e.g., by ↗Heuglin in 1861/62; cp. de Rivoyre 1885; Traub 1889).

K. had been noted for its religious diversity. Originally the population was Christian Orthodox, but with some adherents to Islam. The nearby ancient monastery of ↗Däbrä Sina was



View over Kärän, from the roof of the Kärän Hotel; photo 1993, courtesy of Esther Gallodoro

the main Christian centre in the area; another Christian centre nearby was ↗Ṣäᶜada Ǝmba (the churches of K., however, were deserted). A Catholic mission, led by Giovanni ↗Stella, had been established in K. in the early 1850s (s. Sapeto 1857). K. then became the most important centre of the Vicariate Apostolic of Abyssinia, run by the ↗Lazarists, and a substantial number of people converted to ↗Catholicism. Fot the most part French missionaries ran the mission, in collaboration with local converts, such as the Ethiopian diplomatic envoy and Catholic priest *abba* ↗Ǝmnätu. A Catholic printing press at K. at the time produced a number of Amharic and Təgrəññа religious books (↗Incunabula; ↗Printing).

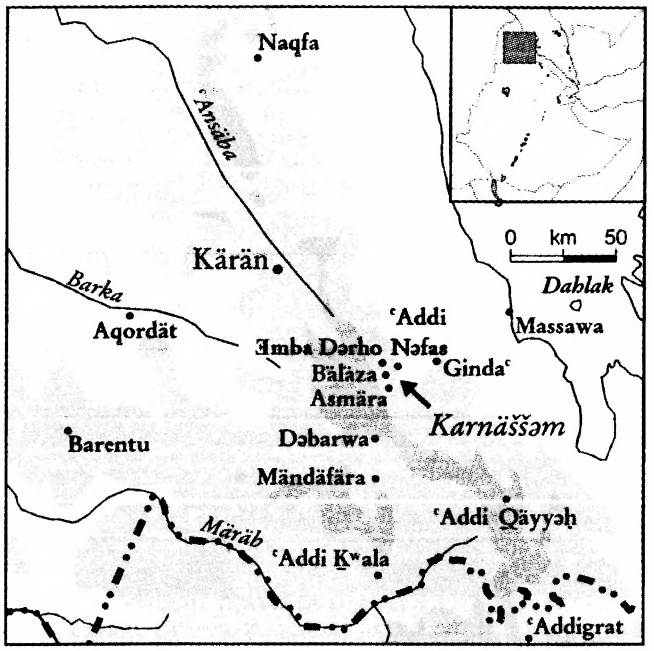
French colonists settled there and cultivated tobacco. In 1868 the humble French settler Gérard René was even appointed governor of Bogos (i.e. a tax collector), based at K., under the authority of the governor of Təgray. The period of French influence, however, only lasted until the demission of the French Vice Consul Munzinger in Massawa in 1871. Egyptian troops, invited by several Bilin leaders, and opposed by others, occupied K. on 2 July 1872. K., together with the whole Bogos-Ḥalḥale area, was included into the Sudanese-Egyptian ↗Massawa Governorate, the realm of Munzinger *bāšā*, now Egyptian governor. He built the fort of Sanaḥīt (Arab., from ↗Sänḥit, the toponym of the K. region) on a central hill in K., today known as Forto (Ital. "forte") or Tigu. The Catholic church of *qəddus* Mikaᵓel (San Michele) is also attributed to Munzinger. Later, his former secretary Franz Hassen *bey* from Hungary, married into an Ethiopian noble family and became the Egyptian governor of K.

During these years, the population of K. was regularly forced to pay taxes to the Ethiopian ruler of the ↗Märäb Məllaš, *ras* ↗Alula Ǝngəda, who regularly raided the area around K. during the period 1879–83, but was unable to expel the Egyptians. They in their turn harboured Alula's local rival *balambaras* Kəflä Iyäsus, son-in-law of *ras* ↗Wäldä Mikaᵓel Sälomon, who himself stayed at K. while claiming the governorship of Ḥamasen. Following the 1884 ↗Hewett Treaty, K., together with the whole Bogos region, was ceded by Egypt to Ethiopia, thus formally ending the ↗Egyptian–Ethiopian war. The period of Ethiopian administration was, however, short. Already in 1888 K. was seized by Italy's new ally *bärämbəras* Kəflä Iyäsus, and then in June 1889 annexed by Italy, which was expanding from the Massawa Protectorate. With the proclamation of the Colonia Eritrea in 1890, K. became the capital of a new colonial administrative province, the Zona di Cheren (later Commissariato Regionale di Cheren, later Sänḥit; ↗Eritrea).

The Friday mosque was built in 1894 with support of the colonial authorities. In 1897 the Lazarists of K. and all of Eritrea were expelled by the Italians and replaced by Italian ↗Capuchins, and K. was integrated into the new Catholic "Prefecture of Erythraea".

In 1938, K. had ca. 9,700 inhabitants (Guida 213). There was a telegraph post, cinema, hotels, a Catholic seminary, schools and administrative buildings. Colonial settlers received large areas around K. as agricultural concessions (esp. for sisal, tobacco, coffee, fruits, vegetables), such as at Maryam Däᶜarit in K. or at nearby ↗ᶜEla Bärᶜəd.

After the decisive battle (↗Kärän, battle of) in early 1941, the Italians retreated from K. and lost control over ↗Africa Orientale Italiana. Italian and British war cemeteries at K. witness the high number of victims. An example of the symbolic importance of K. in British international politics – and an indirect claim for control of the Eritrean region during World War II – was the inclusion of the name K. in the titulature bestowed on



General ↗Wavell ("Viscount Keren of Eritrea and of Winchester") after the battle.

K. is known for its silversmiths and goldsmiths, some of them established at K. since many generations; local craftsmen make jewelry. The population of K. is multilingual (mainly Təgre and Təgrəññña, but many in addition also speak Bilin, Sudanese Arabic as a *lingua franca*, ʿAfar and a few even ↗Hausa). Ethnically K. is dominated by the Təgre, even if historically being the centre of the Bilin. K. as a colonial administrative centre created opportunities for employment not only for Bilin and Təgrəññña speakers, but also for members of different Təgre groups (like the ↗ʿAd Täkles, ↗Mänsaʿ), for whom K. became one of the main administrative centres. Modern Eritrean administration and commerce (including the restaurants and crafttrade) led to a considerable rise in the number of Təgrəññña speakers.

Islam is the dominant religion in K. The Mīrġanī family has its second main centre (after Kassala) in K. (↗Islamic brotherhoods). K. also hosts the important shrine and grave of Abū Bakr al-Mīrġanī. The Təgre group ↗Bet Ǧuk, centred in the ↗ʿAnsäba valley north of K., established an important Muslim centre of learning in K. Many Mänsaʿ of K., however, are still Christians. There are important Orthodox (including Greek Orthodox) and Catholic churches in K. The church Sant'Antonio was founded in 1925 by the Capuchin mission. The chapel of St. Mary built inside an old hollow baobab tree, known as Maryam Däʿarit, is a site of Christian pilgrimage (feast day 29 May) and was consecrated on 18 July 1881.

During the post-war period and the ↗Ethiopian–Eritrean Federation K. was a centre of important political activities. It is there that the ↗Muslim League, a major factor in Eritrean politics of the time, was established in December 1946 by ↗Ibrāhīm Sulṭān ʿAlī from K. In K., elections to the ↗Eritrean Assembly were held by direct vote as in Asmära. During the ↗Eritrean People's Liberation Front's (E.P.L.F.) liberation struggle K. was abandoned by the *Därg* after the five-day-battle of K. of July 1977 and then became the unofficial capital of the E.P.L.F. administration. Following the major offensive of the *Därg* in 1978, K. was inturn abandoned by the E.P.L.F. in November 1978 and a great part of the population fled. It then became a garrison and in 1988 the Ethiopian army's headquarters in the north, until 1991.

In 1995 K. became the capital of the new *zoba* ʿAnsäba, comprising most of the highlands surrounding the ʿAnsäba river. The main neighbourhoods of the city of K. are Laʿli Kärän (Tgn. 'Upper K.'), Gäzabanda ('House of the *banda*' [↗Askari]), Šuq ('Market', this area also being called Taḥti Kärän, Tgn. 'Lower K.'), Däʿarit ('Fig tree'), ʿAd Ḥabab ('Place of the ↗Ḥabab'), Gäza-Wäräqät ('House of the Paper'), Ḥilät Ǧäbärti ('Quarter of the ↗Ǧäbärti'), Ḥilät Sudan ('Sudanese Quarter'), Ḥilät Täkʷarir ('Quarter of the Westafricans' [↗Tukrīr]). K. is crossed by the mostly dry riverbed of a tributary of the ʿAnsäba, often called Šəfšəfit after a dam in K. The sub-region of K. comprises the districts of K. city, Ḥalḥal, Ḥagaz, ʿEla Bärʿəd and Mälbaso.

Kärän, battle of

The battle of K. (3 February–27 March 1941) was the turning point in the allied campaign in East Africa. Sir Archibald Percival ↗Wavell devised a strategy that involved two pincer movements. The southern force, led by General Sir Alan ↗Cunningham, advanced through Italian Somaliland. The northern arm, commanded by Sir William ↗Platt, quickly drove Italian forces out of ↗Kassala and then entered ↗Africa Orientale Italiana through Eritrea. However, the campaign became bogged down as allied forces stalled before the mountain stronghold of K., which is more than 1,300 m A.S.L. and the capital of Sänḥit.

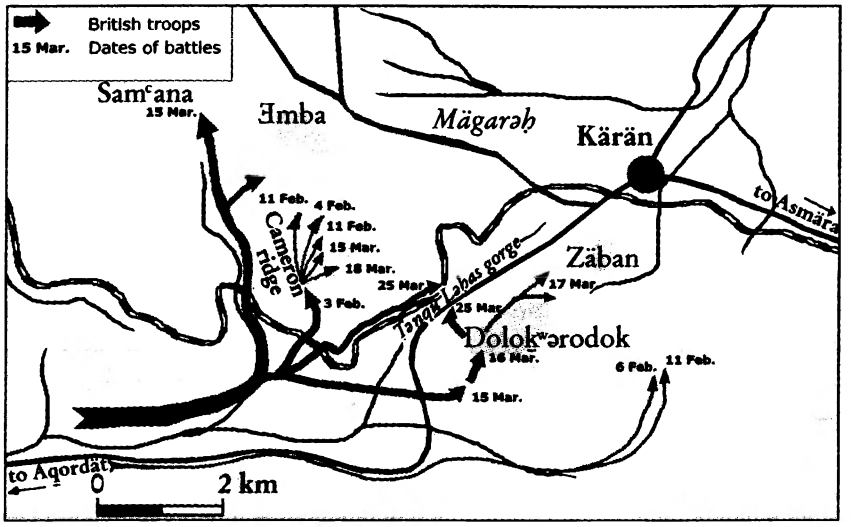
On 1 February 1941, allied forces captured ↗Aqordät, a victory that facilitated the offensive against K. where they had to face 23,000 Italian troops under Generale di Corpo d'Armante Luigi Frusci's command (including the 11th Savoy Grenadiers Regiment; the 1st and 2nd Grenadier Battalions; 3rd Bersaglieri Battalion; XI Brigade; IV Colonial Cavalry Group; CIV Motorized Artillery Group; the 1st Colonel Division's V Brigade and V Artillery Group; as well as an engineering company). In addition to regular battaglioni nazionali, Savoy elite troops, Alpini, Black Shirts (Camicie Nere) and 21 ↗*askari* battalions gathered in K. and fortified the town and fort – after Italian forces, withdrawing from Aqordät had managed to secure the Ṭənqu Ləḥas Gorge (in European publications the "Dongolaas Gorge" or "Keren Pass") just before the British arrived. To halt the British pursuit and win precious hours Ponte Mussolini bridge, crossing the Barka river bed, had been mined and partly destroyed. Thus the campaign proved to be arduous as the Italians occupied the high ground, and their supply lines were not as steep as those used by the allies.

On 2 February 1941, the Gazelle Force – a unit under the command of Colonel Frank W. Massery that had been formed by troops from the Sudan Defence Force's Medium Machine Gun Companies and Skinner's Horse, a troop from the 28th Field Regiment, Royal Artillery – reached the hills around K. Plateau. The following day, the 11th Brigade, commanded by Brigadier Reginald A. Story, attacked north of Ṭənqu Ləḥas Gorge towards Sankil (Ital. "Sanchil"). Over the next three days, the Cameron Highlanders, Rajputs, and Punjabis fought back and forth against their well-prepared and well-dug-in Italian and Eritrean adversaries.

Major General Henry Nole de la Poer Beresford-Peirse, commander of the 4th Indian Division, realized that single brigade attacks had accomplished nothing. He therefore prepared a combined operation battle plan for operations north and south of the Ṭənqu Ləḥas Gorge. On 10 February 1941, the 5th Indian Infantry Brigade, 11th Indian Infantry Brigade, Gazelle Force, and the Cameron Highlanders went into battle. Two days later, Beresford-Peirse terminated operations because of a lack of progress.

For the next month, there were no significant ground operations. However, the Royal Air Force (RAF), operating from the recently captured bases of Aqordät and Barentu, conducted bombing raids over several targets, including K. Italy's Regia Aeronautica retaliated by destroying 13 RAF planes at Aqordät. Shortly thereafter, the RAF dropped propaganda leaflets announcing support for Ethiopian patriotism as well as early Eritrean nationalism that resulted in nearly 600 desertions, a lot of whom were Šäwan or Goğğame levies from the VI and XI brigades. The Italians retaliated by appointing *ras* Śəyyum "*nəguś* of Təgray" and giving him 7,000 rifles to fight the allied forces (Barker 1966:185; however, other sources state that *ras* Śəyyum was given the rank of *mäsfen* and sent 3,000 rifles; Del Boca 1982:468). On 23 February 1941, the Italians launched a minor offensive, commanded by Colonel Siro Persichelli, which drove some Indian troops from their positions.

General Sir William Platt, the increasingly frustrated commander of the East Africa Command (1941–45), started planning for a two division (4th Indian Division and 5th Indian Division) assault against K. He also ordered Brigadier Harold Rawdon Briggs, commander of the 7th Indian Infantry Brigade, to support the operation by attacking from locations along the Red Sea coast. On 15 March 1941, the offensive began with a bombing attack on the Ṭənqu Ləḥas Gorge followed by an artillery barrage. The 4th Indian Division then attacked north of the Ṭənqu Ləḥas Gorge while the 5th Indian Division moved on Dolo$\underline{k}^{w}$ərodok (Ital. "Dologorodoc"). 15 Indian battalions, three English battalions, and two Scottish Battalions also participated in the campaign. After two days of intense fighting, allied forces had managed to occupy only



The British troop movements near Kärän; drawing by Evgenia Sokolinskaia, after Barker 1966 and Ministry of Information 1942

Dolokʷərodok while the rest of the territory in and around K. still remained under control of the Italian troops under the command of General Nicolangelo Carnimeo. Carnimeo, however, lost one of his most capable officers in a counter-attack, when Brigade Commander Orlando Lorenzini was killed by a British grenade splinter in Ṭənqu Ləḥas Gorge.

In support of the British Free French Forces, the "↗Brigade d'Orient", entered northern Ethiopia, partly marching from Tchad, partly sailing from Cameroon via Freetown round the Cape of Good Hope. The latter debarked in Port Sudan, 14 February, and entered northern Eritrea. The Foreign Legion's 13th Half-Brigade, siding with Charles de Gaulle in London in July 1940 after the French defeat by Nazi Germany, carried the entrenched Italian positions at the "Engiahiat"-massif on 1 March, and joined the siege of K. at its Northern Front, 13th March. Among them was company commander Pierre ↗Messmer, later Georges Pompidou's prime minister of France. Commander-in-chief was Raoul Magrin-Vernerey, called Montclar by *nom de guerre*.

On 14 March 1941, the RAF laid the groundwork for another offensive against K. by bombing a train carrying 40 trucks with 30,000 artillery shells. The following morning, the 4th Indian Division occupied the Italian fortress at Samʿana (Ital. "Samanna") and, on 17 March 1941, accepted the surrender of Sankil.

On 20 March the awkward situation of the French Foreign Legion, trapped in rocky and bushy terrain in the North, suffering from Italian shelling, heat and reduced water rations, improved decisively when the 2nd company's Captain Morel found a spring, securing the water supply for the planned offensive and increasing the troops' morale.

On 25 March, allied forces began the final assault against K. by occupying Dolokʷərodok. Two days later, British, Indian and Free French troops entered K. only to discover that the Italians had evacuated the town the previous evening.

Some 40,000 troops had fought at K. The 56-day campaign claimed 536 allied lives and 3,299 wounded while Italian casualties included more than 3,000 killed and 4,500 wounded (there is no record of Eritrean deaths or injuries). Hundreds became prisoners of war. The famous "Devil Commander" and Italian post-war ambassador in Yemen Amedeo Guillet, then Captain of the Cavalleggeri del Monferrato, a mounted local warriors band, was among those who managed to flee.

The allied victory at K. was an important step in the relatively poorly equipped allied campaign in Eritrea and Ethiopia, to open up the way to Asmära, seized by Platt's British, Indian and Sudanese troops (the ↗Gideon Force under the command of Wingate) on 1 April, and Massawa, freed by the Montclar's Legionnaires in a surprise coup on 8 April, before being directly called to Damascus to face French Vichy forces.

Nevertheless, scattered Italian resistance and guerrilla operations continued for a short period of time. However, on 19 May 1941, the Viceroy, Amedeo di ↗Savoia Duke of Aosta, surrendered after the Battle of Ǝmba Alage (↗Ambalage).

Karnäššəm

The Eritrean historical district of K. (**ካርንሻም**, also Karnəššəm, for location s. Kärän) lies in the ↗Ḥamasen region, immediately north of Asmära and south of the Təgre-dominated ↗Saḥəl area; it borders on the historical district of Dämbäzan (s. vol. 5). The historical centres of K., which is one of the most fertile areas of the Eritrean highlands, are ᶜAd(di) Nəfas, Bäläza and ↗Ǝmba Dərho, the main town along the Asmära–Kärän national road. The population of K. consists of Təgrəññaspeakers (sg. Karnäšəmätay, KaneDicT 1598), among whom a small minority in northern K. are Muslims (NadEr 86). K. encompasses 16 villages (Favali – Pateman 2003:23).

Scattered archaeological findings, especially those of Bäläza, reveal the presence of pre-Aksumite, non-Sabaean settlements of the ↗ᶜOna culture in this part of Ḥamasen. According to al-Yaᶜqūbī (ca. 872 A.D.), the ↗Beğa kingdom of Ğārīn (al-↗Yaᶜqūbī: Five Beğa Kingdoms) included a settlement called Ḥalladdağāğ, which could be an Arabic rendering of the place-name Ǝmba Dərho ('mountain of chicken'; CRStor 275, 279).

In 1407, the whole district of K. (*mədrä* Karnəssəm) was given as a *gʷəlt* by *aṣe* ↗Dawit II to the monastery of ↗Däbrä Bizen within a richly endowed land grant, along with Dämbäzan, ↗Ṣänᶜadäglä, ↗Mänsaᶜ among others (CRAxum I, 23; Huntingford 1965:34). In the 16th cent., *aṣe* ↗Ləbnä Dəngəl gave Ǝmba Dərho and Baqla (today in ↗Ḥabab territory) as a *gʷəlt* to a noble man (CRAxum I, 35, II, 41). Local traditions, most probably referring to events from the 16th–17th cent., claim that all the villages of K. were founded by groups coming from ↗Təgray, with one exception: Mäsfənto, a village inhabited by the "sons of Kam". This is the same name as that preserved by tradition for the father of ↗Angäbo who, after killing the dragon ↗Arwe, gave birth to ↗Makədda (KolTrad § 36).

According to their tradition, several Təgre groups seem to have originated from K. In the traditions of the Ḥabab, ᶜAd Nəfas plays an important role as a village founded by the ancestor of the Təgre-speaking ↗Bet Asgäde (Ḥabab, ᶜAd Tämaryam, ᶜAd Täkles) after he abandoned the rest of his family.

In the first half of the 19th cent., K. reached a certain degree of autonomy, as suggested by the title of ↗*käntiba* carried by the leaders of Ǝmba Dərho. A definite impetus to this political situation was given by *däğğazmač* ↗Wəbe Ḫaylä Maryam, *de facto* head of Ḥamasen between 1839 and 1855; following a rebellion of local Ḥamasen chiefs, he submitted K. and other districts in a battle near Guraᶜ, and appointed a local chief his deputy over K. (*wanna* K.; KolTrad § 183).

Again, following an internal rivalry among K. leaders, *aṣe* ↗Tewodros II declared ᶜAd Nəfas *wəsäṭe gʷəlti*, i.e., territory directly depending from the Crown, and thus autonomous from the *käntiba* of Ǝmba Dərho. This situation, which included a special status for Ǝmba Dərho, was also recognized by the Italians much later, within their system of indirect rule. In the geographic reports of Werner ↗Munzinger (MunSt 137), K. appeared as an autonomous district in the 1860s, and were in possession of tributary territories at the coast. During Italian colonization, K. was administratively included into the Ḥamasen district.

The customary ↗law of the K. (**ስርዓት፡ ካርንሻም** *Sərᶜat Karnəššəm*; full text in Zärʾa-Yaᶜəqob Ǝsṭifanos et al. 1990:405–28) highly resembles that of Ḥamasen, the ↗*Ḥəggi Hab Səllus Gärä Ḵəstos*; this reflects both the internal autonomy of the K., and their close connection with the rest of Ḥamasen. The *Sərᶜat Karnəššəm* has been enacted by a local elders' assembly in the village Zagər, seemingly in the early 20th cent., and was first published in Təgrəññä in 1918 (Favali – Pateman 2003:23). It is still used in local tribunals.

During the war against the Ethiopian central government, the K. area suffered particularly, being a border area close to the Saḥəl, which was the stronghold of the ↗Eritrean People's Liberation Front (EPLF). A great percentage of young adults of the K. villages then joined the struggle. K. belonged to the areas at times controlled by the EPLF, and was the stage of land reforms in the 1970s, during which land was redistributed basing on principles of equality.

Karra

K. (ካራ, Amh., lit. 'knife, scimitar', also *Karra haymanot*, 'the Faith of K.') is the denomination of the right wing of the Monophysite doctrine of ↗*Hulätt lədät* (i.e. 'two births [for Christ]') and a group of its adherents (called *karroč̌č̌*, lit. 'Knifists', by its adversaries). The name emerged in the aftermath of the ↗Jesuits' 17th-cent. attempt to introduce ↗Catholicism in Ethiopia, the other two doctrines being ↗*Qəbat* and ↗*Ṣägga* (supported by the "Unctionists" and "Gracists", respectively). The origin of the name K. is unclear, neither is it clear whether the original name was the Amharic word or its Gəʿəz equivalent መጥባሕት (*mäṭbaḥt*). Both terms appear in the literature. It is quite possible that the "Knifists" might have defended their faith with violence.

For the K., Christ, in whom humanity and divinity are united inseparably, is the Son of God by the union of humanity and divinity. He became the Son of God, in his humanity as well, when divinity was united with humanity, just as he, as the Word, has been the Son of God in eternity. The K. maintain that calling any of the persons in the ↗Trinity the "anointer and giver of power to Christ" is tantamount to giving the Son an inferior place in the Trinity. To avoid relating unction to his sonship, they teach that Christ himself is the ointment and the anointer, using the formula በተዋሕዶ፡ ወልድ፡ ዋሕድ (*Bätäwaḥədo wäld waḥəd*, '[Christ is] the Only Son by union').

The K. sources blame Alfonso ↗Mendes for the schism. He is reported to have raised the issue of unction with two of his students, Ewosṭatewos of Sänkʷa Giyorgis and Täklä Haymanot of Ğärr Gäbrəʾel. Mendes first urged them to accept the ↗Christology of one person in two natures. When they rejected this explanation, Mendes tried other approaches. Ultimately, the explanation that Christ has "two births" but that he is Son of God by unction of the Holy Spirit pleased Ewosṭatewos, whereas Täklä Haymanot accepted the explanation that Christ has "three births" (↗*Śost lədät*), the third making him Son by Grace, similar to those who go through the ritual of ↗Baptism. This traditional account of the birth of the schism refutes, unless it was later devised to refute, the idea that the rivalry of the time was not between the followers of the two great saints of Ethiopia, *abunä* ↗Ewosṭatewos and *abunä* ↗Täklä Haymanot, but between the followers of the two heretics who just happened to have the same names.

↗Kəflä Giyorgis and ↗Kidanä Wäld Kəfle, who do not adhere to the K., recognize five subgroups within this doctrine (KWKDic 491f.; Berhanou Abebbé 1986:92ff.). Four call the Holy Spirit ointment and are differentiated by the role they give to the Holy Spirit: (1) it was instrumental for the conception of the Word without the seed of man, (2) it purified from Adam's sin the body that the Word took from St. ↗Mary, (3) it compounded the ointment from different perfume plants with oil, as the high priest of the Old Testament did, and (4) it anointed Christ like other people so that he might be an example for us, and not to benefit him in any way. The fifth, and now dominant, group calls the Son himself both the ointment and the anointer (*wäld qəbʿə*, 'the Son [is] the ointment'), and takes the position *Bätäwaḥədo wäld zäbaḥrəy* ('By union [of divinity with humanity], [Christ is] the natural Son [of God]'). Further on, Kəflä Giyorgis and Kidanä Wäld Kəfle mention *azzaž* Zädəngəl and *abba* Zäkrəstos from Gondär, *abba* Gärima from Təgray, and others from Tämben and Däbrä Damo as originators and defenders of K.

The two champions of Orthodoxy, who succeeded in making the K. teaching the *Täwaḥədo* faith, were *mämhər* Niqolawos of ↗Mändabba and Addam of ↗Däbrä Libanos of Šäwa. The former defended the faith against the Unctionists twice, first against their spokesman ↗Akalä Krəstos of Gondär at a council summoned by *aṣe* Yoḥannəs I (1667–82), and second during the reign of *aṣe* Iyasu I (1682–1706). In 1716, when *aṣe* Dawit III ascended the throne, the Unctionists had their turn. The sources, possibly by K., report that a group of *qəbatoč̌č̌* claimed to the king's mother that her son would live and reign

long if he proclaimed *Qəbat* the official teaching. So he did, and Niqolawos was executed with 44 other teachers who refused to adhere to *Qəbat* (ms. EMML 1710, fols. 15r–20r).

K. represents the extreme right of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), while the *Ṣägga*, who lean toward Catholicism, represent the extreme left (CrumMis 24). The former were based in ↗Təgray, while the latter were based in ↗Šäwa. As much as the question of unction was injected in the life of the EOTC to convince the *liqawənt* of the importance of the Catholic concept, the K. was born in reaction to that concept. Nonetheless, each of the three groups claims that it alone represents the true teaching of the Alexandrian faith; each has, at one point or another, been the official teaching.

Today, the teaching of the EOTC, especially since the 19th-cent. Metropolitan *abba* ↗Sälama, is that of K., though the term itself has fallen out of use. The controversy settled at the ↗Boru Meda council in 1878 is understood as a controversy between the followers of the *Hulätt lədät* and *Śost lədät*, whereas in fact it was between the K., who worshipped the Blessed Virgin with Christ, and the *Ṣägga*, and the declared winners were those who taught that Christ is God in his humanity as well (GSMen 90ff.). They succeeded in making the teaching of K. (or *Hulätt lədät*) the official faith of the church and country.

Kaśa Golğa

Däğğazmač K.G. (ካሣ ፡ጎልጓ, also Kasa Gurğa, "horse name" Abba Käysi; d. after 1882) was a pretender to the throne in the early 1870s in competition with the later *aṣe* ↗Yoḥannəs IV.

K.G. descended from a wealthy and influential Təgrayan family from the line of *šum ʿagame* ↗Kəflä Waḥəd and the Solomonid princess Krəstosawit. At a young age K.G. joined the army of *aṣe* ↗Tewodros II. When in the mid-1860s Tewodros lost control over Təgray, *balambaras* Kaśa Mərṣa (the future Yoḥannəs IV) took the lead and started to distribute local governorships to his followers and his early ally K.G. received in 1868 the *gʷəlti* of ↗Ǝntiṭṭo province. There K.G. continued the potato farming project started by his predecessor, the German settler Wilhelm ↗Schimper. He also kidnapped and married Schimper's daughter Ṣäḥaytu from ʿAdwa, widow of the missionary ↗Kienzlen, who was herself of noble descent through her mother (a relative of *däğğazmač* ↗Wəbe Ḫaylä Maryam).

In about 1869 ca. *däğğazmač* Kaśa Mərṣa, who by then was openly claiming the Ethiopian throne, additionally offered K.G. the governorship of Akkälä Guzay, which K.G. refused, saying that he himself was of a more direct Solomonic descent and therefore should succeed to the Ethiopian throne himself. Referring to the prophecy that "Kaśa will reign after Kaśa" (i.e. Tewodros), K.G. assembled numerous followers to fight for his claim. At times, K.G. controlled most of the ↗ʿAdwa region and ↗Ḫamasen, while Kaśa Mərṣa could rely on eastern ↗Təgray only. K.G. is still remembered in local oral tradition as a "strong and fearless hero". His main stronghold area was then the border region of Ḫalḥale Bogos (↗Ḫalḥal; ↗Bilin) north of Ḫamasen (s. BTafY 118f.). By a second marriage, to Ṭərru, daughter of *däğğazmač* ↗Ḫaylu Täwäldä Mädḫən (s. KolTrad II, 165), K.G. strengthened his links to Ḫamasen and assumed formal governorship over that province in early 1871.

However, on 9 December 1871 Kaśa Mərṣa's army attacked K.G. at ↗Däbrä Sina, near Kärän, with a great force, won the battle, and destroyed most of K.G.'s followers. Kaśa Mərṣa was crowned *nəguśä nägäśt* Yoḥannəs IV shortly thereafter in Aksum. K.G. had to retreat to the ↗Märäb valley area. After a second battle, probably a year later, Yoḥannəs caught and tortured Ṣäḥaytu (s. Rohlfs 1883:326f.), but K.G. escaped again and sought protection under ↗Munzinger *bey* in Egyptian territory. In 1875, K.G., allied himself to the rebellious Ḫamasen governor *raʾsi* ↗Wäldä Mikaʾel Sälomon and sided with the Egyptians in

the ↗Egyptian–Ethiopian war. At the battle of ↗Gura^{c} in March 1876 K.G. was finally caught and blinded by order of *aṣe* Yoḥannəs IV.

K.G. then retreated to Amba Gälila near ^{c}Adwa, an area which he had raided many times before, now receiving shelter from the local peasants. Later K.G. is said to have lived near ^{c}Addigrat (Rohlfs 1883:327) and to have received income from his rich possessions. He had many children by several wives.

Wolbert Smidt

Kaśa Ḫaylu

Lə^{c}ul ras K.Ḫ. "of Darge" (ካሣ፡ ኃይሉ፡ ዘዳርጌ, *K.Ḫ. zädarge*; b. 12 November 1880, Ḫəruy Giyorgis, district of Farṭa, Bägemdər, d. 19 November 1956, Mitäk Amanu^{ə}el) was an Ethiopian statesman, field marshal and writer. The most eminent of the Ethiopian Lords in the period of *aṣe* ↗Ḫaylä Śəllase I, K.Ḫ. was the premier prince of the realm preceded in protocol only by the Emperor. Generally, it was considered that his title to the throne was at least as good as *aṣe* Ḫaylä Śəllase's, descending from the Solomonic lines of Gondär, Šäwa and Lasta Lalibäla (↗Solomonic dynasty).

His father was *däǧǧazmač* Ḫaylu Wäldä Kiros of Lasta, a brother of *aṣe* ↗Täklä Giyorgis (r. 1868–72), and his mother was *wäyzäro* Təssäme Darge, a granddaughter of *nəguś* ↗Śahlä Śəllase of Šäwa. His early childhood was spent in his father's fiefdom in Däbrä Tabor, until he was sent to Lasta at the age of eight to study Amharic and Gə^{c}əz under the auspices of *däǧǧazmač* Wäldä Kiros, his paternal grandfather. Thereafter he went to Šənkurt in the province of Sälale, where he was to receive the traditional military training for young aristocrats and learn courtly manners in the estate of his maternal grandfather, *ras* ↗Darge Śahlä Śəllase. He accompanied his grandfather on various military campaigns, including the battle of ↗Arsi in 1885 A.M. [1892/93 A.D.]. After a few years under his tutelage, *ras* Darge presented his grandson to *aṣe* Mənilək II, where he was to serve as a page and junior officer. K.Ḫ. accompanied the Emperor at the battles of: Z^{w}ay (1886 A.M. = 1893/94 A.D.); Wälamo (1887 A.M. = 1894/95 A.D.) and ^{c}Adwa (1896 A.D.). At the age of 24, Mənilək appointed him governor of the district of Loya in the province of Däbrä Bərhan. In 1895 A.M. [1902/03 A.D.] he married Lə^{c}əlt Ṣəge Bäšäh, a daughter of the *balabbat* of Wagda, *däǧǧazmač* Bäšäh Biṭa and his wife *wäyzäro* Śəläši Kätämma, daughter of the *balabbat* of Adisge. In 1900, he also became the *gäbäz* of ↗Däbrä Libanos, in succession of his grandfather, *ras* Darge. His son, *lə^{c}ul ras* ↗Aśrate, succeeded him in this post in 1957.

In 1897 A.M. [1904/05 A.D.] K.Ḫ. was transferred to the province of Sälale as *məsläne*, becoming its Governor in 1902 A.M. [1909/10 A.D.], receiving the title of *däǧǧazmač*. In this capacity, he led the Ethiopian delegation to the coronation of King George V of Great Britain in 1911. He visited Egypt, Palestine and various European countries during this trip. On his return, the province of Lasta was added to his administration. In 1906 A.M. [1913/14 A.D.] he was created a *ras* and the provinces of Ǝnsaro, Märhabete, Dära, Mida and Boorana were added to his governorship.

In 1916, when *ləǧ* Iyasu was deposed from the throne (↗Coup d'état, 1916), K.Ḫ. was one of the three candidates presented to the council of nobles with the best claim to the crown. However, they decided in favour of his cousin *ras* Täfäri, whose closest friend and most trusted advisor he was to remain until the end of his life, despite this competition. In the same year, K.Ḫ. partook in the battle of ↗Sägäle against *nəguś* Mika^{ə}el of Wällo as a divisional commander, capturing *ras* Yazäw, one of the commanders of the Wällo army. After the defeat of *nəguś* Mika^{ə}el and the subsequent capture of his son *ləǧ* Iyasu, the Minister of War and the most influential politician in Ethiopia at that time, *fitawrari* ↗Habtä Giyorgis Dinagde, entrusted the deposed ruler to K.Ḫ., where he was to be held prisoner in his fiefdom of ↗Fəčče. K.Ḫ. dealt with his royal prisoner, who was also his cousin, most respectfully, until he escaped in May 1932.

During the coming five years, the provinces of Wällo, Gəndäbärät, Bägemdər, half of Yäǧǧu, Sayənt and Wadla and Dälanta were added to

K.Ḫ.'s administration, making him the most powerful politician in the Empire. In 1929 he was given the title of *ləʿul ras* (cp. ↗*Ləʿul*) and was appointed Field Marshal (Amh. *marešal*) in 1934. When Fascist Italy invaded Ethiopia in 1935, K.Ḫ. became Supreme Commander of the Northern Front. He fought against Marshal Pietro ↗Badoglio at Tämben and ↗Amba Aradom, but was defeated by the advanced technology and the use of mustard gas sprayed on his troops by the Italian Air Force. After the defeat of the combined Ethiopian Armies at ↗May Čäw on 31 March 1936, K.Ḫ. was influential in persuading Ḫaylä Śəllase to leave the country and present Ethiopia's case at the League of Nations, sharing the five years of exile with him in England. During the liberation campaign in 1941, K.Ḫ. was responsible for routing the Italian units stationed from Fəčče to Addis Abäba, entering the capital with the Emperor on 5 May 1941. During the later part of May 1941, K.Ḫ. was engaged in pursuing Colonel Saverio Maraventano's division, who were still holding out in Dära and Boorana. Together with a British brigade under the command of Brigadier Orde ↗Wingate, a joint victory was gained after a three-day fight at Čiqäta and Wägdi and Maraventano surrendered. The Italian troops in captivity were paraded in front of the Emperor in Fəčče in June 1941.

Kaśa Ḫaylu; photo courtesy of the author

In 1944 he accompanied Ḫaylä Śəllase to Suez, when he held talks with President Franklin Delano Roosevelt, which led to the U.S. military and civilian engagements in Ethiopia during the coming years. After the establishment of Ethiopian independence, K.Ḫ. served as the President of the Imperial ↗Crown Council. His body laid in state at the ↗Qəddəst Śəllase Cathedral in Addis Abäba and his funeral was held with full military honours befitting a field marshal. His bodily remains were finally buried underneath the crypt of the Church of Our Saviour in Čagäl, which was built by him, and three days of national mourning were declared. K. was ordained a priest in his youth and was considered an important ally of the Ethiopian Orthodox Church. He wrote over a dozen books on various spiritual subjects, two of which were published after his death.

Asfa-Wossen Asserate

Kaśa Ḫaylu ↗Tewodros II

Kaśa Ḫaylu ↗Yoḥannəs IV

Kaśa Wäldä Maryam

Däğğazmač K. (ካሣ፡ ወልደ፡ ማርያም, b. 1931 [16 Mäggabit 1924 A.M.], Belta, Gamo Gofa, d. 1978, Addis Abäba) was one of the most prominent foreign-educated Ethiopian civil servants of the post-Liberation period. He was the son of *däğğazmač* Wäldä Maryam Oodaa, an Oromo of south-western ↗Wälläga, who had fought against the Italians at ↗May Čäw, and later as an *arbäñña* (↗Patriots) before going into exile in ↗Kenya in 1937. One of his grandfathers was ↗Ğootee Tulluu.

K. attended the Lycée Guebre-Mariam and the General Wingate Secondary School, both in Addis Abäba, before taking a Bachelor's degree in International Law from Canada and a Master's degree in Public Administration at the Univer-

sity of Washington in Seattle. On returning to Ethiopia in 1958 he spent three years as assistant, and later head, of *aṣe* Ḫaylä Śəllase's Special Secretariat, and married the Emperor's granddaughter Princess Säblä Wängel Dästa.

In 1961 K. became the first Ethiopian President of Ḫaylä Śəllase I University (↗Addis Ababa University). He played a major role in establishing that body, and in seeking its external funding, as well as in founding its constituent departments. These included the ↗Institute of Ethiopian Studies, as well as the Faculties of Medicine, Law, and Business Administration, the Building College, the Kennedy Library, the Creative Art Centre, the Bäʾədä Maryam Laboratory School and the College of Medicine in Gondär. He also did much to establish the Ethiopian University Service, in which students devoted a year of service before taking their degrees, and was active in establishing the Association of African Universities. Despite K.'s devotion to University matters, student activists sometimes attacked him on account of his close relationship to the Imperial Family.

In 1968, K. was appointed Governor of his home province of Wällaga, with the rank of *däğğazmač*, and was much involved in road-building, public works, and allocating land to the landless. In 1973, he was appointed Minister of Agriculture, and travelled abroad seeking aid for the Wällo famine.

K. was abroad during the early days of the 1974 ↗Revolution. Rejecting advice from his friends, he returned to Ethiopia, and was promptly arrested. During his ensuing imprisonment he taught English to fellow prisoners, helped in clothes-washing for the disabled, and produced a Biblical Concordance in Amharic, Oromiffa, and English. Called out of prison in July 1978, he was executed without trial (Taffara Degueffe 2003:400).

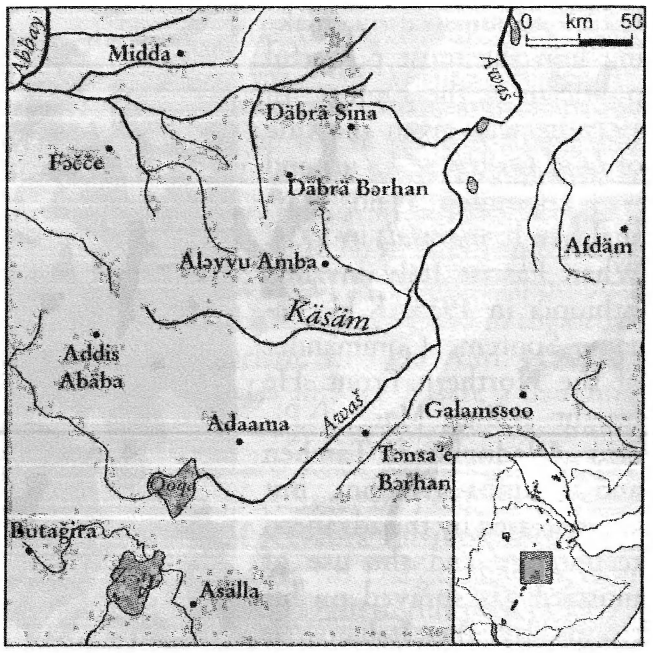
Richard Pankhurst

Käsäm

The K. (ከሰም) river, which is set in a deep gorge and was impossible to cross during the rainy season, is a major tributary of the northern ↗Awaš river. The K. begins with the name Gärmäma river and has its source 30 km north-east of Addis Abäba. The K. then runs in a north-westerly direction to the south and west of historic ↗Šäwa, which it separated from ↗Fäṭägär and other the Muslim-inhabited territories to the south and east (TadTChurch 65, 133).



Situated 60 km south-west of the old Šäwan capital of Ankobär (and 80 km to 150 km west of Addis Abäba) the K. was an important landmark in Ethiopian historical geography. The river was doubtless familiar to *aṣe* ↗ʿAmdä Ṣəyon, who was born nearby, as well as to all the kings of Šäwa, who, however, never established themselves beyond it; and was also known to Saint ↗Täklä Haymanot, who preached in its vicinity (HuntGeogr 103, 108), and to *aṣe* ↗Susənyos, who established a camp nearby (PerChron vol. 2, 17). Near the river stands a mountain of the same name, which was occupied by the armies of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (BassHist 97 [tr.]).

Käśate Bərhan Täsämma ↗Täsämma Habtä Mikaʾel

Käskäse

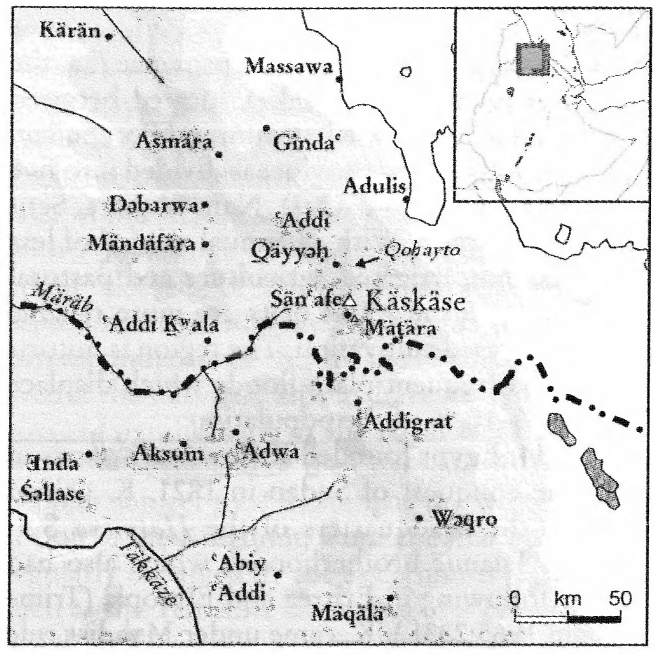
K. (ከስከሴ) is a locality in Akkälä Guzay, ca. 5 km north of ↗Sänʿafe (Eritrea; 39° 25' 50" E, 14° 44' 90" N). It is one of the most important sites of the so-called ↗pre-Aksumite period in the northern Horn of Africa. No systematic archaeological investigation has been so far conducted at this site. The site was described by ↗Conti Rossini

at the end of the 19th cent. and then by ↗Dainelli and ↗Marinelli in 1905. In 1906 the ↗Deutsche-Aksum Expedition led by ↗Littmann surveyed the site and provided a more careful description of its ancient ruins. K. was again visited in the 1960s by Francis Anfray, who collected some potsherds, and in the early 1970s by the Italian amateurs Bernardino Trucca and Giuseppe Tringali, who recorded an ancient graveyard and excavated a tomb at a few hundred meters to the west of the main site. Recently, in 1995, K. was visited by Andrea Manzo, who outlined its general topography and state of preservation, and in 2005 by Jean-François Breton and Rodolfo Fattovich.

K. is located in a plain at the base of Amba Täriqa, close to a valley descending to the Gulf of Zula in the region of ↗Adulis, and consists of a large mound with evidence of collapsed walls, four broken pillars on the ground in front of the mound, and some fragments of another two pillars on the top of an outcrop at about 200 m to the north of the mound (cp. Fiaccadori 2004:129). A concentration of pottery with some fragments of architectural decoration in South Arabian style is visible on the surface to the north of the main group of pillars. The aforesaid graveyard, along the road to Sänᶜafe, was partly destroyed by the construction of this road. No pottery is visible on the surface in the area, but some ancient graves are apparently marked with concentrations of pebbles and white quartz flakes.

The pillars are monoliths, ca. 7–9 m high, with a quadrangular cross-section, but in two cases with a rounded smooth side and a hole at the top (and/or bottom). These monoliths, though reminiscent of the typical pillars used in South Arabian monumental buildings, are different in style and were probably erected on the ground which suggests that they originally formed an

The Käskäse site in 1906; from DAE I, 24



alignment of ↗stelae. Only one pillar from the main group has been preserved in full length. The ceramics from the surface include possibly pre-Aksumite orange ware.

On the two northern monoliths two short texts are engraved in ↗Epigraphic South Arabian (Sabaean) script with the names of two kings of ↗DᶜMT, WᶜRN ḤYWT and RDᵓM respectively (RIÉ nos. 11 and 12), which also occur in inscriptions from other pre-Aksumite sites of Təgray.

The excavated tomb to the west of the site was quite a rich pit-grave, and contained undecorated and decorated vessels in orange ware, light or dark red ware, black-topped ware, and black ware, including a frankincense burner, as well as copper/bronze artifacts and personal ornaments such as stone, bronze and glass beads.

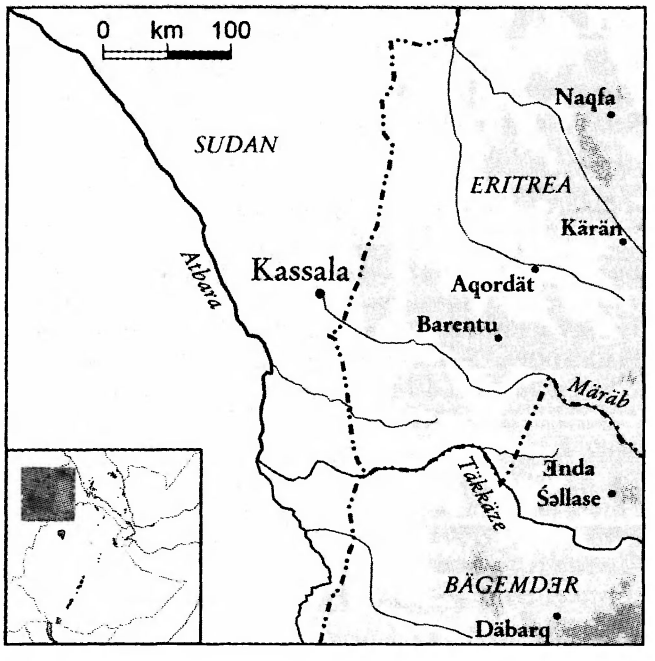
Rodolfo Fattovich

Kassala

K. is the name of a town and a province (i.e. the historical province of ↗Taka), located between the Sudanese capital ↗Khartoum and Port Sudan. Administratively, K. province is divided into five regions: K., al-Gaš (al-Qaš), Nahr ᶜAṭbara, Setit and Hamškūrayb. With an annual rainfall of less than 300 mm, irrigated agriculture and pastoral production in the ↗Gaš delta are more reliable than rain-based cultivation. The region is notorious for its frequent plain floods which displace between 6–10 % of the population.

In 1834, Egypt founded K. town as a garrison after the conquest of Sudan in 1821. K. gained fame as the headquarters of the *Ḫatmīya* Sufi order (↗Islamic brotherhoods), which also had a large following in Eritrea and Ethiopia (Trimingham 1965:233f.). K. came under Mahdist rule from 1885 to 1894 (Hollis 1941). During the period of Turkish-Egyptian rule (1840–97) horticultural production was introduced in the fertile lands near the ↗Gaš and ↗Barka rivers, and the British introduced cotton (The Kassala Cotton Company, part of Sudan Plantations Syndicate, Daly 1991:98).

When the Mahdīya state was established, the Egyptian garrison of K. was encircled by the ↗Mahdist forces (Daly — Holt 1979:30). Following the 1884-↗Hewett treaty, the Ethiopians, led by *ras* ↗Alula Ǝngəda, tried to rescue the Egyptians. Though Alula managed to defeat the Mahdists in the battle of ↗Kufit, he was unable to penetrate K. and free the Egyptians, who in 1886 finally surrendered to the Mahdists under ᶜUṯmān Diqna (Erlich 1996:100f.).



On 17 July 1894 the Italians annexed K. to Eritrea. They fortified K. and pacified the ↗Beğa, the dominant population of the territory. However, the defeat of Italy in the battle of ↗ᶜAdwa (1896) also changed its fortunes. Italy was soon to evacuate K. after failing to hold it until the advancing Anglo-Egyptian troops were able to re-occupy and annex it to the Anglo-Egyptian Sudan (Hollis 1941:39).

In the early 1900s a railway was constructed linking K. first with the Red Sea port of Port Sudan – constructed in 1906 to replace ↗Sawākin – and then with ↗Sinnār (1929) on the southern frontiers of the Gezira Cotton Scheme (Daly 1991; Daly – Holt 1979:140).

When the Anglo-Egyptian forces re-occupied the Sudan, they developed K. into a vibrant trading centre serving the Ethiopian hinterlands. Italy re-occupied K. for a short period during World War II. This time the British, fighting under the banner of the Allied Forces, expelled them. In the struggle over Ethiopia's trusteeship over Eritrea and the formation of the Eritrean liberation fronts that launched a war of independence against Ethiopia, K. became the headquarters for numerous independence organizations (Pool 2001:36ff.).

The presence of a centre of the *Ḫatmīya* in K. today is due to the activity of *šayḫ* Ḥasan al-Mīrġanī, the son of *sayyid* Muḥammad ᶜUṯmān al-Mīrġanī, the founder of the *Ḫatmīya* order and of the Democratic Unionist Party (DUP). In 2003, the population of K. town was estimated at 530,950 inhabitants. It is ethnically diverse and includes various peoples: ↗Beğa, ↗Beni ᶜAmər, Amarar, Bišārīn, ↗Rašāʾida and Halanga, and large immigrant communities from northern and western Sudan such as the ↗Fellata and Nuba. Between 1988 and 1993, there were over 700,000 registered Ethiopian and Eritrean refugees living in K., Qadarif, or in large refugee camps (El-Bagir 1984; Kuhlman 1994) located throughout K. province (now K. State). It is estimated that the 1998–2000 Ethiopian–Eritrean war displaced 110,000 Eritreans, mainly from the border towns of ↗Barentu, ↗Täsänäy and Šəllalo, which were overrun by the Ethiopian army. A large number of them settled in refugee camps around K. (Jaquin-Berdal – Plaut 2004).

Today, K. is a vibrant modern town, with a small industrial complex and airport, and is linked to Port-Sudan via the Khartoum highway (for more recent developments s. Post 1989). Its connections with Eritrea and Ethiopia as a major

commercial and trading hub have also survived the conflict between the three countries.

M. A. Mohamed Salih

Kasu

The inscription DAE 11 = RIÉ 189 by the 4th-cent. Aksumite king ↗ʿEzana reports a military campaign against the ↗Noba (to be identified with the ancestors of the modern Nuba of Sudan) and the K. (ከሱ) living "at the confluence of the rivers Täkkäze and Seda" (lines 28f.), i.e. the ↗Atbära and the ↗Nile. There, "up along the Seda", the K. had "cities with walls of stone and straw, the names of which are Alwa and Däro" (lines 31f.). The former name recalls ʿAlwa or ʿAlwā of the Arabic sources, a designation of both the town also known as Soba (↗Soba Noba in Gəʿəz sources), at the confluence of the ↗Abbay and the Nile, and of the entire Christian Kingdom (Alodia) of which it was the capital. Apparently the Noba and the K. had been in conflict prior to ʿEzana's campaign: "the cities of the K. with walls of stone, which the Noba had taken, were first Täbito and then Fərtoti" (lines 36f.).

K. appears regularly in ʿEzana's royal title (*DAE* 9 = *RIÉ* 187.3, *DAE* 10 = *RIÉ* 188.4, *DAE* 11 = *RIÉ* 189.4), spelled in consonantal script as ከሰ (*DAE* 6 = *RIÉ* 185[I].2, *DAE* 7 = *RIÉ* 185[II].1, *RIÉ* 185*bis*[II].2), KSW (*RIÉ* 185*bis*[I].3) or ከሠ (*DAE* 8 = *RIÉ* 186.4). The Greek inscriptions show the adaptation ΚΑΣΟΥ (*DAE* 4 = *RIÉ* 270.5, *RIÉ* 270*bis* = *FHN* 298.4) and ΧΑΣΩ (*RIÉ* 271 = *FHN* 299.8). After ʿEzana's reign, K. (ከሰ) is mentioned constantly in the royal titles of kings ↗Kaleb (*RIÉ* 191.10) and ↗WʿZB (*RIÉ* 192.6).

On the basis of the location of K. at the confluence of the Atbara and the Nile, its identification with ↗Meroë, or at least with some important ethnic element of this state, is commonly accepted amongst scholars, as well as the implicit correspondence of K. to the Biblical ↗Kush, even if the phonetic aspects have never been discussed. Significantly, in the royal titles K. is always put at the end of the catalogue of lands and peoples subject to ↗Aksum, as the westernmost region of the Kingdom, while the first position is regularly occupied by the easternmost territories, such as the Yemenite territories of ↗Ḥimyar and Raydān. According to this reconstruction, coincidencing with the 4th-cent. Aksumite expansion, K. entered Gəʿəz vocabulary as a designation for Meroë, while the Greek name ↗Aithiopía – used by classical authors for the whole of ↗Nubia (the Biblical Kush) – was considered as a synonym of ↗Ḥabašāt, refering to the highlands dominated by Aksum (as is clearly shown by the inscriptions *DAE* 4 = *RIÉ* 270.2–3, *DAE* 6 = *RIÉ* 185[I].1 and *DAE* 7 = *RIÉ* 185[II].1). The writing ΧΑΣΩ, occurring once (*RIÉ* 271 = *FHN* 299.8), can be explained as a confusion with the name of different people, such as the Ḫasa of Eritrea mentioned in *DAE* 11 = *RIÉ* 189.9 (cp. ↗Hazo).

Gianfrancesco Lusini

Kätäma

Kätäma as royal military camp

K. (ከተማ), originally meaning 'extremity, top, summit', became the common designation for

the Ethiopian royal itinerant military camp. Gəᶜəz ሀገር (*hagär*) or መዲና (*mädina*, a loanword from Arabic *madīna*, 'town, city') were both used to refer to a town, but their usage was arguably limited by the low degree of ↗urbanization and, with a few exceptions, the virtual absence of proper urban centres in Ethiopia until the ↗Gondärine kingdom.

The term K. with the meaning 'summit' appears already in the Gəᶜəz ↗Bible (e.g., Gen 17:11, 47:31). As a term designating the itinerant military (royal) camp, it was in use at least from the 16th cent. However, in historical texts, the camp is frequently called ትዕይንት (*təᶜəyyənt*, s., e.g., MarAmdS). Among the other terms applied to it are: ቤተ፡ መክረም ([*betä*] *mäkräm*, lit. 'home of the rainy season'), or ቤተ፡ ንጉሥ (*betä nəguś*), or ሰፈር/ስፍራ (*säfär/səfra*), the precise meaning of these terms (e.g., the exact difference between K. and *təᶜəyyənt*) not always being clear.

The historical phenomenon of royal military camps functioning as wandering courts and capitals has parallels in other cultural traditions (Horvath 1969:205f.); yet in Ethiopia, owing to the specific conditions of the region, K. remained an important element of political and social organization of the state for many centuries and became a distinctive cultural feature.

It is assumed that the K. acquired importance following the transformation of Ethiopian polity after the decline of the Aksumite empire (↗Aksum), when the political centre of the state moved southward, losing its urban character and acquiring new organizational features. The model of the mobile royal military camp, or K., was probably fully developed by the 15th cent. (cp. Horvath 1969:207). With the expansion of the Solomonic state, and in the absence of a properly developed administrative apparatus, the monarch's personal presence was crucial for controlling and defending such a vast territory. To this end, the court had to be mobile and the monarch had to have at his disposal substantial contingents of reliable military force (cp. ↗Army).

The military role of the K. was important, but not the only one, since it was also the political centre of the state and as such the ultimate destination of foreign envoys and ambassadors. The K. was the site of the royal court of justice (cp. ↗*Čəlot*). There, regular tribute, gifts, booty, etc. were collected and redistributed among the emperor's vassals. At the K., representatives of peripheral regions and different ethnic groups met and were assimilated into "Ethiopian culture". The main language of communication in the K. was ↗Amharic, elevated to the position of a de facto *lingua franca* of the state. The court housed several churches, the royal church being served by a group of influential elite ecclesiastics called ካህናተ፡ ድብተራ (*kahnatä däbtära*, lit. 'the priests of the [the royal] tent'). The K. was frequently visited by monastic leaders from different regions. Learned and literate clergymen recruited from the Empire's churches and monasteries were attached to the K. and employed in different tasks. It could also occasionally be the dwelling place of the metropolitan (↗*Paṗpas*). Finally, the life of the K. revolved around an elaborate system of court rituals, focussed on the sacred personality of the monarch.

The population of the K. was not stable. In the absence of any emergency situation, it would dwindle during the rainy season. The soldiers of royal regiments and vassals with their retainers were allowed to return to their home regions, and the emperor would spend the rainy season with his family members served by the "minor court", with minimal wandering. During the dry season, the population would drastically increase: the subjects of the monarch gathered in preparation for the regular trips across the country for collecting tribute or mounting military campaigns (the former being sometimes very similar to the latter). When the population increased, the K. could not stay in one place for long, because of the quick depletion of resources (food, grass, water, wood etc.) and the danger of ↗epidemics. The choice of a new location required careful consideration and counsel, and the presence of the K. was a heavy burden for local population, more often imposed by force.

In the course of Ethiopian history, there were periods of general stability and stronger royal power, which allowed the emperor to travel less and to stay a number of years in one and the same region, preferably near a sanctuary, which would be constructed on such occasion (cp. the famous ↗Däbrä Bərhan period of *aṣe* ↗Zärᵓa Yaᶜəqob). Remaining in one place for a longer period, the K. could also form a "quasi-urban" settlement (cp. a *mädina* – in fact, a K. – with a "tower" that *aṣe* Gälawdewos built in ↗Wäğ, during a peaceful period of his reign, s. ConzGal 46f.; s. also TadTChurch 274 n. 3). In the 16th–17th cent., stone mansions for the emperor were sometimes built at such places (cp. ↗Gubaᵓe; ↗Dänqäz).

Still, the K. usually lacked a properly urban character, having no permanent population, and being neither a centre of handicrafts, nor necessarily of trade. After the monarch and his court had moved, virtually no traces of a K. were left behind. Despite its dimensions, the K. was flexible. If the situation required, the emperor could detach parts of his army or entourage for special tasks; he frequently left the K. and quickly marched forward with his core troops, to return to the K. later – at the same or another place. However, accompanied as they were by huge entourages, the large 16th–17th cent. royal K. were vulnerable, especially in territories beyond the emperors' control, and easy prey for more mobile enemies (cp. ↗Oromo).

European travellers to Ethiopia were impressed by royal K. which could have a diameter of several kilometres and thousands of tents. The K.'s basic structure was strictly prescribed: in passages of the ↗*Śərᶜatä mängəśt* that might go back to 14th cent. and refer to a more ancient practice, the structure of the K., the ritual procedures for assembling and dismantling the camp, and different features of the K. within "national" and "foreign" (i.e. enemy's) grounds are described (Varenbergh 1915–16, §§ 21–24).

The camp construction began with the planting of the royal standard, marking the centre of the emperor's compound, usually on the highest point of the vicinity. Subsequently, the surveyors determined the sites of the tents around it.

The traditional organization of the royal K. followed a characteristic pattern: it was circular and concentric, around two perpendicular axes often oriented to the cardinal points, the main axis being east-west. In the centre, or the inner circle, screened by curtains (*mägaräğa*) or a fence (ጌገል, *ğägʷäl*), were the emperor's quarters. The inner circle also housed the royal chapel(s) and clergy, the royal kitchen and some other services for the emperor alone. The inner circle had 13 gates (one being the main gate), each meant for different groups of dignitaries and called by a special name. The gates were watched by numerous royal guards; the inner circle could be entered by special pages and a very limited number of dignitaries, courtiers and members of the royal family (some of them, upon special permission, could also camp within the inner circle).

Another row of curtains delimited the second, or outer circle. This space accommodated the compounds of the royal spouses (*gra bäᶜaltiḥat*, *qäññ bäᶜaltiḥat*, and *bäᶜaltä šəhna*; s. ↗*Bäᶜaltiḥat*), the queen mother and princes and princesses. Tents of high-ranking courtiers and officials (such as ↗*bitwäddäd*) and ecclesiastics (such as the ↗*ᶜaqqabe säᶜat* or the metropolitan) were located there as well. The two queens – *gra bäᶜaltiḥat* and *qäññ bäᶜaltiḥat* – defined the division of the royal camp into left and right, respectively. All the court and state dignitaries were divided into dignitaries of the left and right; the centre was symbolically indivisible and occupied by the emperor. The outer circle had the same number of gates as the inner one, and was also strictly guarded. Owing to the structure of the core of the K., the emperor's exact whereabouts were known to a very limited number of people, which made any attempt on his life very difficult, with conventional weapons or ↗magic. In view of the frequent periods of political instability and mutiny, the constant concern of the emperors in the K. was security, mostly depending upon the loyalty of pages, guards and courtiers.

The space outside the circles was occupied by the tents of vassals and their retainers and families. There were also such institutions as prisons, market places and churches. A long tent, called *säqäla*, stood in the middle of a vast open space nearby, functioning as a place for administering justice. The emperors kept with them ↗lions, the symbols of the ↗Solomonic dynasty.

Apart from the royal centre, there were secondary camps organized around the compounds of the respective chiefs (according to the disposition of the troops on march or in battle; s. ↗Warfare): the vanguard led by a ↗*fitawrari*, the central part led by a *däğğazmač*, left and right wings led by *grazmač* and *qäññazmač* respectively (↗*Azmač*), and the rearguard led by a ↗*däğän*. Royal officials moved within the K., transferring orders.

The population of a royal K. could reach some 40,000 (BeckHuntAlvar vol. 1, 268) and probably more, only a portion of these people being soldiers (cp., e.g., ↗*Däbän Ansa*); the number of horses, mules, donkeys was also immense. Strict social hierarchy and order were kept and perpetually updated through a number of court rituals and social events (↗*Gəbər* being one of the most peculiar among them; cp. Kropp 1988).

The arrangement of the royal K. was imitated by the smaller courts of regional governors and rulers. The model of the royal K. shows a clear similarity to certain types of (round)

church structures with the ↗*tabot* hidden in the ↗*mäqdäs*, reflecting the Ethiopian conception of the cosmos and society (Lagopoulos – Stylianoudi 2001). Being an integral part of the political system and warfare, the culture of the K. did not disappear with the foundation of ↗Gondär, but influenced, promoted and, to a large extent, defined further urban development in Ethiopia (cp. ↗Addis Abäba; ↗*Gəbbi*).

The *kätäma* in southern Ethiopia

Originally the term for a royal and/or military camp, K. in today's Ethiopia refers to any kind of dense human settlement that functions as a centre of a given area. The degree to which such a locality has urban features and fulfils urban functions may vary considerably. A cluster of houses with a weekly market or some small shops may be called K. as well as are the three biggest cities in Ethiopia, ↗Addis Abäba, ↗Dərre Dawa and ↗Adaama. Today, "K." also serves as a unit within the system of administrative division.

In the South, a network of permanent military camps or fortified villages, K., became the backbone of *aṣe* ↗Mənilək II's conquest and then the basic means of consolidation of imperial rule. They were "the inevitable results of the new, centralized and at the same time regionally anchored rule of the politico-military organization" (Alula Abate in PICES 4, vol. 1, 728). K. were established preferably in fertile areas and sometimes near already existing villages or market centres. Due to strategic but also health considerations, the location of the first generation of K. was predominantly on hilltops (↗*Amba*). Trenches and palisades combined with natural features of the landscape served as fortifications. The name of a K. was often adopted from the name of the district or ethnic group it was meant to control.

The core of the K. infrastructure was established to serve Mənilək's soldiers and their families and servants as well as different kinds of settlers. The basic function was to control the surrounding population and to guard the main trade routes and military roads. As the frontier of conquest moved forward, some K. lost parts of their population in favour of newly established camps. Others maintained or even increased their importance and became centres of administration and jurisdiction. For the permanent settlers, churches were established. Providing security and economic opportunities, such K. became important trading posts and market places.

The role of the K. in the cultural transformation of the conquered people as well as the multiethnic K. population into "Ethiopians" cannot be overestimated. As an outpost of the northern Christian culture and ↗Amharic language, the K. was a kind of cultural and linguistic bridgehead which served, by force and by attraction, as a model for the surrounding cultural environment. Between these centres ↗*näfṭäññä* settlements (sometimes called አማራ፡ ሰፈር, *amara säfär*) spread, which not only played a crucial role in the security and the economic supply of the K. population but also in the diffusion of K. culture into the countryside.

The development of many, but by no means all, south Ethiopian towns started with a military camp that was turned into the permanent seat of a governor (*gäzi*) or district administrator. Around his residence (*gəbbi*), with bigger buildings for the law court and administration, a fortified settlement emerged. The K. had a permanent housing for the *tabot* (church) and

a regular market. However, the status as administrative centre was not very stable. Whenever a newly appointed administrator chose another location for his residence, a great part of the old K.'s population followed him. In some cases the old site was completely abandoned.

Among the important early K. in southern Ethiopia, founded in the course of the conquest, were: ↗Galamso, ↗Ǧiǧiga, ↗Läǧo, ↗Gobba and ↗Ginnir (established in the 1880s); Bakko and Kokke (established in the 1890s; s. also ↗Hamär Bakko); Damota, ↗Ċenča, ↗Gardula (established after 1894). For western Ethiopia examples of such K. are, e.g.: ↗Nonno Migra, ↗Arǧo and Sayyoo (↗Dambi Dolloo).

The history of the "capitals" of ↗Sidamo Province is a good example of how dynamic the fate of the first K. was. After 1891, when Sidamo was conquered by *däǧǧazmač* (later *ras*) ↗Ləʿul Sägäd, the K. of Därasa (↗Gideʾo) developed into its first administrative centre. *Däǧǧazmač* ↗Balča Safo in 1900 moved the seat of the provincial governor to Abära, and later shifted to Aläta. Under the governor, *däǧǧazmač* Täfari Mäkʷännən (later ↗Ḫaylä Śəllase I), Abära was restored as the capital of Sidamo. In 1916, when Balča returned as governor, he moved the capital some kilometres and founded ↗Hagärä Sälam.

The original lay-out of the "classical" K. may be recognized in some towns to this day, although modernization, European ideas of urban planning (e.g., Italian influence during the occupation) as well as the villagization program of the ↗Provisional Military Administrative Council and constantly increasing ↗urbanization covered most of the old patterns.

Kätäma Yəfru

K.Y. (**ክተማ፡ ይፍሩ**, b. 12 December 1928, Gara Mulläta, d. 14 January 1994, Addis Abäba) was a prominent Ethiopian politician and diplomat.

K.Y. was born to *ato* Yəfru Däǧän and *wäyzäro* Yəmmäññušal Gobänna and started traditional church education in ↗Gara Mulläta. In 1936 his family emigrated fleeing the Italian invasion, first to British Somaliland and later to Kenya. K.Y. completed his elementary education at refugee schools. After the Liberation in 1941, K.Y.'s family returned to Ethiopia. On completing his secondary education at Ḫaylä Śəllase I Secondary School in Kotäbe, Addis Abäba, in 1948, K.Y. was sent by the government to the U.S.A. for further education. K.Y. obtained his B.A. from Michigan Hope College in 1951, and his M.A., in International Relations and Political Science, with distinction, from Boston University in 1952. While researching for his M.A., he worked for a year as an intern for the ↗United Nations in order to acquire work experience.

Kätäma Yəfru; photo courtesy of the family

Upon his return to Ethiopia, K.Y. started his career in the imperial government. In 1952 he joined the Italian Section of the Ministry of Foreign Affairs. A year later, he was appointed Director-General of the American and Asian Department. In 1956 K.Y. became Assistant Minister, alongside *ləǧ* Mikaʾel Ǝmməru and *ləǧ* ↗Ǝndalkačč̈äw Mäkʷännən. In 1957 he was appointed as both the Private Secretary to *aṣe* ↗Ḫaylä Śəllase I, and Assistant Minister of the Ministry of Pen (↗*Śäḥafe təʾəzaz*). In 1959 he was promoted to the rank of Vice Minister and later Minister of State. After a brief imprisonment under suspicion of being involved in the abortive ↗coup d'état of 1960, in 1961 K.Y. was transferred, once again, to the Ministry of Foreign Affairs, where he served first as Minister of State and later as Minister. Altogether he served in various capacities at the Ministry of Foreign Affairs for 15 years.

During the years he headed that Ministry, he played an important role in the African political arena. In 1962 and 1963, he played a major part in bridging the gap between the Monrovia and the Casablanca group, thus paving the way for the African Summit that led to the creation of the ↗Organization of African Unity in 1963.

K.Y. accompanied the Emperor on his official visits to numerous world capitals. He also played a major role in settling a number of international disputes: the Congo crisis, the Algeria–Morocco conflict, the Somalia conflict, the Nigerian civil war and the Southern Sudan crisis. K.Y.'s diplomatic participation in the U.N. ↗Non-aligned Movement and Group of 77 was also significant. From 19 August 1972, K.Y. served as a Minister in the Ministry of Commerce, Industry and Tourism. He left the government when the Aklilu Habtäwäld Cabinet resigned on to 28 February 1974 in the face of the mounting crises.

From April 1974 to September 1982, K.Y. was detained by the Military Government of Ethiopia as a political prisoner. Whilst in prison, he occupied himself with extensive reading in different fields. After his release from prison, K.Y. joined the Food and Agriculture Organization (March 1984 to September 1991), first serving as Senior Advisor in Rome, and later as Area Director of East Africa for the World Food Program stationed in Kenya.

K.Y. spent his last years in Addis Abäba; he was buried within the premises of ↗Qəddəst Śəllase Cathedral. He was survived by his wife *wäyzäro* Raḥəl Sənä Giyorgis, whom he had married in 1960, and their four sons, Mulugeta, Yoḥannəs, Mikaʾel, Mäkʷännən. For his services, he was decorated by both his own and foreign governments.

Katte, (Karl Friedrich Rudolf) Albo von

K. (b. 9 January 1805, Neuen-Klitsche, d. 10 October 1850, Berlin) was a former Prussian officer who visited northern Ethiopia and its border provinces in the late 1830s. Through his reports on Ethiopia and Egypt (1838–41) for the popular newspapers *Augsburger Allgemeine Zeitung* and *Das Ausland*, he was among those, together with the natural scientists ↗Rüppell and ↗Schimper, who considerably enhanced German public interest in the region.

In 1836 K. departed from Ḥudayda, ca. 30 km north of al-Muḫā, crossed the Red Sea and reached Massawa, from where he moved to ᶜAdwa. His technical equipment was destroyed or stolen on the way by prince ↗Ḫaylu Täwäldä Mädḫən of Ḥamasen, which forced K. to cancel his plans to cross Ethiopia from east to west. In addition, a war between different Oromo groups erupted, and K. and many of his companions fell ill. In ᶜAdwa K. stayed with ↗Isenberg and *däğğazmač* ↗Wəbe Ḫaylä Maryam for six weeks in late 1836, and met most of the local Ethiopian governors there who had come together for talks. He then left ᶜAdwa, and reached Cairo in late 1837. The unidentified German officer staying in ᶜAdwa in "February 1838", who is mentioned by Arnauld d'↗Abbadie (Abb Séjour 6), was seemingly not K., but another officer called Kielmeyer (RubInd 71). D'Abbadie mentions that he (as K.) had come following advise of Protestant missionaries. From 1838 to 1842 K. lived in Alexandria. He returned to Germany in about April 1842 and resided in Berlin from 1842, where he shot himself in 1850.

In his *Reise durch Abyssinien* K. gives a precise description of Ethiopian geography, politics and fauna, as well as reflecting on the character and religion of the people.

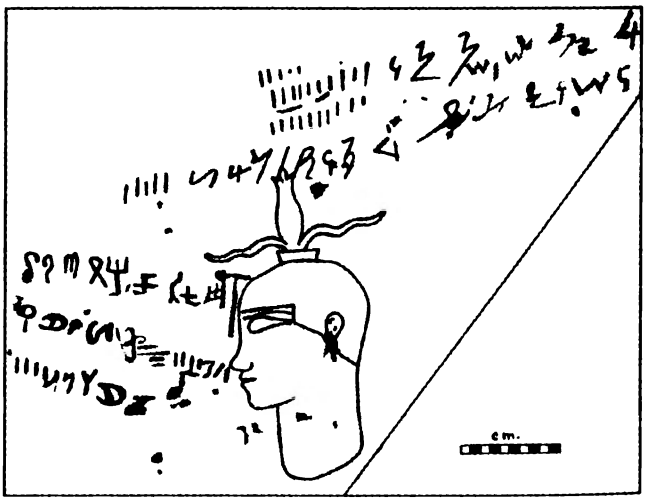
Kawa

K. is an archaeological site in today's ↗Sudan (for location s. Kush), located in the Middle Nile Valley (Upper Nubia) on the east bank of the river in the fertile Kerma Basin facing Dongola. The



The Kawa inscription; from Laming Macadam 1949, pl. 58

site was excavated by the Oxford Expedition to Nubia headed by Francis Llewellyn Griffith and Miles Frederick Laming Macadam in 1929–36.

K. (the ancient name of which is Gem-[pa]-Iten) was founded during the New Kingdom, most probably by Pharaoh Amenhotep III (18th Dynasty). It was an important religious centre which newly crowned Kushite kings had to visit during their coronation journey to receive acceptance by the god Amun-Re of Gem-(pa)-Iten. Remains of three temples have been excavated: Temple "A" dates back to the reign of Tut-ankh-Amun; Temple "B" is a mark of revival under King Shabaqo of the 25th dynasty (↗"Ethiopian dynasty"); Temple "T" was built by King Taharqo (690–64 B.C.); several stelae by him have also been found.

Three faint lines of a graffito in Ethiopic characters, probably dating back to the late Meroitic period, have been discovered on the outer northern wall of Temple "T" (Laming Macadam 1949: 117f., no. 107, pl. 58). The text could not be decyphered. The vertical strokes in the third line, should they mark the end of a phrase as in the ↗Meroitic language, would indicate here a right-to-left reading for the line. The tentatively identified letters, however, suggest a left-to-right reading for the first two lines.

The K. graffito shows some similarity to the unvocalized Ethiopic graffito found in ↗Meroë (DAE I, 50; RIÉ I, 356, no. 267) and tentatively dated to the first half of ↗ʿEzana's reign. The K. ↗inscription is likely to go back to the same period and to be interpreted as an indication that ʿEzana's armies reached the place in their campaigns (Fiaccadori 2004: 126).

Steffen Wenig

Kaye Šeročo

↗*Tato* K.Š. (also known as Kami or Taten-Kami, d. 1870, Andaračа [?]) was a powerful monarch of the ↗Käfa kingdom, reigning probably from 1843 to 1868. Successor of Gawe Šeročo, he was the predecessor of ↗Galli Šeročo and grandfather of the last Käfa king ↗Gaki Šeročo. All were from the Minǧo clan and had their court at ↗Andaračа. K.Š. consolidated the K. kingdom and further reinforced its defences with trenches and gates, but had to face growing expansionist designs from ↗Ǧimma Abbaa Ǧifaar and ↗Šäwa.

As king, K.Š strengthened the religious, priestlike authority of Käfa kingship by appropriating ownership of the *detateno* or *dooči*, the main spirit (s. ↗*Eqo*) recognized in Käfa. This happened after the death of the then powerful and wealthy *eqo* cult "high priest", the *ibeda godo*. The king himself thus became the carrier and incarnation of this spirit (Orent 1970: 280), perhaps to reinforce his position over his political advisors/councillors, the elite drawn from noble families. K.Š. was reputed to have previously been a Christian (Bieber 1923: 400) and is said to have continued some Christian rituals (Lange 1982: 208). The above-mentioned three kings of Käfa were styled as *atioccо* or full-blown "divine kings" (↗Kingship, divine) and led an authoritarian if not despotic regime over the Käfa kingdom, based on control of the supernatural and political aspects of the lives of their subjects.

Under K.Š.'s rule the opening up of Käfa to the outside world was continued, with more traders, missionaries and others coming into the kingdom, many for the slave trade. Initially, in 1855, K.Š. welcomed the settlement of Catholic missionaries led by Cesare da Castelfranco and Guglielmo ↗Massaja. Opinions differ about his motives, with some authors maintaining that K.Š. intended to create a counterbalance to the gradual expansion of Ethiopian Christianity in Käfa, or to seek reinforcement against the expanding Muslim state of Ǧimma. Some years later, probably advised by the leaders of the *eqo* cult, he banned the missionaries again. However, he did not persecute Kaficcо Christians, either Orthodox or Catholic. The Muslims were also left in peace.

Whilst K.Š. strengthened the religious authority and power of the kingship, it did not go uncontested. There were tensions between the "secular" political elite (councillors and advisers) and the religious power-holders (mediums and top ritual specialists). In the 1860s K.Š. faced regional insurrections among the Še and Nao (↗Nayi) people and in Goba and Wota regions, in response to which he reformed the administrative division of the kingdom by instituting 18 regions (*worafo*) and providing them with more *de facto* autonomy. Lange (1979) also reports an

oral tradition stating that the Käfa people prevented K.Š. from engaging in another war with the state of Ǧimma Abbaa Ǧifaar, the perennial enemy of Käfa. K.Š. gave in to popular wishes, probably to stave off rebellion against his rule. Nevertheless, overall, he was able to establish his status as "divine king" and keep the kingdom together. Many aspects of his rule over Käfa remain unclear due to a lack of precise information.

Jon Abbink

Kayla

K. (ካይላ) is a term of ↗Agäw origin used to refer to the people also known as ↗Betä Ǝsraʾel (Fälaša). According to *abba* Yəsḥaq, a Betä Ǝsraʾel monk who spoke to Antoine d'↗Abbadie, K. was a pejorative term referring to those among the Israelites who travelled with ↗Mənilək I and "who did not cross the sea" on the ↗Sabbath; thus, in the local language K. means 'did not cross'. According to this tradition, on their way from ↗Jerusalem to ↗Aksum Mənilək's party arrived at the edge of a sea on the Sabbath. While the majority continued onward, a portion of the group refused to travel on the Sabbath and became known thereafter as K. These were the ancestors of the Betä Ǝsraʾel.

The designation K. first appears in written records in the 17th-cent. Chronicle of *aṣe* ↗Susənyos, which mainly uses the term *Fälaša*, but sometimes equates the two. In one campaign, for example, the Emperor ordered "his troops *Fälaša* who are called K." to scale a steep ↗*amba* (PerChron 307). During the reign of *aṣe* ↗Yoḥannəs I this connection is explicitly repeated in a decree of 1668 that "... the *Fälaša*, called K., who are of the Jewish religion, must not live with the Christians" (GuiIohan 9). The area where K. were settled became known as ↗Kayla Meda.

The two terms (*Fälaša* and K.) appear to be combined in the use of the term *Kaylaša*, although d'Abbadie suggests that *-ša* might be a suffix, and not part of the term *Fälaša*.

Ethiopian migrants in Israel from the ↗Təgray region claim that the term K. is derived from the Hebrew term *kehilla* ('community') and cite it as proof that their ancestors were originally Hebrew speakers. Others link the term to an agricultural instrument used to separate wheat from chaff or to the Gəʿəz *ḫayl* and Hebrew *hayla*, meaning 'strength'.

According to Appleyard (1996), today extinct Kayləññа language appears to be intermediate between the ↗Ḫamtaŋa and ↗Kəmantnäy clusters of Agäw dialects.

Kayla Meda

K.M. (ካይላ፡ ሜዳ, lit. 'field of the ↗Kayla') is a locality to the west of ↗Gondär, on the banks of the Qaḥa River. It lies to the left of the Gondär–Azäzo road (Guida 359) and takes its name from the Kayla ethnic group, more commonly known as Fälaša or ↗Betä Ǝsraʾel, whose settlement in the area apparently long pre-dated the founding of the city in the 1630s (Quirin 1992:103).

In 1668 *aṣe* ↗Yoḥannəs I decreed residential segregation of "the Franks, the Muslims and the Turks, and also the *Fälaša*, called Kayla, who are of the Jewish religion, so that they not live with Christians" (GuiIohan 9). How this would have affected the already existent settlement at K.M. is uncertain. A pottery market was held there in Gondärine times. It was also a place in which proclamations were issued, and, on one occasion,

in 1763, a major church council was held there. However, K.M. took part in the general decline of Gondär town in the 19th cent. and lost much of its vibrancy.

Between 1–5 October 1763 (22 *Mäskäram* 1756), under the rule of ↗Iyoʾas I, a major church council was held at K.M. Counting with the presence of ↗Bərhan Mogäsa, *ras* ↗Wäldä Lᵉul and *däğğazmač* ↗Ǝšäte of Qʷara, it gathered to face the emergence of a third theological party, *Wäld bäṣägga* (↗*Ṣägga*); the followers of the Unctionists (↗*Qəbat*) and the Alexandrian traditionalists (↗*Karra*; ↗*Täwaḥədo*) united to depose *əčč̣äge* Henok and reject a doctrinal letter of the Alexandrian patriarch. The council marked, however, the definitive emergence of the ↗*Yäṣägga ləğ* and the *de facto* division of the church into three mutually hostile parties.

Donald Crummey

Kəbr Yəʾəti

K.Y. (**ክብር: ይእቲ**) is a type of ↗*qəne*-hymn which is composed of four verses (*bet*, pl. *abyat*) and sung, together with the ↗*ᶜəṭanä mogär*, during the celebration of the Eucharistic liturgy (↗*Qəddase*) when Communion is taken. During the celebration, other Eucharistic hymns are sung, such as the ↗*Mälkəʾa qʷərban* and ↗*Zəmmare* (cp. ↗Eucharist).

The melody of the K.Y. depends on the melody used for the liturgy. If it is sung in ↗*gəᶜəz* mode, then the *ᶜəṭanä mogär* with its second strophe (*asärä nəguś*) is sung in ↗*araray* mode. But if the mode of the liturgy is ↗*ᶜəzəl*, the four-*bet* K.Y. and the *ᶜəṭanä mogär* with its second strophe are sung in the same mode, that is *ᶜəzəl*.

The content of the K.Y. must always relate to the eucharistic liturgy of the same day and the *Zəmmare* elements of the feast – *ḫəbəst*, 'bread', *ṣəwwaᶜ*, 'chalice', *mänfäs*, 'spirit', *məśṭir*, 'mystery' and *akkʷätet*, 'thanksgiving'. K.Y.'s subject matter mainly concerns the ↗Crucifixion, especially Christ's suffering on the Cross, and the events following his death as described in Mt 27:51–54. Ps 149 is alternately read with the K.Y., and for this reason the *qəne* takes its name from the same psalm (Ps 149:13, *Kəbr yəʾəti zatti* ..., 'This is an honour ...'). As with all other *qəne*, the K.Y. is improvised. If the liturgy is celebrated in the afternoon, the expert *qəne* composer must observe the fast as the celebrants do. In such cases, the *qəne* composer is treated the same as a celebrant of the Divine Liturgy. During Niqodemus week of the ↗Lent (the week before Holy Week), the K.Y. *qəne* is not composed because there are *qəne* given in the ↗*Dəggʷa* the content of which addresses the body and blood of Christ, and the Holy Spirit.

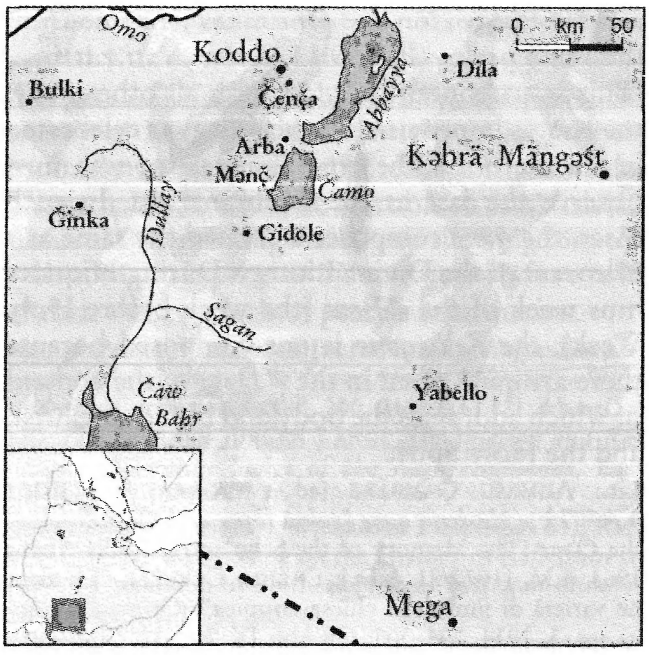
Kəbrä Mängəśt

K.M. (**ክብረ: መንግሥት**; 5° 53' N, 39° 00' E; 2,170 m A.S.L.), formerly known as Adola, is a town located at the confluence of the Ganaalee and Dawa valleys, ca. 20 km north-east of Šakisso. The area is traditionally inhabited by the ↗Guğği Oromo.

The status of the town has grown since ↗gold deposits were discovered in the region in the 1930s. It was then that the name was changed to K.M., which literally means 'the glory of the kingdom'. Moyale graphite and granite deposits have also been found at K.M.

During the reign of *aṣe* ↗Ḫaylä Śəllase I, ↗Käbbädä Bəzunäš was the governor of K.M. Since 1991 it has been the capital of Adola *wäräda*, which is a division of the Boorana zone (Oromiyaa *kəllәl*). The population has been growing quickly in the past years, mostly because of gold miners who come to stay (especially since gold mining and production boomed after 2000): 14,391 inhabitants in 1984; 27,099 in 2000; and 34,395 in 2004 (CSA 1984; 2000; 2004).



From 1942 till 1987 K.M. was the administrative centre of the Ğämğäm *awraǧǧa* of Sidamo province. In the later administrative division it belonged to the Boräna region, and since 1991 it has belonged to the Adola and Wadä *wäräda* of the Boorana zone in *kəllәl* Oromiyaa.

Tesfaye Akalu

Kəbrä nägäśt

The K.n. (**ክብረ፡ ነገሥት**, 'Glory of the Kings', or, better, 'Nobility of the Kings') is a kind of "historical novel", intended, according to the majority of scholars, to justify and glorify the Ethiopian ↗Solomonic dynasty by demonstrating its Israelite descent. The work is in fact untitled, but at least since the 15th cent. it has been known as K.n., from the heading of the first (**በእንተ፡ ክብረ፡ ነገሥት**, *Bä'əntä kəbrä nägäśt*, 'On the Nobility of the Kings') of its 117 chs., each one with a title of its own. Otherwise, the title K.n. is also sometimes used to denote other, later compositions dealing with the history of Ethiopia and incorporating only excerpts or summaries of the K.n. proper (e.g., mss. EMML 1515, 3081).

Contents

The K.n. is composed as an exposition of St. Gregory the Wonderworker, disciple of ↗Origen (3rd cent.), to the 318 Orthodox Fathers on the occasion of the Council of ↗Nicaea, but the person to whom the text alludes is actually Gregory the Illuminator, the "apostle" of Armenia (3rd–4th cent.).

The work can be divided into three parts. The first (chs. 1–94) can in turn be subdivided into sections. After the preface (chs. 1–2), the first section (chs. 3–18) tells the history of the kings of the earth from Adam to Shem to David and Solomon (the tradition of the Ethiopian descent from Ham to ↗Ityopis to ↗Aksumawi is never mentioned), clearly stating (ch. 11) the prominence of the ↗Ark of the Covenant in the Creation, and its identity with St. ↗Mary. The second section, told by Domitius patriarch of Costantinople (366–84), speaks of a book found by him in the cathedral of St. Sophia, on the primacy of the kings of "Rome" (↗Byzantine Empire) and of Ethiopia, but on the superiority of the latter, the first-born of Solomon (chs. 19–20). At this point the story of ↗Solomon and ↗Makədda (called here **ንግሥተ፡ አዜብ** *nəgəśtä azeb*, 'Queen of the South', as already in the N.T. and in post-Christian classical tradition), is inserted (chs. 21–56), undoubtedly the more attractive part of the K.n. and more pivotal to the main goal of the work, and allegedly taken from the same book found by Domitius. The Queen hears from a merchant, Tamrin, of the wisdom and ability of Solomon, goes to visit him in ↗Jerusalem, and is well received by him. She becomes pregnant after having been tricked: Solomon invites her to dinner, and to sleep in his room, promising not to touch her, unless she steals something there; but she takes a sip of water (the dinner was intentionally prepared very spicy). The third section tells how the Queen returns home and after nine months and five days gives birth to a son, ↗Mənilək (I), who in turn, when 22, goes to Jerusalem to meet his father, but also to comply with his mother's invitation to establish, after his return, the first Ethiopian kingdom governed by a man. Having been made king by his father who gives him the name of David, he assumes the royal office (ch. 39). From Jerusalem M. goes back to Ethiopia with the first-born sons of the Israelite notables (given to him for the organization of the new kingdom by Solomon himself, in the hope of acquiring another kingdom under his control). Yet,

those young men, unbeknownst to Mənilək, take with them the Ark of the Covenant, which thus reaches Ethiopia. After a break in the chs. 63b–83 the story ends by recounting the arrival of Mənilək in Ethiopia, the abdication of his mother (who personally orders that the kingdom is never again given to a queen), and his first victorious wars (chs. 84–94).

The second part (chs. 57–83) dwells on the remaining life of Solomon, in particular his fondness for non-Christian women, and subsequent idolatry due to their influence. It also includes the story of the Pearl, told by an angel to the dying Solomon – a symbol of salvation, a gnostic and patristic concept, usually identified with Christ, but in the K.n. identified with Mary, deposed in the belly of Adam and passed to Mary and Christ through Solomon and Israel (ch. 68). It continues with the events of the various peoples after Solomon's reign. The narrative frame resumes with the conciliar assembly of the Nicene fathers, who conclude by stating the clear superiority of the king of Ethiopia, first-born of Solomon, over the king of Judah (son of Solomon's second-born, Rehoboam, and king of the deicides) and king of Rome (son of Solomon's youngest son, Adrami, and king of the heretic Christians; ch. 95, but also passim).

King Solomon and the Queen of Sheba with her attendants; painting on parchment, 20th cent., London, Horniman Museum, no. 19.4.99/20x; photo 1995, courtesy of Michael Gervers

In the third part (chs. 96–112), Gregory gives a series of Christian interpretations to Old Testament passages, with a strong anti-Judaic bias. Toward the end (chs. 113–16), the superiority of Ethiopia is again stated by the Fathers, as well as by Gregory, asserting that the Ark will remain in Ethiopia until the second coming of Christ (↗*Dagəm məṣʾatu läkrəstos*); the close (ch. 117) evokes the events of the 6th cent. war between Aksum and South Arabia, and terminates with a colophon.

Edition

The 1905 edition by Bezold (BezKebr), a good one, although of pre-Lachmannian type, is based on the ms. Paris, BN éth. 94 (of the 13th cent. according to Zotenberg [ZotBNat 9], but this is impossible in view of the date of composition, s. below), collated with 6 other mss.: Paris, BN éth. 123 (17th cent.); Oxford, Bodleian Library, Bruce 87 and 93 (both second half of the 18th cent.); Berlin, Staatsbibliothek Preußischer Kulturbesitz, Orientabteilung, Ms. or. fol. 395 (between 1680 and 1730); London, BritLib Orient. 818 (first half of the 18th cent.) and part of 819 (between 1682 and 1706, cf. WrBriMus 297). There are at least six more known mss., all from the 18th–20th cent.: Paris, BN d'Abbadie 97, 132, 152; EMML 50, 2101; Roma, ANLin Conti Rossini 27.

Aim and date of composition

Alongside the usual interpretation of the K.n. as an ideological instrument for the legitimisation of the new Solomonic dynasty against the ↗Zagʷe (e.g., GuiSLett 45; CRStor 319), some scholars also emphasize the bias of the local clergy in favour of the glorified northern tradition against a kingdom more and more based in the Amharic-speaking south (RicLett 815f.). A new and interesting approach is that of Chernetsov (1982:37f., following some clues given by Conti Rossini 1925:506ff.), speaking of a work linked with northern aspirations for independence. In agreement with him, we can stress the following points: 1) as the colophon states, the work was composed on the orders of *mäkʷännən* (or *śəyy-*

um) ↗Yaᶜəbikä Ǝgziᵓ, ruler of ↗Ǝndärta; 2) it is well known that Yaᶜəbikä Ǝgziᵓ, appointed some years before 1318, was no longer in power in 1322, when he was substituted by Queen Bəlen Saba (CRDLib no. 20); this is why the ultimate date proposed for the completion of the K.n. is 1321; 3) what must now be stressed, is that Yaᶜəbikä Ǝgziᵓ rebelled against ↗ᶜAmdä Ṣəyon I, as already hinted at in the *Liber Axumae*, in a document of Ləbnä Dəngəl (CRAxum doc. 29), but above all by a dramatic document from ↗Däbrä Ḥayq Ǝsṭifanos, contemporary to the events (Taddese Tamrat 1970: 95f.). So, the K.n. may well have been composed for the Ǝndärta dynasty, or at least for one or some of the ruling classes of Təgray, against the claims of the south: it is to these dynastic claims that the proper names of rulers might also refer, nearly always fixed with Ǝgziᵓ as the fixed second member. This agrees with the clearly "northern" traditions the K.n. elaborates; only subsequently it would have been adopted by the Solomonic dynasty.

As for the general background of the text and the implied claims, it must be understood within the problem of Ethiopian ↗Judaism. Israelite descent was a phenomenon equally known in other Oriental monarchies, and in Ethiopia itself it was also claimed by the Zagʷe, as documented by ↗Abū Ṣāliḥ in 1208 (descent from Moses); this in turn is obviously related to the widespread tendency of early Christian communities to identify themselves with the *Verus Israel*, as described by Simon (1948).

Sources and parallel traditions

The literary sources and traditions exploited in the K.n., as well as other traditions (Jewish, Coptic, Islamic) parallel to them (above all on the Queen and Solomon), are indicated by Hubbard (1957): naturally, the O.T. and the N.T.; rabbinical and midrashic lore (esp. the Midrash Haggadol, but also such texts as the Bereshit Rabbah or the Pirqe Rabbi Eliezer, with Cain and Abel, the angels and other motifs); traditions (Cain and Abel, the angels, other motifs); such apocryphal works as ↗*Enoch*, the *Book of* ↗*Jubilees*, the *Book of Adam and Eve* and the very similar *Cave of Treasures*, the *Wisdom of Sirach*, the *Apocalypse of* ↗*Peter*, the *Gospel of Nicodemus*, the *Acts of Philip in Greece* and the *Acts of John*, the *Book of James*, the *Didascalia* (↗*Didəsqəlya*), the *Preaching of Peter*, maybe the *Testament of Reuben*, the *Wisdom of Solomon*, and the *Ascension of* ↗*Isaiah*; patristic concepts and sources (such as, e.g., Origen, ↗Gregory of Nyssa, ↗Cyril of Alexandria, ↗Gregory of Nazianzus, ↗Severus of Antioch, ↗Epiphanius, ↗Athanasius of Alexandria). According to Caquot (in PICES 10) and Beylot (2002), the apocalypse of Pseudo-Methodius of Patara should also be considered; Beylot adds three more texts of Copto-Arabic origin. In many cases, it is not a question of direct borrowing, but only of a parallel use of the same traditions. Such consideration might also apply to the abundant Jewish and Islamic material about the Queen and Solomon, protagonists of some of the most important legendary cycles of the Near East, obviously quite independent from the K.n.

Ethiopian elaborations

The "magic" and fabulous material found in Jewish and Islamic sources has been completely excluded from the K.n., but that some of these traits were also known in Ethiopia is revealed by some of the legends of the dragon of Aksum (↗Arwe), and above all by a ↗Təgre (Littmann 1904) and a ↗Təgrəññña legend (Conti Rossini 1911-12), where a young girl is saved from the dragon by the ↗Nine Saints (here, resp., only four and seven in number), while the monster's blood transforms one of her feet into hoofs. She is healed by Solomon, who also sleeps with her and with her servant (s. Caquot 1955). Conversely, the episode of the seduction and pregnancy of the Queen seems to be an original Ethiopian trait (present also in those legends, and in popular iconography, s. ↗Painting).

Authorship

This is one of the most discussed issues of the K.n., based particularly on the colophon (ch. 117), which states: 1) "in the Arabic book it is said" that the work has been translated from Coptic into Arabic in 1225, during the reign of King Gäbrä Mäsqäl, "whose surname was ↗Lalibäla"; 2) this translation was done by Abäləz and Abälfäräg; 3) they did not translate the text into Gəᶜəz because the Zagʷe were an impious dynasty not coming from Israel; 4) the K.n. was translated (and/or worked out? the text is very vague on this point) by Yəsḥaq (known from other documents as the *nəburä əd* of Aksum), on the order of Yaᶜəbikä Ǝgziᵓ. The opinions about the value of this colophon vary greatly, from complete truthfulness (e.g., BezKebr; Nöldeke 1905; Budge 1922) to complete falsity (e.g., DillmBLond).

Some important elements are: 1) the identity of Abälfäräg is not known (as we have to look for an Egyptian, it is improbable that we have here to do with Abū l-Faraǧ b. aṭ-Ṭayyib al-ʿIrāqī, a philosopher, physician, monk and priest, of the first half of the 11th cent., born in Baghdad and author of exegetical and theological works and commentaries, or with the more famous Barhebraeus [Gregorius Abū l-Faraǧ b. al-ʿIbrī] born in 1225/26 in Melitene, and resident in Syria, cf., however, Munro-Hay 2003); 2) the identity of Abäläz is uncertain, but an Ibn al-ʿIzz was minister of *aṣe* ↗Yagbəʾa Ṣəyon (Conti Rossini 1925:506); 3) the K.n. abounds with Arabic terms, sometimes words merely transcribed (see BezKebr XXXVf.); 4) although the particular goal of the K.n. is limited to Ethiopian interests, the legendary material it makes use of belongs to one of the most important legendary cycles of the Near East; 5) the style and Gəʿəz language of the work are of a high standard (the novel is also purified from any popular or rough elements). This could lead to the conclusion that the K.n. is an original literary Ethiopian work drawing on various older sources (s. CerLett 36–42 and already Conti Rossini 1921–23:606f.). In any case, for further clarification, new data from the Coptic and Copto-Arabic traditions could be useful, to be added to the 11th-cent. text published by Erman (1897), and to that summarized by Amélineau (1888) from an unspecified (now lost) ms. in Cairo, but also found, in a more expanded form, in the Arabic ms. Paris BN, Suppl. 92, of 1594 at the latest (already referred to by Zotenberg apropos of ms. Paris BN, éth. 123; ed., tr. BezKebr XLIII–LX; tr. Budge 1922). Whether the Copto-Arabic text derives from the Ethiopic (ZotBNat 223; BezKebr LX, and the majority of scholars) or vice versa, or whether they depend on a common source (Nöldeke 1905), especially in view of Erman's text, and at least as far as literary motifs are concerned (s. also the connection with the legend of the Holy Cross [↗*Mäsqäl*], absent in the K.n.) is exactly the core of the problem.

Kəbrä nägäśt in popular Ethiopian culture

The K.n. has proven to be significant in the political, religious and social life of the Ethiopians. Irrespective of the original purpose of its composers, it provided the legal foundation for both the Solomonic ↗monarchy's claim to political power and the institution of divine ↗kingship at least from the 14th cent. onward; in this function, the authority of the K.n. was ultimate and largely uncontested, at least among Amhara and Təgrəñña-speaking communities of the Ethiopian Highlands. Ethiopian tradition referred to the K.n., though indirectly, when explaining the origin of the ↗law and judiciary and state rituals (Varenberg 1915-16:11; cp. Doresse 1959:14f.; cp. ↗*Śərʿatä mängəśt*; ↗*wäg*), and as well as many other features of Ethiopian culture.

The central topics of the K.n. – Ethiopia as *Verus Israel*; the Ethiopians as the chosen people (BezKebr 130) and the Ethiopian kings' supremacy (BezKebr 171) – offered the people a sense of shared cultural identity and shaped their mentality. An affiliation to Solomon/biblical Israel was also claimed for some other ethnic groups (such as ↗Irob), the respective narratives being connected to the legend of the Queen of Sheba and Mənilək, and, ultimately, to the K.n. (s. Conti Rossini 1910). The narrative of the K.n. became, indeed, the Ethiopian "national saga"; as such, it greatly contributed to the development of Ethiopian nascent national ideology, in particular in the 19th–20th cent.

Remarkably, by letters addressed in 1872 to Queen Victoria of England and the 2nd Earl Granville, *aṣe* Yoḥannəs IV urged the British to return the manuscript of the K.n. sized by them from Mäqdäla (today preserved at ↗Ǝnṭoṭṭo Raguʾel; ms. EMML 50 [= Orient. 819, s. WrBriMus 297]), an item of great importance for the Empire, as its text contained "the regulations ... of the land" (RubActa III, nos. 88, 89; UllBibl 74f.).

It is noteworthy that, while the main topics of the K.n. were popular in Ethiopia, the text itself was less widespread (a feature also reflected in the comparatively small number of mss. containing the work) and never printed, although in the 20th cent. monarchs generally welcomed proposals by foreign scholars to translate it into European languages. The authority of the K.n. stood behind ch. 2 of Ethiopia's 1955 ↗Constitution, proclaiming the emperors of Ethiopia descendants of the Queen of Sheba and Solomon (cp. Ullendorff 1960:194). After 1974 the stipulation lost its legal power, yet the K.n. still remains an important element of the culture and consciousness of the Ethiopians, both in the country and in the ↗diaspora.

Paolo Marrassini

Kəbran

K. (ክብራን) is a small island located on the southern part of Lake Ṭana, with a church dedicated to the Archangel Gabriel. This church also houses a *tabot* of St. Mary, either at the same church or on the nearby island of ↗Mädo (Bosc-Tiessé 2001:30 n. 2, 240; ChTana 155f.).

The island must have been inhabited by hermits before the monastic community was organized in the first half of the 14th cent., when it was founded by the monk Zäyoḥannəs, according to his *gädl* (Cerulli in Schneider 1972:V–IX; Schneider 1972:13ff., 18; Wajnberg 1936:25; Cornuau 1994:18ff.). K. has been connected to the network of ↗Däbrä Libanos at least since the time the *Gädlä Zäyoḥannəs* was written in the 15th or first half of the 16th cent. (Cerulli in Schneider 1972: V–IX; BassÉt 100).

The monastery claims to have first been endowed by *aṣe* ʿAmdä Ṣəyon (Schneider 1972:17;

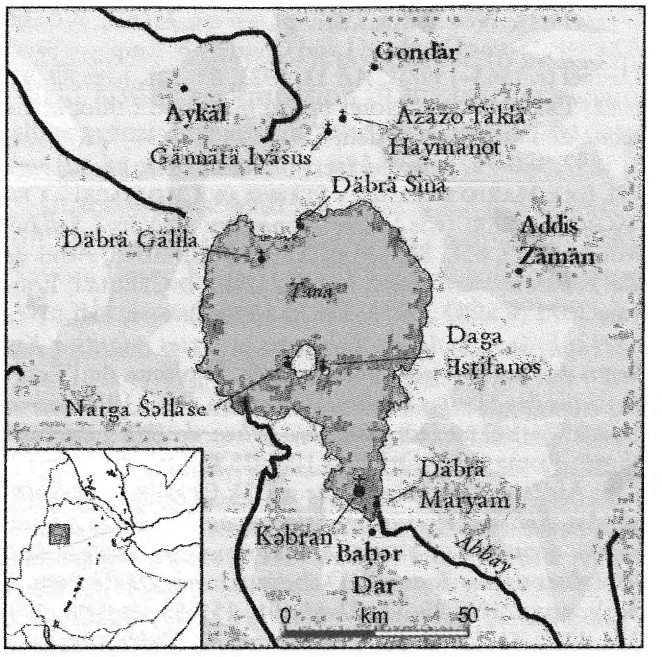
Beheading of John the Baptist; wall-painting, 17th cent., church of Kəbran Gäbrəʾel, Lake Ṭana; photo 2006, courtesy of Michael Gervers

ms. Ṭānāsee 1, fol. 3vb). During the 15th cent., the church celebrated the *täzkar* for the kings and their families: first for *aṣe* Dawit and his parents – he ordered it in 1412/13 and donated *gʷəlt* lands on the occasion (ms. Ṭānāsee 1, fol. 3ra, 236v) – and then for *aṣe* Yəsḥaq (ms. Ṭānāsee 1, fol. 237rv). Endowments from *aṣe* Ləbnä Dəngəl (1508–40) are also registered in the monastery's documents (ms. Ṭānāsee 22, fol. 15ra–va). *Aṣe* Śärṣä Dəngəl granted lands as well (ms. Ṭānāsee 1, fol. 184ra) and intervened in the monastery's internal affairs to settle certain problems concerning the administration and the appointing of the ↗*mämhər* (ms. Ṭānāsee 1, fol. 11v; Schneider 1970:ix–x; another copy in ms. BritLib Orient. 650, fol. 5v–6v, s. Merid Wolde Aregay 1985:89, 92).

The church, apparently restored for the first time under the patronage of *aṣe* Dawit (1379/80–1412; ms. Ṭānāsee 1, fol. 235r; Bosc-Tiessé 2001:151), was rebuilt between 1596 and 1615. The work began under the supervision of *abba* Dämalyos and it was continued by *däğğazmač* ƎḪʷä Krəstos, who also gave two *rəst* lands to the *mämhər* and the *qesä gäbäz* (ms. Ṭānāsee 1, fol. 22r; Schneider 1970:VIII; Bosc-Tiessé 2001:83ff.). During his reign, *aṣe* Fasilädäs endowed the monastery with lands (ms. Ṭānāsee 1, fol. 184rb; Schneider 1970:x; Bosc-Tiessé 2001:91); one of these *gʷəlts*, granted in 1646, was shared with the monastery of ↗Daga (Perruchon 1897:366; 1898:87f.) and was renewed by *aṣe* Yoḥannəs in 1677 (ms. Ṭānāsee 1, fol. 3rb).

The monastery's important library (over 200 mss.; 58 microfilmed by Hammerschmidt, s. HamTana I, and some by EMML, not yet catalogued) contains several manuscripts with historical notes. Among them, a ms. of the Four Gospels is a remarkable document from both the historical and artistic point of view (ms. Ṭānāsee 1, HamTana I, 84–91, pl. XX–XXII; Leroy – Wright – Jäger 1961, pl. vii–xi). Written between the second third of the 14th cent. and the beginning of the 15th cent. (cp. Heldman 1979:359, 362, 369 n. 4; AfrZion 178f.; Bosc-Tiessé 2001:25–32), this manuscript is illuminated with 35 full-page miniatures depicting the Eusebian ↗canon tables, Christological scenes and the portraits of the ↗evangelists. Some details in the miniatures are enhanced with gold, an exceptional feature in Ethiopian ↗painting.

The monastery's ties with the throne were particularly close during ↗Iyasu I's reign. He had the present church building constructed between



1683–90, built from red, cut stones (ms. Ṭānāsee 3; Schneider 1972:39–42; Bosc-Tiessé 2001:151–55; Di Salvo – Chojnacki – Raineri 1999:85f., 88f.) and decorated with a large programme of wall-paintings; particularly notable is the copy of the depiction of the beheading of ↗John the Baptist from the *Evangelium arabicum* (which is very rare in mural art at that time; Bosc-Tiessé 2001:161–69, 480–83, fig. 50–59). However, an earlier canvas – from the second half of the 15th–early 16th cent., produced in ↗Fəre Ṣəyon's style by one of his assistants, or a later artist who worked in the same tradition – still hangs on the *mäqdäs* (Bosc-Tiessé 2000:242, fig. 13; 2001:82–85, 470, fig. 31).

In 1700, the eldest son of Iyasu, Fasil, was buried in the church (GuiIohan 229 [tr.]). A year later, the Emperor promoted the *mämhər* of K., *abba* Abranyos, also called Gämoč, to *ʿaqqabe säʿat* (GuiIohan 231 [tr.]; BassÉt 162). Abranyos played an important role as a patron of the arts, ordering the first illuminated manuscript of the *Gädlä Giyorgis* in Ethiopia (ms. Ṭānāsee 17), marking the beginning of the narrative iconographical cycles for saints' lives and allowing us to date the evolution from the First Gondärine Style to the Second (Bosc-Tiessé 2001:170–98, 493–502; ↗Gondär-style architecture).

The church was restored by *aṣe* ↗Iyoʾas I after it was burnt in 1765/66 (ms. Ṭānāsee 1, fol. 92va); the paintings on the western wall of the *mäqdäs* were redone during the 19th cent. (Bosc-Tiessé 2000:242; 2001:384, 420f., 427f., fig. 183).

Kəflä Giyorgis

K.G. (**ክፍለ፡ ጊዮርጊስ**, b. 14 *Gənbot* 1817 A.M. [21 May 1825 A.D.], Ankobär, d. 3 *Paguəmen* 1900 A.M. [8 September 1908 A.D.], Jerusalem), also known as *mämhər* or *däbtära* K.G., was a renown Ethiopian scholar and theologian. K.G. was baptized on the 23 *Säne*, the commemoration day of St. ↗George of Lydda, and thus named after him. K.G.'s first teacher was *mämhər* Wäldä Śəllase who introduced him, at an early age, to the Triple Birth doctrine (↗*Śost lədät*; ↗*Yäṣägga ləğ*) then predominant in Šäwa, to which K.G. adhered throughout his life.

K.G. studied at ↗Däbrä Wärq in Goğğam under the famous teacher *arat ʿayna* Goššu, proficient in traditional exegesis (↗*Andəmta*) of O.T. and N.T., as well as in the monastic books (*Mäṣaḥəftä mänäkosat*) and the writings of the Church Fathers (*Liqawənt*). Then he moved to Gondär, to the school of *aläqa* Wäldä Ab Wäldä Mikaʾel. On returning to Ankobär, K.G., together with his friend *aläqa* ↗Täklä Ṣəyon, devoted himself to the exegesis of such religious texts as Genesis, I Kings and II Kings, and ↗Isaac of Nineveh. K.G. took a special interest in the Book of Ezekiel. After spending many years in search of a good Gəʿəz text of this book, he worked on the commentary till the end of his life. The results of his labours were included by his pupil ↗Kidanä Wäld Kəfle in his edition of Ezekiel (Kidanä Wäld Kəfle 1924; s. Cowley in SegBodLes).

The situation of the followers of the *Śost lədät* deteriorated after the council of ↗Boru Meda in May 1878, in which K.G. took part as a delegate. Exiled to ↗Kärän, then part of the Egyptian ↗Sudan, he crossed then the border and took refuge at the Catholic Mission near Massawa (↗Ǝmkullu), with the approval of the head of the Mission, *abunä* Yosef (alias Mgr. Joseph Touvier). Subsequently, he was offered the professorship of Gəʿəz in the Catholic Seminary of Kärän, and settled there after a short visit to Jerusalem. Working at Kärän, K.G. contributed to the preparation of some early imprints (cp. ↗Incunabula). He helped edit a traditional Gəʿəz-Amharic grammar, the *Säwasəw* (1879) of *abba* Gäbrä Mikaʾel, and translated the catechism *Təmhərtä krəstiyan* (1880) in collaboration with ↗Coulbeaux. He revised the second edition of the Psalter (*Dawit*, 1885), which included the Song of Songs and ↗*Wəddase Maryam*, and translated, with Coulbeaux, the *De imitatione Christi*, which appeared with the title *Krəstosən sälä mämsäl* (1883). All these works were issued in Kärän by the St. Lazare printing press (s. Fumagalli 1893, nos. 1148, 1395, 1395c, 1395d). While in Kärän, K.G. was also working on an exposition of the *Yäṣägga ləğ* doctrine that was completed in 1883, probably to meet the 33rd anniversary of the death of *əṣṣäge* ↗Maḥṣäntä Mikaʾel, the fervent adherent of *Śost lədät* (published under the title **የጸጋ፡ ልጆች፡ ባህል**, *Yäṣägga ləğoṣṣ bahəl*, 'The Doctrine of the Adherents of the Son of Grace [School]' in Yaqob Beyene 1981:49–211; cp. Berhanou Abebbé 1986:11ff.). K.G.'s excellent teaching aroused the suspicion of *abba* ↗Täklä Haymanot of Məmsah, the head of the Seminary of Kärän, but K.G. was able to prove that accusations against him of "disseminating heresies" were groundless (Yaqob Beyene 1981:9, n. 10).

In 1887 K.G. left Kärän for Rome, where he was invited to teach Gəʿəz at the Ethiopian College in the Vatican (↗Santo Stefano dei Mori). During the ten years he spent there, K.G. had the opportunity to learn Latin and Italian, and he became an informant and consultant to ↗Guidi. Their collaboration resulted, *inter alia*, in a col-

lection of Amharic folklore (Guidi 1891:27, n. 1) and historical texts (Id. 1900:11), a fundamental Amharic–Italian dictionary (s. GuiVoc VIII–X), and the edition and translation of the ↗*Fəṭḥa nägäśt* (Guidi 1899:XVf., 1897:IX, n. 1). The ↗*Märḥa ʿəwwur* (Id. 1896) is possibly a composition by K.G. himself. Guidi felt very fortunate to be able to rely on such a competent source in matters concerning the Ethiopian Church, but somewhat underestimated the impact of K.G.'s own belief in the doctrine of *Śost lədät*. As a matter of fact, works like GuiVoc or "Uno squarcio di storia ecclesiastica di Abissinia" (Guidi 1900), considered to be standard pieces of scholarship by generations of students, reflect more often, inevitably, the views of K.G. and his school (cp. Tesfazghi Uqbit 1973:77f.).

Having left Rome in 1897, K.G. went to Jerusalem. There, he befriended *mämhər* Wäldä Säma^{c}ət, the superior of the monastery of Däbrä Gännät, and encountered a talented monk, Kidanä Wäld Kəfle, who became his disciple. During the eleven years they spent together, K.G. taught Kidanä Wäld Kəfle, sharing with him his vast theological knowledge. In January 1900, K.G. was visited at Däbrä Gännät by ↗Littmann, who briefly passed through Jerusalem looking, among other things, for help in translating the Old Amharic "Royal Songs". Littmann (1914:7) found K.G. exceptionally competent in language matters, but eager to help to interpret sacred hymns rather than popular songs. Littmann testifies that K.G. converted to Catholicism during his stay in Rome, "and kept connection with the Latin Patriarchate" of Jerusalem (Littmann 1902:106, n. 1). Thus, when K.G. came to Jerusalem, he must have lived within the Catholic community (cp. [Stoffregen-]Pedersen 1983:56f., 61). His collection of Ethiopic manuscripts was indeed bequeathed by him to the Latin Patriarchate (ZanBibl 137, no. 246). Yet, his wish to stay with his countrymen was so strong that he settled at, or spent much time in, the community of Däbrä Gännät. Devoting all his time to books and studies, K.G. led an ascetic life, with no interest in mundane things.

In May 1908 K.G. said to Kidanä Wäld Kəfle that he would not survive the month of *Paguəmen*. He bequeathed to his disciple his spiritual heritage and entrusted him with the task of finishing the Gə^{c}əz dictionary, which became the work of three scholars and was published only in 1955/56 by ↗Dästa Täklä Wäld (s. KWKDic). Likewise, the *Haymanotä abäw qäddämt* – a text on the *Yäṣägga ləǧ* doctrine – is considered to be Kidanä Wäld Kəfle's continuation of his teacher's major theological exposition, and was published later by Berhanou Abebbé (1986:36).

In accordance with his wishes, K.G. was buried on Mount Zion at the side of his companion Täklä Ṣəyon. Later, Kidanä Wäld Kəfle compiled a short *Vita* of his teacher (EMML 1523, fols. 67b–73a).

Ewa Wołk – Denis Nosnitsin

Kəflä Maryam

Liqe, or *liqä mäṣane* K.M. (ክፍለ፡ ማርያም, also Kəfle, b. 1641/42, Arba Amba, d. 11 October 1726, Gondär) was a nobleman, renowned legal authority and judge of the high court in ↗Gondär who lived during the prosperous times of the ↗Gondärine kingdom. The main source for his life is the ዜና፡ ዝክረ፡ ስሙ ... (*Zena zəkrä səmu* ..., lit. 'Narrative of the commemoration of the name ...') "of the blessed and glorious" K.M., a rare example of Gəᶜəz biographic writing (with hagiographic features), composed by K.M.'s son, *azzaž* Täklä Haymanot soon after his father's death (Bachmann 1893:33–44, 49f.). According to this text, K.M. was of noble origin, his lineage tracing back to "the house of Barzillai of Gilead" (2 Sam 17–27; 1 Kgs 2:7), which came to Ethiopia with ↗Mənilək I who brought with him "44 laws" from Jerusalem.

K.M. was already prominent at the court of *aṣe* ↗Iyasu I, serving as *liqä mäṣane* – one of the high judges (s. ↗*liq*). He became famous for his eloquence, memory, and his just decisions. In particular, amongst his innovative judgements concerning corporal punishment became known, he cancelled an old practice according to which a person of noble origin (*angebenawi* [cp. Schall in PICES 8], or *əsraʾelawi*, i.e. 'Israelite') who refused to accept the decision of the judges would be publicly stripped of their clothes and flogged. Instead, he/she was supposed to abstain from eating, drinking wine, sleeping in a bed etc. (Bachmann 1893:36; cp. Kropp in PICES 6, 363f.). In addition to the title and office of *liqä mäṣane*, Iyasu I also conferred upon K.M. that of *wəsṭ* ↗*azzaž* (s. GuiVoc 115, 682f.); both were made hereditary to K.M.'s family. In ca. 1694 K.M. was promoted to *liqä mäṣanənt*, 'head of the *liqä mäṣane*-judges' (DombrChr 285 and n. 902), a position he held until his death.

The *Zena* states that St. Mary once appeared to both K.M. and his wife Ǝskəndərawit; soon after, Iyasu I proposed that K.M. found his own church. The *Zena* culminates with a description of K.M.'s efforts to build the church of Kidanä Məḥrät in Arba Amba (his estate near Däbrä Tabor), the list of the clergy installed there and the property given to the church, the ↗*ᶜawaǧ* of Iyasu I and *abunä* ↗Sinoda's blessing of the *tabot*. K.M. died at the age of 85 (under *aṣe* ↗Bäkaffa) and was buried in his Kidanä Məḥrät church. The death of his wife *ətege* Ǝskəndərawit (at the age of 68) occured on 1 January 1720, and is both recorded in a note by her son Täklä Haymanot (Kropp in PICES 6, 361f.) and mentioned in the "Short Chronicle" (e.g., DombrChr 267). The *Zena* does not provide further detail of K.M.'s life, though as a contemporary of six kings he must have witnessed and participated in several important events. The "Short Chronicle" only reports that K.M. was a member of the court that sentenced to death three ↗Capuchins in 1716 (DombrChr 264f.).

After K.M.'s death, the office of *liqä mäṣane* was inherited by his son *azzaž* Giyorgis, and in 1744 (probably after the latter's death) by his other son Täklä Haymanot, who was married to *wäyzäro* Wälättä Nägäśt and died in 1758. The family kept its high position at the Gondärine court, as well as its estate at Arba Amba (for a number of property transaction documents, s. Crummey 1983:211). It has been surmised that Täklä Haymanot was connected with the composition of the "short chronicles" (↗Historiography), and that there were relations between K.M. and *liq* ↗Aṣqu, one of the most learned persons of the time (according to Eduard ↗Rüppel, a grandson of a certain Täklä Haymanot; cp. Kropp in PICES 6, 366 and n. 37).

Denis Nosnitsin

Kəflä Maryam

Abeto K.M. (ክፍለ፡ ማርያም, d. December 1607) was one of the four sons of *aṣe* ↗Śärṣä Dəngəl by his concubine Tägäzzañ Ḫarägo (or Ḫarägʷa; *tägäzzañ* being probably a title; elsewhere she is called *əmmäbet*), a converted ↗Betä Ǝsraʾel woman from ↗Səmen. The others were Zämaryam, ↗Yaᶜəqob and Mätäkko. During his lifetime Śärṣä Dəngəl, who had no legitimate sons, intended to make Zämaryam his heir, but the latter died and Śärṣä Dəngəl chose his next son

Yaᶜəqob as the heir apparent (s. BecRASO III, 327). When Yaᶜəqob was proclaimed emperor, his brothers K.M. and Mätäkko spent the turbulent years of his reign in the safety of Səmen, which they used as their local power base.

When *aṣe* Yaᶜəqob was killed on 10 March 1607 in a battle with *aṣe* ↗Susənyos, the brothers began their struggle for the throne. According to the Chronicle of Susənyos, Mätäkko wanted to become emperor and to make his brother his *wazīr* (PerChron vol. 1, 101). However, the two were arrested and in November 1607 put into Susənyos's hands, who had them brought to trial in December and beheaded. The Chronicle (ibid. 282) also hints at K.M.'s and his brother's links to ↗Gedewon, possibly Ḫarägo's brother (Quirin 1992).

Kəflä Waḥəd

Däğğazmač K.W. (ክፍለ፡ ዋሕድ, also Kəflä Waḥid; b. ca. 1560s, d. 1618, Gorgora) was a governor of ↗Təgray until ca. 1607/08. The son of *šum ᶜagamä* Däbrä Ṣəyon Azäzäy from Wurəḥät (near ᶜAddigrat), he inherited his father's governorship over ↗ᶜAgamä, and later extended his rule over wide areas of Təgray. In about the 1580s, K.W. was married by *aṣe* ↗Śärṣä Dəngəl to the latter's daughter *əmbäytäy* Krəstosawit (in oral tradition: Kəsəsayit or Səsayit [corrupted form: Qäsisawit]; Mendez mentions K.W. as Śärṣä Dəngəl's son-in-law, BecRASO VIII, 92). Through his wife, K.W. controlled a great number of *gʷəlti* lands (↗*Gʷəlt*) in Təgray, such as in ↗Ǝntičč̣o and Dəbdəbo, and in areas up to Bägemdər.

During the 1597 power struggle, which followed the death of the monarch, K.W. sided with the party that successfully supported the claim to the throne of *aṣe* Śärṣä Dəngəl's minor son, *aṣe* ↗Yaᶜəqob. Yaᶜəqob's reign gave K.W. the opportunity to briefly occupy a central power position within the state (BecRASO VIII, 92f.; Ludolf 1681:L. II. c. 6. 57; Bartnicki – Mantel-Niecko 1978:158f.). Together with *ras* ↗Atnatewos he controlled the interim government. However, K.W. soon left the court to return to Təgray and reassume its governorship, *ras* Atnatewos becoming Yaᶜəqob's tutor.

K.W. was able to extend his rule even up to the coast, and assumed both the titles of ↗*təgre makʷännən* and *nəguśä baḥər* (i.e., ↗*baḥər nägaš*). In 1603 his seat was ↗Dəbarwa in Ḫamasen, the capital of the *baḥər nägaš*, where he received Pedro ↗Paez. The powerful nobleman Səbḥat Läᵓab of Ḫamasen stood in K.W.'s services; he was charged by K.W. to detain *ras* ↗Zäśəllase, the rebellious head of the Qʷərban regiment banned from the Ethiopian court (Chernetsov 1990:38). K.W. then nominated Zämaryam from Tämben as governor of the *baḥər nägaš*'s realm in Dəbarwa, and married his daughter Amätä Ṣəyon to him (BecRASO IX, 294f.; PerChron II, 349).

The conflicts at the court led to a battle between *aṣe* Yaᶜəqob and the future monarch *aṣe* ↗Susənyos, which took place on 12 April 1606 at Č̣äč̣äho, Bägemdər. K.W. intervened with his Təgrayan troops and again sided with Yaᶜəqob (BTafA 293); however, this time K.W. was beaten and fled to Təgray. After his accession to power, *aṣe* Susənyos solemnly forgave K.W., who submitted and sent precious gifts, an example followed by the other governors from Ḫamasen to Baqla (PerChron vol. 2, 77f.; Chernetsov 1990:62). Only a few years thereafter, however, K.W. was replaced by another governor, *aṣe* Susənyos's half-brother *ras* ↗Səᶜəlä Krəstos (in ca. 1608; ibid. 65; BecRASO VIII, 93). A decade later, K.W. died of pest at the Emperor's *kätäma* of ↗Gorgora (PerChron vol. 2, 156, 349).

K.W.'s descendants enjoyed a number of practical and symbolic privileges until 1974, owning the rich *gʷəlti*, which with time turned into *rəsti* (family heritage; ↗*Rəst*). K.W.'s six children, three sons and three daughters, received six *gʷəlti*: reportedly, Bakimos got Gʷadəb; Amätä Ṣəyon (by some called "Lättäṣəyon") ᶜAddi Qälqäl; Wälättä Dəngəl ("Lättädəngəl") got Wäᶜaga; Zäwäldämaryam Dagga; Yəḥannəs, who had first gone to Wälqayt, got ᶜAddi Krəs (Dəbdəbo) [in some traditions this son is replaced by Bakimos's son Arqanos]; Wälättä Ḫawaryat ("Lättähawarya[t]") got Məsəḥəl. One line of descendants is also known in Eritrea, e.g., in ᶜAdəgna in ↗Ǝggäla (s. KolTrad 2, 16). Bakimos of ᶜAgamä is known from historical sources as the grandson of *aṣe* Śärṣä Dəngəl, upholding the Orthodox faith against Catholicism (Barradas 1996:80). It was probably due to his genealogi-

cal connection to K.W.'s descendants that *aṣe* ↗Iyoʾas I in the mid-18th cent. built the church at Sägli, another *gʷəlti* of Krəstosawit.

The office of *šum ᶜagamä* was later transferred to another line, allegedly also descending from Däbrä Ṣəyon (*šum ᶜagamä* ↗Säbagadis).

K.W. plays an important role in Təgrayan oral historiography. He is remembered as the founder of the capital of ᶜAgamä, ↗ᶜAddigrat (the church of Č̣ärqos is attributed to him). Besides, he is important as the apical ancestor of Təgrayan leading families, both Christian and Muslim, who can claim Solomonic origin through his wife Krəstosawit (e.g., ↗Kaśa Golǧa). Her grave is still shown in the monastery of Ǝnda Maryam Wəhabit (near Dəbdəbo) in Mägarya Ṣämri, where she lived as a widow. Her grandmother is said in oral tradition to have been from the *Däqqi Bortukan*, i.e. from ↗Portugal. K.W. also figures in Təgrayan legends; for example, his mother is said to have been a *zarti* (*däqqi ḥədərtäna*, female earth spirits), and he himself to have been "taken back" by them.

Kəfle ᶜƎrgätu

Däǧǧazmač K.ᶜƎ. (ክፍሌ፡ ዕርገቱ; b. 1906, Bulga or Tägʷəlät, d. 23 November 1974, Addis Abäba) was a politician during *aṣe* ↗Ḫaylä Śəllase I's reign. K.ᶜƎ. was the son of a guard at the French legation in Addis Abäba and received his education at the military school of Saint-Cyr in France (ClapHS 195; de Juniac 1976:407). In the ↗Italian war 1935–36, K.ᶜƎ. was leading the ↗Imperial Bodyguard units as a junior commander during the battle of ↗May Č̣äw (KTMast 145; HSLife 277). At that time he bore the title of *grazmač*.

After the Liberation, K.ᶜƎ. was appointed *däǧǧazmač*. A close associate of *ras* ↗Wäldä

Kəfle ᶜƎrgätu, photo from Ministry of Information 1963:7

Giyorgis Wäldä Yoḥannəs, he was at that time concerned with public security, occupying first the post of Director-General of the State Security from 1942 to 1949 and then the post of Vice-Minister of Public Security until 1955. When Wäldä Giyorgis lost his influence at court in 1955, K.ᶜƎ. was also removed from his post and appointed Governor of Harär. He re-entered the ↗Government in 1961 as Minister of State for Public Security, and was appointed Minister of Interior in 1966 (ClapHS 113, 116, 195). In his capacity as Minister of the Interior, he participated in the committee established by Ḫaylä Śəllase I in July 1968 to review the situation in the region of ↗Goǧǧam that went through a peasant's rebellion, and to suggest means of ending the crisis (Schwab 1970:253). He was executed together with other officials during the ↗Revolution in November 1974.

Two young brothers of K.ᶜƎ. had also risen to senior positions during the time of Ḫaylä Śəllase I. The most known is General Täšomä ᶜƎrgätu, who was ambushed and killed in Eritrea on the road to Kärän in 1970 for which reason martial law was declared in the region.

Estelle Sohier

Kəfle Wädağo

K.W. (ክፍሌ፡ ወዳጆ; b. August 1935, Addis Abäba, d. 28 April 2004, South Africa) was a distinguished diplomat, a chief architect of the ↗Organization of African Unity and the 1994 Ethiopian ↗constitution.

K.W. was born to *näggadras* Wädağo Ali and *wäyzäro* Məntəwwab Täkle. Wädağo Ali was a diplomat, serving as a consul general in Eritrea in the early 1930s entrusted with following and averting Italian preparations to invade Ethiopia. Upon the Italian occupation the family, including K.W., was interned in a concentration camp in Italy. Following the Liberation in 1941 K.W. was sent to the Täfäri Mäkʷännən School. He graduated from the University College of Addis Abäba in 1957 and from the University of Wisconsin, where he received Master of Arts degrees in Political Science and Legal Institutions, in 1959.

Upon returning to Ethiopia, he joined the Ministry of Foreign Affairs. He also held important posts such as Ethiopia's Deputy Permanent Representative to the UN (1961–63 and 1968–70); the first acting Secretary General of the Organization of African Unity (1963–64); Ambassador to the United States (1971–74); and Minister of Foreign Affairs (1974–77).

In protest against the *Därg* (↗Provisional Military Administrative Council), he resigned from the Ministry of Foreign Affairs and went into exile in the United States. Except for a brief stay at Harvard's John F. Kennedy School of Government, he spent the *Därg* years working tirelessly to end military dictatorship. Upon the overthrow of the *Därg*, K.W. returned to join the Transitional Government and was the chair of the Constitutional Commission (1991–94). The draft constitution included a minority position, put forward by K.W., offering dissenting provisions on the right to secession and collective land ownership. This was presented to the constituent assembly together with the majority draft proposal of the Ethiopian People's Revolutionary Democratic Front (E.P.R.D.F.). The preamble and the human rights provisions of the constitution are among K.W.'s critical contributions to the constitution.

When the Transitional Government came to a close, K.W. left the government to promote peace in a non-governmental organization working in collaboration with the Inter-Africa Group. He also was an ardent advocate of gender and ethnic equality as well as freedom of the press and freedom of association. He remained committed to African liberation and to liberalism causes throughout his long career in public service. In post-imperial Ethiopia, K.W. was Ethiopia's most prominent voice for liberal democracy.

Andreas Eshete

Kəflo

K. (ክፍሎ, d. 22 June 1617, Magač, Dämbəya) was a courtier and one of the most important political figures during the reigns of Emperors ↗Yaᶜəqob,

↗Zädəngəl and ↗Susənyos. The author of the latter's Chronicle, *ṣäḥafe təʾəzaz* ↗Täklä Śəllase, devoted almost an entire chapter to K. (ch. 49, PerChron vol. 1, 185-90 [text]) depicting him as a villain, as he did with other resolute enemies of Susənyos such as ↗Zäśəllase, ↗Yolyos and ↗Yämanä Krəstos. The reports of Pedro ↗Paez (less emotional yet similar to Täklä Śəllase's in disdaining the personality of K., unique even for that time) mostly agree with Täklä Śəllase's information, completing it at some points.

According to Täklä Śəllase, K. was of relatively humble origin: his father was from the ↗*čäwa* of Däwaro, and his mother was from Šäwa. They separated, as Täklä Śəllase stresses, because of their poverty. K. tended his aunt's cattle. When the region was raided by the ↗Oromo, K. was badly wounded and emasculated, yet survived and was later accepted into the service of *azmač* Moṭä Gärrad (s. also CRHist 51), his relative. One day, when K. was angry with his master, he put a burning coal into the chest which contained Moṭä Gärrad's silk vestments. When Moṭä Gärad opened the chest the next day, he found his cloths burnt to ashes. Nobody knew that it had been K., but Moṭä Gärad soon banished the mischievous servant.

K. joined *aṣe* Yaᶜəqob and was made ↗*bäᶜal däräba* of a certain Wakaha, but was soon dismissed for his bad conduct. He joined *ras* ↗Atnatewos and followed him to ↗Goğğam, having become his favourite. When Atnatewos quarreled with Yaᶜəqob and was arrested, K. briefly served under Yaᶜəqob, but then joined the rebellion against him, following *abetohun* ↗Yonaʾel. When Yaᶜəqob was deposed in 1603 and *aṣe* Zädəngəl came to power, Atnatewos joined the rebellion against the Emperor (killed at ↗Barčʿa on 14 October 1604, s. PerChron ch. 21), and also quarreled with K., who went to look for Yaᶜəqob in ↗Ǝnnarya. Not finding him there, on his way back he met *ras* Zäśəllase along with the powerful Qʷərban regiment and other nobles. The message that Yaᶜəqob "was not found" prompted the decision to dispatch a delegation to Susənyos, which swore loyalty to him in April/May 1605; at that time already *nägaš* of Goğğam, K. was among the delegation's members. Possibly by chance, K. thus contributed to Yaᶜəqob's failure in his struggle for the crown, ending with his death in 1607.

Susənyos favoured K., who served him on campaign, leading a *čäwa*-regiment called Ḫaylat (PerChron ch. 36). However, he plotted against Susənyos on several occasions. In 1609 he joined a plot hatched by *ras* Yolyos, which was foiled by *ras* ↗Səᶜəlä Krəstos. K. was imprisoned on ↗Däq, but was soon pardoned (ibid. ch. 39, 43) and appointed ↗*blatten geta*. He quitted the office after some time, offended at not being appointed ↗*säḥafe lam* of Damot. In October 1613, K. was again found plotting; he was arrested and briefly imprisoned in Wäläqa, but soon forgiven and brought back to court.

In May 1615, K. was sent on campaign against the Oromo in ↗Bizamo and to collect tribute in Ǝnnarya. He was again appointed *blatten geta*; his power grew, and so did, according to Täklä Śəllase, his arrogance and the scale of his wrongdoings. When Susənyos was campaigning against ↗Gedewon and Täkluy, K. concentrated power in his own hands. He became ↗*wämbär* and ↗*käntiba* of ↗Dämbəya and even took *ṣäḥafe təʾəzaz* Täklä Śəllase's seal from him thus incurring the latter's hatred.

Upon receiving complaints, Susənyos reproached his favourite, but did not punish him, and K. was able to keep his position for two years and seven months. Then he secretly joined the anti-Catholic rebellion of Yolyos. K. promised him to stay on the side of Susənyos and to assassinate the Emperor at the right moment, on condition that Yolyos would kill *ras* Səᶜəlä Krəstos. However, during the battle of 11 May 1617, in which the rebels were defeated and *abunä* ↗Səmᶜon was killed, K. did not do this. Some days later, still playing the loyal servant, K. tried to organize another attempt on the Emperor's life, which also failed. In response, K. was arrested, brought to court, quickly sentenced to death and beheaded on 22 June 1617.

Denis Nosnitsin

Kəfu qän

K.q. (**ክፉ ቀን**, Amh. 'evil day') is a term often applied for a time of famine and more specifically for the Great Ethiopian Famine of 1888–92.

This last famine owed its intensity to the fact that it represented a coincidence of calamities, any of which would by itself have been serious. First, there was an outbreak of rinderpest, possibly due to the import by the Italians in 1887 of cattle infected by a new virus against which the local animals lacked immunity (Pellenc 1987:18f.). The disease spread rapidly from the northern highlands across most of Ethiopia and into other parts of eastern Africa. Cattle infected died within three days. Not more than 7–8 % of livestock were said to have survived (Skinner 1906:196). This led to an acute shortage of meat for consumption and to the virtual disappearance of plough oxen, with a resultant collapse of agricultural production. In addition, there was an unusually severe drought, beginning in 1888, which culminated in a major harvest failure (GueCopMen 258, 296–99).

Finally, plagues of locusts and caterpillars appeared, apparently induced by abnormally hot weather. These events combined to produce a spectacular increase in food prices and acute shortages, resulting in high human mortality. Many of the survivors, debilitated by hunger and wandering in search of food, fell victim to epidemics of smallpox, dysentery, typhus and virulent influenza (GueCopMen 322f.). One estimate suggested that a third of the population died (Pankhurst 1966:273).

The K.q. had numerous repercussions. These included migration to the coast, west and south in search of food; temporary replacement of ploughs by hand tools; collapse of resistance to Italian expansion in Eritrea and of Oromo opposition to *aṣe* Mənilək II's southward advance; scarcity of supplies, which contributed to the Emperor's subsequent reorganization of the agricultural tax system; depopulation of fertile Eritrean land, which, as a consequence, was claimed for the settlement of Italian colonists; enhanced proselytism by European missionaries providing charity.

Kəhnät

The term K. (**ክህነት**, Gəᶜəz, Amh. lit. '[office of] priesthood, clerical condition) refers to both the sacerdotal character and the ministry of the members of the clergy of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). It is derived from **ካህን**, *kahən* (pl. *kahənat*), 'clergyman', the cognates of which, with the same meaning, are attested in such other Semitic languages as Hebrew, Syriac and Arabic (DillmLex 814; LesCDic 278).

In the Ethiopic ↗Bible, *kahən* is used in the O.T. to indicate the sacred ministers of the Temple (cp. Hebrew *kohen*, 'priest [of the Temple]', descendant of Aaron). In the N.T., it is applied to Jesus Christ as corresponding to Gr. ἱερεύς (cp. also ↗*liqä kahənat* [Gr. ἀρχιερεύς, 'high-priest'], e.g., in Heb 4:14); the expression **ሕዝበ፡ ክህነት** (*ḥəzbä kəhnät*) refers to the "sacerdotal people" as a whole (cp. DillmLex 814b). In contrast, the term ↗*qäsis* (cp. Gr. πρεσβύτερος, 'presbyter, priest') applied originally to elders flanking the bishop (DillmLex 433a).

Since the early 3rd cent. at least, the liturgy and the life of the Christian community were presided by the monarchic bishop, a fact documented in the ↗*Traditio apostolica*, also in its Ethiopic version (cf. Horner 1904:138f.; Duensing 1946:20f.; cp. Bradshaw 2002:38f.; cp. ↗*Senodos*), as well as in the *Mäṣḥafä kidan* (cf., e.g., Beylot 1984:35; s. ↗*Testamentum Domini*). The "Constitutions of the Apostles" show a change, referring to both the *epískopos* and the *arhieréus* for the celebrant (Metzger 1987:179, 204), and using the term *hiereîs* for priests outside the liturgy (ibid. 212f.), the same equation being established, consequently, in the Ethiopic ↗*Didəsqəlya*, where the bishop is the high-priest (Harden 1920:50). The term *kahən* (or **ንፍቀ፡ ካህን**, *nəfqä kahən*) has since then been referred to the celebrant of the liturgy (↗*Qəddase*), whether a bishop or a member of the presbyterium delegated by him to assume liturgical presidency in his stead. *Kahən* and *qäsis* have therefore quickly become synonymous. (English does not distinguish both either, hence the artificial notions of the "priesthood" of Christ and the people of God and the "ministerial priesthood" of the Church's clergy.) In current usage *kahən* applies to monks who have

received the priestly ordination, while the married priests are generally called *qäsis*, although they share the same K.-priesthood.

The *nəfqä kahən* (lit. 'half-*kahən*', i.e. the assistant priest) assists the main celebrant in a given Eucharistic service in the awareness that the full liturgical functions may be fulfilled by the latter only. Priests swap their roles from one liturgy to another, on a weekly basis (hence the term *sämonäññə*; ↗*sämon*), or more, depending on the number of priests qualifying to celebrate the liturgy (*qäddaš kahənat*). The liturgy likens the pair *kahən – nəfqä kahən* to Joseph and Nicodemus (Jn 19:38–42; *Mäṣḥafä qəddase* 1981/82; ch. III, 12; Böll 1998:206f.) while K. is referred to the figure of ↗Melchizedek.

The term *liqanat* (sg. ↗*liq*, cp. DillmLex 25f.) renders Gr. *presbýteroi* ('elders, priests') in the phrase *ʿəśra wäʾarbaʿəttu liqanatä sämay*, 'the 24 Heavenly Elders' (Rev 4:4–10), who are commonly known, however, as Heavenly Priests (**ካህናተ ሰማይ**, *kahənatä sämay*). The hymn of the Heavenly Priests praising the Lamb ("To you, power, honour, glory and dominion forever ...", *məqnay* after Rev 4:11, 5:12) is sung with prostrations at each canonical hour of Holy Week (cp. ↗*Gəbrä Ḥəmamat*). The Ethiopian tradition considers the Heavenly Priests (for their names, s. Basset 1895:21; Conti Rossini 1896:470) a particular category of ↗Angels. Occasionally in the early period (e.g. in ↗Gännätä Maryam), but more systematically since the development of the first Gondärine style up to the present, the 24 Heavenly Priests have been depicted as accompanying the ↗*Maiestas Domini*, the Ancient of Days or the ↗Holy Trinity (ChojPaint 132f.), thus conveying to the faithful a sense of their participation in the heavenly liturgy through the concrete celebration held in the particular community and church. In this regard, the Ethiopian tradition, in keeping with the conceptions found in the *Didəsqəlya* (Harden 1920:1) and developed by Pseudo-Diyonysius the Areopagite's *Celestial Hierarchy* (esp. ch. 1 and 3), understands that there is a correspondence between the earthly hierarchy of K., with all its ten ranks (including the minor orders) and the heavenly hierarchy of the ten choirs of angels (*Fətḥa nägäśt* 1965/66:133; cp. Paulos Tzadua 1968:56; Yared Fanta forthcoming, 162f.).

K. is regarded as one of the seven sacraments of the Church: namely, the **ምሥጢረ ክህነት**, *məśṭirä kəhnät* (lit. 'Mystery of the Priesthood', i.e. Holy Orders; cp. ↗Ordination). It concerns the bishops and the patriarch (cp. ↗*eppisqoppos*, ↗*pappas*), priests among whom the *qomosat* (sg. ↗*qomos*) receive a specific ordination, and the deacons (↗*diyaqon*), i.e. the major orders, given by the laying on of a bishop's hands and the blowing of his breath, as distinct from the minor orders given by a blessing only: sub-deacon (*nəfqä diyaqon*), lector (*anagʷənəsṭis*), cantor (*mäzämmər*), doorkeeper (*aṣawe ḫoḫət/anaqəṣ*). The functions inherent to K. are to govern the Church, teach the faithful and conduct the liturgical services. The actual level of responsibility varies according to the ordination received, the mandate given by the concerned authority and, in the case of a bishop, the prerogative of the episcopal see to which he is appointed (e.g., the apostolicity of the see of Alexandria or Addis Abäba being a capital city).

The bishops are in living diachronic communion, throughout the history, with their predecessors, as well as their living counterparts. This uninterrupted apostolic succession supports the apostolic tradition (**ሐዋርያዊ ትውፊት**, *ḥawaryawi təwfit*) that witnesses to the identity of today's EOTC with the Church of the Apostles and expresses its catholicity, also in a synchronic manner, through their participation in the Holy Synod at the level of the local Churches of Ethiopia (and now of Eritrea) while the communion between local sister Churches is expressed through letters and visits, participation in the enthronement of the new head of a particular Church and councils (cp. ↗*gubaʾe*; in modern times the Addis Ababa Conference held in 1965).

Historically, many of the EOTC and state leaders sought to bring the conditions of the clergy in stricter correspondence with the Canon ↗law, and both raise their quality and heighten their involvement in the lives of believers (in particular, *aṣe* ↗Zärʾa Yaʿəqob, cf. CRRicBerhan 19ff., 48–53). In modern times this became one of the primary missions of the educational establishments such as ↗Holy Trinity Theological College.

With the emergence of the administrative structure of the EOTC, the Church headquarters at every hierarchical administrative level are referred to as **ቤተ ክህነት**, *betä kəhnät*, lit. 'the house of priesthood': **ጠቅላይ ቤተ ክህነት**, *ṭäqlay betä kəhnät*, i.e. the Patriarchate; **የመንበረ ጵጵስና የሃገረ ስብከት ቤተ ክህነት**, *yämänbärä pəpəsənna yähagärä səbkät betä kəhnät*, i.e. the diocesan curia; **የአውራጃ/ወረዳ ቤተ ክህነት**, *yäʾawraǧǧa/*

wäräda betä kəhnät, i.e. the *awraǧa/wäräda* Church office (cp. ↗Administrative division).

Since the establishment of the Patriarchate, dioceses, Holy Synod and of the almost parallel centralizing institution of the ↗*Yäsäbäka mänfäsawi guba'e*, the *betä kəhnät* offices have supervised the parish councils at every level (s. EOTC 1999:25f., organogramme on back cover). In case of conflicts, the authority of the heads of *betä kəhnät*, from the *liqä kahnat* on the *wäräda* up to the Patriarchate, can be called upon (cp. Canon ↗law).

Among the ↗Betä Ǝsra'el, priesthood followed many of the characteristics of K. among the Christians particularly with regard to rules regarding ↗matrimony and the role of confessor (↗*näfs abbat*). An additional responsibility was the performance of sacrifices. Since the Betä Ǝsra'el did not have formal sacraments, *kahən* or *qes* were not indispensable. Indeed, many villages did not have a *kahən*. Since arriving in Israel, Beta Ǝsra'el K. have largely lost their ability to officiate in formal ceremonies such as marriages, funerals etc.

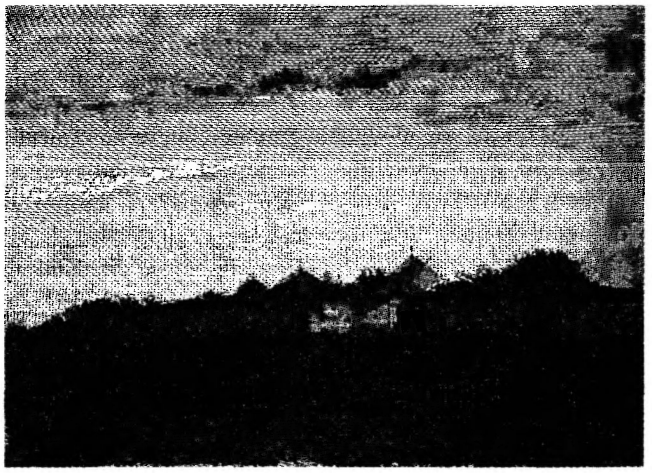
Kələttä Awlaʿəlo s. EAE vol. 5

Kella

K. (ኬላ) is the term for a customs post, checkpoint or toll station (cp. KaneDic 1365). Such posts – an essentially feudal institution – were usually established at sites geographically difficult or impossible to by-pass (cp., in ancient times, the station of ↗Gäbäz[a] at the coast of the gulf of ↗Adulis). They played an important role in traditional Ethiopian ↗taxation, for they constituted the principal means of extracting duties on long-distance ↗trade. They provided local chiefs or rulers with highly prized imported articles, as well as ↗*amole*, otherwise virtually impossible to obtain.

The burden imposed at K. posts was noted by 17th-cent. Jesuit authors. Pedro ↗Paez declared that every customs post on the route inland from the coast levied a tax of one-tenth of imports passing through it (BecRASO II, 285f.), while Manoel de ↗Almeida stated that caravans transporting *amole* from the salt mines would thus lose "nearly a third" of their original loads (BeckHuntAlm 45). Though most K. belonged to local rulers, *aṣe* ↗Susənyos reserved for himself an important one at the high mountain of Lämälmo, yielding annually 100 ↗*wäqet* of gold (BeckHuntAlm 87). The system of K. was substantially reorganized during the ↗Gondärine kingdom, when *aṣe* ↗Iyasu I summoned the chiefs of Təgray in 1698, and interrogated them on the taxes then exacted at the customs posts between Ǝndärta and Wägära. Learning that the merchants were then suffering from considerable abuse, he



A *kella* at the border between two territories, Ğimma Abbaa Ğiffaar; from Traversi 1888:904

was reportedly saddened, and inquired as to the taxes paid in previous times. He was informed that at major customs posts there was formerly a charge of two *amole* on every mule carrying salt, and one on every donkey so laden, while human porters carrying salt were free of tax. Smaller K. in the past likewise levied no tax. The monarch thereupon ordered the Təgray chiefs to consult among themselves, and decide upon the rate of taxes for the future. They duly deliberated, and proposed that there should henceforward be only one single tax, payable at the frontier, at a rate of one *amole* for every five salt-laden mules, or eight laden donkey. Human porters were declared tax-free, the king declaring that anyone attempting to tax them would have his property confiscated, and be punishable by death. Iyasu accepted these far-reaching proposals, and ordered that they, and the location of all Təgray K., be announced by herald, and recorded in the royal chronicle – where they may still be consulted today (GuiIohan 206ff.).

Detailed descriptions of the country's many K. were subsequently provided by 19th- and early 20th-cent. foreign observers, who emphasized the wasted time and exploitation they involved (PankEcon 521ff.).

The need to curtail the country's innumerable K. and thus to establish a more centrally controlled and centrally taxed state was first recognized by Emperor ↗Tewodros II. According to Consul Plowden he "put an end to a number of vexatious exactions", by reducing the number of K. posts to only three (Great Britain, House of Commons 1868:151). Likewise, *aṣe* ↗Mənilək II in the ↗Italo–Ethiopian Treaty of 1889 and *ras* ↗Mäkʷännən Wäldä Mikaʾel in the Additional Convention of 1890 both agreed that Italian trade in Ethiopia should be taxed only in one place (Rossetti 1910:42, 46). This principle was later adopted also for the Addis Ababa–Djibouti ↗railway. Efforts to cut down on excessive K. posts gained greater impetus early in the centralizing reign of ↗Ḫaylä Śəllase I (PankEcon 521ff.; Bahru Zewde 1984:20f.), but a few such customs posts have continued to exist for certain items, notably coffee and ↗*č̣at*, down to the present.

Kəllәl ↗Administrative divisions

Kəmant

The K. (**ክማንት**, also Qəmant), speaking the ↗Agäw language of ↗Kəmantnäy, and the ↗Betä Ǝsraʾel, speaking a similar language, constitute an old extant cultural substratum of the Ethiopian civilization. The land of the Kəmant is located in the *wäyna däga*, north of Lake Ṭana. It surrounds ↗Gondär, extending westward through Kärkär and ↗Č̣əlga. Communities consist of clusters of several houses widely dispersed and totalling 100 to 400.

The ethnic charter and identity of the K. are not primordial but a fluctuating development from interactions with the dominant Christian Ethiopian society. Scant documentation exists for K. history in the Gondärine era (1632–1755) or previously (Quirin 1998:203–08). In Quirin's conceptual framework of class, especially after the late 1700s, the K. chiefdoms, imbedded in the Ethiopian conquest state, could be viewed as an emergent ↗*rəst*-holding, lower-class peasantry within ↗Amhara society. After the 1830s, we find narrow glimpses into K. society, mainly as reported by European travellers. By 1850, K. construction work and supplying of timbers and other building materials in Gondär waned but safeguarding of the caravan routes through the

land of the Kəmant to Gondär waxed. As supporters and soldiers of *ras* Kaśa who rose to power as *aṣe* ↗Tewodros, the position of the K. as a loyal, subordinated, ethnic enclave, then became secure. Some K. elite converted to Christianity during the reign of Tewodros, mainly for social advancement. K. had prominent roles during his reign. The best-known was Galmo who was governor of Č̣əlga and then of Western Ethiopia. During the reign of *aṣe* ↗Yohannəs IV, the K. were forcible converted to Christianity (Quirin 1998:209–17).

The oral history of the earliest past of the K. consists of mythic charters. In the K. beginning, Noah, of the flood, begat Ham, who begat Canaan, who begat Yanər, the "first K.". Yanər's son, Aydərki, is the earliest culture hero (*kədus*) of the K. He and his wife, Anzäkonba, having aspects of a fertility heroine, are each prayed to in their separate sacred groves as intermediaries to the god Məzgäna. The couple's son, Kəbərwa, is the most important K. hero and putative founder of the superordinate *kəbər* moiety of K. society (Gamst 1969:65–69, s. below). Some elder K. recount a vague tale of conquest of other related Agäw speakers by the *kəbər* thereby creating the K. society. Conti Rossini considers an origin of the *kəbər* in Semitic-speaking conquerors of the K. (1912:19, n. 2). However, the adoption of the Semitic label *kəbur* by a group of occupying Agäw would be a less baroque hypothesis, thereby not involving both total language and religious conversion by these victorious overlords.

K. were proud of keeping their religion hidden from the dangerously prying activities of all outsiders, African and European, and they admit to telling tall tales to the unclean inquiring stranger. Some of the 19th- and early 20th-cent. accounts about the K. by Europeans are nonsensical, such as the K. worship the sun and cut the throats of a loved one just before the natural death (Gamst 1969:9, 34). With religious secretiveness and unresisting subservience to the Amhara, the K. say they kept their ways largely intact until recent times, thus, free from significant Amharization. Some take pride in their people's close political relationship with *aṣe* Tewodros, whom a few claim was partially a K.

Aṣe Yoḥannəs IV's forcible conversion and national integration of the K. irreparably ruptured the native K. societal boundaries, centred on their religion and their political-religious leaders and resulted in a declining of K. culture. Amharization of the K., and others, was re-emphasized

Azmari playing for a group of harvesting Kəmant peasants, Kärkär; photo 1965, courtesy of the author

after World War II. During his fieldwork of 1964–65, Gamst could observe Ethiopian Orthodox "development priests", working from a base funded in part by the US AID, actively searched for the remaining K. of the original faith. Almost all K. had converted to some form of Christianity by the 1970s.

Traditional K. political organization was a theocratic chiefdom, antecedent to and surviving subordinated in the Ethiopian state. The chiefdom posed no threat to the Amhara, who built their capital, Gondär, in Kəmantland. The K. chiefdom was a centralized political institution of a territory, permanent, hierarchical, and hereditary. A chief's legitimization was sacrosanct, hence, theocratically authoritative and grounded in religious ideology. The K. chiefs (*wämbär*, 'judge', lit. 'seat') regulate life. They proclaim and enforce holidays, grant permission for divorce and ceremonial marriage, judge disputes unsettled at lower adjudicative levels, and invoke sanctions.

The K. chiefdom had two territories, separated by the Guwang River, each under a superior chief of which the *wämbär* of Kärkär was paramount and the *wämbär* of Č̣əlga subordinate. Each demi-chiefdom consisted of several communities headed by an area *wämbär*. Subordinated to a *wämbär* were higher priests (*kämäzäna*), lower priests (*abäyəgäriya*), and *wämbärs'* spokesmen-enforcers (*afäliq*). Before the mid-1800s, *wämbärs*, through their re-distributive exchange, controlled much inter-area trade. Superior, area, and community religious leaders collected three days of agricultural and other corvée from their

territories. The *wämbärs* redistributed much of the collected wealth in services and alms. As Ethiopian market exchange developed, the exchange of collection-redistribution diminished.

K. society bifurcates into exogamous moieties, the politically superior *kəbər* and the inferior *yətänti*. All religious positions except *abäyəgäriya* are occupied by *kəbər*. Elite patrilineages supplied the hereditary leaders. Traditional social stratification comprised *kəbər* elite, *kəbər* commoners, *abäyəgäriya* elite, *abäyəgäriya* commoners, and, before the 1920s, hereditary non-K. slaves.

Among the K., land does not remain in use from generation to generation as part of a lasting family estate associated with family lines. Potentially, all of a man's children could divide his *rəst* rights, but actual practice was complex. A corporate group, descended from the apical ancestor first cultivating the land, controls *rəst*. Actually, from 30 to 100 or more people take use-rights in an ambilineage of an apical first-tiller of the corporate land. Traditionally, members of the Amhara and K. feudal elite and the church held ↗*g^{w}əlt* rights (a form of fief over production) to particular lands but not its cultivators. Although K. social organization displays strong elements of patrilineality, especially in transmitting positions of leadership, claims in land use were traced ambilineally.

Families arrange monogamous marriages and formerly required exogamy to the seventh degree but, now, the fourth degree of remoteness from a person. A vestigial bride price remains and the families of the bride and groom contribute money and goods to the couple, whose residence in a nuclear family is eventually ambilocal. During menses and after childbirth, a woman is segregated in a special hut because vaginal blood is thought to be polluting. The male infant is circumcised and the female clitoridectomized. By 30 days after birth, infants receive a *qənona* rite of passage into K. society.

Today, except for a few devout persons, the K. are Ethiopian Orthodox Christians but manifestations of their former religion abounded through the 1970s. Məzgäna is the god (*adära*), a "Bronze-Age" sky father, super-ordinate over other spirits, angels, and ghosts of once-human culture heroes. Only *kəbər* patrilineages have apical culture heroes, each venerated in an eponymous sacred grove. Gänel (Satan, s. ↗Devil) is the anti-deity. Məzgäna will triumph over Gänel and descend on His horse to the flat earth, when He will render His Last Judgement of good and evil K., sending them up to heaven or down to cold, fiery hell.

The ↗Sabbath extends from Friday dusk through Saturday dusk. In sacred groves, prayers mentioning the Ark of Moses orient toward ↗Jerusalem. The high point of annual ceremonies is a Rite of Spring, during *Mäggabit*, concerning fertility in all aspects. The superior *wämbär* uses a ceremonial phallic plough to inseminate the labia (furrows) of the earth with a mixture of blessed seeds and sacred beer. Prayers and animal sacrifices to Məzgäna complete the rite, after which the agricultural season begins.

Agricultural technology uses the plough and draft oxen. Agriculture includes *ṭef*, emmer, wheat, two- and six-row barley, *Eleusine coracana*, sorghum, maize, flax, nug, castor-oil plant, chick peas, lentils, peas, broad beans, potatoes, squashes, cayenne, garlic, shallots, and gourds. Animal husbandry includes cattle, sheep, goats, horses, donkeys, chickens, and bees. K. are not craftsmen. Houses are wattle-and-daub ovaloids or cylinders roofed by thatch cones.

Frederick C. Gamst

Kəmantnäy

K. (self-name; also known as Kəmant, Qəmant; Amh. Qəmantəññña) is the language of the ↗Kəmant people; the language name is derived from the ethnonym with the abstract suffix *-näy*. K. belongs to the Central Cushitic (↗Agäw) branch of the ↗Cushitic language family (Appleyard

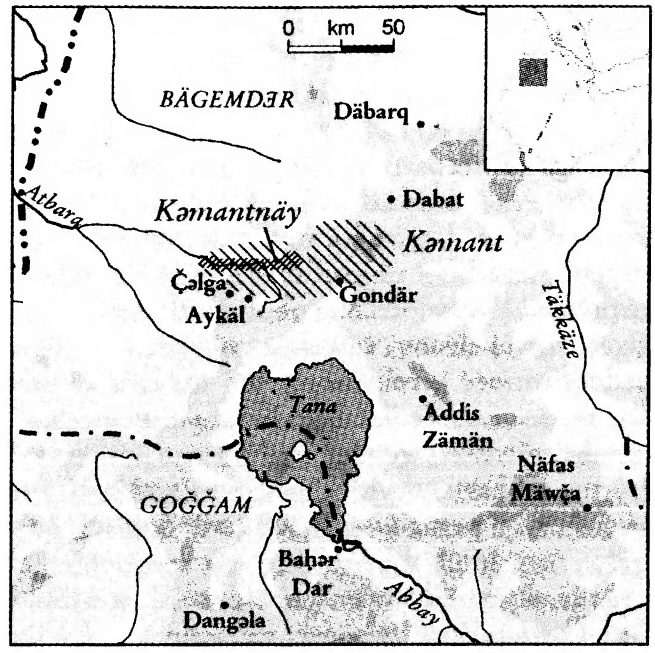
1988; Bender et al. in BendLang). K. dialects mentioned in the literature are Dämbəya (Halévy 1873:156) and Qʷara [Qʷaräsa, Qʷarəññña, Falašan] (Reinisch 1885–87). A further dialect, Kayla (Kayləññña, s. ↗Kayla), was probably a variety between the K. and ↗Ḫamtaŋa (Appleyard 1996, 2006:4f.). K. was widely spoken in the area north of Gondär stretching from Kärkär up to ↗Qʷara near the Sudan border. K. (mainly Qʷara dialect) was also used by some Fälaša (↗Betä Ǝsraʾel). At present K. is limited to some scattered villages of Č̣əlga and Gaba-galla-agär to the west and south-west of Gondär.

The number of K. native speakers is 1,650 according to the 1994 population census; in addition, ca. 3,180 people use it as a second language (Gordon 2005:118). Thus, K. is spoken by around 3 % of the Kəmant population at different levels of proficiency. As a rule, K. is well retained by individuals above the age of 60. K. is an endangered language, being superseded by ↗Amharic. Amongst other reasons, the advent of Christianity and the mass conversions during the reigns of *aṣe* Yoḥannəs (1871–89) and Ḫaylä Śəllase I (1930–74) have contributed a great deal to the foreseeable extinction of the language and culture of the Kəmant (cf. Zelealem Leyew 1998a).

The consonant phonemes of K. are: labials *b*, *f*, *m*, *w*; alveolars *t*, *d*, *s*, *z*, *n*; palatals *š*, *č*, *ǧ*, *y*; sonorants *l*, *r*; velars *k*, *g*, *x*, *y*, *ŋ*; labiovelars k^w, g^w, x^w, y^w, $ŋ^w$. Phoneme *b* has allophones *ß* and *v*. In addition, there are a number of borrowed phonemes recorded only in Amharic loanwords: the ejectives *ṭ*, *ṣ*, *č̣*, *q*, the palatal nasal *ñ*, and the glottal fricative *h*. Whereas in the speech of old fluent speakers all consonant phonemes are fully preserved, the younger speakers cannot produce *x*, *y*, *ŋ*, x^w, y^w, and $ŋ^w$ (Zelealem Leyew 1998b).

K. has seven vowel phonemes: *i*, *e*, *ə*, *ä*, *a*, *u*, and *o*. The seven-vowel system makes the language (together with ↗Bilin) different from the rest of the Agäw languages and is believed to be the result of the influence of the ↗Ethio-Semitic languages, especially Amharic.

K. has seven independent subject personal pronouns: *an* (1st pers. sg.), *ənta* (2nd pers. sg.), *nay* (2nd pers. polite), *ni* (3rd pers. sg.), *annew* (1st pers. pl.), *əntändew* (2nd pers. pl.) and *naydew* (3rd pers. pl.). Gender distinction in the 3rd pers. sg. pronouns (masc. *ni* vs. fem. *niy*) is shown in the works of Conti Rossini (1912) and Appleyard (1975). However, present-day speakers neutralize the distinction. The above subject pronouns have



corresponding bound object and possessive pronouns. The object pronouns are *yə-* (1st pers. sg.), *ku-* (2nd pers. sg.), *na-* (2nd pers. polite), *ni-* (3rd pers. sg.), *annew-* (1st pers. pl.), *əntändew-* (2nd pers. pl.), *naydew-* (3rd pers. pl.). The possessive pronouns are: *yə-* (1st pers. sg.), *ti-* (2nd pers. sg.), *na-* (2nd pers. polite), *ni-* (3rd pers. sg. masc.), *niš-* (3rd pers. sg. fem.), *anä-* (1st pers. pl.), *ənt-* (2nd pers. pl.), *na-* (3rd pers. pl.). In the possessive paradigm, gender distinction is shown in the 3rd pers. sg.

As in all Agäw languages, the morphology of K., especially the verb, exhibits complex grammatical structure. The verb carries person, number, gender, and tense/aspect inflections, e.g. *an xal-əy^w*, 'I saw'; *ənta xal-iy-əy^w*, 'you (sg.) saw'; *nay xal-n-əy^w*, 'you (polite) saw'; *ni xal-əy^w*, 'he saw'; *ni xal-ət*, 'she saw'; *annew xal-n-əy^w*, 'we saw'; *əntändew xal-i-n-əy^w*, 'you (pl.) saw'; and *naydew xal-n-əy^w*, 'they saw'. As in most Cushitic languages, gender is not distinguished in the 2nd pers. There are three tense/aspect categories: perfect, imperfective, and progressive. Indicative, gerundive, jussive, imperative, conditional, and interrogative moods are employed. As in all Agäw languages, relative verbs have a special paradigm, distinguishing between Subject Relative (verb subject is identical with head noun: *anǧəŋ$_1$ täk^{w}äsəm-ey$_2$ ni$_3$ səmb-i-t$_4$*, 'the one who sat down$_2$ yesterday$_1$ was$_4$ her$_3$') and Oblique Relative (verb subject and head noun are not identical: *ni$_1$ was-əy-ay$_2$ gaba$_3$*, 'the thing$_3$ that she$_1$ heard$_2$'). Negation in the main verb is shown by a special paradigm, in which the negative formant *-la* (*-l* for 1st pers.), combined with personal markers, replaces the corresponding morphemes

of the affirmative paradigms. A different negation marker *-g* (*-k* for 2nd pers. and 3rd pers. sg. fem.) is employed for subordinate verbs.

The noun in K. has three morphological cases: nominative, accusative, and genitive. The citation form is either marked with *-a* or unmarked. The semantics of dative, locative, instrumental etc. are expressed by adpositions. Plural number is expressed by various morphological means (suffixes, vowel elision, vowel or consonant change, reduplication, gemination); the choices among them are not predictable. Nouns do not have gender markers; gender is, however, expressed by the agreement with quantifiers and with the verbs of 3rd pers.: *la-y gəzəŋ* 'one dog' vs. *la-y gəzəŋ* 'one bitch'.

Like other Cushitic languages, K. is a Subject-Object-Verb language, e.g. *an*$_1$ *ku-t*$_2$ *kašəŋ-äk*^{w}$_3$ 'I$_1$ will call$_3$ you$_2$', *kasa*$_1$ *ni-nəŋ-əs*$_2$ *kəz-äk*^{w}$_3$ 'Kasa$_1$ will sell$_3$ his house$_2$'. K. is a head-final language, e.g. *fəray*$_1$ *yər*$_2$ 'big$_1$ man$_2$', *an*$_1$ *anğəŋ*$_2$ *ğax-ay*$_3$ *səlaya*$_4$ 'the beer$_4$ which I$_1$ drank$_3$ yesterday$_2$'. Exceptions are quantified NPs such as *əyyän*$_1$ *niŋa*$_2$ 'two$_2$ men$_1$', *xurrä*$_1$ *säğğa*$_2$ 'four$_2$ children$_1$'.

Demonstratives are (citation form): *əndän / ən* 'this', *yəndän / yən* 'that', *əndäw* 'these', *yəndäw* 'those'. Question words include: *aw* 'who', *awət* 'where', *wä-* 'what', *awi-* 'whose', *awən* 'when' and *wixa* 'how many/much'. The verb of existence has the stem *ga-* for present and a suppletive stem *səm(b)-* for past: *ni ga-la* 'he is' vs. *ni səmb-ey*^{w} 'he was'. Note that *ga-la* 'he is' is affirmative in meaning, but inflects like a negative verb.

The lexicon of K. shows massive borrowings from Amharic (e.g., *sämay* 'sky', *ədme* 'age'). The ten-word list is as follows: *lay*^{w}*a* 'one', *niŋa* 'two', *sey*^{w}*a* 'three', *wəzəŋ* 'fire', *ax*^{w} 'water', *k*^{w}*ara* 'sun', *məzbära* 'moon', *bər* 'blood', *lanx*[*ə*] 'tongue', *ərk*^{w}*ə* 'tooth'.

Kənfä Mikaʾel

K.M. (ክንፉ፡ ሚካኤል, fl. first half of the 18th cent.) was ↗*ṣäḥafe təʾəzaz* during the time of *aṣe* ↗Bäkaffa. He continued writing the Chronicle of Bäkaffa after the death of *azzaž* ↗Sinoda, a talented and prolific historiographer, calling himself "the son of Sinoda". The latter has therefore usually been considered his father (GuiSLett 89; GuiIohan 345), though Chernetsov (1989:348) indicated that the word "son" could be used here in its broader meaning: "(close) pupil" or "associate". Otherwise, nothing is known about K.M.'s background. He wrote the last 14 chapters of the Chronicle, recording events from ca. mid-August 1726 till mid-January 1727 (a period poor in important political developments; cp. DombChr 284f.).

K.M.'s style was remarkably different from that of his predecessor. Sinoda's was a coherent and informative narrative of high literary quality, marked by his outstanding intellect and skills. Far from that, K.M. was rather keen on describing in detail "amazing" or "interesting" events. Such is his detailed description of the "ship", built for Bäkaffa under the guidance of the "Egyptians" Dəmeṭros and Giyorgis on Lake ↗Ṭana (chs. 1–5). Another extensive account is devoted to the litigation between *bašša* Rətuᶜ and *däğğazmač* Täklä Haymanot (chs. 10, 12; cp. ↗*Muggət*). The final judgement of Bäkaffa remained unknown, since the Chronicle ends suddenly (8 *Ṭərr*/17 January), and the rest of his reign is described only in the "short chronicles" (Dombr Chr 285–89).

Kənfu

Wag šum K. (ክንፉ, fl. 19th cent.) controlled his hereditary region of ↗Wag and ↗Lasta during the 1830s. Since his inmediate predecessors did not belong to the ancient ↗*wag šum* lineage, his ascendance was regarded as a reinstallation of the legitimate heir, even though K. belonged to the lineage via his mother, the daughter of *šum* Märqorewos. K. came to power through the support of *ras* ↗Wäldä Śəllase of Təgray, who was himself related to the *wag šum* dynasty. Local manuscripts report positively on K.'s rule, which occurred after the region had been dominated and devastated by the ↗Yäğğu dynasty. With the strong backing he received from the ruler of Təgray, K. began raiding the region of Yäğğu in retaliation for the devastation of his homeland.

After Wäldä Śəllase's death in 1816, however, *ras* ↗Gugsa Märsa, the Yäğğu kingmaker, attacked Wag and Lasta, a move that forced K. to change allegiance and join Gugsa's stronger army. This brought relative peace to the region, and K. became active in the political affairs of the kingdom as a whole. He married Gugsa's daughter Tərəngo and in 1827, fought on the side of *ras* Yəmam, Gugsa's son, against *däğğazmač* ↗Maru. The latter was killed, either by K. or one of his soldiers, and a few years later, K. was also killed, as revenge for Maru's death.

Wag šum Kənfu depicted below the scenes of the Passion; wall-painting, 19th cent., the church of Däbrä Yoḥannəs Kidanä Məḥrät near Säqota; photo 1993, courtesy of Michael Gervers

K. was succeeded by his son Wäsän Kənfu, who was followed by Täfäri Wäsän and eventually by another of K's grandsons, ↗Gäbrä Mädḫən, son of his daughter Bätäha.

Kənfu Addam

K.A. (ክንፉ፡ አዳም; d. 1782) was a powerful lord of the ↗*Zämänä mäsafənt*. Of Oromo descent, he was a ↗*balabbat* of Mäčča (in Goğğam) during the 1760–70s.

For his services to *aṣe* ↗Täklä Haymanot II, particularly for having killed the rebellious *ras* Fasil, the Emperor granted K.A. the title of *däğğazmač*. However, in 1777, together with *ras* ↗Ḫaylu Yosedeq and ↗Wänd Bäwäsän, K.A. deposed Täklä Haymanot (who had to flee to Waldəbba), and installed the new emperor, *aṣe* ↗Sälomon I, who had been previously kept on ↗Wähni Amba. For this, he was made governor of ↗Damot. In 1778 K.A. repeatedly besieged Wähni where the future *aṣe* ↗Täklä Giyorgis I was being kept, cutting off the latter's food supplies, probably at the wish of the Emperor.

Some months later, in 1779, K.A. violated the peace agreement he had with *ras* Ḫaylu and defeated the latter's troops at Śabisa Bär on the Rəb. Hoping to obtain full control over Goğğam, he deposed Sälomon who had to flee to Wägära, letting Täklä Giyorgis ascend the throne.

Not satisfied with the position offered by the newly-made Emperor to his relative ↗Ṣädalu and possibly deluded at the lack of his own promotion, K.A. rebelled again. Whilst the Emperor was fighting another rebel, Gädlu from Wälqayt, K.A. approached Gondär. After a temporary spell of peace, K.A., who was then staying in Wälläga, started another rebellion. He was stopped and captured by the forces of Bäqätu Abba Ğale at Maryam Wəha. An ↗*azmari* commemorated the battle in a song written in the ↗*sämənna wärq* genre (BTafA 446f.).

Bäqätu died in 1780, and K.A. escaped from captivity in 1781. This time the Emperor himself left Gondär to take pursuit. Two weeks later the armies of K.A. and his ally Adära Ḫaylu were defeated and dispersed by the royal regiment under *fitawrari* Ikonyan; Adära Ḫaylu was captured. K.A. fled to his home Mäčča and assembled a new army, allying with Andayl, but in 1782 he was defeated again by *fitawrari* Ikonyan and *däğğazmač* Addəgäh. K.A. escaped but several weeks later was captured again, along with several other powerful lords of Mäčča, by *azzaž* Bälya.

K.A. and other prisoners were brought to the Emperor for trial with stones on their shoulders. Täklä Giyorgis pardoned some, had feet cut off of others, whereas K.A., Andayl and Adära Ḫaylu were left in chains. When they fled and

were recaptured, Andayl had his feet cut off, and K.A. and Adära Ḫaylu were blinded. The death penalty was officially remitted, but most probably K.A. was killed, or died, shortly thereafter.

Kənfu Ḫaylu

Däğğazmač K. (ክንፉ፡ ኃይሉ; b. ca. 1800, d. 1839, Fanğa) was a protagonist of the era of the ↗*Zämänä mäsafənt*, whose power was at its peak in the 1830s when he was governing the vast lands known as ↗*Maru Qämmäs* and comprising the historical provinces of ↗Dämbəya, ↗Qʷara, ↗Agäwmədər, stretching as far as Mätämma in the south-west.

K. was the son of Ḫaylä Maryam (or ↗Ḫaylu) Wäldä Giyorgis, a petty governor of Qʷara under *däğğazmač* ↗Maru, and Wälättä Täkle, Ḫaylu's first wife and Maru's niece. He was therefore related, though distantly, to both the Solomonic dynasty (through his father, whose son by his second wife ↗Aṭṭətägäb was Kaśa Ḫaylu, the future *aṣe* ↗Tewodros II) and to the Warrasek dynasty of ↗Yäğğu (through his mother, Maru being ↗Gugsa Märsa's son-in-law). This latter connection made him raise his claims over Maru's domain after the latter's death in 1827.

During the early 1830s he is mentioned as governing Dämbəya and frequently fighting on the side of ↗Dori Gugsa, or the rising ↗Wəbe Ḫaylä Maryam. Following his defeat of Säbagadis and rise to power in 1831, Dori, afraid of K.'s growing popularity, threw him in prison. The last of Gugsa's children, he died several months later, and *ətəge* ↗Mänän came to power as the regent of the young ↗Ali Alula. Subsequently, K. was freed and given the governorship of the *Maru Qämmäs*. He ruled over the region from his base at Fanğa in Dämbəya till his death.

K.'s importance grew considerably when in 1836–37 he fended off the Egyptians who had advanced into Ethiopian territory around and beyond Mätämma. His complete victory over the small Egyptian force headed by Aḥmad Ġāšim of ↗Qadarif at Wad Kaltabu in 1837 and destruction of Mätämma did not, however, prevent the subsequent Egyptian aggression that eventually culminated in the ↗Egyptian–Ethiopian war. One of the numerous ↗*qəne* celebrating K.'s victory was included in one of the chronicles of *aṣe* Tewodros's reign. The future emperor, a minor at that time, was growing up at his half-brother's court in Dämbəya.

K.'s paramount role in the Ethiopia of the *Zämänä mäsafənt* is underlined by the fact that his name appears among the authors of the two letters sent by the then emperor ↗Śahlä Dəngəl to Queen Victoria and Louis Philippe. The letters were composed by *əčč̣äge* ↗Maḥṣäntä Mika'el and carried to Europe by Antoine d'↗Abbadie. K. is listed as one of the two most powerful governors of *ras* Ali, along with Wəbe Ḫaylä Maryam.

The chronicles of Tewodros's reign mention a quarrel Kaśa had with his brother towards the end of 1838 that made him leave Dämbəya and seek asylum in Goğğam. He only returned to Fanğa upon K.'s death from illness in 1839. K.'s sons, Yəlma and Mäkʷännən (the youngest son, ↗Gärad, still too young at that time) contested for their father's lands but were disinherited by Ali and Mänän in favour of ↗Bərru Goššu. In the battle of Dəngəl Bärr in late 1839 Yəlma and Mäkʷännən were defeated by the army of Bərru and his father ↗Goššu Zäwde and had to retreat to Qʷäraṣa. Yəlma died, falling from a horse, Mäkʷännən and Gärad lived on as ↗*šəfta* until their deaths, in 1856 and 1860 respectively. K.'s only daughter, Wəšän, married Yəlma Asfaw; their daughter Wärqənäš later became John ↗Bell's wife.

In 1847 Maru Qämmäs was conquered by Kaśa Ḫaylu and from then on his brother's former domain served as the future emperor's power base.

Kenya, relations with

In pre-colonial times, the social organization in the Ethio-Kenyan region was mainly based on descent groups and age grades, and political entities were seldom defined by clear territorial or even national boundaries. Several linguistic groups extend across the Ethiopian–Kenyan

boundary: the language of the ↗Ñaŋatom belongs to the same dialect cluster as that of the ↗Turkana on the Kenyan side, the ↗Đáasanač straddle the boundary, and on both sides of the boundary there are large, continuous areas of ↗Oromo (s. also ↗Orma) and ↗Somali speakers (e.g., the ↗Garre). In addition to these continuous areas of linguistic unity across the international boundary, it is possible to find numerous ethnic minorities of Ethiopian origin within K. During the colonial period, the British encouraged the ↗Burǧi to settle on Mount Marsabit as agriculturalists. Today, Burǧi trade networks extend from Mombasa to Addis Abäba.

The grounds for the British foundation of K. were laid effectively by a business company, the Imperial British East Africa Company, which enjoyed the protection of the British Crown and extended this "protection" to the territories under its control, thus forming the British East African Protectorate.

Diplomatic contacts concerning the relations between Ethiopia and British East Africa date back to the late 19th cent. They find expression in *aṣe* Mənilək's Circular Letter to the European Powers of April 1891, which defined the Ethiopian frontiers to which he aspired and announced that he intended to "re-occupy all ancient territories of Ethiopia as far as Kartum and Lake Niyānsā" [i.e. Lake Victoria] (Bairu Tafla 1981:217). After the conquest of Gamo Gofa in 1894, *ras* Wäldä Giyorgis and ↗Bulatovich raised the Ethiopian flag at the northern tip of Lake ↗Turkana. However, Ethiopian activities reached as far as beyond River Turkwel in today's K. There, the adventurer *fitawrari* Baron Chedeuvre for a short time established an Ethiopian fort by the name of "Mənilək II" (Bulatovich 2000:344–48; Leontieff 1900:107; PankHist II, 195).

In the Anglo–Ethiopian treaty of 8 December 1907 (↗Treaties), the two highland-based political entities, Ethiopia and colonial K., defined a boundary by dividing the marginal lowlands that lay between them (Hamilton 1974:345–92; ↗Boundaries). Apart from being a necessary feature of modern statehood in the eyes of state-builders, this boundary (like the one with future Somalia) served the purpose of keeping rival powers, including Italy, at a distance from the core areas of K. Additionally, it facilitated the control of mounted Ethiopian raiders and poachers known as "Təgray", a group formed from diverse ethnic origins.

Jomo Kenyatta on a state visit to Ethiopia, with *aṣe* Ḫaylä Śəllase I; photo courtesy of the IES

The Ethio–Kenyan boundary was instrumental in regulating citizens of both countries as they travelled from one territory to the other. The British distinguished between resident and alien Somali and repatriated some of the latter by force into Ethiopia. On the other hand, those Garre, who normally resided on the Kenyan side, under Hassan Gababa temporarily withdrew into Ethiopia to avoid taxation by the British. The zone on both sides of the common frontier was moreover largely unpoliced, with the result that British colonial administrators complained of "everlasting murderous raids across the Abyssinian frontier" (Mitchell 1954:271).

Relations between the two countries were correct, but hardly cordial, for the British were interested in partitioning Ethiopia. K.'s white settlers moreover disliked the concept of an independent African State. One of them, Lord Cranworth, described Mənilək's victory at the battle of ↗ᶜAdwa as "the foulest crime" of the 19th cent., as it had destroyed the Ethiopians sense of "the superiority of the white man", and had prevented European access to the Ethiopian highlands, which "onwards to Addis Ababa" he considered "typically suitable for white settlement" (Cranworth 1939:149f., 167). In 1920, mediated colonialism through the British East Africa Company was abolished in favour of direct control, and the Protectorate was renamed K. Colony.

Throughout the colonial period, the focus of economic development and administrative effort was directed towards Uganda Railway, which connected Kampala and Nairobi to the port of Mombasa, and the fertile agricultural highlands found along this axis. It is noteworthy that through the history of Ethio–Kenyan relations, the frontier

areas between the two polities were regarded by both as far-off, and of secondary importance.

The opinion of the Kenyan Africans on Ethiopia was very different from the white man's colonialist view cited above. Jomo Kenyatta, then a student in England, reported in *Facing Mount Kenya* (1938) that Africans in his country were inspired by references to Ethiopia in the Kikuyu Bible, and found particular "depth" in the prophesy "Princes shall come out of Africa; Ethiopia shall stretch forth her hands unto God" (Kenyatta 1953:225). Local legend also held that ↗Mənilək I had been buried on the summit of Mount Kilimanjaro (↗Ethiopianism).

Kenyan African interest in Ethiopia increased during the ↗Italian war 1935–36. Kenyatta, then representative in London of the Kikuyu Central Association, founded, and became the secretary of an embryonic pro-Ethiopian Pan-African society in England (↗Pan-Africanism). Entitled the International African Friends of Abyssinia, its objective was to "assist the maintenance of the integrity and political independence of Ethiopia". He was at London's Victoria Station to greet the Ethiopian Emperor's arrival in exile in 1936. Support for Ethiopia was also voiced in the US by another prominent Kikuyu nationalist leader, Mbiyu Koinange (Padmore 1956:144ff.).

After Mussolini's entry into World War II in June 1940, a British force, under General Alan Cunningham, participated in the Ethiopian Liberation campaign. Though the extent of white settler participation was criticized by Churchill (MockWar 253), the soldiers of the King's African Rifles from K. advanced rapidly into southern and central Ethiopia in Spring 1941. They were accompanied by many Ethiopian refugees from K., with whom the Emperor was in contact (Marcus 1994:88, 109). They included *däğğazmač* Wäldä Maryam, *däğğazmač* Zäwde Ayaläw and *fitawrari* Tadämma Zällaka (MockWar 238). With the defeat of the Italians, British East Africa currency was officially introduced into Ethiopia by the British Military Administration and came into extensive circulation in Ethiopia. The British Government sought, unsuccessfully, to persuade the Emperor to cede Ethiopia's Boorana province to K. The East African Shilling (↗Currency) was in use until the 1950s (Caravaglios 1984:341–50; Pankhurst 2003:146f., 166f., 170, 174; Spencer 1984:94, 99).

Ethiopians, liberated only a decade earlier, sympathized with K.'s struggle for independence, and recalled Kenyatta's support at the time of Italian invasion. They were moved by repression in K. during the Mau Mau emergency (1952–57), which some likened to ↗Graziani's earlier reign of terror in Ethiopia. ↗Gärmame Nəway, later ideologue of the ↗Coup d'état of 1960, wrote his Colombia-University thesis on *The Impact of White Settlement Policy in Kenya* (1954). The Ethiopian consul in Nairobi, *ato* Bərhanu Täsämma, himself a former refugee in K., developed close relations with the 14 elected African members of the Legislative Council of K. The National Library of Ethiopia, with the backing of an unofficial Africa Society composed of Ethiopian returnees from study abroad, held crowded lectures by the Kenyan leaders Mbiyu Koinange, Tom Mboya and James Gichuru. The Ethiopian press carried supportive articles (s., e.g., ↗*Mänän* magazine, October–November 1958 and April 1965), and twelve students from K. (*EthObs* 3, no. 3) were given Ethiopian Government scholarships to the University College of Addis Abäba and other Ethiopian educational institutions. One of them, Robert Ouko, later became Foreign Minister of K. (*EthObs* 2, 12). Ethiopia secretly gave asylum to many Mau Mau refugees.

After K.'s independence, in 1963, the two countries developed warm relations. This owed much to personal friendship between K.'s leader, President Kenyatta, and the Emperor, who, in June 1964, was the first head of state to visit the country after its independence. Joint fears of Somali irredentism – as territories of both countries were claimed by the state of Somalia starting from 1961 – led to the signing of a Mutual Defence Pact, as well as some training of Kenyan soldiers in Ethiopia. A Nairobi street was called after Ḫaylä Śəllase I and one in Addis Abäba after Kenyatta. Visas between the two countries were abolished. A treaty of friendship between the two countries was signed on 9 June 1970, by which date the 790 km long common frontier had at last been delineated. The border city of ↗Moyale developed into an important market after that.

In recent decades, K. has been affected by Ethiopia in a variety of ways. In 1991, the remnants of Mängəśtu Ḫaylä Maryam's army, abandoned by its leader, destabilized northern K. by flooding it with fire-arms, which they sold in order to buy food. *Därg* supporters were then put into the same UNHCR refugee camps as those who had fled from them while they were in power. This led to clashes inside the camps. Addition-

ally, the fact that the ↗Oromo Liberation Front had periodically operated from Kenyan territory brought a degree of tension to the relationship between the two countries. However, the instability that spread from Somalia created a mutual fear that brought the two sides closer together. Both countries are member states of the Inter-Governmental Authority on Development, and they have had an active role as "frontline states" in the 14th Somalia peace process since 2002. In 2007 the two countries cooperated in the war against the Islamist Somali Sharia Courts.

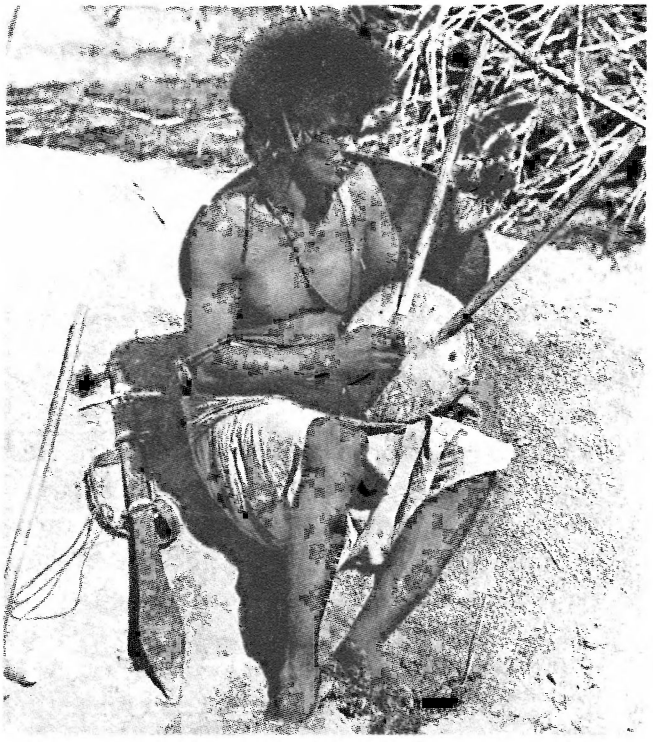
Kərar

The K. (Amh., Tgn. ክራር; Harari *kirār*) is a five- or six-stringed plucked lyre consisting of two upright or v-shaped pillars joined by a crossbar at the top, and held by a taut sound-box skin at the bottom near the front surface of the sound box. Resonating boxes can be round or in the



Beğa (Marar) nomad playing a *basinkoob*, bowl-lyre similar to *kərar*; photo 1926/27 by Ernest B. Schoedsack, from Cooper 1928:475

shape of a rectangle or trapezoid. The word K. may derive from Amh. ክረረ, *kärrärä* ('to twine into a fine stretched cord', Ashenafi Kebede 1967:156; KaneDic 1386); alternatively, Leslau compares Ethiosemitic terms for K. with the Semitic terms for lyre (Hebrew *kinnōr*, Arab. *kinnāra*, Akkadian *kinnāru*; Leslau 1979:350; cf. also MonVidMus 3186).

The origin of the K. remains uncertain. Although ancient lyres existed in Asia, it is thought that the lyres of East Africa and the Horn came via Egypt (Powne 1968:57 suggests an Egyptian origin both for the K. and the ↗*bägäna* – the larger trapezoid lyre). Egyptian lyres include an asymmetrical instrument held horizontally and played with a plectrum (ca. 2000 B.C.) and a smaller symmetrical lyre played upright (ca. 1000 B.C.). The Hebrew *kinnōr* was also a box lyre (*New Encyclopaedia Britannica* 2003:592f.).

The K. and similar instruments are widely spread in Ethiopia and Eritrea among various ethnic groups, sometimes under local names, such as *kihayta* in Konso, *dita* in Diraaššа, etc. (s. also VSAe I, III). The *masinkoob*, or *basinkoob* (a term etymologically related to ↗*mäsinqo*) of the ↗Beğa of Eritrea are said to be similar to the K. (Wedekind 2005:151, 130f.). The present entry describes the K. amongst the Amhara, Təgrəññа, and Dorze. Lyre-type musical instruments simi-

lar to the K. are wide-spread not only in Ethiopia, but also among many East African peoples (s. *Asnaqetch Werqu* ... 2004; Kidula 2001; Tamasuza 2005; Kwabena Nketia 2000:140; for the various lyre names s. Marcuse 1975:319–23).

Whereas the *bägäna* is used in Ethiopia and Eritrea for meditation and prayer, the K. – sometimes described as a "popular lyre" – is used primarily to accompany popular secular song. Traditionally the K. was associated with hunters and men of the wilderness (Tesfaye Lemma 1975:11). Its shape, resembling an "inferior imitation" of the *bägäna*, could have inspired the legends told by ↗*azmari*-singers that refer to the "Satanic" origin of the K., whereas the form and dimensions of the *bägäna* are said to have been revealed to the biblical King David by God (Ashenafi Kebede 1967; 1977). Today, the K. is played by both men and women, to accompany popular songs and solo, for personal amusement and relaxation (Kimberlin 1986:3f.; 1996:8f.). Most people learn to play the K. by themselves through observation and imitation, and/or by apprenticing with a master K. player.

Professional K. players are usually soloists who compose their own texts on traditional melodies that have been passed down from generation to generation. Sometimes a vocal soloist or group is accompanied on the K. by another musician. In Eritrea and Təgray, K. players are more numerous than *mäsinqo* players but in Šäwa the reverse is true. Thus, in order to make more money, Təgrayan K. players make annual trips to Šäwa.

Although all K. are basically made of wood and have the same fundamental shape, there are some regional differences. Traditionally, Təgrayan K. have gut or horsehair strings (outside urban areas) and a wooden resonating box covered with goatskin, resulting in a mellow sound. More recently, K. players have also started to use metal strings and an enamel bowl-shaped resonating box covered with animal hide, resulting in a louder metallic sound. The two side pillars form a slight "V" shape, and the five metal strings are wound around friction pegs which are pushed through the crossbar and rotated to change the pitch. If the K. has six strings, the sixth string is a duplicate of another string sounding an octave apart. The Amhara K. has a wooden, clay or metal bowl-shaped resonating box that is covered with goatskin, and the two side pillars form a slight "V" shape. The six gut, metal, or nylon strings are wound around the crossbar and peg levers. The peg lever is set against the crossbar and is always perpendicular to it when rotated to change the pitch. The Dorze K. has a rectangular resonating box that is made of wood and covered with cow hide. The two side pillars are perpendicular to the crossbar, and the five gut-strings are wound around the crossbar, which acts as a friction bar. A plectrum of bone, plastic, or talon may be used by Təgrayan and Dorze players. The bridge has frets equal to the number of strings. Each string passes through a fret to the tuning peg and crossbar. The purpose of the bridge is to lift the strings off the stretched skin covering the resonating box, enabling the K. to produce clear tones. However, in parts of southern Ethiopia, K. are played without a bridge (Tesfaye Lemma 1975:11).

K. can be played both standing (held almost horizontally against the left hip) and sitting (held vertically). Playing techniques vary from region to region (although nowadays, due to technological advances in communication, a player may adapt techniques from other regions). E.g., the Təgrayan player picks and strums the K. strings with a plastic plectrum held in his right hand, while his left hand stops (making the frequency higher) and mutes (lessening the intensity of the sound, e.g. vibration and upper harmonics) the strings. Tunings are not based on pitch but on interval set or sequence. Pitch range is determined by tessitura. Musically he plays various rhythmic patterns outlining the basic melody of his voice. The Amhara player plucks the strings with his left hand and with the thumb of the right hand. No plectrum is used and there is no muting or stopping of strings. The K. and vocal accompaniment are performed by a soloist who plays in heterophony, whereby the instrument plays a melodic variant with chords of the vocal melody. The Dorze player uses a leather plectrum and plays ostinato chordal rhythmic patterns with shifting accents while he sings an independent melody. Heterophony is a form of polyphony where there is simultaneous use of modified versions of the same melody by two or more vocal and/or instrumental parts (Kimberlin in PICES 15, 452).

The Təgrayan, Amhara, and Dorze K. players observed use chords that are intentionally played and are fully integrated into their music compositions (s. Kimberlin in PICES 15). The K. may use chords approximating perfect 4^{th}s or 5^{th}s, and 3^{rd}s or octaves, whose combinations are also favored by musicians from North Africa and the Middle East, and are not necessarily part of the

Western music notion of chordal progression. To vary the tone quality, the player may experiment with various sound combinations with or without a plectrum.

Kəśtät

K. (**ክሥተት**, lit. 'Revelation') is a technical term designating a liturgical unit formed of verses from the Psalms to be recited before the Gospel during ↗funerals (Grébaut 1931:29f., with reference to the Latin gradual, sung or said in the Mass after the Epistle). It occurs frequently in the *Mäṣḥafä↗gənzät*, where several kinds of K. are mentioned: for priests, deacons, monks, the righteous, children, etc. (GréTisVat I, 265f., with a list of the relevant Psalms; cp. GrébGriaule III, 180ff., 279f.).

Gianfranco Fiaccadori

Kəśtätä aryam

The K.a. (**ክሥተተ፡ አርያም**, 'Revelation of ↗*aryam*', i.e. the highest heaven, with unceasing performance of angelic praise) is a set of hymnological compositions (↗*Dəggʷa*) taken from the Psalms and Canticles. Originally a monastic nocturnal prayer, it developed into a proper office, which is used on many occasions in the Ethiopian Orthodox (Täwaḥədo) Church (↗*Qəddase*): chiefly, for the ↗feasts of Mary, the saints and the Cross; but also for other major feasts falling on week days (when the ↗*Səbḥatä nägh* is not prescribed), and for such other observances throughout the liturgical year as the feast of the Trinity, ↗*ʿƎrgät*, ↗*Ṭəmqät*, ↗*Fasika* eve etc., as well as at funeral services.

Like the ↗*Mäwäddəs* and ↗*Məhəlla*, the K.a. forms one of the longest services of the Ethiopian Orthodox Church, including 150 psalms (Psalter), the entire collection of the O.T. and N.T. canticles, a great number of ↗prayers, ↗litanies, invocations, ↗hymns (e.g., ↗*aryam*, *mästäbqʷəʿ*) and ↗*qəne*. Its performance consists of a preliminary recitation of individual psalms (often beginning with Ps 136 *əsmä läʿaläm*), canticles (↗*Maḫlet*) and ↗*kidan*; singing of verses related to the specific feast; singing of psalms with the elements of *Dəggʷa* and *qəne* in alternating choirs; ↗*mäwaśəʿət*; and, finally, invocations to the saints, biblical and non-biblical readings (e.g., from ↗*Wəddase Maryam*).

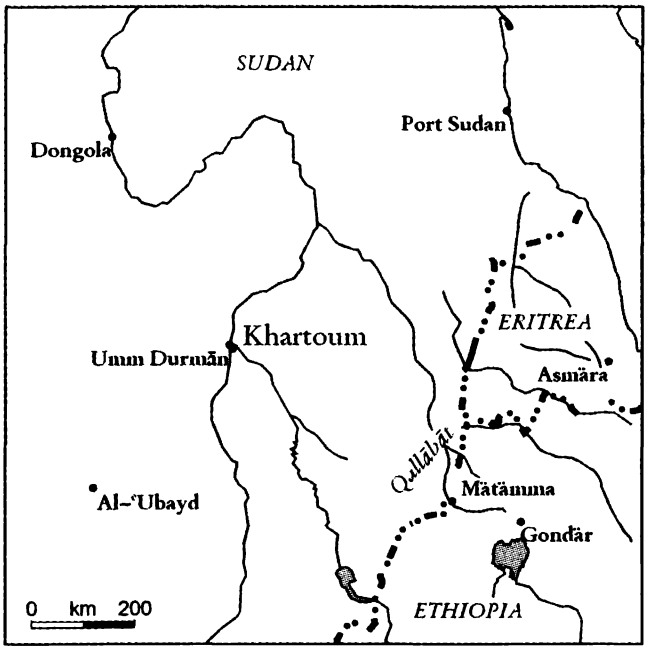
Khartoum

Located at the confluence of the White and Blue Niles, present-day K. (Arab. خرطوم, Ḫarṭūm) consists of three parts, namely the cities of K. in the south, Umm Durmān (Omdurman) in the west and modern semi-industrial K. Baḥrī in the north. Though there are no actual data available since the last census in 1993, the population of the agglomeration also comprising the former suburbs may have well grown up to five million inhabitants through refugees from military conflicts in neighbouring states and the civil war, causing the erection of non-permanent displaced people's camps along the city limits.

For most of its history K. remained a temporarily inhabited small fishing village located in an unhealthy swampy environment at the fringes of the various empires dominating ↗Sudan since antiquity. It has not been until the Turco–Egyptian conquest of the Sudan in 1820/21 (↗Egypt; ↗Ottoman Empire), that the occupants recognized its strategic position, after all other garrisons were annihilated by local resistance. Protected by both Niles, Egypt shifted the seat of the colonial government from Wad Medani to K. in 1823, which became a permanent settlement and underwent rapid development as well as a population growth in the subsequent decades not only by its elevation



to capital status, but also because of the economic decline of rival towns, which transformed K. into a crossroads of long distance caravan trade from the inner Sudan and Ethiopia. K. also became an embarkation point for traders as well as foreign explorers and adventurers upriver and thence to Ethiopia (s. Hill 1967), e.g. for such as the later consul Theodor von ↗Heuglin, Konstantin Reitz, the Russo–German Wilhelm Junker, who was the first to explore the Ḫor Baraka (↗Barka) in 1876, and Charles ↗Gordon.

From the late 1840s onwards, K. became the seat of several European consulates and in 1848 the centre of the (initially Austrian-dominated) "Vicariate Apostolic of Central Africa", founded on 3 April 1846, adjacent to the "Vicariate Apostolic of Abyssinia" and that of "the Galla" (↗Catholicism). However, not until 1876, in an attempt to tighten the relations between these units, was the foundation of a mission station at Famaka on the Sudanese–Ethiopian border considered, but the latter never came into being. After ↗Kärän, in today's Eritrea, was occupied by the Egyptians in 1872, the Catholic mission there came under the influence of the K. mission, which was headed from that year onwards by the (Verona based) newly consecrated apostolic vicar Daniele Comboni.

A significant change took place in 1854, when most of the city was destroyed by heavy rainfall and rebuilt with houses constructed of mud brick or stone, replacing those made of thatch. It was that same year that through European pressure on Egypt the city's public slave market was closed, although slaves continued to be traded outside, some of them captured in raids in Ethiopian border areas. Various travellers, e.g. Alfred ↗Brehm, mention that Oromo girls were sold there (e.g., by ↗Ğäbärti; s. Hartmann 1861). A considerable number of Europeans in K. were married to baptized Oromo women in the 1850's and before, such as Eugène de Pruyssenaere de la Wostyne, the physician Alfred Peney and the Austrian consul Martin Ludwig Hansal (married to Pruyssenaere's widow Maria Amina from Ğimma; s. Bano 1976 for their European names).

The Protestant ↗St. Chrischona Pilgermission incorporated K. in their 1860s "Apostolic Highway", which connected ↗Jerusalem with Ethiopia, establishing the St. Thomas missionary station at K. This was also done in view of the slave market; young freed Oromo slaves, who were not pressed into the Egyptian army, were

taught at the mission school until 1871 by European and African missionaries (Smidt 2005).

From 1856 to 1860, K. temporarily lost its significance as an administrative centre, when the Egyptian viceroy Saʿīd *bāšā* created a short-lived decentralized government. Afterwards, K. regained its former position and in 1872 became the capital of the newly founded General Governorate of the Eastern Sudan and the Red Sea Coast (cp. ↗Massawa Governorate, which included newly annexed Ethiopian border areas, such as Bogos, cp. ↗Bilin). K. experienced a turning point in its development in the course of the ↗Mahdist revolution, which laid siege to the city from September 1884 onwards. Though fortified by a trench and a wall connecting the Blue and the White Niles, it was conquered by Mahdist forces on 26 January 1885. The surviving inhabitants were deported to the new capital Umm Durmān, while the city was abandoned.

Palace of the Governor General in Khartoum; photo 1878, by Richard Buchta, from Buchta 1881, "Photo 4", collection of the author

With the re-conquest of the Sudan by Anglo–Egyptian troops in 1898, the capital was returned to K., which was rebuilt according a street plan in the shape of the Union Jack. K. Baḥrī was established as a garrison comprising a dockyard and railhead to Egypt, while Umm Durmān (remaining the most populous part) largely kept its old shape. The National Record Office of K. contains the archives of this period, including detail documentation on the border areas ↗Gaš, ↗Barka (Eritrea), ↗Mätämma and ↗Gambella (Western Ethiopia).

Beginning from the first decade of the 20th cent., K. was the starting point of the steamer service connecting Gambella town with the Sudan and also became the hub of the railway system interconnecting the whole region.

In 1940/41 the city again became involved in Ethiopian affairs, when after the entry of Italy into ↗World War II the British started their efforts for the Liberation of Ethiopia. Emperor ↗Ḫaylä Śəllase I resided in the Sudanese capital for almost half a year, where he established his headquarters at the "Pink Palace". From K., he called on the people of Ethiopia by radio broadcast to continue their fight against the occupying forces. Initially, however, he had to face the open hostility of both the governor-general in K., and the commander-in-chief for the area, General William ↗Platt (Spencer 1984:90; cp. ↗Wavell).

After Sudan achieved independence in 1956, K. remained its administrative centre, also playing an important role for Eritrean opposition forces. During a congress of the ↗Eritrean Liberation Front (E.L.F.) in 1965 in K. a revised organizational structure was created. The Revolutionary Command (E.L.F.-R.C.) was replaced by a Supreme Council (E.L.F.-S.C.), whose headquarters were moved from Cairo to K., whilst a new Revolutionary Command was established at ↗Kassala on the Ethiopian border. In the 1970s and 1980s, the Sudanese capital was exposed to tens of thousands of refugees from Eritrea and Ethiopia, fleeing climatic catastrophe and military conflict.

Michael H. Zach

Kidan

K. (ኪዳን, 'testament, covenant, pact') in Ethiopian Christian literature and tradition designates a solemn promise given by Jesus Christ to a saint to the benefit of the latter's faithful. Religious archetypes for the K. can be found in the Bible (cp., e.g., the "testaments" of the O.T. Patriarchs; Late Jewish and Christian "testament literature"), as well as in the "Covenant" or "Pact of Mercy" given to St. ↗Mary by Jesus in such apocryphal tradition as that preserved in the *Liber de transitu* (*Mäṣḥafä* ↗*ʿəräfta lämaryam*, likely to have been translated from Greek) and other texts, or later in the *Miracles of Mary* (↗*Täʾammərä Maryam*, translated from Latin via Arabic). The "Covenant of Mercy" became one of the most important elements of the Ethiopian veneration of St. Mary (↗*Kidanä məḥrät*). The biblical idea of the "pact" between God and men, known since Aksumite times, was then extended to local ↗saints, but only came into prominence at a later date, after the (re)establishment of the Solomonic dynasty fostered the spread of monasticism and enhanced the role of the ↗holy man.

The same idea of a pact for the saintly life exists in Coptic and Christian-Arabic literature, but its position in religious practice was not that prominent. Hagiographic works translated into Gəʿəz usually do not include K., whereas a few of the earliest-known pieces of original Ethiopian ↗hagiography have K.-like passages: cp., e.g., the Homily in honour of Mäṭaʿ (↗Libanos), dating from 1340 A.D. at the latest (s. Getatchew Haile 1990:37f. and Bausi 2003, §§45–46, 108; the term K. is not used here). Although the issue has not been investigated in detail, scholars generally connect the origins of the K. in the Acts (↗*Gädl*) of Ethiopian saints with the literary models found in the Greek hagiography of Egypt (Conti Rossini 1936–37:405), or the *Kidanä məḥrät*-related texts (Cerulli 1957:53). In many Acts of Ethiopian saints, K.-related accounts, indeed, have a specific literary shape apparently influenced by works in which the pact of St. Mary is described (cp., e.g., Arras 1974:73–76, which is the *Sənkəssar* lesson for the feast of *Kidanä məḥrät*, ColSyn X, 552–57; BudSaint 635–38; extended version in Cerulli 1957:58–64).

Usually, saints receive the K. shortly before their death, s., e.g., ↗Bäträ Maryam's pact on 1, his death on 7 *Ḥamle*. Some receive the pact twice: ↗Iyäsus Moʾa on the eve and on the very day of his death; ↗Samuʾel of Däbrä Wägäg some time before and again just prior to his fatal illness. In a number of Acts, before the "ultimate K.", a saint may receive several K.-like promises, long before death. Sometimes the pact is given in particular circumstances: ↗ʿƎnbaqom receives it in prison, ↗Filmona after victory over temptation. When offering the pacts, Jesus arrives alone (Filmona, Iyäsus Moʾa, Samuʾel of Däbrä Wägäg) or with other "heavenly witnesses" – St. Mary, angels, "heavenly priests" etc.

In the Acts of the saints, even a short K. has an established form and terminology ('to give a pact', *wähabä kidanä*; whereas a saint 'takes' or 'accepts' it: *näśʾa* or *täwäkkäfä* respectively). The Vita of Filmona seems to contain the simplest and briefest K.: "The Lord has given him the pact of mercy for the sake of his sons and all those who will trust in his prayers, and ensured anew that he will stay with the anachorite Pantaleon in the Kingdom of Heaven". Most of the other Acts have more developed K. First, they contain the reference to the eternal salvation of the saint's soul. Then they present detailed directives to the faithful as to how the latter should venerate and honour the saint (proper celebration of the saint's feast, ↗*täzkar*, commemoration of the saint's name in prayers, ↗pilgrimage to the saint's grave, charitable deeds in his name etc.; the writing of the saint's Acts also being included), in order to rely upon his help and intercession during their lifetime and after death. Thereafter, the Acts include the description of the rewards to those who fulfil the requirements, first of all the salvation of their souls and eternal rest in the saint's heavenly "fief" (which is sometimes also described). Promises concerning the flourishing of the saint's monastery are also common: e.g., it will never face a famine nor any other calamity, but turn into a "second ↗Jerusalem", etc.

No doubt, the K.-passage was one of the most important parts of any saint's Acts, and was apparently considered one of the major pieces of evidence for his sanctity (although a few Acts contain no K., for unclear reasons). In Ethiopian hagiography, the gradual development of the K.-

passages was directly connected to the growing importance and "differentiation" of the soteriological function of the saints and to the spread of their veneration, in which increasing numbers of faithful were involved. In fact, the K. was written to establish, formalize and announce the relations between the faithful and their patron-saints. In the context of a feudal society (↗Feudalism), this may well be considered as a "heavenly replica" of the traditional patron-vassal relation existing on the earth (Taddesse Tamrat in PICES 7). K., therefore, was one of the elements making the cult of the saints an even more attractive religious practice. On the whole, it became one of the most peculiar features of Ethiopian ↗Christianity.

Kidanä Maryam

Näggadras K.M. (ኪዳነ ማርያም, fl. mid-19th cent.) was a leading merchant in ↗Gondär. He was, almost certainly, the only Christian among the six ↗*näggadras* in northern Ethiopia at that time. There is some evidence, based on oral tradition, that suggests that the first *näggadras* of Addis Abäba, and scion of a major Gondärine family, ↗Aggədäw Wäldä Maryam, was related to him. As the *näggadras* of Gondär, K.M. had two major tasks; he was responsible for assessing local commercial taxes in the Gondär markets and administered the quarter in Gondär called Ǝslamge (↗Addis ᶜAläm).

He also regularly headed trade caravans from/to Egypt (Gobat 1834:87) and was befriended by Samuel ↗Gobat who visited his house on several occasions (ibid. 87, 125, 167f.). K.M. had a certain level of church education since on several occasions he discussed theological issues with the missionary during 1830–31.

Peter Garretson

Kidanä Maryam Kaśa

Abunä K.M. (ኪዳነ ማርያም ካሣ, b. 21 April 1886, ↗Hebo, d. 1 September 1951, Asmära) was the son of *aytä* Kaśa Tammänu and *wäyzäro* Ḥagosa Tare. His grandfather was one of the first people converted to ↗Catholicism by Giustino De ↗Jacobis. K.M.'s father died when he was five, and his widowed mother became a nun. He joined the seminary at ↗Kärän when he was fourteen, on 12 November 1900. In 1909, on completing his regular education, he was sent to ↗Jerusalem for further theological training at the Latin Patriarchal Seminary.

In 1914, K.M. returned to Eritrea and was ordained priest a year after, in Sägänäyti, by Mgr. Camillo Carrara, where from 1915 to 1925 he taught candidates for the priesthood. At the same time, he became involved in pastoral activities in the surrounding region. He also assisted Franc-

esco da ↗Bassano in preparing the edition of the Gəᶜəz ↗Bible.

On 5 April 1926, K.M. was elected Pro-Vicar General for the local clergy, under Mgr. Celestino Cattaneo. For about two years, he performed the delicate task of acting as intermediary between the bishop and the local clergy. He proved to be a wise man, capable of listening and sensitive to the needs of the priests. From 1928 to 1930 he studied Canon Law at the Pontifical Gregorian University in Rome.

The growing number of indigenous clergy called for the appointment of a native bishop, and on 4 July 1930, following Cattaneo's recommendation, Pope Pius XI named K.M. "Ordinary for the indigenous Catholics of the Ethiopic Rite and Titular Bishop of Tibari". He was ordained Bishop by the then prefect of the Sacred Congregation for the Oriental Churches, Cardinal Luigi Sincero (assisted by Mgr. Agostino Zampini and Mgr. Giovanni Santini), in the Ethiopian College's chapel at the Vatican (↗Santo Stefano dei Mori) on 3 August 1930. On 16 January 1931 K.M. returned to Asmära.

Bishop Kidanä Maryam Kaśa as elected "ordinary bishop for the Catholics of Ethiopian rite"; from Mauro da Leonessa 1930, front page

K.M. was a man of dialogue who tried to foster harmony among his priests. He devoted special attention to seminary students. During his tenure as bishop, the number of ordinations increased, and he sent many students to the Ethiopian College in Rome.

K.M. tried, sometimes successfully, to introduce Catholicism into several traditional Orthodox Täwaḥədo areas, e.g., Dəgsa, Maᶜəräba, Dəbarwa, ᶜAddi K̲ʷala and ᶜAmäṣi.

During World War II, the Vatican asked K.M. to move to Addis Abäba because of the vacuum created by the missionaries who had been expelled from Ethiopia. On 18 February 1943, K.M. took over the regency of the Apostolic Delegation of Addis Abäba and the pastoral administration of the whole country. In this new role, K.M. was assisted by priests whom he had brought from Asmära: ↗Gäbrä Yäsus Ḫaylu, Täklä Maryam Fətaw, Täsfa Maryam Täkläzgi, Yoḥannəs Gäbrä Maryam, Gugsa Gidäy and Habtä Gäbrəᵓel Täsfu. K.M. served in Ethiopia till 1949. He then returned to Eritrea were he had to deal with an open revolt from several of his priests, the bone of contention being the proposed transfer of the seminary. The challenges K.M. had to face, especially during the last phase of his ministry, took a heavy toll on his health. His increasing frailty induced the Holy See to appoint two Apostolic Administrators to succeed him: *abunä* Yaᶜəqob Gäbräyäsus for Eritrea, and *abunä* ↗Ḫaylä Maryam Kahsay for Ethiopia, who were both consecrated on 1 May 1951, four months before K.M.'s death.

K.M. was buried in his birthplace, Hebo.

Tedros Abraha

Kidanä məḥrät: Mäṣḥafä kidanä məḥrät

The expression K.m. (ኪዳነ ምሕረት, lit. 'Covenant of Mercy') refers to the covenant, or pact (cp. ↗*Kidan*), concluded by Jesus Christ and St. ↗Mary in which he promised that, as a reward for the sorrows she had to endure, he would forgive the sins of everyone who remembered them and would do pious deeds in her name. K.m. is celebrated by the Ethiopian Orthodox Täwaḥədo Church on 16 *Yäkkatit* (23 February) as a major Marian feast and commemorated on the 16th day

of each month (↗Calendar; s. BudSaint 635–38; ColSyn X, 552–57).

↗Gəᶜəz literature has a number of texts related to K.m. and the feast of 16 *Yäkkatit*, with the name *Mäṣḥafä kidanä məḥrät* (መጽሐፈ: ኪዳነ: ምሕረት, M.k.m.):

a) A rather short text (Cerulli 1957:54ff., "redazione breve"; here part of the ↗*Täᵓammärä Maryam*) is a translation probably dating to Aksumite times (Cerulli 1957:69), from a Greek original (the *Liber de transitu*, cp. *Mäṣḥafä* ↗*ᶜəräfta lämaryam*; ibid. 56f.). The content is simple: Mary praises Christ and is granted the Covenant.

b) Another very short text (Budge 1900:10, 1933:58f. ["Version II"]; Euringer 1938:77f.; Cerulli 1957:64–67) is ultimately adapted from a Latin *Vorlage*, through an Arabic intermediary translated from a French text (ibid. 66f.). In this version, Christ asks Mary about the sorrows she had to endure because of his passion and death. After she explains the five greatest ones, he promises her that "whosoever shall give an offering for thy name's sake, I will remit to him his sins, and I will make him inherit the kingdom of heaven."

c) A longer M.k.m. is attested, e.g., in mss. Dabra Māryām 14, VII; Dāgā Ǝsṭifānos 4, v; s. also Budge 1900:77f. (text) and 1933:54–57 (tr., "Version I"); Euringer 1938:78ff. Cp. an extended version of this text in Cerulli 1957:58–64 ("redazione ampia", here part of an edition of the *Täᵓammärä Maryam*), still depending upon a Greek text, but influenced by the *Mäṣḥafä* ↗*ᶜəräfta lämaryam*; s. also ColSyn X, 552–57 (the "second recension" of the ↗*Sənkəssar*) and Arras 1974:73–76 (text). This M.k.m. relates how Jesus left Mary with his apostle John, how she wanted to visit his grave, and how the Jews wanted to prevent her from doing so, but, through divine intercession, were not able to molest her, and how Mary was then taken through heaven to Christ. There she adjures her son that whoever does a good deed in her name, even a very small one, should be spared from hell. Christ concedes this as the K.m.

d) A ↗*dərsan* bearing the title *Zäkidanä məḥrät*, 'Of the [Feast of] K.m.' (Arras 1974:77–85) relates how, after adjuring her son for a long time, Mary finally receives the Covenant of Mercy.

e) Still another M.k.m. (Conti Rossini 1910:593–621) was composed during the reign of *aṣe* Naᶜod (1494–1508). Many miracles of Mary are recounted exemplifying the covenant. The last chapters contain miracles on behalf of the contemporary Emperor and his immediate predecessors.

f) The K.m. is also the topic of a ↗*mälkəᵓ*-hymn (cf. DillmChr 147f.; ChRep no. 96; Euringer 1938, 1941).

In Ethiopian ↗Christianity, the belief in the Virgin's intercession on behalf of all human beings and the power of salvation of her covenant is been very strong. The topic of the K.m. is the basis of many Ethiopian legends about Mary, one of the most illustrious being, for instance, the story of the "cannibal of Qəmər" (*bäläᶜe säbəᵓ*), who, after a very wicked life, was saved from hell because once he gave a sip of water to a leper who had asked him in the name of Mary (Euringer 1938:84). The K.m. is a frequent subject in Ethiopian traditional ↗painting (s. subarticle).

Many churches and monasteries are dedicated to the K.m. The idea of the K.m. is even reflected in Ethiopian anthroponomastics, in personal ↗names like Kidanä Dəngəl, 'Covenant of the Virgin', or Kidanä Maryam, 'Covenant of Mary' (Elias Yemane 2004:206). Sometimes St. Mary herself is referred to simply as K.m.

Stefan Weninger

Kidanä məḥrät in art

The iconography of the K.m. seems to be a creation of the Ethiopians, based originally on the longer version of the K.m. story (Budge 1933:54–60). Some elements of the scene, however, might have been borrowed from Byzantine depictions of the Assumption of St. ↗Mary, her elevation into heaven and her coronation.

The oldest images of the K.m. go back to the second half of the 17th cent. and belong to the

"Pact of Mercy"; miniature in ms. *Täʾammərä Maryam*, fol. 13r, 17th cent., the church of Kidanä Məḥrät at Ǝnda Ǝčč̣äge, Tämben; photo 2004, courtesy of Michael Gervers

so-called First Gondär school of ↗painting. Two main pictorial formulas can be distinguished. The abbreviated one shows Jesus and Mary facing each other (standing or sitting), sometimes accompanied by a group of ↗angels. Jesus either extends his hand in the gesture which in the context of the story should be understood as the expression of the solemn promise or raises Mary's hand as proclaiming her the intercessor of humanity. It can not be excluded that the ancient idea of the alliance between Christ and the Church, symbolized by Mary, is also present here. Since the concept of the K.m. echoes Ps 45 which is quoted in the K.m. story and added to some K.m. miniatures (cf. fol. 13r in the ↗*Täʾammərä Maryam* of the Kidanä Məḥrät Ǝnda Ǝčč̣äge church, Tämben), Mary is usually depicted on the right side of Jesus. The second, more developed formula, adds the figure of enthroned King David playing lyre (traditionally represented as a ↗*bägäna*) as well as patriarchs, prophets, the righteous and sometimes the apostles.

Both pictorial versions of the K.m. illustrate the 17th-cent. *Täʾammərä Maryam* manuscripts where they are part of the pictorial cycle preceding the miracles. Usually this contains the following scenes: Mary praying by the sepulchre of Christ; Mary in heaven paid homage by the prophets who bow before her; the developed version of the K.m. formula; Mary looking into hell; the K.m. in the presence of the angelic hosts.

In churches with the ↗*mäqdäs* decorated in the First Gondär style (e.g., ↗Däbrä Sina, Gorgora, ↗Kəbran Ǝsṭifanos, Abba Ǝnṭonəs near Gondär [presently Paris, Musée des Arts et Civilisations d'Afrique], ↗Qoma Fasilädäs) the short version of the K.m. formula occupies the prominent place on the west side of the tambour, just below the scene representing the Ancient of Days with 24 Heavenly Priests. The paintings on wood in the same style (diptychs and triptychs) usually place K.m. on the left-hand wing, below the Anastasis.

Some sumptuous manuscripts of the *Täʾammərä Maryam* decorated in the Second Gondär style follow the tradition of the previous century and introduce the miracles with the K.m. pictorial cycle. Sometimes other scenes are added, e.g., in the manuscript of Tägogäwa Yoḥannəs, the Last Judgement is included with the depiction of the fate of sinful and righteous souls watched by Mary.

From the second half of the 18th cent. the K.m. disappears from the tambours of the *mäqdäs* and, with exception of churches dedicated to the K.m., the scene is seldom included in decoration schemes. The iconographical innovation, which should be ascribed to the painters of the Second Gondär style, is the figure of Mary portrayed as the Queen of Heaven, either wearing a crown or receiving it from the angels.

The K.m. also appears on objects used for private devotion such as pendant icons and ↗*sənsul* but rarely on crosses (e.g. London, BritMus no. 68.12–30.5).

From the second half of the 18th cent. the scene is sometimes included in the groups of devotional miniatures gathered at the beginning or at the end of a manuscript. In such cases the figure of a prostrate supplicant may be included at the feet of Jesus and Mary.

Ewa Balicka-Witakowska

Kidanä Wäld Kəfle

Aläqa K. (ኪዳነ ወልድ ክፍሌ, b. 1862 or 1864 A.M. [1869/70 A.D. or 1871/72 A.D.], Ǝmbiṭaṭa, Tägulät, d. 24 *Säne* 1936 A.M. [1 July 1944 A.D.], Addis Abäba) was a celebrated Ethiopian theologian, grammarian and lexicographer.

K. was born to a family of respected ecclesiastics. His father's name was Däbru Yäwnätu (later, K. substituted his second name with the name of his mentor ↗Kəflä Giyorgis). While still very young, K. was taught calligraphy by his grandfather, *mämhər* Yäwnätu. The early years of K.'s church ↗education are obscure; however, at the age of 20 he left for ↗Jerusalem to lead a monastic life. On his way, he stayed in Egypt for about a year before reaching Jerusalem in 1890, where he lived for 30 years. Yet after ten years K. still was not a monk, since his name is mentioned without the title *abba* in the list of Ethiopians residing in the monastery Däbrä Gännät, obtained by ↗Littmann upon his visit to the Ethiopian community of Jerusalem in 1900 (Littmann 1902:107, 112).

In Jerusalem, K. was earning a living by copying manuscripts, eagerly waiting to attain his monastic profession, when *mämhər* Kəflä Giyorgis, a renowned traditional scholar, arrived in Jerusalem in 1897. Understanding the great intellectual potential of K., Kəflä Giyorgis was committed to continuing his education and taught K. the traditional exegesis (↗*Andəmta*) of the ↗*Qerəllos*, the works of ↗John Chrysostom and ↗Epiphanios of Salamis, which were followed by other Church Fathers (*Liqawənt*), and the exegesis of the Scriptures and ↗Abušakər.

K. remained with Kəflä Giyorgis until the latter's death in 1908. Apart from Amharic, Gəᶜəz and Təgrəñña, K. acquired proficiency in Arabic; intending to continue his teacher's work on Gəᶜəz lexicography, K. studied Hebrew, Syriac and Greek.

Having been personally summoned in 1920 by *ras* Täfäri Mäkʷännən (the future *aṣe* ↗Ḫaylä Śəllase I), K. returned to Ethiopia and stayed at Dərre Dawa, preparing for publication the Book of Ezekiel and its Amharic interpretation (the work conceived, in fact, by Kəflä Giyorgis, s. Cowley in SegBodLes 103ff.). The print, one of the most remarkable Ethiopian ↗incunabulas, was produced in 1924 by the St. Lazare printing press at Dərre Dawa (in two issues, s. Wright 1967:99). Remarkably, it included a new translation of Ezekiel from the Hebrew Bible, and a commentary for which K. used, apart from Ethiopian, also Hebrew sources (s. Knibb 1988:22; Cowley in SegBodLes 110). Later on, K. lived in Dərre Dawa on grants made to him by *ras* Täfäri. He was attended to by *wäyzäro* Bälaynäš Gobäna, daughter of *ras* ↗Gobäna Dači and wife of *blatta* Aššəne Kidanä Maryam.

Berhanou Abebbé (1986:19f.) refers to a number of early Ethiopian prints – mostly Gəᶜəz texts and Amharic commentaries – that K. must have prepared for publication in the 1920s: *Mar Yəsḥaq* (1922/23; cp. ↗Isaaq of Nineveh), *Mäṣḥafä qəddase* (cp. Wright 1967:29, 33), the works of ↗monastic literature under the title *Mäṣaḥəftä mänäkosat* (comprising [a reprint of] *Mar Yəsḥaq*, ↗*Arägawi mänfäsawi* and

↗*Filkəsyus* in one volume, 1927/28). The following year, K. was asked by *ras* Täfäri to translate the *Larousse Universel* dictionary into Amharic. The project turned out to be too difficult and was never realized (instead, it obviously became the beginning of the Amharic lexicon prepared and published by K.'s disciple ↗Dästa Täklä Wäld, s. DTWDic 4). Yet K. published small studies on the syllabary (1934a, 1934b) and kept working on the comprehensive Gəᶜəz dictionary – a work he inherited from Kəflä Giyorgis.

Apart from his main engagements, K. began compiling theological texts, also transmitted to him by Kəflä Giyorgis, on the doctrine of ↗*Yäsägga ləğ*, to which K. too was persuaded (having taken as an additional name Wäldä Abba Täkle, lit. 'son of *abba* Täkle', reportedly in honour of *abunä* ↗Täklä Haymanot). However, this work, under the title *Haymanotä abäw qäddämt* ('Faith of the Ancient Fathers'), was completed by Dästa Täklä Wäld only in 1941/42 and edited by Berhanou Abebbé (1986).

During the occupation, K. courageously spoke out against the Italians, was put into prison for three months and lost his sight, but his library was rescued by Dästa Täklä Wäld. After the liberation, aged and weak K. moved to Addis Abäba, to be taken care of by *blatta* Aššəne and Dästa Täklä Wäld. After his death, K. was buried at ↗Däbrä Libanos of Šäwa.

A few of K.'s works were published posthumously (cp. Berhanou Abebbé 1986:24, 26 n. 115). The lexicographical work, commenced by Kəflä Giyorgis and carried on by K., was published in 1955/56 by Dästa Täklä Wäld over a decade after K.'s death (s. KWKDic). The book provides a lengthy grammatical review of Gəᶜəz, based on traditional ↗*säwasəw* terminology, and a large lexicon. The latter is arranged by roots according to the ↗*abugida* ("Hebrew") order. Verbal roots are usually introduced by the infinitive of the basic verb, followed by derived nouns and verbal stems in the form of 3rd pers. masc. sg. perfect. Amharic explanations of the meaning (sometimes with illustrations) are as a rule followed with relevant quotations from Gəᶜəz texts. Basic etymological information is also provided, such as cognates or sources of borrowing (Hebrew, Syriac, Arabic, Greek and Latin). The lexicon is still one of the most authoritative works on Gəᶜəz published to date.

Kienzlen, Gottlieb

K. (d. 1865, Gafat) was a German lay missionary sent to Ethiopia in 1856 by the ↗St. Chrischona-Pilgermission and the Anglican Bishop Samuel ↗Gobat. K. was a member of the first St. Chrischona group which planned to start a reformation movement from within the Ethiopian Orthodox Church.

After a stay in the Gondär region, K. was transferred in 1857 to Mäqdäla, the centre of ↗Tewodros II's army, when the Emperor went north to fight against "Agäw" ↗Nəguśe. Here the lay missionaries had to do different kinds of artisan work; at the same time K. was actively establishing friendly links with *abunä* Säläma, but could not avoid confrontation with priests, since, among other things, he rejected fasting rules (Strebel 2001:152f.). In 1858 he, together with Johannes ↗Mayer, convinced Tewodros's secretary *aläqa* ↗Zännäb of Protestant doctrines, Zännäb becoming the first Ethiopian "evangelist" within the Ethiopian Church (Flad 1968:32). K. also used his stay in Mäqdäla to learn ↗Oromiffa, preparing himself for a possible Oromo mission. From 1859 to 1862 K. together with Christian

↗Bender was mainly involved in the building of a street in Čäčäḥo with the help of several hundred Oromo workers.

After that K. joined the colony of European craftsmen at ↗Gafat, which focused on weapons production for the Emperor. From here, with the permission of Tewodros II, he travelled to ↗Dämbəya in late 1862, where he preached among the ↗Betä Ǝsraʾel (Smidt 2005). In Gafat K. also worked on an Amharic grammar (Strebel 2001:139), which, however, seems to be lost; in January 1865 he was already sick, after having breathed toxic gas during the production of a mortar, and had not finalized his work on the manuscript (s. *Mittheilungen* 1865).

Together with Theophil ↗Waldmeier, Karl ↗Saalmüller and Johannes Mayer, K. caused controversy among the missionaries by marrying a local woman in 1863, which was, by some, seen as entailing the risk of getting too much involved in Ethiopian affairs (cp. Strebel 2001:140f.). His wife Ṣäḥaytu was the daughter of Wilhelm ↗Schimper of ʿAdwa (thus becoming Bender's brother-in-law, who had married Yäšimmäbet Dästa Schimper). After K.'s death, his widow married the Təgrayan noble ↗Kaśa Golğa.

Kings, Books of ↗Historical Books, biblical

Kingship, divine

K. is a monarchic institution found in many parts of Eurasia, Africa, America and Oceania from antique times until the early 20th cent. Since James Frazer's first edition of *The Golden Bough* (1890), it has become an important focus in historical and anthropological literature, particularly on north-eastern Africa (for the Western approach s. Kantorowicz 1957). The bulk of the studies has been based, however, on the interlacustrine areas of Buganda, Ruanda etc., whereas Ethiopia, which also offers a rich spectrum of relevant phenomena of the K., has featured much less in this field.

K. can be defined as a special type of ↗monarchy, in which the princely leader is considered as a mediator between the natural and supernatural worlds, between the microcosmic and the macrocosmic spheres, between men and supreme beings. In this position he does not primarily act as a political ruler of his group, but rather as a symbol of numinous powers in this world, and as a guarantor of an equilibrium between transcendental and earthly spaces. K. is therefore sometimes also labelled as "cosmic kingship" (L'Orange 1982). The monarch usually acts in close co-operation with representatives of symbolic statuses such as arch-ministers and female relatives, particularly his mother. In certain societies, such as the Pabir of northern Nigeria, the "queen mother" is chosen from another clan and required to give birth to a new king after having been offered the royal paraphernalia (↗Kinship). Rulers of matrilineal descent are frequent in K. of Central African regions. All executive matters of the state and the society are carried out by more or less profane authorities that are under the spiritual supremacy of the king.

According to the socio-religious system of K., the ruler is not regarded as an immediate incarnation of a god, as was the dogma, for example, in the case of the god-kings of Pharaonic Egypt. It is rather based on a set of ideas centred upon the conviction that after his installation the incumbent becomes a vehicle or shrine of a god, a royal ancestor or a cultural hero. In order to represent a strong and well functioning universe, the holder of the position had to be physically and psychically unblemished. If he became too weak to perform the necessary ritual and ceremonial actions, the whole community was considered to be threatened, and as a consequence he had to be replaced. Oral traditions in eastern as well as in central and western parts of Africa even report that divine kings were killed either when they revealed signs of weakness or as a routine after a fixed number of years. This custom of regicide, emphasized especially by Leo ↗Frobenius (1931) for the areas between the Red Sea and Zimbabwe, has not been able to be proved. As can still be observed up to the present in the kingdoms of eastern Africa, K. comprises an extensive catalogue of behavioural prescriptions demanded from the monarch himself and from his subjects with regard to him. They imply, for example, taboos separating the king from contact with profane persons, relationships,

objects and activities. Furthermore, they contain notions that the king's physical, moral and ritual condition affects the welfare and fertility of the people, livestock and crops. It may finally involve the custom of deposition or potentially even regicide.
